GROOMBRIDGE & SONS, 5, Paternoster-row, London.

Now ready, 400 pp. crown 8vo. cloth, fully illustrated, price 3s.

O N F O O D.

By E. LANKESTER, M.D. F.R.S. F.L.S.

EXTRACT.—"I began by giving you a cup of cold Water. I then placed before you the salt-cellar, and the various forms of plants we eat as salads, and popularly known as purifiers of the blood. Aware, however, that you could not be sustained on this diet, I introduced you to Starch and Sugar, and the philosophy of making puddings and eating sweetmeats. These I explained to you were Heat-giving materials, but inferior, even in that function, to Butter, Fats, and Oils. I then placed before you Bread and Meat, Poultry, Fish, and Game, not denying you a glass of Ale or Wine to stimulate your digestion, and Condiments and Spices to give a relish to your food. We will now, if you please, discuss the merits of Tea, Coffee, and Chocolate, previous to taking a pipe of Tobacco with the American-Indian, and a doze of Opium with the Chinese."

Part I. contains: WATER; SALT; HEAT-GIVERS—OIL, BUTTER, FAT; FLESH-FORMERS—ANIMAL FOOD. One Shilling.

Part II. contains: ALCOHOL; WINES, SPIRITS, and BEER; CONDIMENTS and SPICES; TEA, COFFEE, and CHOCOLATE; TOBACCO and OPIUM. Eightpence.

London: ROBERT HARDWICKE, 192, Piccadilly.

This day is published, the Second Edition, in 2 vols. 8vo. with Portrait of the Princess Charlotte of Wales, price 26s.

AUTOBIOGRAPHY OF MISS CORNELIA KNIGHT,

LADY COMPANION TO THE PRINCESS CHARLOTTE OF WALES.

With Extracts from her Journals and Anecdote-Books.

"Of the popularity of these volumes, on account of their historical as well as of gossipping merits, there can be no doubt whatever."—*Athenæum*, June 8, 1861.

"We can heartily recommend the entire work to our readers as one of the most curious and authentic disclosures of State affairs in this country, and one of the most interesting and graphic journals of travel which the literary world has for a long time been called upon to notice."

Press, June 22, 1861.

"The journal of a clever and lady-like woman, who saw many men and many cities, and whose testimony is not heightened by the warmth of too lively an imagination, nor blackened by the tints of malice, must be—that we have found it to be—unusually interesting reading."

Spectator, June 22, 1861.

"The matters which will secure popularity for the Autobiography are those which resuscitate the stories that excited the curiosity of our forefathers, and made them invent other scandals, scarcely any one of which, fiction as they were, exhibited half the strangeness of the facts themselves, as they are now recorded."

Bell's Messenger, June 15, 1861.

"These are highly interesting volumes... Miss Knight, speaking in the fullness of the knowledge derived from her confidential position in the Princess's household, more than confirms what has been previously asserted of the Prince's cruelty; and presents us with a picture of royal littleness in the father, and of royal wretchedness in the daughter, such as we hope may never again be exhibited within the walls of an English palace."—*Observer*, June 30, 1861.

London: WM. H. ALLEN & Co. 7, Leadenhall-street.

On the 31st of August, for September 7th, will be issued, the FIRST NUMBER of

JOHN CASSELL'S NEW JOURNAL, THE QUIVER.

WEEKLY, ONE PENNY.

Designed for the promotion and defence of Biblical Truth, and the advancement of Religion in the Homes of the People. THE QUIVER will be larger than any journal hitherto issued at the price of One Penny. The whole of its Articles and other Contents will be written with a view to interest and instruct the family circle. They will be furnished by the ablest writers of the day, and will be free from all sectarian bias.

ADVERTISEMENTS.—A limited number of Advertisements will be inserted; and as it is intended to issue 100,000 copies of the First Number, the columns of THE QUIVER will present unusual advantages to Advertisers. Advertisements will be charged at the rate of 8d. per line.

CASSELL, PETTER & GALPIN, Ludgate-hill, London.

Just ready, demy 8vo. handsomely bound in cloth, with Portraits and numerous Illustrations, price 21s.

RECOLLECTIONS OF A. N. WELBY PUGIN,

AND HIS FATHER,

AUGUSTUS PUGIN.

WITH NOTICES OF THEIR WORKS.

By BENJAMIN FERREY, Architect, F.R.I.B.A.

With an Appendix, by E. SHERIDAN PURCELL, Esq.

"Abundant knowledge and warm interest in his subject entitled Mr. Ferrey to write Welby Pugin's life; and he has written it with an unaffected heartiness, deserving of the warmest praise; and as to all essentials—as in dealing with the religious element in the life of one who was a convert to Catholicism—with good feeling and great tact."—*Examiner*.

London: EDWARD STANFORD, 6, Charing Cross, S.W.

EQUITABLE ASSURANCE OFFICE

NEW BRIDGE-STREET, BLACKFRIARS.

ESTABLISHED 1762.

DIRECTORS.

THE RIGHT HON. LORD TREDEGAR, *President*.

William Dacres Adams, Esq.
Philip Hardwick, Esq.
William Samuel Jones, Esq.
John Aldin Moore, Esq.
William Frederick Pollock, Esq.

Charles Pott, Esq.
Rev. John Russell, D.D.
James Spicer, Esq.
John Charles Tempier, Esq.
Right Hon. Lord Tredegar.

John Charles Burgoyne, Esq.
Lord George Henry Cavendish, M.P.
Frederick Cowper, Esq.
Richard Gooling, Esq.
Peter Martineau, Esq.

THE EQUITABLE is an entirely MUTUAL OFFICE. The reserve, at the last "rest" in December, 1859, exceeded three-fourths of a million sterling, a sum more than double the corresponding fund of any similar Institution.

The Bonuses paid on Claims in the Ten Years ending on the 31st December, 1859, exceeded Three Millions and a Half, being more than 100 per Cent. on the amount of all those Claims.

The amount added at the close of that decade to the Policies existing on the 1st January, 1860, was £1,977,000, and made, with former additions then outstanding, a total of £4,070,000, on Assurances originally taken out for £6,252,000 only.

These additions have increased the Claims allowed and paid under those policies since the 1st January, 1860, to the extent of 150 per Cent.

The Capital at this time consists of

£2,730,000—Stock in the Public Funds.
£3,006,297—Cash lent on Mortgages of Freehold Estates.
£300,000—Cash advanced on Railway Debentures.
£83,590—Cash advanced on security of the Policies of Members of the Society.

Producing annually, £221,432.

The total Income exceeds £400,000 per Annum.

POLICIES effected in the current year (1861) will participate in the distribution of Profits made in December, 1859, so soon as Six Annual Premiums shall have become due and been paid thereon; and, in the Division of 1869, will be entitled to additions in respect of every Premium paid upon them from the year 1863 to 1869, each inclusive.

On the surrender of Policies, the full value is paid, without any deduction; and the Directors will advance nine-tenths of that value as a temporary accommodation, on the deposit of a Policy.

No extra Premium is charged for service in any Volunteer Corps within the United Kingdom, during peace or war.

A Weekly Court of Directors is held every Wednesday, from 11 to 1 o'clock, to receive Proposals for New Assurances; and a Short Account of the Society may be had on application personally, or by post, from the Office, where attendance is given daily, from Ten to Four o'clock.

ARTHUR MORGAN, Actuary.

T. ROSS, OPTICIAN,

(SON AND SUCCESSOR OF THE LATE
ANDREW ROSS,)

2 and 3, FEATHERSTONE-BUILDINGS,
HIGH HOLBORN, LONDON, W.C.

IMPROVED MICROSCOPE OBJECTIVES,
IMPROVED TERRESTRIAL TELESCOPES,
&c. &c. &c.

WENHAM'S BINOCULAR ARRANGEMENT FOR MICROSCOPES.

ASTRONOMICAL TELESCOPES.

ROSS'S NEW STEREOGRAPHIC LENS.

ROSS'S NEW WHOLE-PLATE PORTRAIT LENS.

ROSS'S NEW LENS for "CARTES-DE-VISITE" PORTRAITS.

A LARGE STOCK of PHOTOGRAPHIC APPARATUS always on hand.

A LARGE COLLECTION of MICROSCOPIC PREPARATIONS.

RACE, FIELD and OPERA GLASSES, &c., as usual.

See Catalogues, to be had on application at

2 and 3, FEATHERSTONE-BUILDINGS,
HIGH HOLBORN, LONDON, W.C.

To MICROSCOPISTS and OTHERS.

To complete our system of Manufacture, and to meet the demand for our Instruments, we have built an entirely new Factory; and whilst we shall thus be enabled to continue our improvements in Manufacture, we shall also concede to our Customers every reduction that we can in Price.

ACHROMATIC MICROSCOPES.

We have carefully arranged our different forms of Stand with various Object-Glasses and Apparatus, so as to offer Microscopes, more or less complete, at certain amounts, in each instance considerably less than the sum of the individual prices of the several parts, and these we keep constantly in stock.

WENHAM'S BINOCULAR MICROSCOPE.

We are now manufacturing, under the immediate superintendence of the Inventor, this valuable addition to the Microscope. Mr. Wenham's arrangement not only gives the most perfect and well-defined Stereoscopic vision with any Object-Glass or Eye-Piece, but it can be applied to almost any Microscope, and when adapted, it in no way whatever interferes with the ordinary use of the Instrument.

MALTWOOD'S FINDER FOR THE MICROSCOPE.

This is the only method that has become universal for the purpose of finding Objects.

MICROSCOPIC OBJECTS.

In the endeavour to make our Collection of Prepared Specimens complete in every branch, we have lately secured the sole agency for the sale of some most remarkable transparent injections.

ICELAND SPAR.

We have a number of Cabinet Specimens of this interesting substance on Sale, the pieces having been selected from a large quantity which we have purchased, and besides being of very fine quality, we are enabled to offer them at prices considerably below the ordinary value.

ACHROMATIC STEREOSCOPES.

GORHAM'S KALEIDOSCOPIO COLOUR TOP, &c.

Catalogues, giving full particulars, may be had on application, or sent post free.

SMITH, BECK & BECK,
6, Coleman-street, London, E.C.
and Lister Works, Holloway.

J. H. DALLMEYER (Son-in-Law and Pupil of the late ANDREW ROSS)
Respectfully begs to inform the Scientific Public that he exclusively manufactures the **ASTRONOMICAL TELESCOPE** according to A. H.'s processes, who has also bequeathed to him the whole of that faculty.

For particulars of J. H. D.'s recent **IMPROVEMENTS IN MICROSCOPIC OBJECT GLASSES, PHOTOGRAPHIC LENSES, &c.** see Catalogue, which may be had on application at 19, BLOOMSBURY-STREET, Oxford-street, W.C.

HER MAJESTY'S VISIT TO IRELAND.—CALLAGHAN'S OPERA, RACE AND FIELD GLASSES, matchless for power and portability, may be worn round the neck as a double eyeglass. Invaluable to the Tourist, and for viewing scenery at four to five miles' distance, are preferred to the telescope. Equally available at the Opera-House, Race-Course, or Review. Price, 30s., 45s., 50s., 70s., and 80s., according to size and power. May be had at Messrs. Smith & Son's Bookstalls, at the principal Railway Stations; and in Ireland at Bray, The Curragh, Killarney, Kingston, Limerick, Mallow, Newbridge and at No. 21, Lower Sackville-street, Dublin; or will be sent free on remittance to William Callaghan, Optician, 22A, New Bond-street, W., corner of Conduit-street, London.

GOVERNMENT SECURITY LIFE POLICIES.
THE CONSOLS ASSOCIATION,
439, STRAND, LONDON.

1. Provides the Security of Consols for its Policies.
2. It issues a **DEMAND** on **DEMAND** at any time, about One-Half of all Premiums paid.
Undoubted Security for Money, with a liberal Rate of Interest. The Association possesses a large Capital, subscribed by several hundreds of Shareholders.
Full information may be obtained on application to **THOMAS H. BAYLIS**, Managing Director.

GENERAL LIFE AND FIRE ASSURANCE COMPANY,
69, KING WILLIAM-STREET, LONDON, E.C.

Established 1837.
CAPITAL, 1,000,000.

Directors.

MUTUAL BRANCH.
Assurers on the Bonus system are entitled, after five years, to participate in nine-tenths, or 90 per cent. out of the profits.

The profit assigned to each policy can be added to the sum assured, applied in reduction of the annual premium, or be received in cash.
At the first division a return of 30 per cent. in cash on the premiums paid was declared; this will allow a reversionary increase, varying, according to age, from 60 to 35 per cent. on the premiums, or from 5 to 15 per cent. on the sum assured.
One Whole Term Premium may remain on credit for seven years, or one-third of the premium may remain for life as a debt upon the Policy at 5 per cent., or may be paid off at any time without notice.

Claims paid one month after satisfactory proof of death.
Loans upon approved security.
No charge for Policy Stamps.
Medical Attendants paid for their reports.
Persons may, in time of peace, proceed to or reside in any part of Europe or British North America without extra charge.
No extra charge for the Militia, Volunteer Rifles, or Artillery Corps on Home Service.
The Medical Officers attend every day, at a quarter before Two o'clock.

NORWICH UNION LIFE INSURANCE SOCIETY.—Instituted 1805.
Secretary—**SIR SAMUEL BIGNOLD.**

The whole of the profits divided with the assured.
Ample security offered by an accumulated capital of £200,000.
One-half of the first five annual premiums may remain as a permanent charge upon policies granted for the whole duration of life.
The Income of the Society is upwards of £27,000.
The amount insured is upwards of £,073,000.
Since its commencement 32,700 Policies have been issued, and £,605,665l. paid to the representatives of 4,354 deceased members.
The Bonuses may be applied at the option of the Assured as follows:—
As a Bonus added to the Policy, or the amount may be received at once, that is, in cash value, or it may be applied in reduction of the future annual premium.
The rates of premium are lower than those of some Offices by nearly 10 per cent., a benefit in itself equivalent to an annual bonus.
For Prospectuses apply at the Society's Office, Surrey-street, Norwich, and 4, Crescent, Blackfriars, London.

THE SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY

is a purely Mutual Office, in which the whole Funds belong to the Members; and the Profits are divided among them alone. Since it was founded, in 1815, its history has been one of constant and increasing prosperity; and it is now, in point of Funds, Annual Revenue and number of Members, one of the largest Life Offices in the world. The Security presented by the Society to its Members and their Representatives is of the most unquestionable character; while the Returns made in the form of Bonuses are, it is believed, not exceeded by those of any other similar Institution. The following is a

MEMORANDUM OF BUSINESS, BONUSES, FUNDS AND REVENUE.

Extracted from the Society's detailed Prospectus.

ALFRED B. PEARCE, 23, LUDGATE-HILL, E.C.
Established 1760.

MORTLOCK'S CHINA WAREHOUSE, 250, OXFORD-STREET.—SELLING OFF.—In consequence of the Marquis of Westminster's refusal to renew the Lease of the above Premises (in connection with Park-street), **JOHN MORTLOCK** is anxious to dispose of his RICH STOCK, and is prepared to make a great allowance for Cash.—250, OXFORD-STREET, and 58, PARK-STREET, near Hyde Park.

LE SOMMIER ÉLASTIQUE PORTATIF.—**HEAL & SON** have patented a method of making a Spring Mattress portable. The great objection to the usual Spring Mattress is its being so heavy and cumbersome. The "Sommier Élastique Portatif" made in three separate parts; and, when joined together, has all the elasticity of the best Spring Mattress. As it has no stuffing of wool or horse-hair it cannot harbour moth, to which the usual Spring Mattress is very liable; the price, also, are much below those of the best Spring Mattresses, viz.:—
3 ft. 6 in. " " " " 22 0 0
4 ft. " " " " " 25 0 0
4 ft. 6 in. by 6 ft. 4 in. long " " 30 0 0
5 ft. " " " " " 35 0 0
5 ft. 6 in. " " " " 40 0 0

The "Sommier Élastique Portatif," therefore, combines the advantages of elasticity, durability, cleanliness, portability and cheapness.

An ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-room Furniture sent free by post on application.
HEAL & SON, 126, Tottenham Court-road, W.

MR. HOWARD, SURGEON-DENTIST, 52, FLEET-STREET, has introduced an ENTIRELY NEW DESCRIPTION OF ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication. Decayed teeth rendered sound and useful in mastication.—At home from Ten till Five.

NO MORE PILLS NOR ANY OTHER

MEDICINE.—"We find **DR. BARRY'S HEALTH RESTORING REVALENTA ARABICA FOOD** the safest remedy for habitual constipation, indigestion (dyspepsia), palpitation, coughs, colds, asthma, bronchitis, diarrhoea, nervousness, biliousness, torpidity of the liver, &c."—Andrew Ure, M.D. F.R.S., Dr. Harvey, Dr. Shorland, Dr. Campbell, Dr. Wurrer's Testimonial:—"Bonn, July 19, 1842. Dr. Barry's Food is particularly effective in effectually curing indigestion (dyspepsia), a confused heat of body, as also in diarrhoea, bowel and liver complaints, inflammatory irritation and cramp of the urethra, the kidneys and bladder, and hemorrhoids; also in cough, asthma, debility, bronchitis, and pulmonary and bronchial consumption."—Dr. R. Dr. Wurrer, Professor of Medicine and Practical M.D. in Bonn, packed in tins, with full instructions, 11b. 3s. 6d.; 21b. 4s. 6d.; 51b. 11s.; 131b. 22s.; 241b. 42s. of carriage, 40s.—**Barry Dr Barry & Co., 77, Regent-street, London; Fortnum & Mason; also at 60, Gracechurch-street; 4, Cheap-side; 63 and 129, Oxford-street; 229, 330, 430 and 451, Strand; and all Grocers.**

DR. DE JONGHE'S
(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL,

Prescribed by the most eminent Medical Men throughout the world as the safest, speediest and most effectual remedy for

Consumption, Chronic Bronchitis, Asthma, Coughs, Rheumatism, Gout, General Debility, Diseases of the Skin, Rickets, Infantile Wasting, and all Scrofulous Affections,

Is incomparably superior to every other variety.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart. M.D., Physician in Ordinary to the Queen in Ireland.—"I consider Dr. de Jonghe's Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. GRANVILLE, F.R.S.—"Dr. Granville has found that Dr. de Jonghe's Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea, and indigestion too often consequent on the administration of the Pale Oil."

Dr. LANKESTER, F.R.S.—"I deem the Cod Liver Oil sold under Dr. de Jonghe's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

Dr. LAWRENCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.—"I invariably prescribe Dr. de Jonghe's Oil in preference to any other, feeling assured that I am recommending a genuine article, and not a manufactured compound, in which the efficacy of this invaluable medicine is destroyed."

DR. DE JONGHE'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-Pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists.

Sole Consignees:
ANSAR, HARFORD & CO. 77, Strand, London, W.C.

CAUTION.—Beware of Proposed Substitutions.

ELKINGTON & CO. desire respectfully to call the attention of the Nobility and Gentry requiring PLATE, to their Manufactures, which may be obtained in great variety, both in **SILVER and ELECTRO PLATE**, from either of their Establishments:—

LONDON—25, Regent-street, St. James's, S.W.; and 45, Moor-gate-street, E.C.

DUBLIN—College Green.

LIVERPOOL—Church-street.

MANUFACTORY and SHOW ROOMS, Newhall-street, Birmingham.

Estimates, Drawings and Prices sent free by post. Replating and Gilding as usual.

KEATING'S PERSIAN INSECT-DE-STROYING POWDER.—This powder is quite harmless to Animals &c., but is univalued in destroying Fleas, Bugs, Embezzles, Flies, Cockroaches, Beetles, Gnats, Moths in Furs, and every other species of Insects in all stages of metamorphosis. An invaluable remedy for destroying Fleas in Ladies' Pet Dogs. It is perfectly harmless in its nature, and may be applied without apprehension, as it has no qualities deleterious to animals. Sold in Packets, 1s., 2s. 6d., and 4s. 6d. each, or post free for 1s. 4d. or treble size for 3s. 6d. postage-stamps, by **THOMAS KEATING, Chemist, 79, St. Paul's Churchyard, London, E.C.**

THE FAIRY BOUQUET.—Dedicated (by Special Permission) to the QUEEN of the FAIRIES. It is made from Wild Flowers, called by Fairy hands from "the bank whereon the wild thyme grows." The authenticity of the receipt is verified for what the same does for the same disease as the existence of Titania herself. In bottles, 2s., 3s. 6d. and 5s. each.

METCALFE, BINGLEY & CO.'S NEW PATTERNOOOTH BRUSHES, Penetrating Hair Brushes, Genuine Smyrna Sponges, and every description of Brush, Comb, and Perfumery. Metcalfe's celebrated Alkaline Tooth Powder, 2s. per box.—120s and 121, Oxford-street.

REFRESHING BALM for the HAIR.—

Every one values and admires a beautiful head of hair; yet there are hundreds who desire to make their hair look well, keep it from turning grey and falling off, but are unacquainted with the means to do so. **OLDIDGE'S BALM OF COLUMBIA** to them is a priceless treasure—it is the only certain remedy. Established upwards of 20 years, it has withstood every opposition and imitation, and by the increasing demand proves its true value. In producing whiskers or moustaches, aiding weak thin hair to become strong, it has no equal. Price 3s. 6d., 6s. and 12s. only.—Sold Wholesale and Retail by **G. & A. OLDIDGE, 22, Wellington-street (seven doors from the Strand), W.C.**

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 500 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of a steel spring, so often hurtful in its effects, is here avoided; soft bandage belts worn round the body, while the requisite resistance is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the truss (which cannot fail to fit) forwarded by post, on the circumference of the body, two inches below the hips, being sent to the Manufacturer.

MR. WHITE, 228, PICCADILLY, LONDON.

ELASTIC STOCKINGS, KNEE-CAPS, &c. for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, and impervious to moisture, and are worn on like an ordinary stocking. Prices, from 7s. 6d. to 15s. each; post free.

JOHN WHITE, MANUFACTURER, 228, Piccadilly, London.

HENRY'S CALCINED MAGNESIA continues to be prepared, with the most scrupulous care and attention, by Messrs. THOS. & WM. HENRY, Manufacturing Chemists, Manchester. It is sold, in bottles, price 3s. 6d., with glass stoppers at 4s. 6d., stamp included, with full directions for the use of, by three various Agents in the metropolis and throughout the United Kingdom; but it cannot be genuine unless their names are engraved on the Government Stamp which is fixed over the cork or stopper of each bottle. Sold in London, wholesale, by Messrs. Barclay & Sons, Farringdon-street; Sutton & Co., Bow, Chumbers; and Newbery & Sons; E. Edwards; Thos. Butler, 24, Paul's Churchyard; Savory & Co., New Bond-street; Sauer, Oxford-street. And of most of the vendors of the Magnesia may be had, authenticated by a similar stamp. **HENRY'S AROMATIC SPIRIT OF VINEGAR**, the invention of Mr. Henry, and the only genuine preparation of that article.

DINNEFORD'S PURE FLUID MAGNESIA

has been, during twenty-five years, emphatically sanctioned by the Medical Profession and universally accepted by the Public, as the Best Remedy for acidity of the stomach, heartburn, head-ache, gout and indigestion, and as a mild aperient for delicate constitutions, more especially for Ladies and Children. Combined with the Acidulated Lemon Syrup, it forms an agreeable Efferescent Draught, in which its aperient qualities are much increased. During Hot Seasons and in Hot Climates, the regular use of this simple and elegant remedy has been found highly beneficial. Manufactured (with the utmost attention to strength and purity) by **DINNEFORD & CO. 173, New Bond-street, London; and sold by all respectable Chemists throughout the Empire.**

COCKLE'S PILLS.—To those who suffer from Indigestion and Sick Headache, Torpid Liver, Inactive Bowels, &c., **COCKLE'S ANTIBILIOUS PILLS** are strongly recommended, as, by combining aromatics, tonic, and aperient properties, they remove all morbid accumulations, strengthen the stomach, induce a healthy appetite, and impart tranquillity to the nervous system. Prepared only by **JAMES COCKLE, 18, New Ormond-street; and to be had of all Medicine Vendors.** In boxes, at 1s. 1d., 2s. 6d., 4s. 6d., and 11s. each.

THE BEST APERIENT AND ANTIBILIOUS MEDICINE is **DR. HUGO'S MEDICAL ATOMS**, they are small, and have a most agreeable taste. Sold in Packets at 1s. 1d., 2s. 6d., and 4s. 6d., by all Druggists.

HOLLOWAY'S OINTMENT and PILLS.—

FEMALE COMPLAINTS.—The disorders peculiar to women are the most delicate and difficult to be conducted to a favorable termination. Upon their early and judicious treatment hangs the momentous question, whether women enjoy strength, soundness and cheerfulness, or pine away in weakness, disease and misery. Holloway's inestimable preparations are the most reliable remedies for restoring weakened or suspended functions. The Ointment should be rubbed on the back and stomach, for at least ten minutes every night and morning, till restoration takes place, and perfect functional regularity be induced. While thus using the Ointment, Holloway's Pills should be freely taken in order to purify the blood, and cleanse the system, by which natural process all obstructions will be readily removed.

LONDON, 158, FLEET-STREET, E.C.

WARD & LOCK'S APPROVED EDUCATIONAL WORKS.

ROYAL COLLEGES OF PHYSICIANS AND SURGEONS OF EDINBURGH.

PRELIMINARY EXAMINATION IN GENERAL EDUCATION.

The List of Subjects and Books for the Preliminary Examination in General Education required to be passed by Candidates for the Double Qualification in Medicine and in Surgery conferred conjointly by the Royal Colleges of Physicians and Surgeons, and for the separate Diploma of each College—to be held on OCTOBER 26th, and on NOVEMBER 2nd, 9th, and 16th, 1861, and on FEBRUARY 1st, MAY 2nd, and AUGUST 2nd, 1862—is now ready, and may be obtained on Application to the Officer of either College. The attention of intending Students of Medicine is specially requested to the following New Regulations, in accordance with a resolution of the Medical Council, applicable to all the Royal Colleges, Universities, and Licensing Boards:—1. That all Students of Medicine must be registered. 2. That those commencing medical study after September 1861 cannot be registered until they have passed a Preliminary Examination in General Education. 3. That, except for those who have been detained by illness or other unavoidable cause, the Register at all Medical Schools must be closed within *five* days after the commencement of each Session.

ALEXANDER WOOD,

President Royal College of Physicians.

DOUGLAS MACLAGAN,

President Royal College of Surgeons.

Edinburgh, August 2, 1861.

requested to make their Subscriptions payable to ROBERT
CHAMBERS, Esq., 47, Paternoster-row, London, E.C.
(Signed) JOHN FRANCIS, Hon. Sec.
August 10, 1861.

ESSAYS AND REVIEWS' DEFENCE FUND.

The Bishop of Salisbury has instituted proceedings in the Arch-
deaconry Court of Canterbury against the Rev. Dr. Rowland Williams,
Vicar of Broad Chalk, on account of the article entitled 'Bunsen's
Biblical Researches,' published in the 'Essays and Reviews.'
This suit may be followed by others tending to suppress the free-
dom of religious inquiry, and the decision in the case will be of
great public importance.

It is thought right to give an opportunity to the friends of reli-
gious liberty in the Church of England, and others, to show their
sympathy for the cause, by contributing to defray the large ex-
penses which will necessarily be incurred in defending the present
suit.

C. W. GOODWIN, M.A., 6, King's }
Bench-walk, Temple } Hon. Secs.
THEODORE DU BOIS, }
Chancery-lane, }
Messrs. Child & Co., Temple Bar, have kindly consented to
receive subscriptions to the credit of the 'Essays and Reviews'
Defence Fund, and

Communications may be addressed to either of the Secretaries,
or to 'Essays and Reviews' Defence Committee, 7, Goddard-
street, Doctors' Commons, E.C.

'Health Committee,' to be delivered at the Office of the Town-
Clerk, as under, on or before the 14th of September next.
By order, W. M. SHUTTEWORTH, Town-Clerk.
Public Offices, Cornhill-street, Liverpool,
August 3, 1861.

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

MANCHESTER MEETING, 4th to 11th September, 1861.
Reception Room, The Portico, Manchester.

President.

WILLIAM FAIRBAIRN, Esq. LL.D. F.R.S. &c.

The objects of the Association are—"To give a stronger impulse and more systematic direction to scientific inquiry; to promote the intercourse of those who cultivate science in different parts of the British empire with one another and with foreign philosophers; to obtain a more general attention to the objects of science and a removal of disadvantages of a public kind which impede its progress."

General Arrangements.

WEDNESDAY, 4th September.—OPENING MEETING and PRESIDENT'S ADDRESS, at 8 p.m., in the Free-Trade Hall.
SECTIONAL MEETINGS daily, as usual, from the 5th to the 10th inclusive.

WEDNESDAY, 11th September.—CONCLUDING GENERAL MEETING, in the Free-Trade Hall.

THURSDAY, 5th September.—SOIRÉE (Microscopes), in the Free-Trade Hall.

FRIDAY, 6th September.—EVENING DISCOURSE.

SATURDAY, 7th September.—SOIRÉE (Telegraphs), in the Free-Trade Hall.

MONDAY, 8th September.—EVENING DISCOURSE.

TUESDAY, 10th September.—SOIRÉE (Field Naturalists' Society), in the Free-Trade Hall.

On THURSDAY, the 11th of September.—Important EXCURSIONS.

Gentlemen desirous of attending the meeting may make their choice of being proposed as Life Members, paying 10*l.* as a composition, or Annual Subscribers, paying an admission fee of 1*l.*, and (additional) 1*l.* annually, or Associates for the meeting, paying 1*l.* Ladies may become members on the same terms as gentlemen; or ladies' tickets (transferable to ladies only) may be obtained in the Reception Room, by members, on payment of 1*l.*

Life members receive gratuitously the Reports of the Association which may be published after the date of payment.
Annual subscribers receive gratuitously the Report of the Association for the year of their subscription, and for every following year of subscription, without intermission. Associates for the meeting are entitled to the Report of the meeting, at two-thirds of the publication price.

In order to facilitate arrangements for the meeting, it is desirable that application for tickets should be made as early as possible. Forms of proposal will be supplied in the Reception Room during the meeting; or the names of candidates for admission may be transmitted to the Local Secretaries.

As the funds which the Association has to expend for its scientific objects consist only of the payments made by its members and associates, it is particularly desirable that every opportunity should be taken of increasing their number.

Compositions and subscriptions of new members or associates will be received by the Local Secretaries until the commencement of the meeting; afterwards, as well as the subscriptions and arrears of former members, by the Local Treasurer.

For information respecting the local arrangements, application may be made by letter addressed to any of the Local Secretaries for the meeting, at "The Portico," Manchester.

R. D. DARBISHIRE, } Local Secretaries
ALFRED NEILD, } for the Meeting.
ARTHUR RANSOME, }
H. E. ROSCOE, }

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE. MANCHESTER MEETING.

Notice to Exhibitors.

Portico, August, 1861.
Gentlemen proposing to send specimens or apparatus for exhibition during the meeting, will please to address their contributions as follows:—

Zoological Specimens, to Dr. Alcock, Museum, Peter-street, Manchester.

Botanical Specimens, to Leo H. Grindon, Esq., Museum, Peter-street, Manchester.

Geological Specimens, to Rev. G. Perkins, Museum, Peter-street, Manchester.

Chemical Products, to Dr. Roscoe, Owens College, Manchester. The above may be forwarded at once; the earlier the better.

Microscopes, to G. Mosley, Esq., Free-Trade Hall, Manchester. These are to arrive on Tuesday, the 3rd, and Wednesday, the 4th of September.

The owners of private microscopes are expected to see to the delivery, unpacking, arranging, and removal themselves.

Philosophical Apparatus, to British Association, care of John Pender, Esq., Mount-street, Manchester. These are to arrive on Monday, the 2nd, and Tuesday, the 3rd of September.

Mechanical Models, to John Robinson, Esq., care of John Pender, Esq., Mount-street, Manchester.

All contributions must be announced in letters addressed to the gentlemen named, at the British Association, Portico, Manchester. All contributions will be carefully unpacked by skilled persons, and afterwards repacked. Carriage must be prepaid on all, except solicited contributions.

Manufacturers exhibiting their own apparatus are expected themselves to provide for the unpacking and arrangement within the limits at the disposal of the Local Committee, and to attend for the purpose at the Free-trade Hall, on Tuesday, the 3rd, and Wednesday, the 4th; on the latter day before 3 p.m. All this apparatus must be removed by the exhibitors on Thursday, the 11th of September.

The Local Committee intend to exhibit during Soirées only, on tables, in the Free-trade Hall. The arrangements for special soirées (see general advertisement) will not interfere with the tables appropriated for general purposes, which will remain during the week of the meeting.

The articles in the Free-trade Hall will be insured against risk by fire by the Local Committee, who will provide a general police supervision in the Hall.

Cabinet Specimens which are accepted for exhibition will be shown in locked glass cases, which, if desired, may be placed in charge of the exhibitors.

Inquiries to be addressed to the gentlemen named; or to the undersigned, at The Portico.

R. D. DARBISHIRE, } Local Secretaries
ALFRED NEILD, } for the Meeting.

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE. MEETING IN MANCHESTER.

4th to 11th SEPTEMBER, 1861.

RAILWAY PASSES.

Reception Room, Portico, Manchester, August, 1861.
The Executive Committee have arranged with the undermentioned Railway and Steam-Packet Companies to issue to gentlemen and ladies attending the meeting in September, as members or associates, PASSES entitling the bearer to a ticket to Manchester and back for one fare, between the 2nd and 14th of September:—

Lancashire and Yorkshire Railway Company.
London and North-Western Railway Company.
Manchester, Sheffield, and Lincolnshire Railway Company.
Great Northern Railway Company.
North-Eastern Railway Company.
Midland Railway Company.
Caledonian Railway Company.
North Western Railway Company.
City of Dublin Steam-Packet Company (via Holyhead).
North Lancashire Steam Navigation Company (to Fleetwood).
Belfast Steamship Company (to Liverpool).
Glasgow and Liverpool Royal Mail Steam-Packet Company.

Application for these Passes must be made (the sooner the better) to Local Secretaries, R. A. Portico, Manchester, stating the names of those who will use them, and if any are not yet members or associates, their full names and addresses, and the particular class of membership desired.

The pass cards will have to be exchanged at the railway or packet office for the Company's special ticket.

The Author has availed himself of the valuable information on important points of English History afforded by the Chronicles published by direction of the Master of the Rolls. Smith, Elder & Co. 65, Cornhill.

RE-ISSUE

THE FAMILY LIBRARY, IN A CHEAPER FORM,

With MANY CORRECTIONS and IMPROVEMENTS.

This series of works was projected and commenced by the late Mr. Murray at a time when he numbered amongst his business connexions and personal friends the most brilliant writers and most eminent scientific men of the day. Of this enviable position he availed himself with characteristic tact and energy; and, in the fulfilment of the plan which he had sketched out, secured the assistance of a host of authors whose works now rank amongst the classics of England.

Having spared no pains or expense to insure its favourable reception by the public, Mr. Murray was rewarded by the immediate success which was accorded to THE FAMILY LIBRARY. Its sale was very large and continuous. After some years the work passed into the hands of the late Mr. Tegg, who engaged competent writers to treat other topics of interest, and continued the series till it numbered eighty volumes, for which there has been a steady demand down to the present day. Upon the copyrights alone of these valuable works a sum of more than 12,000l. has been expended; and amongst the Contributors to the series will be found the following distinguished names:—

SIR WALTER SCOTT, BART.	REV. E. SMEDLEY.
ROBERT SOUTHY, LL.D.	REV. G. R. GLIGIO.
MR. LOCKHART.	SIR D. BAEWSTER, K.G.H.
DEAN MILMAN.	MR. COLERIDGE.
WASHINGTON IRVING.	SIR F. B. HEAD, BART.
ALLAN CUNNINGHAM.	MR. CROFTON CROKER.
MR. TYTLER.	PROFESSOR ATYOUN.
REV. J. WILLIAMS, A.M.	REV. T. CHETWODE ECSTACE.
REV. J. J. BLUNT.	MR. ROBERT.
SIR J. BARROW.	SIR FRANCIS PALGRAVE.

It having appeared to Mr. William Tegg, the present proprietor of THE FAMILY LIBRARY, that—in view of the gradual yet great increase of book-lovers, and the encouraging demand for every work of value that is attainable at a moderate price—something might be done to bring this mass of instructive and entertaining matter within the reach of a wider circle of readers, he has made arrangements which will enable him to reduce the price per volume to three shillings and sixpence; confidently expecting that both the public and himself will derive advantage from the increased circulation which may reasonably be reckoned upon. At this price the volumes will be carefully printed on good paper, and bound in cloth, with gilt edges.

To meet the convenience of Libraries, Book-Clubs, &c., the Volumes, in their new form, will be issued at the rate of thirteen at a time, at short intervals. The following is a list of those which are now ready:—

THE FIRST SERIES.

AYTOUN'S (PROFESSOR) LIFE and TIMES of RICHARD the FIRST.

BARROW'S (JOHN) LIFE of PETER the GREAT.

EDMOND'S (CYRUS) LIFE and TIMES of GENERAL WASHINGTON. 2 vols.

HEAD'S (Sir F. B., Bart.) LIFE of BRUCE, the African Traveller.

MR. BENTLEY'S

LIST OF NEW BOOKS
FOR AUGUST.

CONSUL HODGSON.

A RESIDENCE at NAGASAKI and HAKODATI in 1859-60. With an Account of Japan generally. By CONSUL HODGSON. To which are added, a Series of Letters on Japan, by HIS WIFE. 8vo. with numerous Illustrations.

J. HENEAGE JESSE.—MEMOIRS of KING RICHARD the THIRD and SOME of his CONTEMPORARIES. By J. HENEAGE JESSE, Author of 'The Court of England under the Stuarts,' &c. 8vo. with a Portrait, &c.

C. E. FRANCAELLI.—THE COOK'S GUIDE and HOUSEKEEPER and BUTLER'S ASSISTANT: a Practical Treatise on English and Foreign Cooking in all its Branches, and also Instructions for Pickling and Preserving Vegetables, Fruits, Game, &c.; the Curing of Hams and Bacon; the Art of Confectionery and Ice-making, and the Arrangement of Desserts. By CHARLES ELMÉ FRANCAELLI, Author of 'The Modern Cook.' Small 8vo. with Illustrations. 8s.

M. GUIZOT'S PERSONAL MEMOIRS. Vol. IV. 8vo. 14s. [Now ready.]

"We have here sketches of M. Guizot's great contemporaries—Talleyrand, Metternich, Wellington, Louis-Philippe, Emperor Nicholas, Louis Napoleon, Palmerston, &c."—*Birmingham Journal*. "This new volume deals with a brilliant and dramatic period in the constitutional history of France, from 1830 to 1840, and aims at something far higher than a passing popularity."—*Athenæum*.

NEW STORY OF SOCIAL LIFE.

EAST LYNNE. By the Author of 'Ashley.' 3 vols. post 8vo.

A REPLY to the OBSERVATIONS in 'THE QUARTERLY REVIEW' on 'THE AUTOBIOGRAPHY of LORD DUNDONALD.' By MARCUS. 8vo. with Charts.

The Hon. Mrs. YELVERTON'S 'MARTYRS to CIRCUMSTANCE.' Second and Concluding Parts, price 3s.

Dr. MARSHALL HALL.—BIOGRAPHICAL MEMOIRS of MARSHALL HALL, M.D. F.R.S., Corresponding Member of the Institute of France, and Foreign Associate of the Academy of Paris. By HIS WIDOW. 8vo. with a Portrait. 14s. [Now ready.]

"Dr. Marshall Hall was not less an amiable man than a scientific inquirer, with an intellect of noble proportions and lofty aim. In the world of physiological science he may fairly be ranked as the companion of Harvey and Bell."—*Athenæum*. "This work cannot fail to command respect and sympathy, not less for the sentiments which animate the author, than for the many interesting facts it contains relative to a public benefactor, an able physician, an accomplished gentleman, a thoroughly good-hearted man."—*Observer*.

JOHN HUBS and JEROME OF PRAGUE.

The LIFE and TIMES of CARDINAL JULIAN. By the Rev. R. C. JENKINS. 8vo. 14s. [Now ready.]

"Mr. Jenkins treats with candour and learning a life which bears the impress of greatness. He has succeeded in developing the high aims and profound statesmanship of Cardinal Julian."—*Saturday Review*. "Soberly and truthfully written. The times in which the Cardinal moved, and upon which his strong mind made a marked impression, were very full of incidents. The book has solid value, and deserves close attention."—*Examiner*.

POPULAR ANSWERS to "ESSAYS and REVIEWS." Being Lectures delivered in various Places. By the Rev. Dr. CUMMING. Small 8vo. 4s. [Now ready.]

JUST PUBLISHED.

NEW MODERN SEA STORY.

VONVED the DANE, the ROVER of the BALTIC. 2 vols.

"This is a great book, both in conception and execution. The Author possesses a rare faculty of exciting and arresting attention. In its own school this story has no rival. Victor Hugo might be proud to have written some of its chapters, than which he has never written anything more thrilling or more terrible; and Alexandre Dumas himself, so powerful in describing prison scenes, has not exceeded this writer in his account of the Rover of the Baltic."—*Morning Post*.

NEW VOLUME of 'BENTLEY'S STANDARD NOVELS.' The SEMI-ATTACHED COUPLE. By the Author of 'The Semi-Detached House.' Price 2s. 6d.; cloth gilt, 3s.

THE HON. MRS. YELVERTON.

MARTYRS to CIRCUMSTANCE. By the Hon. Mrs. YELVERTON. Part I. Seventh Thousand. Price 2s.

With Four Plans and a Portrait, price 3s.

LORD DUNDONALD'S AUTOBIOGRAPHY.

"This thrilling narrative will be read with interest as long as England possesses a navy, and ought to be a prize-book in every school in England."—*London Review*.

A LIBRARY EDITION may be had, in 3 vols. 8vo. 22s.

London: RICHARD BENTLEY, New Burlington-street, Publisher in Ordinary to Her Majesty.

13, Great Marlborough-street.

HURST & BLACKETT'S
NEW PUBLICATIONS.

THE OKAVANGO RIVER. A Nar-

native of Travel, Exploration, and Adventure. By CHARLES JOHN ANDERSON, Author of 'Lake Ngami.' 8vo. with Portrait of the Author, and numerous Illustrations. 21s.

"Mr. Anderson's book, illustrated with many animated pictures of adventures connected with the wild sports of the journey it describes, is one that will be popular as a budget of trustworthy traveller's tales, besides being valued for the information it gives to geographers."—*Examiner*.

"Mr. Anderson's adventures stamp him as one of the most enterprising travellers of modern times, and well worthy to take rank by the side of the Livingstones and others, who have attempted to penetrate the interior of the great African continent. Every page of his present work is full of interest to the reader."—*Observer*.

"A truly entertaining volume, the importance of which to African enterprise cannot be calculated. It is full of curious details, indicative of vast explorative energy and fearless courage."—*Messenger*.

A SAUNTER THROUGH the WEST END. By LEIGH HUNT. 1 vol. 16s. 6d. bound.

"The title of this work is unexceptionable; it is happily and appropriately chosen to denote the gossiping contents of the book—light, chatty, and amusing. The author quietly puts his arm in that of his reader, and as he passes on from Hyde-park Corner down Piccadilly or Pall Mall to the Haymarket and Soho, points out the anecdotes connected with each locality. Touches of quiet, genial humour, playful interruptions and amusing stories told in a quaint, unaffected style contribute to the attractive conversational tone adopted, as he saunters along with his friend of the hour. The reader will find himself agreeably carried on from the first to the last page of the 'Saunter' by its cheerful tone and entertaining gossip."—*Literary Gazette*.

"Few men felt, as Leigh Hunt did, the human poetry of the old memories that crowd upon the lettered and thoughtful rambler about London streets. His gentle, genial humour shines always in a book like this—worthy companion to his 'Town' and 'Old Court Suburb.'"—*Examiner*.

"If any of our readers are in want of a genuine gossiping volume written by one who was deservedly a favourite in the world of letters, we can recommend them Leigh Hunt's very pleasant 'Saunter.' It will suit town or country readers equally well."—*Oracle*.

THE SECRET HISTORY of the

COURT of FRANCE under LOUIS XV. Edited, from rare and unpublished Documents, by Dr. CHALLICE. 3 vols. with Portraits. 21s. [Next week.]

HENRY IV. and MARIE de MEDICI.

From Original and Authentic Sources. By Miss FREER, Author of 'The Lives of Marguerite d'Angoulême, Jeanne d'Albret,' &c. 2 vols. with Portraits. 21s.

"In presenting so complete and interesting a narrative, Miss Freer has done good service to the public, besides enhancing her own well-earned reputation."—*Star*.

JAVA; or, How to Manage a Colony:

Showing a Practical Solution of the Questions now affecting British India. By J. W. B. MONEY, Esq. 2 vols. 21s.

NOTHING NEW. By the Author of

'JOHN HALIFAX, GENTLEMAN.' Illustrated by J. E. MILLAIS, A.R.A. Forming the New Volume of HURST & BLACKETT'S STANDARD LIBRARY of CHEAP EDITIONS of POPULAR MODERN WORKS. 8s. bound.

THE NEW NOVELS.

ALONE in the WORLD. By the Author of 'COUSIN GEOFFREY,' &c. 3 vols.

PAUL FOSTER'S DAUGHTER. By DUTTON COOK. 3 vols.

"This novel has the rare merit of growing more and more interesting as it proceeds. It is not often that a novel so witty, wise, and healthful in spirit offers itself for perusal. It is a thoroughly right-minded book. The characters are noble and the artist, Paul Foster himself, is an excellent character, and his daughter Sylvia is a young lady who will find an adorer in every man who reads the book. We recommend our readers to get the book for themselves."—*Athenæum*.

"A good novel. The story is very ingeniously constructed, and the interest is completely sustained throughout."—*Spectator*.

"Mr. Cook belongs to the Charles Dickens school of literature, in which variety, liveliness, and power of working on the affections are the prominent features. The story of 'Paul Foster's Daughter' is very interesting. Sylvia is one of the most charming creations with which fiction has for a long time presented us."—*Lit. Gas.*

A FAMILY HISTORY. By the Author of 'THE QUEEN'S PARDON.' 3 vols.

"A very good novel, well imagined and well told."—*Post*. "The Author of 'Family History' betrays no falling away from the vigorous promise of her former work. It is a specimen of a class of far more than average excellence. The story exercises a fascination over us, and we take leave of this very agreeable authoress with the wish that we may often enjoy the fruit of her pleasant, facile, and attractive pen."—*Oracle*.

UNDER THE SPELL. By the Author of 'GRANDMOTHER'S MORRIS,' 'WILDFLOWERS,' &c. 3 vols.

"The best story hitherto written by a very pleasant novelist. It is throughout a good story—rapid and rich in incident—so that nobody will leave unfinished."—*Examiner*.

HOMELESS; or, a Poet's Inner Life.

By M. GOLDSCHMIDT, Author of 'JACOB BENDEXER.' 3 V.

A HERO in SPITE of HIMSELF. By Captain MAYNE REID, Author of 'The Sculp Hunters,' &c. 3 vols. [Just ready.]

MR. DICKENS'S NEW WORK.

Second Edition, in 3 vols. post 8vo.

GREAT EXPECTATIONS. By Charles DICKENS.

In 3 vols. post 8vo.

THE CONSTABLE of the TOWER: an Historical Romance. BY WILLIAM HARRISON AINSWORTH. With Illustrations by Gilbert.

"The Constable of the Tower" is one of the best of our English historical romances."—*London Review*.

Fcap. 8vo. 3s. 6d.

TANNHAUSER; or, the Battle of the Bards: a Poem. By NEVILLE TEMPLE and EDWARD TREVOR.

"Full of beauty of thought, melody of language, and sudden pictures that rise like visions before the reader—it is full also of noble purpose and distinct morality.... For very many years there has not been a more remarkable poem offered to the English public."—*Times*, August 2.

Post 8vo. price 10s. 6d. with Illustrations.

A CRUISE in the CLAYMORE on the COAST of SYRIA during the Present Troubles. By Mrs. HARVEY, of ICKWELL-BURY.

"Mrs. Harvey's narrative of these events, as well as her account of the numerous places of note which she visited, is straightforward, unadorned, and remarkably free from feminine exaggeration; and we have great pleasure in heartily recommending her book to all who take an interest in the scenes which she describes."—*Spectator*.

Post 8vo. 4s.

FORAYS among SALMON and DEER. By J. OONWAY.

"He tells his story in a very pleasant and amusing manner; and his book cannot fail to be welcome to all true lovers of the sports which he describes."—*Spectator*.

Second Edition, 2 vols. post 8vo. 16s.

LA BEATA: a Novel. By Thomas ADOLPHUS TROLLOPE.

"La Beata" is a novel of which there is nothing to say but what is good. It is a charming story, and though the theme is as old as the world, it has the eternal and ever-renewed freshness of life itself. The story required to be very skilfully handled; and, in his management of poor Beata, the author has shown himself an artist as well as a thorough gentleman. It is a story in which the narrator reveals himself and his own nature more than the incidents and characters with which he has to deal. As a picture of Italian domestic and interior life and manners, it is excellent."—*Athenæum*.

NEW SPORTING NOVEL.

Third Edition, post 8vo. 5s.

MARKET HARBOROUGH; or, How Mr. Sawyer went to the Shires.

"From the very beginning of the hero's adventures a certain interest is experienced which never falls off, and the only annoyance felt is that the visit of Mr. Sawyer to the Shires terminates so soon. Indeed, the fault here perceptible may with equal truth be urged against Major White Melville in some of his previous writings, his finishing being too abrupt."—*Press*.

2 vols. post 8vo. 18s.

THE ENGLISH at HOME. Essays from the *Revue des Deux Mondes*. By ALPHONSE ESQUIROS. Translated and Edited by LASCELLES WEAUXALL.

"M. Esquiros himself is a sort of French Washington Irving, in his zealous pursuit and his cordial appreciation of the latent characteristics of English life; though at the same time that he views English manners and institutions sympathetically, even those that dissent from him must allow that he judges them with a frank independence.... We can go further with M. Esquiros in desiring that a better agreement on the spirit of the institutions which rule civil life will tend to approximate the character and genius of the two peoples still nearer; and, as his own book is unquestionably an effort in this direction, it has our warmest sympathy and our cordial approbation."—*Times*, May 26, 1861.

LITERATURE

Recent Recollections of the Anglo-American Church in the United States. By an English Layman, Five Years Resident in that Republic. 2 vols. (Rivingtons.)

THE author of these 'Recent Recollections of the Anglo-American Church' allows enthusiasm to mislead his judgment. The severance of the North American States from the mother-country was, with him, a consequence of neglecting to plant amongst the early settlers a State Church. Had the efforts of the Society for the Propagation of the Gospel in the eighteenth century been properly supported by the parent government, the "Layman" is of opinion that the colonists would not, to this day, have objected to pay taxes levied without their consent, and would be still living in contentment and prosperity under the mild sway of a Secretary of State and a Circumlocution Office on the banks of the Thames. Startling as this view may be to the majority of orthodox churchmen, and ridiculous as it will unquestionably appear to philosophic students of history, it is not original with the "Layman," but has been gravely maintained by Anglican divines of learning and influence. The Bishop of Oxford does not go so far as to argue that a Colonial State Church would have rendered a Declaration of Independence impossible; but he has put on record his opinion that the War of Independence and the French Revolution may be attributed to the absence of sacerdotal influence in the British dependencies. "It is impossible," observes the subtle Prelate, in his 'History of the Church in America,' "to close the scene without reflecting how different it might have been, if the mother-country had long before faithfully established the strong bond of true community of faith between herself and her colonies. Those whose minds the Church, weak as she was, had leavened were by her healing influence kept loyal in the day of trial. What might not have been the consequence if, instead of spreading division freely in that land, and keeping her maimed and impotent, we had, with a true faith in God, planted her amongst our Western Children in her strength and beauty? The colonies might now, perhaps, have been as much an independent nation, but they might have reached this state by a gradual progress to natural maturity, their youthful affections might never have been torn from us; and England, America and the world might have been spared those bitter sufferings with which they have been visited in the War of Independence, and its clear consequence, the French Revolution." The Bishop and the "Layman" concur in thinking that the influence of a Colonial State Church would have resulted in greater servile readiness to endure tyranny on the part of the ruled, not in increased enlightenment and a more lively sense of justice on the part of their rulers. It would have inculcated in the former patience under wrong, and have protected the latter from the natural consequences of their own misconduct. The one party would have been taught to exercise a Christian virtue and the other side left in quiet possession of all they were contending for. In other words, the rich harvest from the planting of many churches would have been compounded equally of spiritual gain to the colonists and political ascendancy to the inhabitants of the mother-country. In these days of caution it is as refreshing as it is rare to hear the Anglican Church thus upheld, on the

ground that it is a useful political engine for reconciling the masses to the evils of bad government.

That the clergy would have exercised an influence injurious to the true interests of the country, if they had been numerous and powerful, there is no reason to doubt; for few and weak as they were, they zealously adopted a course of action which, under a guise of pious care for human souls, would fain have surrendered the liberties of the young Republic. As soon as the agents of the monarchical party in America commenced a reactionary agitation for the triumph of despotic principles, either by restoring the colonies to George the Third, or establishing a Transatlantic dynasty with the Bishop of Osnaburgh, or Washington, or some such puppet as "King Adams" for a founder, the Anglo-American clergy busied themselves in behalf of the retrograde movement. At the same time that the followers of Humphreys and Alexander Hamilton were hoping to set up a regal government, Samuel Seabury was unsuccessfully soliciting the Archbishop of York to make him an agent for transmitting to the States the mystic influences of the Apostolic Succession. In the May of 1784 the clergy of New York, New Jersey, and Pennsylvania met to discuss the best means for transplanting Anglican Episcopacy to American soil. The movement spread, and in due course application was made to the English Primates for their spiritual co-operation. Dr. Seabury was the first candidate for consecration at the hands of a British Archbishop. Hastening to the mother-country in 1784, he implored the Archbishop of York (the See of Canterbury being then vacant) to qualify him to discharge the episcopal functions. Such, however, was the state of public feeling towards the revolted States, that the Primate either did not wish or did not dare to comply with the request of his petitioner. Dr. Seabury, however, was determined not to return to his native country no richer than he left it. His ambition was to be a bishop; and a bishop he was resolved to be ere he revisited his own people. As he could not obtain Anglican consecration, he would even try for the next best thing—a Scotch qualification. "Dr. Seabury thereupon had recourse to the Church of Scotland, where the true succession, anciently derived from that of England, was carefully preserved; and there, after due consideration of the important and, at first, startling application, in the month of November, 1784, the first American bishop was consecrated by three Scottish bishops,—those of Aberdeen, Ross, and Moray,—their whole Episcopal College, at that time, consisting of only four." Happy in his consecration by three Scotch bishops, which may certainly be regarded as equivalent to consecration by one English Archbishop, Dr. Seabury returned to his infant diocese, and was for a short time the only efficient representative of the Apostles in the United States. He was not, however, long without companionship in the episcopacy. The reactionary party steadily gained ground amongst the wealthier inhabitants of the towns, and the "king's friends" in America obtained so many new adherents, that a policy of conciliation was recommended at St. James's by those who acted as mediators between the King of Great Britain and the leaders of the monarchical party in the Republic. The Church of England, regulating her course by the royal smile, no longer declined giving her sanction to the spiritual instructors of a rebellious nation; and the United States at length obtained a supply of bishops of real Lambeth manufacture. Dr. Provoost, Bishop of New York, and Dr.

White, Bishop of Pennsylvania, received consecration from the Most Reverend John Moore, Primate of Canterbury, in the February of 1787,—and three years later Dr. Madison, the Bishop of Virginia, obtained episcopal rank from the same source.

"The American Church," to use the language of the "Layman," "having thus secured four bishops of the true succession from the old country, and being in possession, therefore, of all that was necessary for the continuation and extension of her own episcopacy," took root, and, in the opinion of her admirers, has done great things for the spiritual edification of the States. At the present time it has 139,611 communicants, 43 bishops, and 2,065 clergy, i.e. a clergyman to every 67 communicants, and a bishop to every 48 clergymen. The principal place of worship is Trinity Church, New York, which, unlike most churches in the United States, has the questionable advantage of a rich endowment in the shape of a tract of land granted by deed to the corporation of the church by Lord Cornbury, in 1705. Since the date of donation this property has been built upon, so that now it forms a compact and valuable portion of the city, and the revenue derived from its rents causes the church and its clergy to bear some faint resemblance to the cathedral and chapter of a provincial capital in England. Founded in imitation of the Anglican Establishment, the Episcopal Church of the United States has been faithful to its origin and traditions. For nearly eighty years, that is to say, throughout its whole life, it has in everything meekly followed the example of its parent. In politics as well as doctrine, in tone as well as form, it has been a feeble echo of the high-church party on this side the Atlantic. Oxford Puseyism was accurately reproduced by the Anglo-American clergy; every movement in the mother-church being accurately imitated by the child. When Keble gave utterance to his strains of pious melody, their mellow cadences inspired the Rev. Arthur Cleveland Coxe to put forth his miserable little sing-song rhymes, entitled 'Christian Ballads.' Full of awe, and penetrated with a sense of the sacred loveliness of a Christian temple, Keble says:—

Even the very walls of the dread place,
And the tall windows with their breathing light,
Speak to the adoring heart.

—Burning to celebrate Trinity Church, New York, Mr. Coxe says it resembles a Prayer-Book:—

Not this a Gothic gasing-stock,
Where naught is meant or told;
Translated into solid rock,
The Prayer Book's self behold!
Sermons in stones! Yes!—more beside,
A language and a voice;
Much uttered, but far more implied
That makes the heart rejoice.

The "Layman's" credulity extends further than having faith in the ability of the Anglo-American Church with its 139,611 communicants to work, even at this late date, a spiritual revolution in America. He believes implicitly that the Rev. Eleazar Williams was the *de jure* King of France, being no other than the Dauphin who is accounted for in history as dying in the Temple, in 1795, but who is, in the new statement, represented as having been secretly removed to America, and brought up by a family of Indian blood, named Williams. It would take up too much time to point out to the "Layman" the many reasons there are for rejecting this romantic story, which has no stronger testimony in its support than the many other astounding revelations elaborated by American ingenuity. A few years since, a writer in an important organ of United

States literature created "a sensation" by proving that the present Emperor of the French was no member of the Buonaparte family whatever, but simply a New York adventurer named Clofin Bowen. During his residence in New York, it would appear that the veritable Prince Louis Napoleon formed a close intimacy with a citizen of the States named Bowen. The mutual resemblance of the two friends was such that each was often mistaken for the other. On the evening previous to the Prince's intended departure for Europe, he and Clofin met, spent an hour in a theatre, and then supped with two "pretty horsebreakers" in a house of vicious entertainment. The Prince, his friend, and the two girls had a private room, and were waited upon by the landlady of the establishment. That supper was the last meal of which Prince Louis Napoleon ever partook. The champagne was still sparkling amidst the flowers on the table when the Prince fell down from his chair in an apoplectic fit, and almost in an instant was dead. Consternation seized on the survivors. The landlady said that the death of so distinguished a personage in her house would attract the attention of the police, cause her licence to be recalled, and lead to her ruin. "Don't be alarmed," said Clofin, after a few minutes' deliberation, "I will go to Europe and personate Louis Napoleon. Our intimacy has been such that I know all his private affairs. Here, I will take his clothes, purse, watch, rings. His luggage is already on board the vessel in which he has taken a cabin. His valet he has already dismissed. Therefore, nothing remains for me to do but to go on board and take possession of his cabin. First, however, we must bury poor Prince Louis." In a few minutes the three women and Bowen dug a grave in a yard attached to the premises, and in that grave Louis Napoleon now rests. The remainder of the story can be imagined. Clofin Bowen, the daring adventurer, is now Napoleon the Third, Emperor of the French. His confederates live still, occupying a good position in American society with funds regularly transmitted to them from Paris. Such are the vaguely remembered outlines of a story which, extravagant as it is, was told with such exact attention to minute details, and was backed up at every point with such an abundance of testimony, explanation, suggestion and arguments, all alike plausible, that it provoked much discussion and obtained many believers. It is true that the Rev. Eleazar Williams's story presents this difficulty to those who on purely historic evidence would not hesitate to reject it: he, a Christian minister, of good repute and unquestionable intelligence, believed it, and maintained that the Prince de Joinville, in 1841, endeavoured to persuade him to sign a document relinquishing his claim to the French crown. This, unquestionably, is a point worthy of consideration; but the land of Barnum's triumphs—the land of spirit-rapping and table-turning—has furnished us with so many instances of the intellect being upset by a lively and unrestrained imagination, that we have no difficulty in accounting for the worthy missionary's absurd fiction, without casting doubt on his honesty of intention.

The account given by the "Layman" of the pernicious results of Revivals in America is free from exaggeration, and merits attention. Speaking of the "Revivalist Hymns," he says:

"The 'Hymn-book' was a most important ingredient in the composition that was administered. I have one now before me. It is entitled, 'Revival Gems; a Collection of Spirit-stirring Hymns, specially adapted to Revivals.' And gems they indeed are, whether poetically or reli-

giously considered! Some of them were exquisitely adapted to revive a fanatical feeling, sung as they were to the most ranting, and often boisterous and profane, tunes. For instance,—

We're travelling home to heaven above;
Will you go? will you go?
To sing the Saviour's dying love;
Will you go? will you go?
Millions have reach'd this blest abode,
And millions now are on the road,
Anointed kings and priests to God—
Will you come? will you come?

The refrain of this hymn was given in the wildest, most exciting manner, the fingers often accompanying it with violent gesticulations—turning to their neighbours, and addressing the question personally to them, 'Will you go? will you go?' There was another of a similar style,— 'Will you come? will you come?' Its refrain was this:—

Come, anxious sinner, come and see;
Come, guilty sinner, come and see;
Will you come? will you come?

The effect of this was wild and startling, anything but solemn and devotional. The same, indeed, may be said of most of them. Another favourite one went by the familiar name of 'Just Now.' I must quote a verse or two to show its puerile character:—

Christ is knocking, Christ is knocking,
Christ is knocking, Christ is knocking,
Christ is knocking, just now—
Just now, Christ is knocking, just now.

He is willing, He is willing,
He is willing, He is willing,
He is willing, just now—
Just now, He is willing, just now.

A very exciting one in its chorus was called 'Bound for Canaan.' It is a great favourite with camp meetings of the negro Methodists and Ranters:—

O, Canaan, bright Canaan,
I'm bound for the land of Canaan;
O, Canaan is my happy home,
I'm bound for the land of Canaan.

There was one of rather a more lofty and pretending character, written specially for the atmosphere of Wall-street,—the Lombard-street of New York, —and containing also a hit at the Church. It opened thus:—

Not to the man of dollars,
Not to the man of deeds,
Not to the man of cunning,
Not to the man of creeds;
Not to the one whose passion
Is for a world's renown,
Not in a form of fashion
Cometh a blessing down.

The allusions to the *dollars* and the *creeds* explain themselves. One more specimen, and I have done. It is one which was sung in a most rattling style, particularly the refrain:—

Whene'er we meet, you always say,
What's the news? what's the news?
Pray, what's the order of the day?
What's the news? what's the news?
My Saviour hath done all things well,
And triumph'd over death and hell;
That's the news! That's the news!

The "Layman" would have us believe that the Anglo-American Church was powerfully instrumental in bringing to a conclusion the worst excesses of the Revivalist phrenzy in the States. In this he, of course, speaks as a partisan, and attributes to the curative means employed by his friends that calm which, by a law of nature, invariably follows a storm.

The Life and Typography of William Caxton, England's First Printer, with Evidence of his Typographical Connexion with Colard Mansion, the Printer at Bruges. Compiled from Original Sources, by William Blades. Vol. I. (Lilly.)

"A man not quite stupid nor benumbed with sloth!" was the negative praise bestowed upon England's first printer by England's earliest systematic biographer, John Bale. The Bishop of Ossory's 'Illustrium Majoris Britanniae Scriptorum Summarium' was published in 1548, not quite sixty years after Caxton's death; therefore, within such an interval as made it competent for any one of reasonable diligence to have gathered up the most interesting facts

respecting him, and bequeathed to us a more lively portraiture of the man's character than is contained in the brief and (to all appearance) grudging line of commendation here quoted. "Non ignavia torpens!" We should think not, seeing that he has left behind him at least 18,000 printed pages, nearly all folio size, the issue of his press, and, for the most part, revised by himself; out of which number more than 4,500 pages consist of translations executed by his own hand. This does not include the 'Vitas Patrum,' printed by Wynken de Worde after Caxton's death, but translated by the latter, and, as Wynken de Worde informs us, "finished at the last day of his life." Neither does it include any but those works known with certainty to have been printed by Caxton, in England, commencing with the 'Dictes or Sayengis of the Philosophes,' first printed at Westminster, in 1477. And all this he achieved within the short space of fifteen years,—a fact which, taken in connexion with the time of life when he commenced his occupation of printer, namely, when between fifty and sixty years of age, must stamp him as a perfect model of industry and perseverance. Of such a man had Bale set himself to trace the history, what a world of pains and almost fruitless research would have been spared to subsequent antiquaries and biographers! On one point especially he would appear to have been in a position to give us some accurate information, namely, with respect to the master from whom Caxton acquired his art; for Bale himself resided for some eight years in the Low Countries, and, doubtless, heard numerous traditions there of the Merchant Adventurer, afterwards Printer at Westminster. This, however, he forbore to do, nor must we blame the learned bishop too hardly for what, in reality, did not come within the scope of his work. We only wish that it had been otherwise. As it is, all that we know of the personal history of Caxton mainly consists of the information that he has himself given us in the Prologues and Epilogues of the several works that he printed; and this, notwithstanding all the researches of Lewis, Ames, Oldys, Herbert, Dibdin, and other enthusiastic bibliographers. But, fortunately, it is a quality inherent in some natures not to suffer their ardour to be damped in any favourite pursuit by the failures or mistakes of their predecessors:—

This proverb rushes to their heads,
The many fall, the one succeeds.

—And thus we now have a new Life of Caxton by one who, approaching his subject in a thoroughly independent way, taking nothing for granted upon the authority of high names, diligently travelling over the grounds before trodden, observing many things unnoticed by previous travellers, and frequently turning aside into fresh paths, has succeeded in laying before us some additional information and some new views respecting England's first printer.

About the year 1422-3, there was born in the Weald of Kent, into a family named Caxton, a male infant who received the baptismal name of William. It would be interesting to know who were this child's parents, but this is denied us. Even the precise place of his birth is veiled in obscurity. "Lambarde says that the Weald had always been a very undefined portion of Kent, and that even in his time it was an easier thing to deny its existence altogether, than to define its boundaries with any accuracy." There was, however, in the fourteenth century, a manor of Causton, or Caxton, in the Weald of Kent, in the hundred of Hadlow, which, although alienated to a family named Watton, may still have sheltered one of the ancient stock, and here probably it was that

William Caxton was born. Fuller assumes the town of Caxton in Cambridgeshire as his birthplace, but this is founded solely upon the identity of the name, and is in direct opposition to Caxton's own statement that he was born "in Kente in the Weeld." "Still," says Mr. Blades, "a coincidence in connexion with this town may be worth noting. Earl Rivers, the patron and employer of Caxton, on his first attempting the new art of printing, had ancestors who owned the town of Caxton; but there is nothing to lead us to suppose that either the family of Wydeville or Caxton had any connexion with this town in the fifteenth century." The name of Caxton, Caxton, or Causton, he goes on to observe, was common in England during the fourteenth and fifteenth centuries; and in a note he enumerates several persons that bore it, but without being able to trace any connexion between them and our first printer. Of his childhood all we know is that his father and mother sent him to school, and the next fact in his life that we become acquainted with is his apprenticeship in the City of London to Robert Large, one of the richest and most influential merchants of his time. This took place in the year 1438, which is the first precise date in Caxton's life that we arrive at, and gives the starting-point for calculating the year of his birth. This, we may observe, has been fixed with much show of reason, by Mr. Blades at some ten years later than the date assigned by previous writers. "Large was a mercer, and the son of a mercer, and, according to Stow, was born in the City of London. In 1430 he filled the office of Sheriff, and in 1439-40 was elected Mayor. The Mercers' Company was then, as it is now, the oldest chartered company in existence. Its members comprised the merchants of highest standing in the City. It paid more money to the king's revenue, sent to a "Riding" more well-mounted men, spent larger sums on its liveries, and yielded from its ranks more sheriffs and mayors than any two of the City companies besides. Of this company, Large was elected Warden (or, as the old clerk writes it, "Gardein") in 1427, and appears to have made himself very popular, if we may judge from the unusual expenditure at his "chivacherie," when he succeeded to the mayoralty. The Mercers, on that occasion, rode before their mayor "in new liveries, preceded by sixteen silver trumpets made for the occasion." It must have been of no slight advantage to Caxton upon starting in life that he did so under the auspices of one who enjoyed so much public consideration. The house in which Large resided, and of which Caxton now became an inmate, "stood at the north end of the Old Jewry, and appears to have been a very ancient and extensive mansion." The household consisted of at least eighteen persons, besides menial servants. Caxton was one of eight apprentices, all of whose names are preserved, but little else is recorded respecting them. In their society, and gradually learning the mysteries of the mercer's craft, doubtless also observing much, and like a gallant 'prentice taking some part in the public events that transpired,—Caxton spent the next three years of his life, until on the 24th of April, 1441, his master died, bequeathing in his will various sums to his several apprentices, of which Caxton's share was twenty marks, equal to about 150*l.* or 160*l.* of our money. Whether Caxton's indentures were now transferred to some one else does not appear, but it is most probable that such was the case; also that it was by mutual agreement between himself and his new master, arranged that he should "be sent to some great mart town abroad to obtain experience in trade,"

as was the custom of the times. "Whether Caxton left England by his own desire," says Mr. Blades, "or at the instance of his new master, is quite unknown, but that he took up his abode in the Low Countries, and probably at Bruges, in the same year that his first master died, 1441, we gather from his own words in the Prologue to the 'Recuyell,' where he states, in 1471, that he had been abroad thirty years."

Caxton, it will be recollected, was at this time in his twentieth year or thereabouts; and it must have been a highly favourable opening in his career as a "merchant adventurer" to find himself located in a city like Bruges, which was not only the capital of the Dukes of Burgundy, "but the metropolis of trade for all the neighbouring countries." And, like a man of true enterprise, he made the most of his advantages, and quickly rose to a position of distinction among the merchants and traders of "the English nation" at Bruges. It has been discovered, from some law proceedings still extant, that so early as 1450 he was considered sufficient security for the sum of 110*l.* sterling,—more than equal to 1,000*l.* of our present currency. About this time, also, or earlier, it is probable that he was admitted to the freedom of his company—certainly before 1453; for in that year he made a journey to London in company with Richard Burgh and Esmond Redeknappe, "when all three were admitted to the livery of the Mercers' Company,—a privilege to which the admission to the freedom was a necessary step." As an English merchant at Bruges, he was, of course, subject to the regulations of the chartered Company of Merchant Adventurers, "whose governor had control over all English and Scotch traders in those parts,"—a most important association, which had its origin in the thirteenth century, and from time to time had its privileges confirmed and extended by successive sovereigns down to Edward the Fourth, who granted it a still larger charter in 1462. Two years later, we find Caxton filling the important office of Governor of this association,—a position in which he was invested with "full power to govern, by himself or deputies, all merchants and mariners; to make such minor regulations for the conduct of trade (not contrary to the international treaties) as seemed to him fit; to decide all quarrels, and to pass sentences in a Court composed of himself, as Governor, and twelve Justices to counsel and advise him," &c. Soon after Caxton became Governor there was some trouble with respect to a renewal of the treaty of commerce between the Duke of Burgundy and the English Sovereign; and Caxton was associated in an embassy with Sir Richard Whitehill, a clever statesman of the period, to negotiate a renewal of the treaty. They were not successful, however, in their endeavours. The treaty was to expire in November, 1465; and in October of that year it was still unrenewed. This produced much uneasiness both among the Mercers and other fellowships at home and the association of Merchant Adventurers abroad; and there was great correspondence backwards and forwards upon the subject. But, in fact, a serious misunderstanding had sprung up between the two Courts,—the result of which was, that the Duke of Burgundy excluded all English-made cloth from his dominions; and the English Parliament retaliated by excluding all Flemish goods from the English ports. This unsatisfactory state of things continued until the death of Philip the Good, which took place on the 15th of June, 1467. Upon the accession of his son, Charles the Bold, however, the aspect of affairs changed

altogether. Lord Scales, afterwards Earl Rivers, John Russell, and other ambassadors, were sent into the Low Countries to conclude a treaty of marriage between Charles, Duke of Burgundy, and the Princess Margaret, sister of our Edward the Fourth. This marriage was solemnized at Bruges with great splendour, on the 5th of June, 1468; and "it is not improbable that at this period Caxton attracted the notice, and gained the goodwill, of the Duchess herself, as he was certainly in her service two years later." Henceforward, there was no difficulty in renewing the commercial relations between the two countries. In September, 1468, the King in Council issued a special command to the Court of Mercers, to select fit persons "to go out in embassy with divers ambassadors into Flanders," for the purpose of negotiating a treaty; and the Court thereupon nominated William Redeknappe, John Pikeryng and William Caxton for the office; at the same time voting 40*l.* for the costs and charges of the two former. From the absence of any provision for Caxton's travelling expenses, it is presumed that he was already in Bruges, where he was joined by his fellow ambassadors, and the treaty was amicably concluded before the end of October in the same year.

Here we take leave of Caxton in his capacity of Governor of the "Merchant Adventurers," merely observing that, from one or two documents still extant, and quoted by Mr. Blades, it is evident that he still filled that office in 1469; but the precise date of his resigning it, and entering into the service of the Duchess of Burgundy cannot be ascertained. Neither is it clear that he was present at the imposing ceremony that took place at Ghent on the 4th of February, 1470, when the Duke of Burgundy was invested with the Order of the Garter, and the oration of John Russell was delivered, now so famous as one of the earliest works connected with the Caxton Press.

"About March, 1471, he was actually in the service of the Duchess, receiving a yearly salary and other benefits." The nature of this service is not clear, but that it was an "honourable office" we agree with our author, "admits of no doubt, and that it was one in which Caxton's knowledge and talents as a merchant would be serviceable seems probable," especially as we learn that it was not derogatory to a regal Duchess, in those days, to engage in private mercantile speculations, and that, in fact, the English King granted to his sister "special privileges and exemptions for her own private trading in English wool."

At all events, Caxton had leisure for the completion of his first literary enterprise; one commenced two years earlier, namely, the translation into English of the '*Recueil des Histoires de Troye*,'—a French historical romance, written or compiled by Raoul Le Fèvre, in 1464. The translation of this work, Caxton himself informs us, was commenced by him at Bruges, on the 1st of March, 1468, new style 1469, was carried on at Ghent, and finished at Cologne on the 19th of September, 1471, when he presented to his mistress, the Duchess of Burgundy, a complete copy. In the Prologue to it he discourses pleasantly both about his motive in undertaking the work and the manner in which he carried it on.

The Duchess took an interest in his work, ordered him to complete it, and even went the length of criticizing the portion already done. Had she been more free in finding *defaute* with his *englishse*, it would not have been altogether without reason. The Duchess, however, being by no means too critical, not only graciously received his translation, but "largely rewarded" him for the same,—as

Caxton informs us in the Epilogue to the same when printed. The translation once achieved, copies of it were much sought after; which circumstance, according to Caxton's own account, led him to avail himself of the newly-discovered art of printing to furnish them forth. His words are these:—

"Thus ende I this book whyche I have translated after myn auctor as nyghe as god hath gyven me connyng, to whom be gyuen the laude and preysyng. And for as moche as in the wrytyng of the same my penne is worn, myn hande wery and not stedfast, myn eyen dymed with ouermoeche loking on the whit paper, and my courage not so prone and redy to labour as hit hath ben, and that age crepeth on me dayly and febleth all the bodye, and also be cause I haue promysid to dyverse gentilmen and to my frendes to addresse to hem as hastily as I myght this sayd book. Therefore I haue practysed and lerned at my grete charge and dispense to ordeyne this said book in prynte after the maner and forme as ye may here see, and is not wroten with penne and ynke as other bokes ben, to thende that euery man may haue them atones, for all the bookes of this storye named the recule of the historyes of troyes thus enpryntid as ye here see were begonne in oon day, and also fynishid in oon day."

This passage brings us at once to a consideration of the question, where, how, and by whom was this work, the first that issued from the Caxton Press, printed? The commonly received opinion hitherto has been that it was printed by Caxton himself at Cologne, and in the same year and month that it was translated, namely, September, 1471. Mr. Blades, however, far from accepting this conclusion, combats it in all its points; and in two of those points, at least, as it appears to us, with perfect success. We shall endeavour to set forth his arguments, both negative and positive, as briefly as possible. That it was not printed at Cologne he shows from a careful comparison of the types with those of Ulrich Zel, the only Cologne printer at the time from whom he could have learnt the art. The types used in all of Zel's books are of a totally different character from those in 'The Recuyell.' Zel graduated in the Mentz school of printing; and any one who compares the style of his works with those that issued from the Caxton Press in its infancy must be at once satisfied of their total dissimilarity. Besides which, Caxton was only absent from Bruges altogether about six months at the time when he is supposed to have printed this work, which brief period includes likewise the time spent by him in his journey to and fro. Nor is there any evidence of his having been subsequently in Cologne at any time. But there are four other books extant printed in the same type as 'The Recuyell'—namely, the original French of that work, 'Le Recueil,' 'The Chess Book,' 'Les Fais du Jason,' and 'Meditacions,' all, like that, printed in folio size, all without signatures, all agreeing exactly in the size of the page, and all, except the last two, uneven in the spacing of the lines. Mr. Blades's practical experience as a printer, we may observe, coupled with his habits of minute investigation, makes him a safe guide in these minutiae of typography, often not sufficiently attended to by the professed bibliographer. The conclusion then is, according to Mr. Blades, that all these five works are the production of the same printer. We should rather have said printed from the same fount of types. M. Bernard, one of the latest and best authorities, maintains the theory that Philippe le Bon, wishing to have some printed copies of 'Le Recueil,' employed a *Frenchman* to cut the types, and Ulrich Zel to print from them; that afterwards the same printer used them for 'Bartholomeus' and 'Les Fais du Jason'; and

that, on the death of the Duke, these types reverted to the Duchess, who, being friendly to Caxton, permitted him to use them for 'The Recuyell' and 'Chess Book.' "This story," says Mr. Blades, "is in diametrical opposition to Caxton's allusion to the great expense he incurred in ordaining 'The Recuyell' in print; yet upon some such theory must every account, which ascribes any of these books to the Cologne Press, be based." But if not printed at Cologne, and by Ulrich Zel, where then, and by whom? Mr. Blades replies—by Colard Mansion, and at Bruges. The process of argument by which he arrives at this conclusion would be too long for us to mention in detail. It rests, however, mainly upon the following facts. Colard Mansion had a printing-press in Bruges at the same time that Caxton finished his translation. Indeed, he is generally supposed to have been the first that practised the art in that city; and, although his earliest dated works were issued in 1476, there is good reason to believe, from the character of the type and other circumstances, that some of his books in which no year of imprint is mentioned date as far back as 1471–2. Before commencing printer he had considerable reputation as a calligraphist, and his printed books clearly show his types to have been modelled upon his handwriting. According to Mr. Blades, he used two kinds of types: the earlier books being printed in a large bold secretary type, and the later in a small semi-Roman character, known as "Lettres de Somme." Now, both of these differ considerably from any of the types used either by Ulrich Zel or any other Cologne printer, while they bear a close resemblance to the Haarlem school of printing as opposed to that of Mentz. And similarly the Caxton types more closely resemble those of Mansion than of any other printer. In style of execution also there are the same peculiarities in both. "The Recuyell" was printed page by page, as were the books of Mansion, who even made a separate working of his woodcuts: Caxton, even when using the quarto size, cut up his paper into half sheets, and then, as in folios, printed in single pages. This accounts for the entire rejection by Mansion and the sparing use by Caxton of the quarto size for their publications, as it necessitated twice as much press-work as the larger size. But the strongest evidence is found in the fact, that Zel, after 1467, always spaced out the lines of his books to an even length, and would have taught any one learning the art of him to do the same; while this improvement was not adopted by either Mansion or Caxton for many years." There is also a remarkable peculiarity in the way of applying red ink when used for the headings of chapters, which is observable in both the Mansion and Caxton books, but in no others; "the two colours being printed by one and the same pull of the press, and all the type, both for black and red, being included in the same form." These and other peculiarities meeting in the two men, living in the same town, render the conclusion obvious, that they must have either printed in concert, or that one of them must have learnt from the other. And if this be so, that it was Caxton who learned from Mansion, and not Mansion from Caxton, is equally beyond doubt.

Thus far with respect to the printing of 'The Recuyell,' which, in all probability, must be referred to 1474 as the date of its execution. With respect to the four other books printed in the same types as 'The Recuyell,' and two publications from a new fount, which he calls "type No. 2" all equally without date of printing, Mr. Blades sums up as follows:—

"The Recuyell" probably was not accomplished

till 1474, and was succeeded on Caxton's part, in another year, by an issue of 'The Chess Book,' which, as we are informed in a second edition, was 'anone depessed and solde.' Mansion, finding that success attended the new undertaking, printed 'Le Recueil,' and later 'Les Fais du Jason,' and 'The Meditacions,' the two last after Caxton's return to England. The three French works were doubtless published by Mansion alone, as Caxton is not known, although perfectly acquainted with French, to have printed a single book in that language. Caxton having printed at Bruges 'The Recuyell' and 'The Chess Book' with types wholly or in part Mansion's, now employed Mansion to cut and cast him a new fount to the pattern of the large *bâtarde* already in use by Mansion, only smaller in size, with the intention of practising the art in England. As proofs of its capabilities, the speech of John Russell on the investiture of the Duke of Burgundy was produced: an oration which, from perpetuating a memorable occurrence, would always be as welcome to the Burgundian Court as to the English. That 'Les 4tre derrenieres choses' was also produced about this time under the immediate workmanship of Mansion, has been also shown."

Exception, we think, may be reasonably taken against this conclusion of Mr. Blades, that Caxton had no share in printing the French works just mentioned, and we are especially unwilling to deny him the honour of having printed the original 'Recueil,' the first French book ever printed. But to argue the point here would occupy too much space, having now immediately to cross the sea with Caxton, when, in the year 1476–7, we shall find him established in Westminster, proprietor and worker of the first printing-press used on English soil. Before taking our final leave, however, of the Bruges Press, we must, in justice to Mr. Jones, the present Keeper of the Printed Books in the British Museum, mention that it is to his keen eye and bibliographical judgment we are indebted for the discovery, some ten years ago, in the course of his labours on the Museum Catalogue, of two out of the seven works enumerated by Mr. Blades as forming the *Primitiæ* of the Caxton Press, namely, the 'Meditacions sur les sept Pseaumes Penitenciaulx' and 'Les quatre derrenieres choses qui sont advenir.' This important discovery was communicated at the time by Mr. Jones to the Society of Antiquaries, in an article published in the 'Archæologia.'

The next fifteen years of Caxton's life were spent in the quiet but laborious occupation of a printer at Westminster. There, within the precincts of the Abbey, perhaps in a house known as "The Red-pale" in the Almonry, the precise locality it is almost impossible to ascertain, Caxton printed the long list of works, by which his name has become famous, and which are now so eagerly sought after, and purchased at almost fabulous prices. It has been hitherto supposed that the first work here printed was 'The Game and Playe of the Chesse,' mentioned above. But Mr. Blades has, we think, satisfactorily shown this to have been one of the books printed at Bruges, and we see no reason to differ from him in accepting the 'Dictes or Sayengis of the Philosophres,' printed in 1477, as the first book that issued from the Westminster Press "with an indisputable imprint." This book was "translated out of Frenshe into englyssh by the noble and puissant lord, Lord Antone, Erl of Ryuers," one of Caxton's earliest patrons, and an ornament to the age in which he lived,—an age of battles and tumult, in which England bled at every pore; the nobility, however, being the chief sufferers, whether it was the Red or the White Rose that gained the ascendancy. Did they escape Death on the field, it was only to meet him on the scaffold. Thus perished

Anthony Wydeville, Earl Rivers, who was beheaded, in 1483, by order of Richard the Third; and thus also, a few years earlier, Tiptoft, Earl of Worcester, the translator into English of 'Tullius de Amiciicia,' another of those works printed by Caxton. Both were patrons of literature, which they also cultivated themselves with no little success. Two other works besides the 'Dictes or Sayengis' were translated by Earl Rivers, and printed by Caxton; namely, the 'Moral Proverbs' of Christine de Pisan and the book called 'Cordiale,' in the Epilogue to which Caxton, after much praise of the Earl, informs us that Lord Rivers "put him in deuoyr at all tymes when he might haue a leyser, which was but startemele to translate diuerse bookes out of frensh into english"; moreover, that he had "made diuerse balades ayenst the senen dedely synnes." These two works were printed, the first in 1478 and the second in 1479, and were followed by numerous others, of which Mr. Blades has given a classified list. We may mention a few, giving them their short titles, and omitting those already named. Thus, in Religion we have the 'Psalter,' two editions of the 'Hore,' three of the 'Golden Legend,' two of the 'Liber Festivalis,' the 'Pilgrimage of the Soul' and the 'Directorium Sacerdotum,' in three editions. In Morality, 'Boethius,' the 'Knight of the Tower,' 'Caton' and the 'Book of Good Manners.' In History and Biography, 'The Chronicles of England,' 'Description of Britain,' 'Polycronicon,' and 'Lives of SS. Elizabeth of Hungary, Catherine of Sienne, and Wenefryde.' In Poetry, the 'Canterbury Tales' and other works of Chaucer, the 'Poems of Lydgate' and the 'Confessio Amantis' of Gower. In Romance, the 'Life of Jason,' 'Godefroy of Bologne,' 'The Order of Chivalry,' 'King Arthur,' 'The Four Sons of Aymon' and 'Charles the Great.' And Miscellaneous, 'The Mirror of the World,' 'Æsop's Fables,' 'Reynart the Fox' and 'The Governayle of Health.' A goodly list truly, and one that sufficiently indicates the varied intellectual tendencies of his age. Here was food for all comers. Caxton had to live by his new employment, and by thus treating his customers to such a variety, he "avoided the fate of his typographical brethren at Rome, Sweynheim and Pannartz, who having printed too many works of the Classic authors—about 12,000 volumes in five years—became bankrupt and sank under the weight of their numerous unsold volumes." In modern phrase, he made his business pay by wisely suiting his supply to the public demand.

"Caxton, however, [says Mr. Blades] did not enter upon his new adventure of printing books without good and able patronage. Edward the Fourth paid him a sum of money for certain services performed, and Caxton printed 'Tully' and 'Godefroy' under his protection. The King's sister, Margaret, Duchess of Burgundy, was his friend and supporter, as was also Margaret, Duchess of Somerset, mother of King Henry the Seventh. The Earl of Warwick must have had some knowledge of him, as Caxton dedicated to him his 'Chess Book.' Earl Rivers, brother to the Queen, was his fast friend, with whom Caxton seems to have enjoyed a considerable degree of intimacy. The 'Order of Chivalry' was dedicated to Richard the Third. Henry the Seventh personally desired Caxton to translate and print the 'Fais of Arms'; and the 'Eneydos' was specially presented to Arthur, Prince of Wales. Maister William Daubeney, King Henry the Sixth's treasurer, was his 'good and syngular friend.' William, Earl of Arundel, took great interest in his progress, and allowed him the 'yearly fee' of a buck in summer and a doe in winter. Sir John Fastolf, Bart. [?], a great lover of books, Hugh Bryoe, mercer and king's ambassador, William Praast, a rich mercer, and divers unnamed 'gentyhmen and

ladies,' are known to have employed him. Some of these engaged him to translate as well as to print, like the 'noble ladye with many faire daughters,' for whom he produced 'The Knyght of the Toure.'

Sure never was printer more honoured by the royal, the noble, and the great of his time! Nor was there ever any that took greater delight in his occupation, whether of printing or translating, than did Caxton. For fifteen years he carried it on; and, "in 1491, close upon seventy years of age, but still in mental vigour, he undertook the translation of the 'Vitas Patrum.' Whether disease at this time was gradually undermining his health, or whether, as seems more probable, he was taken off suddenly, is unknown; but it is an interesting fact, that he was spared to work at his favourite task of translation till within a few hours of his death." This appears to have taken place towards the end of 1491, judging from the position of the entry in the parish accounts of St. Margaret's. In the churchyard of that parish he was buried, and in the account-books of the churchwardens appear the following funeral charges:—"Itm atte Bureying of William Caxton for iiij. torches, via. viiij. Itm for the belle atte same bureying, viij."

"These rates," said Mr. Blades, after a careful examination of the books, "are considerably above those paid by the majority of the parishioners, and are equalled in a very few instances: another evidence of the superior position held by our printer in his parish."

We congratulate Mr. Blades, not only upon the success of his researches, but upon the able assistance of the Messrs. Tupper in producing the lithographic fac-similes that illustrate the volume before us.

Edwin of Deira. By Alexander Smith. (Macmillan & Co.)

Mr. Smith's poetry will never be an original so much as a parasitic growth. The Laureate is too strong for him. No matter in what far-off ground he may try to strike root, his trailers are drawn right away to the Tennysonian tree, which they must climb to unfold their leaves. But for 'The Princess' and the 'Idylls of the King,' there would have been no 'Edwin of Deira' in this shape and rhythm. This granted, we have to chronicle an advance on Mr. Smith's previous poetry. Had he been permitted to pass unchallenged in his borrowed plumes and "feather triumph," we doubt whether he would have returned with a poem approaching so nearly to oneness of conception, manliness of feeling and simplicity of speech, as does the present work. Altogether, this is a piece of honest workmanship. He has not allowed either memory or fancy to play him perpetually false. He has not violated the facts of natural relationship, as of old. We do not find all Nature "dancing like a Bacchanal" on a calm summer-day; nor does the moon come rushing into the sky on a serene summer-night "like a stag, with one star like a hound." Nor is there so much of that reference to the weather, which characterizes the spasmodists, and makes their pages as meteorological as poor Lord Raglan's Crimean Reports. We make an observation respecting the weather, when there is nothing else to be said; but the spasmodists will do it in the midst of a solemn agony, and any supreme moment must be ticketed with its time of day and condition of climate. There is still too much use of simile—that second-hand mode of representation—and the writer's mind still emits its light by flashes, rather than luminously informs his subject with a clear and steady shine. And just as he reveals by flashes, so

is his mind soonest arrested by those objects which do flash. And this without regard to value; hence the bit of broken glass gleaming in the sunlit furrow is often ranked with the diamond on the queenly front. Nor does Mr. Smith appear to have got back very successfully to the time of Edwin. His poem has more of the glow and glitter of the day of Chaucer and Edward. We suspect he has not lived enough with the Norsemen to get back by the right way to the spirit of that earlier dawn.

The poem opens with Prince Edwin escaping from the rout, after losing a great battle which he has fought with Ethelbert. He is a flying fugitive, hurrying from hiding-place to hiding-place, night by night trying to reach the court of King Redwald, his father's old friend. Once there and recognized, he receives a royal welcome to the friendly feast. The characters of Redwald and his seven sons are well described. The giant boys soon become knit to the prince in love, and espouse his cause in fiery earnest. The old man pauses and poises the matter of making Ethelbert his enemy with a Burleigh-like wisdom. The entrance of Bertha, the old King's darling daughter, is piquant:—

In at the door a moment peeped a girl,
Fair as a rose-tree growing thwart a gap
Of ruin seen against the blue when one
Is dipped in dungeon-gloom; and Redwald called,
And at the call she thro' the chamber came,
And laid a golden head and blushing cheek
Against his breast. He claspt his withered hands
Fondly upon her head, and bent it back,
As one might bend a downward-looking flower
To make its perfect beauty visible,
Then kissed her cheek and mouth.

Of course this sweet and tender vision is enough to drive away something of the darkness of the Prince's great grief and melt some of the blackness of bitterness out of his blood. Equally of course, the twain fell in love, or, loving, met each other half way. In painting Bertha, Mr. Smith has for the first time shown a delicate sense of womanhood. The music, too, is moved to greet her coming, as—

With the dawn, and like another dawn,
But fairer, Bertha came.

This picture of maiden love clothed with loveliness, and hiding in a hush of tender thought, is admirably felt:—

Homeward thro' prime of noon the hunters wound;
The Princess rode with dewy drooping eyes
And heightened colour. Voice and clang of hoof,
And all the clatter as they sounded on,
Became a noisy nothing in her ear,
A world removed. The woman's heart that woke
Within the girlish bosom—ah! too soon!—
Filled her with fear and strangeness; for the path,
Familiar to her childhood, and to still
And maiden thoughts, upon a sudden dipped
To an unknown sweet land of delicate light
Divinely aired, but where each rose and leaf
Was trembling, as if haunted by a dread
Of coming thunder. Changed in one quick hour
From bud to rose, from child to woman, love
Silenced her spirit, as the swelling brine
From out the far Atlantic makes a hush
Within the channels of the careless stream,
That erst ran chattering with the pebble-stones.

The Prince has won her heart, and the old King gives him her hand. He also gives his sons and an army to Prince Edwin, that he may go to recover his lost kingdom from Ethelbert, his old enemy. The Prince makes a brave dash for it:—

By mid-day we were on them ere they knew,
And Ethelbert, like some wild beast at bay,
Fought but to kill, while he was being killed.
For him Prince Edwin and Prince Regner sought;
And tho' so knit in love their noble hearts
That each would give the other all he had,
Yet each grudged each his death. So when the sun
Broke thro' the clouds at setting, on a mound,
Lifted in seeing of the swaying fight,
Stood Ethelbert, surrounded by his lords,
Known by his white steed and his diadem,
And by his golden armour blurred with blood.
'Gainst him with but a single score of knights
The Princes spurred. Many were ridden down
In shock of onset. Regner's horse was speared,
And rearing with forefeet that pawed the sky,
Fell backward on his rider, in whose side

A thirsty arrow stuck. Prince Edwin then,
With axe, and arm up to the elbow red,
Drove up his horse 'gainst Ethelbert's, and struck,
Crushing the diadem and head at once,
And rode him down.

On the whole, we like the concluding book of the poem best; it is furthest removed from Mr. Smith's earlier manner, and the greatest effect is attained with the least strain. The speech of Paulinus is choicely good; the whole book is thoroughly well done. But, for brevity sake, we prefer giving an example of a neat little bit of quiet work from an earlier part as a pattern for the author to follow oftener. A spirit appears to Prince Edwin in his misery:—

What man art thou that sitt'st on this cold stone
When every bird sleeps on the forest bough?
It matters little where I sit o' nights.
I know thy name, and why thou sittest here.
I saw thee sleeping on the naked ground
With but a rainy sky for coverlet.
I know thy story and the things thou fear'st;
What would'st thou give if I turned Redwald's heart
And made him draw the sword in thy defence?
I have not much, but I would give thee all.
What if I clothe thy limbs with mightiness?
What if, in far days when thou tak'st the field,
I give thee spoil and captive? If I give
Her soft voice to thine ear, her lips to thine,
Her white arms to thy neck?

Oh! mock not so
My sharp distress: for any good I'll be
Most answerably grateful.

That, we take it, has the real touch, and is more to the point than a large amount of loud-sounding exaggeration.

Although Mr. Smith has not travelled out of his path in search of inappropriate and incoherent fine things, instances of happy bits of description abound in the book. Here is one of a desolate, lone churchyard out in the western isles of Scotland:—

A broken wall surrounds the field of dead;
The gate stands open for no man to pass;
And carved crosses with their runes unread
Lie sunken in a sea of withered grass.

This image, too, is apposite and powerful:—

The army moved
Onward, like thunder's corrugated gloom
Rolling o'er desert hills, with fire reserved
For other lands.

We need not point these beauties out; readers will not fail to find them. The poem concludes with the conversion of King Edwin and his people to Christianity. We have to credit the writer of it with a right effort made in a right direction. By the aid of history, he has got out of a morbid consciousness of self, and, by looking outwardly on the realities of life, has seen more than he would have perceived by continually looking within. This sort of change has saved poetry, before now, in the individual and the nation.

History of the Martyrs in Palestine, by Eusebius, Bishop of Caesarea; discovered in a very ancient Syriac Manuscript. Edited and Translated into English, by William Cureton, D.D. (Williams & Norgate.)

To biblical scholars, the history of the acquisition by the Trustees of the British Museum of a valuable collection of Syriac manuscripts from the Monastery of St. Mary Deipara, in the valley of Scete, in the desert of Nitria, is known; it will not be necessary, therefore, to enter into minute particulars on this subject. More than a hundred and fifty years ago, efforts were made by Pope Clement the Ninth to procure these treasures for the library of the Vatican, but with very trifling success. Dr. Tattam, now Archdeacon of Bedford, was more fortunate in his endeavours. He visited Egypt in 1838, and again in 1842, and on both occasions succeeded in purchasing from the monks a very large proportion of this library. These volumes became the property of the Trustees of the British Museum, who subsequently, through the agency

of M. Pacho, purchased the remainder of the library. The several portions of the collection were placed, as they were acquired, in the hands of Dr. Cureton, at that time one of the officers of the Department of MSS. in the British Museum, for examination and arrangement. Dr. Cureton soon discovered what he calls "that wonderful volume of the Nitrian collection," from which he has edited the present work. It may truly be called a wonderful volume, for it contains not only this work of Eusebius, but a Syriac translation of the 'Recognitions of St. Clement,' which has been edited by Dr. P. de Lagarde, 8vo., Lips., 1861: 'The Book of Titus, Bishop of Bostra, in Arabia, against the Manichæans,' also edited by Dr. Lagarde, 8vo., Berol., 1859; and 'The Book of Eusebius on the Theophania, or Divine Manifestation of our Lord,' edited by Dr. Lee, 8vo., Lond., 1842.

The following is Dr. Cureton's history of this invaluable tome:—

"Among all the curiosities of literature, I know of none more remarkable than that of the fate of this matchless volume. Written in the country which was the birthplace of Abraham the Father of the Faithful, and the city whose king was the first sovereign that embraced Christianity, in the year of our Lord 411,—it was at a subsequent period transplanted to the valley of the Ascetics in Egypt, probably A.D. 931, when 250 volumes were collected by Moses of Nisibis during a visit to Bagdad, and presented by him on his return to the Monastery of St. Mary Deipara, over which he presided. In A.D. 1036, about 155 years later, some person with careful foresight, fearing lest the memorial of the transcription of so valuable, beautiful and even at that remote period 'so ancient a book' should be lost, in order to secure its preservation, took the precaution to copy it [the subscription to the volume] into the body of the volume. At how much earlier a period the fears which he anticipated became realized, I have no means of ascertaining; but in 1837 'the end of the volume' had been torn off, and in that state in 1839 it was transferred from the solitude of the African desert to the most frequented city in the world. Three years later, two of its fragments followed the volume into England; and in 1847 I had the gratification of recovering almost all that had been lost, and of restoring to its place in this ancient book, the transcriber's own record of the termination of his labours, which, after various fortunes in Asia, Africa and Europe, has already survived a period of one thousand four hundred and thirty-six years."

Dr. Cureton is of opinion that this work was not written originally in the Syriac language, but in Greek. The work itself is of the highest interest. Eusebius, in the Eighth Book of his 'Ecclesiastical History,' speaking of certain bishops and others who had suffered martyrdom, says:—"Our design is not to commit to writing the conflicts of those who suffered for the worship of God over the whole world, nor yet to give an accurate relation of every accident that befell them; but this rather belongs to those who, with their own eyes, beheld what was done. Moreover, those ourselves were present at we will commit to the knowledge of posterity in another work." The account of those contemporaries of Eusebius who suffered in the persecution of the Christians in Palestine, inserted in the greater number of the editions of Eusebius, has been generally regarded as an abridgment of this promised work, and the correctness of such conjecture is established by the discovery of this copy of the 'History of the Martyrs' "in the vernacular language of the country where the events took place, and actually transcribed within about seventy years after the death of the author."

Of most of the events recorded in this History Eusebius was himself an eye-witness. Dr. Cureton considers that the work is a record of

facts noted down at the time as they severally occurred, and which were afterwards revised and arranged in due order at a subsequent period. Also, that it was composed before Eusebius wrote the Ecclesiastical History, the abridgment of it inserted in that work having been made by Eusebius himself.

The present edition comprises a translation of the original Syriac, made, as the editor states, "as faithful as I could without following the Syriac idiom so closely as to render the English obscure." This is followed by copious notes intended "to throw light upon the time of the composition of the work and of the Ecclesiastical History by Eusebius, and to serve to elucidate the text." After which comes the Syriac text. The name of Dr. Cureton is a sufficient guarantee for the care and accuracy with which the editorial task has been performed.

The Prison Chaplain: a Memoir of the Rev. John Clay, B.D., late Chaplain of the Preston Gaol; with Selections from his Reports and Correspondence, and a Sketch of Prison Discipline in England. Edited by his Son, the Rev. Walter Lowe Clay, M.A. (Macmillan & Co.)

THIS book is full of matter for all who take interest in that momentous and sad subject, Crime and its remedy. Mr. Clay's long connexion with one prison, and the aid which his Reports have given to the formation of ideas on the subject of prison discipline, need no introduction here. The communications from Preston Gaol,—his notices, suggestions and illustrations offered during a quarter of a century,—were looked for as regularly as the year came round. They had the value of accuracy and sincerity, whether they squared or not with the philosophical or beneficent theory of the time; they showed, too (as may be seen from the extracts here tendered), the growth of experience in the reporter's mind; illustrating how, without any change in fixed principles, the views of every honest man must extend and correct themselves, and his conclusions undergo some transformation, as life advances.—Observers of Mr. Clay's spirit and temper have been too rare; especially among the persons who have had to deal with sin and sorrow.—Yet, those who knew him in his youth might hardly have conceived that such was his appointed task in life;—unless they be prepared to admit that versatility does not mean instability, and that genius for many things does not preclude persistence in one, when the duty is once clearly ascertained and the responsibility accepted. He was born with elastic spirits and the capacity for many different callings. He was educated for a clerk's desk in Liverpool.—At the beginning of this century few destinations more destructive of hopes and fancies and intellectual aspirations could be conceived than this one. It implied work of the most grinding nature as to time demanded, and (mentally at least) as mechanical as that which has since called so much attention to the condition of the Factory Worker; small variety of relaxation, save in carousals with unrefined companions; as little general chance of man's better nature being kept alive by intercourse with those to whom the richly endowed love to look up. None but the very strong or the very sincere could resist the influences of such a life in such a place. This, however, John Clay did, perhaps unaware of the resistance, in right of the extraordinary geniality (if not genius) born with him. He had been placed, as a Liverpool boy used to be placed, in a private academy, where he learned some little Latin, no Greek, and "a smattering of French"; and from the

age of fifteen till twenty-one had to do service in a merchant's office, or in a landing-waiter's hut, for some ten hours a day, to catalogue the items of a cargo of logwood, or salted hides, or bales of cotton,—or as collecting-clerk, to go round to flour-dealers and wine-buyers: if a gentleman at heart, half ashamed of his task; if not, hardened to that callousness beneath which such better aspirations and more refined tastes as may have originally existed, being vaulted in, naturally die for want of air and light.—There was the elastic resistance of Genius in John Clay. He had tastes for music—sang with great feeling, and played on two or three instruments. He drew (in drawing, as in music, almost self-taught). He was a good cricketer, skater, boxer, archer, fencer, rider. He read aloud well, and showed capacity and cleverness as an amateur actor.—Talents like these were thrown away in a merchant's office; but it is impossible to over-estimate their value as keeping heart and hope alive in one destined to labour throughout a long life among everything that is most foul, distorted and weak in human nature. Without some fairy land to escape into, the gaol life might either have broken the Chaplain's spirit prematurely, or subdued him into that sort of professional indifference which precludes much chance of progress or discovery. So far as we can see, Clay was never satisfied with himself—sanguine in his views—unsparingly minute in gathering evidence—indefatigable when a point was to be won or a mistake to be cleared up;—a healthy, religious, cheerful man, whose suggestions and counsels, urged, as they were, without extravagance or dogmatism, sank deep and influenced widely. If but one fourth of our English prisons had had functionaries such as he during the past quarter of a century, the amount of abuse and waste, of false philanthropy and pernicious over-severity, existing in this most difficult branch of social administration would, we verily believe, have by this time been reduced largely.

He was twenty-two ere he decided on proceeding no further in mercantile life, and by the advice of a friend entered the Church. He was appointed to the position he filled so long while he was only in deacon's orders—married a few years later—later still built himself a house, a mile and a half from the prison, "to ensure every day a three miles' walk," and this, with the birth of six children, makes up the story of his life till that period when Nature gave way beneath the strain of unremitting and anxious labour.—It would have been pleasant to think of so good a man having been permitted to take a little rest and relaxation in the evening of so closely and usefully employed a day; but Mr. Clay's death followed shortly on his retirement from office.

Our admiration of a character so single-hearted, strenuous and complete, does not bind us to implicit adoption of all the conclusions derived, as they were, by the Prison Chaplain from thirty years' unremitting attention to his subject.—Without following these pages one by one, the well-executed sketch of prison discipline which they contain reminds us of the abominations of our gaols forty years since, in language not too forcible for the reality, and points out how the indignation of some self-devoted people, at the idea of such a hideous state of matters existing in the heart of a Christian country, made its way, for reform and purification, into this abode of all that is most horrible to conceive.—It was not possible that this should be done without some excess in the other direction—without the vanities and feebleness of poor humanity tincturing and tithing the noble scheme of beneficence. The line separating or—may it not be said?—uniting

reformation and prevention could hardly be firmly traced, if by any, by those whose hearts burned within them when a trap-door was opened which showed them horrors past the conception of imagination.—Further, folly, presumption and sentimentality will rush in, in the wake of wisdom and self-sacrifice, when any great movement is in question. The interesting murderer and reclaimed ruffian sent to the gallows with the *camellia*, the gift of *Dorcas*, in his button-hole, was the inevitable successor to the groups who had appeared on the scaffold by twenties and thirties, unjustly sentenced for petty crimes, and ill-cared for; not to speak of those tawdry stage-figures belonging to an elder period whose march to Tyburn Tree (as the bad novel 'Jack Sheppard' reminds us) was a performance of the procession of a hero to the consummating glory of his life.—The absence of anything like such morbid sympathy for the criminal, is a marking feature in the career of the Preston Chaplain: though we still must feel that the spirit of the time may have pervaded some of his hopes and conclusions. An extract, made up of many passages belonging to the same period, will help to illustrate our meaning:—

"Mr. Clay saw from the first that if ever the public was to accept the new penal doctrines, some very tangible proof of their soundness must be given. For a time, like many others, he attached undue importance to the tears shed, and the irrepressible emotion displayed in the solitary cell. But he soon became aware that this extreme sensibility was often morbid and unnatural, the symptom of disordered nerves rather than of a softened heart. The argument derived from the demeanour of the prisoners was only used till he could produce a better, for which he at once began to seek. The statistics of crime in North Lancashire for twenty years past, which (as already recorded) he had collected himself with great pains and care, and the like of which at that time probably existed nowhere else in England, now became extremely valuable. By their help he was able to prove, past denial, that even the seventy-two cells, after only a year's use of them, had given a check to crime far more effectual than any other measure adopted during those twenty years. While the deterring efficacy of the new discipline was demonstrated by a considerable falling off in first committals, the power to reform was proved by a decrease in re-committals, at the rate of 20 per cent. He was ready with his first instalment of statistics even before the new cells were occupied. It will be recollected that a rough make-shift for the separate system had been tried at Preston Gaol three years before the Model Prison was built. On the strength of this crude experiment, and with the help of his statistical crime-gauge, then in the twentieth year of operation, Mr. Clay was able to vaticinate the probable issue of a thorough trial of mitigated solitude. He correctly anticipated the question which would be asked. In April, 1844, the *Times* (at that time hot against the separate system) pointed out that what the public wanted was 'a general return of the persons re-committed in 1843 under the ordinary mode of imprisonment, in comparison with those who had been in solitary confinement.' 'The only return,' continued the article, 'which we have upon the subject, is from the House of Correction at Preston. It is certainly not very satisfactory for the partisans of the solitary system.' * * The result which it indicated was certainly not very wonderful, being simply this,—that while one-fifth of the prisoners were re-committed under the old no-discipline, only one-sixth came back after passing through a very poor substitute for the separate system. * * He was soon convinced that the number of re-committals was not altogether a satisfactory test, and he therefore resorted to many other methods for gauging the efficacy of his prison-discipline. One criterion he at once saw would be worth all the rest—namely, to follow the prisoners in their subsequent careers,

and ascertain what became of them. This was a difficult undertaking; indeed, in many instances it was impossible: for criminals are, for the most part, a nomadic race, and their wanderings baffle pursuit. His plan was, to elicit from every discharged prisoner, who had passed his term in a separate cell, whither he meant to go: if he professed an intention of settling somewhere in Lancashire, after the lapse of six or eight months, he wrote two letters of inquiry concerning him, the one to the minister of the parish, the other to the police superintendent of the district. In their replies the clergymen, as a rule, were sanguine, the policemen saturnine. * * Year after year the issue of the scrutiny was nearly the same; about half the men were reported as more or less reformed. Beginning in 1845, he published annually for some years a synopsis of the replies: no evidence of equal importance was ever adduced in favour of the separate system. It was on the strength of such testimony that he asked the public to give their confidence to the mitigated separate system. He would never admit that the failure of some other prison, conducted on a similar plan, could outweigh his own success. * * 'Have you ever had occasion,' he was asked in a parliamentary committee-room, after only three years of better discipline, 'to see your prisoners after they were restored to society?'—'Not in many instances,' was the reply, 'because I cannot go beyond Preston very well. In Preston I have seen them: in twenty cases or more.' 'If a clergyman,' he would sometimes say, 'is willing to put all ambition and hope of advancement on one side, and make the salvation of souls the great end and aim of his ministry, he could choose no field for work so fruitful as a prison.' It had been at one time his earnest wish that one of his sons should succeed him in his chaplaincy; and it was no slight disappointment to him when he found that this was not to be. * * To the charge of being sanguine he would angrily plead guilty. 'Sanguine!' was his usual reply, 'why, of course, I am sanguine. I should have no business to be the chaplain of a gaol if I wasn't sanguine; and I am sure of this, that a firm, obstinate, enthusiastic belief in the possibility of saving even the worst of the poor fellows committed to his charge, is a prison chaplain's most necessary qualification. I wonder what some of the knowing gentlemen, who criticise my simplicity, would make of it, if they had to minister in this place. It would be barren work, I think, going from cell to cell to let the prisoner know how 'cute and wide awake you were yourself, and what hypocritical scoundrels you thought them. It is hard enough, I can tell you, working in such a place, hoping against hope; and our gratitude, therefore, is not very profound to the kind monitors who think us a pack of fools for our pains.' This was a matter on which he could rarely speak with composure. Ridiculed in the newspapers, sneered at by sundry magistrates, and sometimes irritated by silly jokes in private society, it must be confessed that at last he grew sore under the annoyance which all this caused him. * * It is not, he writes in his journal, encouraging to know that such want of confidence in prisoner's motives and in chaplain's judgment exists; but it would be still less encouraging were it a fact that this want of confidence is the result of any investigation or inquiry into the matter. On the contrary, the unfavourable opinions I allude to are held by persons who have never given a day's attention to the important subject on which they venture to form and propagate such an opinion."

To continue, by extracts from reports, notes of evidence, &c. :—

"'I have been taught repeatedly that I must not look on any case as hopeless..... I only require that a man or a boy should have an ordinary understanding and ordinary feelings, and I think there is abundant ground for hope. Of course, if his understanding is weak, and in some cases where there has been a long habitude to deliberate crime, it is comparatively hopeless; but I am quite satisfied that it is generally the reverse. I know cases of professional pickpockets, comparatively young, who may be reclaimed.' Of the two, the profes-

sional and the profligate, he regarded the latter as much the more hopeless. 'There yet remains a sordid residue—a few whose moral state is so completely disordered that neither penal nor reformatory treatment can effect a cure. These disgraceful and dangerous pests—not confined to one sex—are perpetually moving between the beer-shop, public-house, or other public curse, on the one hand, and the prison, on the other.' In trying to gauge the reality of a prisoner's reformation by observing his demeanour, he relied upon symptoms rather different from what a less experienced person would have wished to see. A reserved man, who said very little, attracted him most: he generally distrusted fluidity either of words or tears. This extract from his Journal will serve as an illustration:—'S— professes to have derived great benefit from his opportunities of self-examination. He is often moved to tears at our interviews;—but there is that about him which leads me to feel no confidence in his permanent reformation. He is too plausible, and gives me the idea of being accustomed to speak to prison-chaplains.' With his shrewd humour and quick judgment of character he was quite a match for the prison hypocrite. The following is characteristic:—'12th August, 1848. With so many cases to give encouragement to our efforts, there are always a few of an opposite character. The cell often is tenanted by one who assumes the thinnest cloak of hypocrisy, and who, in the old yard, would have been prominent among the insubordinate. W— P—, aged twenty-six, had been living for eighteen months on his wife's earnings, previous to his conviction for a robbery committed under the influence of drink. Since his conviction—not content with my regular visits—he has sent for me specially, four or five times a week, to tell me that he was 'getting on very well,' that he was 'living to the Lord,' that he 'prayed night and day,' &c. On some late occasions he has hinted to me that he is rather in want of clothing; and to-day—having sent for me again—he 'made his full descent' by announcing that three nights together he had 'dreamed that I made him a present of a very handsome Bible.' I told him that I was no believer in dreams."

A large part of this book consists of extracts from the annual Preston Reports, with notes and recollections of remarkable cases with which Mr. Clay had to deal. One, "the story of an innocent prisoner" is as remarkable an instance of a mistake cleared up by the energy and persistence of a benevolent man as we recollect. The steps by which Mr. Clay followed the clue,—under every possible official discouragement, ending, after all, in only a partial undoing of the wrong done,—are as minute in their interest as one of Mr. Wilkie Collins's most ingeniously devised novels: it is a tale impossible to be condensed, or it should have been given here.

In the above paragraphs we have dwelt on a good man's character, in place of examining the soundness of his doctrine. To do this, indeed, would involve a close and argumentative examination of the entire question of penal discipline,—a subject only one degree less difficult than the origin of evil. Enough to add, then, that Mr. Clay's final conclusions on the best method of operating on the mind of the criminal for the reformation of himself and the protection of society, included a strong recommendation of the separate system of confinement and labour—the prolongation of imprisonment—the abolition of the hulk system, as involving the existence of a hell on earth too abominable to think of—and the promotion of reformatory schools. Be these recommendations sound or unsound in the proportions regulated by their earnest advocate, it seems past dispute that Mr. Clay's measures worked well in the district for which he may be said to have been spiritually responsible.—The book, to conclude, is a remarkable book, devoted to the life and labours

of a remarkable man, every page of which is well worth pondering. It is fairly executed: the son's affection for his father's memory never betraying him into falseness nor fulsome praise.

Beyond the Orange River; or, Scenes in Southern Africa. By the Author of 'The Last Earl of Desmond.' (Newby.)

THIS product is a cross-breed, as a naturalist would say, between a novel and a book of travel; and, like all half-castes, it has all the vices and none of the virtues of its parents, being destitute of a good plot and without any strong local colouring. The author does not reveal his name, and we do not profess to know more of his literary antecedents than that he wrote 'The Last Earl of Desmond.' Judging from the contents of the work now before us, we take him to be an Irishman, residing somewhere near the Cove of Cork, who, having much idle time on his hands, makes notes on the various works he reads with the view of, sooner or later, letting others have the benefit of them. The present batch seems to have accumulated on his hands after reading sundry missionary magazines on Southern Africa, Livingstone's Travels, Macaulay's Papers on Lord Clive and Warren Hastings, a few passages of Goethe's 'Faust,' ill understood, and perhaps some abstracts on the ramblings of the schoolmen and casuists living in times gone by. Now, mark how these materials are utilized! One fine morning you find yourself bound for India, with a portion of the 65th Regiment on board, commanded by Major Temple. Among the passengers are, besides, Mr. Edward Stanley, who is going as chaplain to the Cape of Good Hope, and Lady Mary Howard, a lovely girl, who though a Bishop's daughter and having had a sound education, is yet so giddy as to adopt "the fashion of two strings to her bow," or we should rather say two beaux to her string, represented respectively by the red and the black coat. Whilst the plot works, the tediousness of the voyage is broken by dissertations on India, to get rid of the notes on Macaulay's Papers. Arrived at the Cape, Major Temple parts company with Lady Mary, and we are left in the dark, just illuminated by the faintest glimmer of what passed in their hearts during the voyage. And now the reader is supposed to perform a feat worthy of Leotard,—that of leaping over a period of three years. Having accomplished that, he will be allowed to listen to the after-dinner conversation of the Bishop at the Cape, and learn nearly all he will have to go through ere reaching the end of the book. His Lordship, under the assumed name of "Doctor Bruce," means to take a trip "beyond the Orange River," and thus confer a title on the work. An English officer from India, who proves to be no other than the Major, having heard of the "Doctor's" intended trip, has obtained permission to accompany him, and a former Irish servant of the Major's is engaged by the "Doctor" on condition that he disguises himself in such a way as to render it impossible for his late master to recognize him. This Irishman is supposed to provide for the comic element of the story. The poor fellow has to get into the skin of a chimpanzee, and move about, no doubt, to the amusement of the reader, but to the utter discomfort of himself, considering the scene is laid in Africa. The whole party start off in waggons, and now the notes taken on reading the missionary magazines and Livingstone come in. The Major talks as much as can be expected from a man labouring under the delusion that Lady Mary has become the wife

of that young chaplain who came out with her; the Irish servant displays as much agility as can be expected from a man shut up in an ape's skin, and the "Doctor," alias Bishop, is indefatigable in disposing of the religious notes on hand, and, having safely delivered himself, needs must think of returning home, not however before having conquered a certain prejudice against the Major, who wins his Lordship's heart by carrying a Bible, and thus unknowingly secured the hand of Lady Mary. The remainder of the party now push on towards Loanda, the Portuguese settlement on the west coast,—Livingstone, it will be remembered, went there, and why should not our author, after making so many notes? However, our author, like the great African traveller, had an object in going there, dragging along with him all those who have not, like the Bishop, the wisdom of parting company with him at this turn of the road. Waterboer, a noble chieftain, half-caste, like this book, and guide to the travelling party, has been affianced to a maiden, named Wildflower, who, poor thing, being very beautiful, has been kidnapped by a Portuguese slave-dealer, or rather "rudely plucked from her native stem and soil." Of course, Major Temple's party reached Loanda just in the nick of time, and, with the help of the governor of the settlement, succeed in re-capturing her. All the author's notes having now been digested, there is no longer any need of spinning out the story; Major Temple catches the fever, is taken on board, safely landed at Cape Town, recovers his senses, which he had lost during his illness, finds that Lady Mary is not married, her father his old travelling companion, and that they can go to church whenever they feel inclined. Of course, Waterboer, our noble chieftain, and Wildflower, the half-caste maiden, become man and wife. The Irish servant returns home and marries a "Colleen Bawn," who seems to have been waiting for him all the time in the Cove of Cork. But by this time our readers must have had enough of the "Cove of Cork," and they will be glad that the story of African travel is at an end.

Halcyon; or, Rod-Fishing with Fly, Minnow, and Worm. To which is added, a Short and Easy Method of Dressing Flies, with a Description of the Materials used. By Henry Wade. With Eight Coloured Plates. (Bell & Daldy.)

THOSE who are acquainted with the bibliography of angling may regard another book on the art as superfluous; but this publication pretends to a place, and a place of its own. "Many anglers, who are esteemed best able to form a correct judgment on the matter, affirm that there is no one book which has clearly and concisely described the materials and methods employed in dressing Artificial Flies, so that artists may, from the instruction there given, build them satisfactorily. The same remarks apply to the fitting up of tackle, rods, and the other paraphernalia of the science. Great pains have, accordingly, been taken in the following chapters to render the instructions there given as plain and explicit as possible." And, certainly, if verbal instructions and coloured plates can teach a man to "build a fly," then, by the help of Mr. Henry Wade, he may succeed. But the truth is, many men might as well attempt to build a ship as a fly. It demands not only the right materials and the right turn of hand, but also patience and a peculiar tact, which do not come of books or coloured plates, although these may certainly help somewhat towards the entomological mimicry. When we say it demands the right materials, we must add that

to get these, and to have them all at hand and in working order, is no slight business. Artless enough is the way in which this fly-builder teaches how, for example, to construct the Fieldfare, or Brown Dun:—"wings from the blue-tailed fieldfare's quill-feather; body, otter's fur, or the fur of a black cat," &c. Then, to make other flies, we have to get "two light-coloured whisks from a squirrel's tail," and the fur of water-rats. But who amongst us is to circumvent fieldfares, black cats, water-rats, otters and squirrels, and to steal their hairs, feathers and fur? As to the feelers of the May-fly we can hardly believe that Mr. Wade has considered the pains and perils of obtaining them. "Two feelers are to be tied in when the head is made, of two hairs taken from a bear's skin." But, first, how and where is one to catch the bear,—in or out of his skin? Are we to repair to the Zoological Gardens, and to barter buns with bears for hairs? To be required to catch a bear in order to catch a trout is rather discouraging, to say nothing of catching other animals, and catching them asleep too, if one is to filch feathers and fur.

We are not let off with a half-supply, for "whether a hackled or a winged fly is to be manufactured, it is essentially requisite that the whole of the materials which are to compose the imitation should be properly adjusted before he commences operations." Now this implies little less than the run of a menagerie, which being granted, the directions given are certainly minute enough for the manufacture of flies likely to mislead even discriminating trout; though there are some about which we conceive no trout who had taken twenty turns up stream would turn aside to speculate; not because Mr. Wade is wrong in his canons of fly-building, as they are commonly laid down, but simply because trout are far better entomologists than anglers are. They study the science practically, they are daily on the look-up, and we are not of those who think all flies are alike to them. They certainly know their own favourite food better than we do, and quite as well as we know our own. Our observation inclines us to think much more highly than some anglers of piscine intelligence in these matters. We believe that trout know infinitely more about the ways and wings of their particular flying fancies than even did Swammerdam, or Kirby and Spence, or the most accomplished entomologists. Mr. Wade, indeed, seems to be nearly of a similar opinion. Most of his observations are sensible, and some of them especially useful, and such as plainly bespeak an experienced handler of the rod and line. We know no other book which contains so much precise instruction on the matter of fly-fabrication, while other piscatorial topics are touched upon satisfactorily. This we say without prejudice to Stoddart and others, who have merits of their own.

"The great beauty of fly-fishing is to see your fish before he takes your fly," says our piscator; and say we, the great mischief of it is that your fish generally sees you before he declines your fly. We were going to observe that we have seen a good deal of the habits of fish, but prefer to admit, on second thoughts, that the fish have probably seen a good deal more of ours. What wonder, when they are always on the watch as to what is going on around and above them, especially when the friendly sun projects your shadow so warningly to the fish? We have often thought when flogging the waters that if Peter Schlemihl's old gentleman should happen to pass and propose for our shadow, we should be sorely tempted to dispose of it, and see it doubled up on the grass with positive pleasure. Had Peter himself taken to

fly-fishing after his lamentable loss, he would have been a happier man, and would have found consolation for his shadowless presence in the fullness of his creel.

If the book-writing piscators would tell us not merely how to dress a fly, but where to find a fish, we should feel still more deeply indebted to them. We have at this hour in our fly-book such a collection of salmon and trout flies as even our fly-builder would approve. We have nearly everything that does fly, and a dozen or two of things that never did or will fly, except at the end of an angler's line. We have reels and creels and rods, and a fly or two which even Mr. Wade does not name—the Francis fly, to wit. We have true Spanish gut, half a horse's tail of fine single hairs, and other little fancies admired by anglers. Yet we honestly confess we do not know where best to put all these implements into successful operation when vernal airs and beams induce us to unwind our tackle. Most of the open rivers, we remember, at least as within a literary man's compass, are scarcely worth the casting of our flies. North Wales? Very well for the Welshmen who poach, and sell the trout to the innkeepers, who again fatten on the angler's coin, though he does not on his creel. If you manage to land a few fish, how lean and poor compared with your anticipations!—while, as to salmon, you can certainly buy them at market. South Wales? Better perhaps, but crafty Welshmen poach there also. The North of England? Mr. Wade, his family and his friends, have been there half a century, angling all the while, so that it is doubtful whether wading after the Wades would produce much sport. While he says very much about what the angler should do, he does not say where one ought to angle. Yet the streams of the North of England are amongst the best open streams known to us, and contain good trout for fine fishermen. Beware, however, of streams near railways, factories and lead mines—all deadly foes to the Salmonidae. The railways bring poachers, the factories idlers, and the lead-mines poison. What can the best fly-fishers do against a mob of excursionists and a wash of lead-water?

Of course strictly preserved waters have fish enough, but few have luck enough to angle in them. One of the most popular of Scottish preachers, who is a brother of our craft, sometimes gives a sermon for a salmon. Grant him a week's fishing, and he will become a fisher of men on the Sabbath. But those of us who are only poets, or preachers, but not vastly popular preachers, must resign ourselves to being regarded as poachers as respects preserved water. True there are Subscription Waters, but we should as soon subscribe for six copies of Lady Lackaday's 'Lays of the Boudoir' as pay a full fee for a fortnight's fishing; and every day, perhaps, an east wind, or the water too low, or too clear, or too foul, or a pike or two just arrived, or our flies out of season, or the fish in the sulks, and the keeper too.

To an angler who was complaining of the absence of fish to the keeper of one of the Shropshire-preserved waters, said keeper replied, "Ah, there's a plenty of fish, but they won't rise; and no wonder, Sir,—see what a hedication they gets. There's so many gemmen a-fishing now." Possibly, this is a clue to the secret of so many amateur failures. The fish are becoming too knowing; and no marvel, for are they not taught in a public school, and by much flogging? If anglers learn by books, trout learn by looks and by hooks. Instead of picking up our flies, they pick up a little notion of our faithlessness. If education be so rapidly progressing on land, depend upon it there is a kind

of cautionary schooling going on under water. Probably many an old trout intimates, by well-understood signs, to his young friends to beware of every tall moving thing that approaches the water and flings a fly on it. Perhaps he has been deceived twice or thrice in his own youth, and has turned misanthropist. If, too, he has but once been betrayed into the acceptance of a delusive feather, and has the hook still in his mouth, wherever he swims he is a swift monitor against all such mockeries: he has only to open his mouth and *ecce signum!* Should subaqueous education go on at this rate, very soon, we fear, every one of Mr. Wade's one hundred and seventeen specimens of flies will be as well known to the fish as to the fishing-man; and the only reply to any enticing offer will be "declined with thanks, as not suitable to these waters."

Meanwhile, occasional anglers like ourselves, who rank books before hooks, and prefer to "build the lofty rhyme" to building a little fly, must look out for the uneducated and simple trout who will take our first offers,

Who dream a feather is a fly,
And who, to prove it, dare to die.

After all, however, that can be said about the tastes of trout, our fly-fabricator rightly comes to this conclusion:—"It is absurd to talk of *this* bait being deadly, and *that* bait being deadly; all natural baits are deadly, if fished in the places where the fish are accustomed to feed on them in their natural course. So an artificial fly is deadly, if it is a good representation of, and put on the water like, a natural one, and in spots in which fish are known to feed. A person fishing in a horse-pond, which is dry half the summer, will take as many trout in a day as some amateurs will while fishing in a river where trout are plentiful, unless they hook one by accident. These certainly flog, flog away, but seldom within many yards of the places where trout abound and feed." So, then, the great secret is not fly-building, nor fly-flogging, but fish-finding.

It will be inferred that we think very highly of Mr. Wade and his fly-leaves. We mean to follow his instructions "To dress a salmon-fly," hoping that they will lead us to dressing a salmon. If not, of course the angler is a bungler; so we have often been told, but we attribute our misfortunes to the establishment of the monitorial system amongst the Salmonidae.

Mamecestre: being Chapters from the early recorded History of the Barony; the Lordship or Manor; the Vill, Borough, or Town, of Manchester. Edited by John Harland. Vol. I. (Printed for the Chetham Society.)

"Vulgar" as *Brummagem* may sound, we are all now well aware that it is nearer to the original sound of what was once written *Bromwich-ham* than the modern and accepted refinement of "Birmingham." The volume edited by Mr. Harland refers to another of those localities which, commencing as a village, has developed into a city,—famous for its progress, wealth, jealousy of Liverpool, its extravagance of fashion, and its political weight. There is, probably, no place in the world, except one or two of the cities of the United States, where "cash" is so absolutely the standard of merit, and where money-worshippers are so fervent in the adoration of their god. Exceptions, and these nobly distinguished, of course, there are,—but we speak of the rule, and the prevailing rule is as we have here described it.

The antiquity of Mamecestre, or Manchester, is of a very respectable quality. Some fond antiquaries have claimed its name as British. Baxter makes of it *Man-centium*, "the place of skins or tents." Mr. Harland pronounces this

"fanciful." "This ideal name falls to the ground at once, if the real Roman name was not 'Mancunium,' but *Manutium*, or *Mamucium*." The actual Roman name it would be difficult to determine, for it is written in the last three ways, from which Mr. Harland is inclined to reject the first. In reference to Baxter's perhaps fanciful, but possibly well-guessed derivation, and alluding also to the Latinizing of British names by the Roman settlers, the Editor remarks:—"Compare this with what we know of the Roman station at Wroxeter, near Shrewsbury. The hill in the immediate neighbourhood still bears the British name of the Wrekin, from which was probably constructed the Roman name of *Uricontum*; but here the terminal *-um* has no correlative sound in the British name; the Latinizing of which would be *Uricon-*, the *-ium* being added as required by the genius of the Latin tongue and by Roman euphony." In fine, the antiquaries are accused of making an imaginary British out of a supposed Roman name. The latter, however, is more certain than Mr. Harland would seem to allow; yet, without saying that Baxter and Whitaker are right, we are not prepared to declare that they are, undoubtedly, wrong.

One point is unquestionable, the existence of Britons or Celts in this locality:—

"They have written the indelible evidence of their ancient possession of the district in the names of its rivers and streams. Of the three rivers or larger streams which water Manchester, the Rev. John Davies thus writes:—The IRWELL, from *Ir* (Welsh), fresh, vigorous; and *Gwili* (Welsh), a name for river, as the Gwili in Carmarthenshire; properly that which turns or winds,—a winding stream. In composition, 'gwili' loses the initial G. The IRE, from *Iwrch* (Welsh), the roebuck, probably from bounding along a hill course. Lhuyd, in his *Adversaria*, says there were many streams so called in Wales. The MEDLOCK, from *Med* (Welsh), complete, full; and *loch* (Gael. loch), lake or pool. As to the smaller streams, the CORNBROOK is from *Cor* (Welsh), narrow, and *awn* (Welsh), a contraction of *avon*, a river; i.e. *cor-awn*, the narrow stream. Whitaker says that the TIB is the same with Teivi, Tavy, Towey, Tav, Dove, Dee, &c., meaning simply the water or stream."

The footstep and the home of the Roman, and, of course, stronger impress of the abode and the doings of the Saxon, are also clearly visible. To these succeeded, as elsewhere, in England, the Norman, one of whose lucky soldiers obtained a grant of land, and laid the foundations of the baronial house of the Gresleys or Gresleys. In his account of these barons, Mr. Harland is not aware that he is at issue with such high authorities as Nicolas and Courthope. The Editor opens his list with one Albert, about 1100, who, he tells us, 'is generally regarded as the first baron of Mamecstre.' We confess we have greater confidence in the worthy Somerset Herald, who commences the list with Albert's son Robert, the first ascertained Baron, by tenure, who was living in 1134. Somerset records seven barons from this Robert, in 1134, to Thomas, who dying childless in 1347, the barony became extinct, but the lands passed to Thomas's sister, Joan, wife of John la Warr; and the blood of the Gresleys now flows in the still existing line of the Earls of Delaware.

Mr. Harland states that the eight barons Gresley had but three Christian names; there were according to him, three Alberts, three Roberts, and two Thomases. We turn to those authorities we have already cited, and we find only seven barons,—one Albert, three Roberts, two Thomases and a Peter. This genealogical difference we leave the Editor to settle with "Somerset"; it is of more importance to them than to us, who are rather

inclined to cite an illustration of a well-known English phrase, which probably may have puzzled that highly-informed personage the "general reader." Allusion is made to Robert de Gresley, who is said to have had twelve knights' fees in the county "*infra Limam et extra*":—

"What was the Lime? Dr. Hibbert-Ware notices two different opinions. Sir Peter Leicestor in adverting to an old saying 'None do me service beyond the Lime,' regards the word 'lima' or 'lime,' as an old corrupt version of *limes* (a limit or boundary line), and observes that there were two towns situated on the verge of the Cheshire palatinate, namely Ashton and Newcastle, to each of which the words 'subtus limam' were appended. Others would read the word 'lineam,' agreeably to the English name of Ashton-under-Lyne, which they regard as pointing to the local situation of the town 'under the line' of Mercian Cheshire; and so distinguished from Ashton-on-Mersey, which was not situated 'under,' but 'upon' the great Cestrian boundary. This, however, does not remove the difficulty; for almost all ancient charters have 'limam' and not 'lineam.' Dr. Hibbert-Ware thinks that whether the word be lime or line, reference is made to the great Mercian or Cheshire verge, or line, which is to be traced along the south-easterly and southerly districts of the barony from the Tame to the Mersey. Thus, such knights' fees as lay below this verge or line contiguous to the Tame or the Mersey from Ashton-under-Lyne to Flixton, and those in Widnes, adjoining the estuary of the Mersey, would be termed '*infra limam*,' or perhaps '*lineam*.' Such knights' fees as were more remote from the Mercian verge or line, as those in the north of the Salford hundred, or in Leyland, would be designated '*extra limam*,' or by some '*lineam*.'"

In reference to the connexion of the Ferrers family with this locality, Mr. Harland writes:—"It is doubtful whether there was an Earl of Ferrers in 1282." We can assure him, it is not doubtful at all; there was no Earl of Ferrers till 1711. There were Ferrers who were Barons of Chartley as early as 1299; and there were Ferrers, Earls of Derby, as early as 1138. It is incorrect to speak of this latter branch as Earls of Ferrers. The one who died, under attain, in 1278 had been dispossessed of his earldom in 1266,—not in the preceding year, as Mr. Harland states. He is also in error in saying that "his lands were conferred on Edward Plantagenet, afterwards Earl of Leicester and Lancaster." The princely successor to the Earl was Edmund, and not Edward Plantagenet, as the Editor, doubtless only by an oversight, has called him. One of the pleasantest incidents connected with these Ferrers, Earls of Derby, is that in reference to the Earl and Countess who died within one short month in the year 1247, after having lived together man and wife seventy-seven years!

The following is a bit of forester's life of the olden time. The *hora nona*, without question, refers to "noon,"—the mention of dinner, the noon or "mittags-mahl," mid-day meal, satisfying us on that point:—

"In one of the forest statutes the mode of a forester's walking and watching in the forest is strictly prescribed: 'That the foresters rising early and going into their bailiwick, shall there do their accustomed duty until the ninth hour [*horam nonam*, the hour of noon, or of three p.m., the *nonas* or *nona* of the canonical hours], and then go to dinner; and quickly after dinner returning into their bailiwick, namely into those parts where they had not been before dinner, there go, listening and lying in wait [*audientes et insidiantes*], that no one does ill there, until evening [*vesperum*, i.e. canonically from about four to seven o'clock, p.m.]. And so he shall do every day.'"

William of Malmesbury dedicates his history to Robert the Consul, or Robert Fitzroy, as his father, Henry the First, called the son, who was

a more accomplished man than any of Henry's legitimate children. Mr. Harland refers both to Robert and his son William, the second Earl of Gloucester, who, he so informs us, died in 1173. This is another of the Editor's errors. The Earl William, in 1176, having no male heir, made over to John (afterwards King of England) his Earldom of Gloucester, on John being affianced to William's daughter Isabel. Of the few transfers of peerages, this is certainly the most singular, for the marriage did not take place till 1189, and, by law, or custom as good as law, no man could assume a title by right of his wife till that wife was a mother. It was because of this fact that Queen Mary, when she was hoping against hope, made such fond and ostentatious parade of her person. Had her hope been fulfilled, Philip would have styled himself King of England. The Earl William of Gloucester did not survive to see his daughter married, but he lived ten years longer than Mr. Harland has recorded him as living.

For readers for whom municipal history has peculiar attractions this volume will have great interest. The love of self-government has been a passion in this country from the time of the Druids. In a brief passage this is well illustrated by Mr. Harland:—

"The municipal privileges of the earlier towns of England were mostly derived from Roman sources, with the addition of Saxon and Norman, and a few lingering British customs and usages. These were enjoyed anterior to the grant of the earliest charters, and these charters, whether granted by king, earl or baron, must consequently be regarded rather as the formal confirmation and ratification of customs, privileges and immunities already venerable from their antiquity, than the first accordance of such franchises. Indeed, most of the early charters express this fact in plain terms, confirming to the men of the town, the burgesses or citizens, all the liberties, free customs and franchises, which they have had from of old time, or which they have ever had. In Anglo-Saxon times the king had an officer called the king's reeve or receiver, in a town, to collect and receive therein the taxes and tolls due to the king; and when the king 'gave a town' to a queen, a bishop or abbey, the gift was simply of those dues or duties accruing to the crown from such town. Most Saxon towns were royal towns, having no superior lord but the king. Others, after the introduction of Christianity, gradually grew up about episcopal sees, abbeys, priories, &c., and eventually received recognition and confirmation of their liberties and immunities at the hands of their ecclesiastical lords and protectors. When the king's reeve or the lord's bailiff practised heavy extortions and grievous oppressions, the townspeople purchased a charter enabling them to choose their own reeve, and protecting them against the petty tyranny of the taxing officers of their superior, and when the town was under the king the burgesses, whenever they could, invariably bought the farm of the king's dues for ever, which was called the fee-farm of the town. Such will be found to have been the case with Liverpool. As to the provisions of charters they were based mainly on the great mass of customs, which formed the old common law, the unwritten law of England ('*lex non scripta*') anterior to the commencement of legal memory, i.e. A.D. 1189. To this may be added the liberties and immunities directly declared by Magna Carta and the statute or written law, subsequent to that year."

To some statements made in this volume the Editor has appended names of writers as his authority for the respective statements. When these statements, however, are made in the very words of the original authors, and are merely quoted by Mr. Harland, they should be distinguished by inverted commas. We notice this matter, as we have done, with respect to the errors in the book, in a friendly

spirit. We need not wish for a scholar like Mr. Harland more learning, but we are justified, as other volumes on this subject are to follow, in recommending a little more care in correcting his proofs.

NEW NOVELS.

Life in the Land of the Fire Worshippers. By Charles de H****. Edited by Fredrika Bremer. 2 vols. (Newby).—This novel might have stood very well upon its own merits, without any editorial godmother to declare her faith in its claims to attention. Except in the case of posthumous works, or standard scientific works, which may deserve to be endowed with the latest discoveries and the additional lights which foot-notes can bestow, an editor is like an unwise surety who writes his good name on the promissory note of a man whose own assets are doubtful. "Let every herring hang by its own tail," as the aphorism says. 'Life in the Land of the Fire Worshippers' is both an amusing and instructive book. It is written by some one who has travelled and lived in the lands described. The descriptions of manners, customs, and scenes are all fresh and vivid; they appear to have been drawn from actual life. The story does not lie in any hackneyed line of Oriental travel, but in parts where tourists never go, and travellers but seldom; indeed, there seems little encouragement to go for any reason short of necessity, or that passion

For always roaming with a hungry heart,

of which Ulysses accuses himself. Persia is a region where persons might go from a love of adventure, but never from a mild desire to take a pleasant excursion. The odds against coming safely back again seem ominously heavy. The story of the 'Land of the Fire Worshippers' is slender, but it makes the adventures interesting. A missionary and his wife stationed at Tocat—sent out by what society we do not know—being at Tocat, the husband wishes to be present at the great festival of the Guebres, and to see their great temple; his wife insists on going with him. They set off, accompanied by a wonderful courier, or "Tatar," who might have come out of the 'Arabian Nights,' also a Turk called Belladour, both excellently-drawn characters, worthy of the Author of 'Hajji Baba.' The account of the Guebres is very touching, and seems to be quite true. The description of the temple and of the great day of ceremony is very good; the sudden trouble that comes upon them gives a vivid picture of the state of things in those countries, and would dishearten the most sanguine believer in the regeneration of Oriental governments. The missionary and his wife visit an encampment of wild Kurds, and get mixed up with a romantic adventure, which leads them into very interesting and exciting perils and dangers, through all of which Abdullah contrives to extricate them in spite of themselves. Mr. Leonard, the missionary, is an entirely impracticable man, without an idea of choosing the proper times and seasons for the display of his virtues. He is so truthful, that he will insist on riding through Persia in spite of the sun, in the tightest European costume, with an orthodox beaver hat, because he does not consider it right to seem to deny his country by adopting a dress more fitted to the climate! He cannot be restrained from the most headstrong stupidities, which bear the same relation to the virtues he intends as the sticks on which gardeners write their labels bear to the plants they are made to designate. Mrs. Leonard is a bright, sensible woman, in spite of her more than matrimonial superstition about the wisdom of her husband; she and Abdullah together overrule him for his good. Firouza, the Armenian girl, is a capital sketch of an Oriental young woman, by no means according to the type of a model heroine, but a fascinating compromise between an angel and a wild cat! Nomchia, the young Gueber, is a hero after the model of all ages and countries, though Mr. Leonard, the missionary, bids fair to spoil him; but as he does not convert him till quite the end of the book, the reader is none the worse for it. It is not often we have read a more entertaining book; the story is as unlikely as possible, but the reader would be worse

than ungrateful to complain of such a trifle:—if Mr. and Mrs. Leonard had not run all those hazards, and if they had not escaped, where would the book and the story have been?

My Heart's in the Highlands. By the Author of 'Nut-Brown Maids.' (Parker, Son & Bourn.)—The fault of this story is that it is written with a pedantry of imitation. The period is the middle of the last century, and the author has been content to read and quote Dr. Johnson's Tour, and to talk of novels, instead of becoming identified with the scenes and people with whom the story is connected. The book might quite well have been written by one who had never seen the Highlands; and the reader is needlessly referred to books to support the author in actions and incidental traits which occur in the story. If, however, the reader can get over the stiff halting gait at which the story proceeds, he will find much to interest and amuse; indeed, when he closes the book, he will be surprised to find how much more he has been interested than he was aware of. The fortunes of the different families of the glen will win on his sympathy; while Fimalia, with his questionable antecedents and his worship of Mary Adour, is akin to young Mauprat with his love for Edmé, in George Sand's novel; though we confess to feeling more interest with the Highland Fimalia than ever we had with the evil young baron. There is a great deal of careful writing and painstaking attention in the Highland story; we prefer it to the author's former work, 'Nut-Brown Maids,' and we think our readers will be of the same persuasion. If the author would see more and go less to books for inspirations of time and fashions, the story which would result would be worth reading.

The Bank Parlour; or, Experiences in the Life of a Late Banker. By A. B. Blackie. (J. Blackwood).—Bankers, medical men, lawyers, clergymen and the police have special opportunities of seeing human nature in extreme phases in the crisis of emotion and the emergencies of sudden catastrophes. If they would or could tell one-tenth part of what they have seen, it would be more than any novelist would venture to invent; but they in general have not the gift of facility in putting their experiences into a readable artistic form. 'The Bank Parlour' is no exception: the stories may be found in fact, but they are weak, and not worked up with an artistic power; they promise more than they perform, and they are weakened by a false sentimentalism, which detracts greatly from their truth. For sea-side or railway reading the volume will be acceptable, as the stories are short, and do not make much claim on the reader's powers of attention or recollection.

The Boatman of Clarens.—[*Le Batelier, &c.*] (Jung-Treutzel).—This is a novel in which we have stuck fast, after having forced a way through one-half of its tedious and fantastic improbabilities. We have already some experience of wearisome and affected Swiss novels—the tales of Töpffer making bright exceptions, quiet though they be, and restricted in their circle of incidents;—but 'The Boatman of Clarens' is the most wearisome and affected of all, and, to boot, very long. We find in it a lady widow who has a daughter, and a daughter who has a female companion and a male cousin; and the daughter is one of those capricious, malicious, coquettish, affectionate, selfish, generous, repulsive, fascinating creatures who first saw the light in the novels of Madame Dudevant, and whom Christian men and women, it may earnestly be hoped, will have difficulty in finding anywhere else. Julia is an elaborate yet paltry copy of the most tormenting of these terrible girls. The "boatman of Clarens" is a hero à la Sand,—a mysterious, passionate, self-contained, humble, proud, refined, simple-mannered, altogether incomprehensible youth, who being thrown by chance within the spell of this siren, is tormented to her heart's content. There are midnight meetings, lake scenes, private theatricals (in which the humble companion gets the worst of it, being "fitted up" by the terrible girl aforesaid as the object of the mysterious boatman's adoration),—with the view of teasing him ere she extorts his secret. The male cousin intervenes, and does nothing. There is an accessory figure, meant to be a droll, of whose

washed waistcoat, and buttons, and braces our author does not spare us a scrap or a thread. Thus much of the contents of the first volume, which for the first volume of a novel in French is more than usually thick. Let any curious to know how these delightful and probable characters extricate themselves from the web of conceit and perplexity thus woven, try the second volume of 'The Boatman of Clarens.'

OUR LIBRARY TABLE.

Peter the Apostle never at Rome, shown to be a Historical Fact; with a Dissertation on the Apostolic Authority of the Symbol (or Creed) of the Church. By the Rev. J. H. Brown. (J. H. & J. Parker.)—Mr. Brown, Rector of Middleton-in-Teesdale, is a writer with whom our logical associations come into frequent collision. His very title does not please us. We know that slip-slop has long taken the liberty of converting negation of fact into another fact, and laying it down that of the two facts, "Peter was at Rome," and "Peter was not at Rome," one must be true and one false: but we have yet to learn that ecclesiastical history has given in to this perversion of words. Again, Justin Martyr states what we call a fact: he says that Simon Magus went to Rome, was there honoured as a god, and had an image. On which Mr. Brown says that "the whole ground upon which Justin founds his argument" for Simon having visited Rome is the existence of an image, &c. Justin was not arguing, but stating facts. In the same page Mr. Brown says, "If the evidence alleged fail, the conclusion must be against the fact for which it is alleged." We can only go so far as to say it must not be for. We shall not enter into the question whether Peter was or was not at Rome: a question about which our readers may get all the learning from Mr. Brown, and may use their own logic. Lardner, whom Mr. Brown routs to his own entire satisfaction, will give the same. Mr. Brown's view of the "Symbol" is that the Creed is the Nicene Creed. We are not better pleased with his reasoning on this conclusion—fact, if he please—than on the former one. Jerome speaks of the Creed as an expression of our hope as well as of our faith. This, says Mr. Brown, evidently refers to the Nicene Creed, since the distinction does not "seem" so strongly marked in the Apostles' Creed. Mr. Brown quotes the Nicene—"the resurrection of the dead, and the life of the world to come"; but he does not quote the Apostles—"the resurrection of the body, and the life everlasting." Both mean exactly the same thing; but Mr. Brown is speaking of the strength with which the meaning is given: and it is clear enough that the one word *everlasting* which is in the Apostles' Creed, and is not in the Nicene, makes the passage in which it occurs far the more marked of the two.

Under the title of *British Wild Flowers* (Van Voorst), Mr. J. E. Sowerby has produced a volume that should be most welcome to the younger students of botany. It contains figures, coloured or uncoloured, of all the flowering plants natural to this kingdom, so reduced that each plate contains twenty representations. Mr. Sowerby's botanical knowledge has enabled him to execute the operation of reduction with such skill that, with some exceptions, the figures are as instructive as those in the original thirty-six volumes of 'English Botany,' or in the seven volumes of the abridgement of the same work. It is chiefly among willows, sedges and grasses that the figures are unsatisfactory, but even in these difficult orders the likenesses of the plants are sometimes preserved with success. We must add, that the letter-press, by Mr. C. Pierpoint Johnson, is unworthy of the plates. A teacher of botany who confounds the knob of an orchis with the tuber of a potato, who tells his reader that the bulb of a lily and the corm of a crocus are "considered by some botanists" to be modifications of the stem, and also calls them all a root, using the word in its "popular" meaning, or, rather, no-meaning, is not a guide to be commended, especially when we find him proceeding to assert that in some plants a stem is wanting! as in the dandelion. It is to be observed, too, that

Mr. Johnson is not aware of the real meaning of the term pistil. A flower, he says, sometimes contains "only one, and sometimes many" pistils. Every tyro should know that no flower can have more than one pistil; the name designates the whole female apparatus. *Pistillum intra antheras communiter collocatur*, is the definition of Linnaeus, who called its parts, when it consists of more parts than one, *germina*,—a term now replaced by *carpella*. We must, however, add, in fairness to the author, that he does not stand alone in this misconception. A slovenly use of terms is one of the worst features in books intended, like this, for beginners.

Class-Book of Botany: being Outlines of the Structure, Physiology and Classification of Plants, with a Flora of the United States and Canada. By Alphonso Wood, A.M. (New York, Barny & Burr; London, Low & Co.)—If naturalists in the North American provinces are unacquainted with the vegetation of their country it is not from want of good books, of which there has been an abundant crop in late years. On the contrary, few kingdoms in Europe have been more carefully examined and reported on. We do not refer to the meagre and obsolete treatises of Pursh, Richard or Bartram, nor to the comparatively modern ones of Nuttall, Torrey, Eaton and Beck, but to a few first-class works produced either in this country or in North America itself, such as Hooker's 'Flora Boreali-Americana,' and the valuable text-books of Asa Gray and Chapman, in which the authors have availed themselves of every resource afforded by modern science. To these another guide has been added by the Principal of the Female Academy at Brooklyn, who in the work before us, an octavo of 832 closely printed pages, gives a systematical account of all the flowering plants and ferns known to grow "from Quebec to New Orleans, and from St. Paul's to St. Augustine." The matter is arranged according to the natural system of De Candolle; and Mr. Wood assures us that in preparing it he has distrusted every source of information, except that of his own personal inspection. In making up his mind upon the many vexed questions of the day, concerning the limits of species and the value of characters in defining genera, he has uniformly leaned to the side of condensation rather than separation,—an example which our writers on the botany of Europe would do well to follow. Analytical tables of the orders, genera and species, of the volume are introduced, and to the whole is prefixed an introduction to botany and vegetable physiology. If we cannot say that Mr. Wood's work contains much originality, we must give him credit for careful compilation and clear arrangement; qualities that suit it well for the purposes of students. Its fault is the want of brevity in his definitions, or we ought to say short descriptions, of plants, the characters in which are not always skilfully contrasted; while, on the other hand, his analytical tables of species are too concise, as is especially observable in his account of the order of Anacardiaceae. Upon the whole, the book deserves commendation as the result of conscientious labour; although disfigured here and there by strange misprints, as *Æschylus* for *Æsculus*, *Leland* for *Solander*, *gladulosa* for *glandulosa*, *trachæofolius* for *trachelifolius*, &c. It also has two complete indexes, one of Latin, the other of English names.

Black's Guide to the South-East Counties of England—1. Sussex; 2. Kent. (Edinburgh, Black.)—We do not know if the inquirer, in a recent number, after a Sussex guide with "a decent claim to accuracy," will find what he requires in the first of these volumes. Of the account of Shoreham Church in Murray's Guide he complained, because of its incorrectness, especially in dealing with Shoreham Church. How Black's 'Sussex Guide' contrives to stick to accuracy may be seen from this extract on the same subject:—"The churches, both at Old and New Shoreham, possess an unusual interest for the archæologist." That is all, and it cannot be gainsaid; but whether its strict truth be the whole amount required by anxious travellers, is another matter. It seems to us that a wayfarer without a guide at all might contrive easily to pick up ten times more information of a valuable quality in a single tour

through the county than is to be found in this volume. On the other hand, the volume on Kent is full and satisfying, as far as we have been able to test it, though, in some cases, as in the account of Stone Church, more extended descriptions would be desirable.

The Threshold of Atrides. By George F. Preston. (W. Kent & Co.)—Herbert and Sydney Smith have told us that he who shoots at a star aims higher than he who shoots at a tree; and it is perhaps for this reason that the author of this little volume just succeeds in soaring above a dead level of mediocrity. For Mr. Preston essays to sing the progress of those events which preceded the downfall of Troy. His drama, or dramatic poem, opens with the sacrifice of Priam and his priests on the Trojan Pergamus, and closes with a chorus of Spartans, bemoaning the flight of Helen. It contains nothing striking, no one line that fastens itself on the memory; but it is fair, consistent writing, which never offends against good taste. Here is a speech of Paris to Cænone:—

Thy memory broods upon one evening past,
We paced in woven shadows broad and still;
Quick flocks unrobed the vapour-dusty sun,
And beamed a lightning on the distant sea;
A softer ray athwart the column'd pines
Mirrored the tangled rye-grass in the rills.
Autumn had touched the trees—white gusts of cloud
Sped high above us. There we reached a cave,
Sacred to some bright Goddess of the hills,
Whose image, lap'd from its grey pedestal,
Slept fallen in a calm divinity.
By a still covert ivy-garlanded,
Deep latticed from the glare with netting vines;
Hard by, an altar delicately spread,
Thin barley-cakes and ears of yellow maize,
Which shepherds offered quaintly of their best.
Soft meadow-grasses rustled round the slopes,
Crisp alders and white poplars rimmed the brook,
Thimby of curling rivulets. Beyond
To sternest solitudes the pinewood darkened—
I linger on these trifles grown most dear,
Close-hoarded memories of uncertain joy—
And there, in converse precious as the sound
Of silver streamlet in a leafless wild,
We wondered if that ever-fading shore
Future would crown its purple peaks with gloom;
Sullen, or sunlit barriers dimly seen,
Which beckon into cloudland.

—'The Threshold of Atrides' contains nothing worse than the above, and nothing better, in the shape of a detached passage; but the poem, as a whole, is not ill conceived. Mr. Preston had not the *vidua vis* to do his conception justice. Like Tristram Shandy, it has almost perished in the embryo. The reader will find the book very harmless, albeit it is not a book which we can strongly recommend. We shall not be surprised if the author does better by and by.

The Career of Franklin, an Ode; with other Poems. By Chandos Hoskyns Abrahall. (Mallett.)—Another poor poem on a subject that poetsasters had better let alone. Mr. Abrahall has mistaken his vocation. He is prosy enough for the desk or counter, and might employ his leisure more profitably than in the production of verses which the warmest admirers of the Arctic hero will be slow to read.

Legends of the Moorlands and Forests of North Staffordshire (Hamilton, Adams & Co.)—*Pictures for the Mind's Eye, including Subjects both Humorous and Grave*, by Edwin Davis (Edinburgh, Nimmo).—*The Poetic Spirit, and other Poems*, by James Ellis Cartwright (Longman & Co.)—Three more volumes of sentiment and silliness; the first nervous, the second bilious, and the third febrile.

Of Lectures delivered at various institutions we have to mention the following publications:—Mr. D'Orsey *On the Study of the English Language: an Essential Part of a University Course* (Bell & Daldy).—Mr. Godwin Smith on *Some Supposed Consequences of the Doctrine of Historical Progress* (Parker).—The Rev. S. Haughton on *Arctic Voyages* (Hodges, Smith & Co.).—The Rev. C. T. Rust on *Essays and Reviews* (Jarrold).—Prof. Williams on *The Study of Sanskrit in Relation to Missionary Work in India* (Williams & Norgate).—Mr. Campbell on *The Caledonians and Scots* (Houlston & Wright).—Dr. Lieber on *The Constitution of the United States* (Trübner).—Mr. Hutchison on *Art and Education* (Macnair).—Mr. Smith on *The Place of English among the Languages and Literatures of the World* (Crystal Palace Library).—Mr. Rowntree on *An Inquiry into the*

NEW CHURCH IN WESTMINSTER.

THE Church of St. James the Lees, in Upper Garden Street, Westminster, designed by Mr. G. E. Street, was consecrated on the 31st ult. This edifice has not only large pretensions and considerable architectural merit, but is, in some respects, novel, and for interest in design inferior to no church in London, unless it be that in Wells Street, Oxford Street, designed by Mr. Butterfield. It is of brick, red and black, dispersed with taste and judgment, stone being very sparingly introduced. In the interior the nave is of immense width, compared with that of the aisles, which in height also are kept quite subordinate, their roofs being not only low, so as to permit of the employment of a clerestory, but these roofs (open timbered and painted) slope downward to the outer walls: a picturesque result is thus obtained, and by far the greater part of the space of the interior thus comes unbroken before the eye. The largeness which characterizes the design is also marked by the great span of the aisle-openings, three only in number. Above, the wall has been painted by Mr. Watts with an admirable fresco, considering it as a work of Art, but which, from its very style, seems out of place in this edifice of Romanesque-Gothic character, as much as would be, to reverse the circumstances, a wall-painting by Ghirlandajo in St. Paul's. Through this wide opening we see the choir and altar. The west end of the building is filled in with a line of three double lights, separated by broad wall spaces, so that the whole west wall of the interior looks more like a piece of plate tracery than a simple wall: an effect still more forcibly suggested by the introduction of a noble rose-window over the line of three double lights, which carries the eye up to the roof. The roof, which is semi-hexagonal in form, is planked flat, divided by light wooden ribs, which, rising from the aisle piers, span the nave in semi-circles. The roof has been painted by Messrs. Clayton and Bell, with the Tree of Jesse and the Genealogy of Our Lord, typical busts of the person-

ages being introduced in medallions along the sides of the span in a line on either hand. Entering the choir through the light iron railing which incloses, without hiding, its interior, we find the apse to be semi-circular, the roof groined by two springers, which rise on either side of the super-altar to the apex of the roof; the ribs are of stone, meeting in a stone boss, on which enter also the ribs coming from the north and south sides of the altar. The apse has three lights, with a rose-window in the head, filled with stained glass, representing types and antitypes of Christ, by Messrs. Clayton and Bell. Between these descend the groving ribs, to rest upon banded shafts of polished marble. The reredos below the line of lights is somewhat peculiar to English eyes, being of white stone, inlaid (with a black composition) with figures of the Holy Women. Immediately over the altar is an eight-pointed cross of vari-coloured Irish marbles, set with studs of Derbyshire spar. The emblems of the Evangelists fill in the space between the arms of the Cross and the descending shafts on either hand. The monograms of Christ are placed below these. In the pannels of the reredos which bend round the apse are the above-mentioned figures, commencing, on the left, with Mary the mother of James, then Mary Magdalen, St. Elizabeth and the Virgin Mary; then, on the other side of the reredos proper, come the wife of Manoa, Hannah, Ruth and Sarah. Bands of red and yellow tiles are inserted between these figures, which are represented in niches, dividing them into twos. We should like to see these tiles removed entirely, or others of a bolder colour introduced; they weaken, and do not relieve the design. At the right hand of the lower altar is a sedilla; on the left a piscina, the last richly designed. The tiles on the floors of the high and lower altars (or retro-choir), and on that of the choir, are rich and quiet in colour, but there is an unsatisfactory look about them, probably derived from their being indifferently laid. Much of the beauty of these decorations depends upon their being irreproachably laid. Few, indeed, of the old pavements are imperfect in this respect, or they would never have remained for our admiration. Messrs. Man & Co., of Brosely, supplied the floor-tiles of the whole edifice, which is paved with them throughout. The choir seats have poppy-heads, which we do not like at all. Within the apse come the transept aisles, fitted, apparently, as chapels; in that on the left is the organ. Two drop arches, resting on broad shafts of polished granite, with carved caps, and resting on tall plinths (the height of the choir seats), divide these transept aisles from the choir, which is further severed by a similar iron railing to that before named. Each transept aisle is, in itself, divided by a shaft of Bath-stone in its centre, whence spring arches to the side piers of the choir. The view from the aisles through these transept aisles on to the altar gains much effectiveness by these last-named shafts. The spring of the chancel arch is very bold and impressive. There responds, on which rest the groving ribs of the choir, are supported by carved brackets above the side shafts, but the rib of the chancel arch itself rests upon a stone corbel inserted in a massive stone pier, both of which are to be inlaid as the reredos is. The two shafts which are on each side of the nave are of polished red granite, with bands of Bath-stone midway of their heights; the caps are elaborately carved, to our minds, —almost too elaborately, indeed, but very skillfully, however, from designs by Mr. Street, who is, of course, responsible for the supererogation. The subjects are illustrative of the Parables and Miracles. The clerestory windows consist of two tripled lights, divided by detached shafts of coloured marble, the caps inlaid as above. In addition, next the chancel is a light on each side, —to our minds, the only poor portion of the whole design, —of three lights divided by narrow mullions, a rose above them so as to form a conventional window. Small pointed lights run along the whole length of the aisles, divided by shafts of granite with stone caps; the arcade-like effect of these, with their rear-vaults, is characteristic of the style adopted, and very picturesque. The gas-burners are effectively grouped above the piers of the nave, so that the wholeness of the design is not broken

by rows of little pipes sticking up here and there, as is too commonly the case. If we look round the interior thus described it is impossible to refuse admiration of its dignity, repose and massive breadth. The rich effect of the skillfully arranged red and black bricks will be heightened still more by time. The iron-work and lighting of this important building has been executed by Mr. Cheaver, of Maidenhead; the stained glass throughout by Messrs. Clayton and Bell; the organ made by Mr. G. Nicholson, of Worcester. Miss Monk embroidered the altar-cloth. At the expense of this lady the church has been built, in memory of her father, the late Bishop Monk, of Gloucester, a Canon of Westminster, at a cost of about 8,500*l*. The pulpit, which looks solid, rich and handsome, is designed by Mr. Street; it contains figures of the four Doctors of the Western Church and the four Evangelists, and on the pannels, which are divided from each other by shafts of green marble, are illustrations of preaching:—1. St. John the Baptist preaching; 2. Dispute with the Doctors; 3. The Sermon on the Mount; 4. St. Augustine of Canterbury preaching. Mr. Watts's picture represents our Lord in majesty, surrounded by angels; below, on each side of the head of the chancel arch, are painted the four Evangelists. The design of this work is extremely noble, and full of exalted feeling, and it is produced with admirable art; but, nevertheless, the whole style, as we said before, is out of keeping with the style of the building itself. It is understood that this picture was executed under considerable difficulties, and that Mr. Watts is not satisfied with the result of his labours.

ON A NATIONAL MUSEUM OF NATURAL HISTORY.

BY PROF. OWEN.

(Concluded from page 155.)

ON the foregoing grounds of calculation, with forecast of thirty years accessions, it appears that a Museum of Natural History, embracing all the objects of the science, from Man to the Mineral, and affording to each class space for its due proportion of exhibited examples selected to show the extent of the class, and the kind and degree of variations therein, would require a building of two stories, covering five acres of ground. Such was the main result of the Plan and Estimate* which I made at the time when the questions of the need of space for a National Library and Reading Room, a National Collection of Antiquities, a National Gallery of Fine Art, a National Museum of Technology or applied Art, were being agitated, and, in various ways, pressed upon the notice of administrative authorities and of the public.

I felt that I should be wanting in my obligations to the cause of the science to which my life has been devoted, if I omitted, at this crisis, to set forth the statistics or constants on which an adequate conception of the requirements of space for a National Collection of Natural History could be formed.

Although, from the care and pains bestowed in obtaining these constants, I had and have no misgiving or doubt in regard to the result,† it was with satisfaction that I learned the scale on which the public Museum of Natural History had been provided by the State of Massachusetts, North

* 'Return,' 16th of March, 1859, *ut supra*.

† The scoff and abusive epithets applied to this labour by the Hon. Member for Galway in the debate on the British Museum, as reported in the *Times* of July 23, 1861, has not yielded me any grounds for modifying the conclusions arrived at in my 'Estimate of Space and Plan,' printed by Order of the House of Commons, March 16, 1859. I have never recommended the immediate erection of a building covering ten acres or five acres; but that the latter extent of ground should be secured for the Natural History Department, in order that future additions might be made economically, with great saving of money and time, in conformity with a pre-determined plan, looking forward to the augmentations for thirty years. In reply, *e.g.*, to Q. 729, I stated "again as I have stated before, it is not at all in contemplation that such a plan as this should be forthwith carried out, but only that the space of ground be secured; so that when additions were required, they might be made conformably with a well-devised and well-considered plan."—'Report of Select Committee on the British Museum, 1860,' p. 68. I have never advocated the removal of the Natural History Collections from their present locality; but that adequate space be secured for them wherever Administrative wisdom may determine.

America. The *Boston Daily Advertiser* of Wednesday, Nov. 14, 1860, gives the following statements in its report of the "Public Opening and Dedication of the Museum of Comparative Zoology at Cambridge, U.S." "The lot of land on which it stands is an oblong square of about five acres given by the University, in trust, to the Museum." The building, when complete, "will represent three sides of a rectangle with an open square facing Divinity Hall." It will be a building of three stories. "The wing erected is apparently four stories in height, but one row of windows belongs to the large and commodious galleries which surround the chief rooms."

The exhibition space which this building will afford, when complete, is equivalent to a superficial area of 500,000 feet, or to galleries, with an internal free width of 50 feet, of a collective length of about 6,000 feet.

And this space is prospectively provided and secured for a proportion only of those classes of natural objects which would be associated together in my plan and estimate of space for a National Museum of Natural History. The accomplished Governor of the State of Massachusetts, GEORGE BANKS, in his "Dedictory Address" on the opening of the "State-Museum of Comparative Zoology," alludes to the "somewhat restricted object signified by its designation." He says that "this name faintly indicates the purposes of its founders," and that "he sees in imagination rising before him a structure of such magnificent proportions as may serve not only for the animal, but the vegetable and mineral creations."

President Felton, in his Address, states that "the first conception of the plan of this State-Museum is due to the genius of him who is now placed at its head."

Prof. Agassiz, throughout his brilliant and productive career, has associated the practical labours of the Museum Curator with those of the public scientific teacher and of the original scientific investigator. Of all my contemporaries and fellow-labourers, he is the one in whose opinion as to the scope and aims of a Public Museum of Natural History I have the greatest confidence. Beyond the general fact of his devotion of a proportion of his time to the development of a State or National Museum for the country of his adoption, I knew nothing in regard to it until I received the 'Report' of its 'Inauguration' from which I have quoted.

The chief features in which my friend's principles of arrangement differ from those of my Plan and Report of 1859, are, that "the collections of fossils should be combined with those of the animals now in existence;" and that he has provided both numerous preparations and requisite space for "the exhibition of embryological series to illustrate the correspondence existing between the successive changes in the development of living animals and the order of succession of the representatives of past zoological ages." Prof. Agassiz states in his 'Report'—"I am satisfied that no Zoological Museum will hereafter be considered as established on a true scientific basis in which Embryology shall be excluded; and it will be one of the great advantages of our Museum to have started on that basis and to be throughout able to organize the whole of our arrangements with reference to it."

In this practical exposition of his convictions of the importance of Embryology, Prof. Agassiz has set an example to the officers of other public Museums which I, for one, would gladly follow: participating with him and every philosophical naturalist in the estimate of the value of developmental evidence in the determination of real affinity.

Youthful eyes, skilful fingers, ardent zeal to co-operate with the systematic arranger, are indispensable to carry out these views in any reasonable time. And Prof. Agassiz has well availed himself of the application of his collections to public teaching, and the concomitant functions, of Professor and Curator, which long experience of the advantages of such associated duties has led me to urge on every suitable opportunity. "The preparation and arrangement," says Agassiz, "of many hundred thousand of specimens was no easy task. In fact, I could

never have undertaken it alone. But I had, as Professor, to train young men intending to be professional Naturalists, and I availed myself of this circumstance to advance the work of the Museum. I have thus prepared several good assistants, who have taken charge of the arrangement of the different parts of the collection now on exhibition. The number of students who have been so engaged has varied, for the last five years, from ten to twenty; and it is my earnest desire that the most advanced of these young men should be more regularly connected with the Museum."

The instances of the most rapid advance and perfection of Natural History Museums have all been associated with the fact of their curatorship by Professors, notable for their successful public teachings of the science; as, for example, the Botanical Museum at Upsal, under Linnæus; the Anatomical and Palæontological Collections at Paris, under Cuvier; the Zoological Collections at Paris, under Geoffroy St.-Hilaire, Lamarck and Latreille.

When Parliament, in 1799, purchased the Physiological and other Collections of John Hunter, and, committing them to the charge of the College of Surgeons, appointed trustees to insure their application to the public benefit, under certain restrictions, they wisely added a condition, that a Professor should be appointed to give annually a Course of Lectures, of not less than twenty-four in number, on the science illustrated by the Hunterian Preparations. During the period in which I held office in the Museum of the College of Surgeons its increase required the substitution of a Museum with two galleries, for the Museum with one gallery, originally built for it, and a subsequent addition of two other Museums with two galleries and with the same arrangements for increased exhibition space.

My twenty years' experience as the Hunterian Professor led me to the conclusion, that the interest excited in a public auditory, with the incidental notice of the wants of the collection in the lectures, exercised a powerful influence in the contribution of desiderata and the acquisition of unexpected novelties. I have entered more fully, elsewhere,† on the reciprocal advantage to both Curator and Museum arising out of the duty of the former to give public lectures illustrative of the collections; and I will only here repeat my conviction, that one of the applications of a National Museum of Natural History involves, as a duty of the chief curator of each class or department, the delivery of an annual course of lectures on the characters, principles of classification, habits, instincts and economical uses of such class or department of Natural History.

The most elaborate and beautiful of created things—those manifesting life—have much to teach—much that comes home to the business of man, and to the highest element of his moral nature. The nation that gathers together thousands of corals, shells, insects, fishes, birds and beasts, and votes the requisite funds for preparing, preserving, housing and arranging them, derives but a small return for the outlay by merely gazing and marvelling at the manifold features and functions of such specimens and series of Natural History.

We may fail to adequately appreciate the humanizing and ameliorating effect of such mere opportunity of contemplating the extent, variety, beauty, and perfection of Creative Power upon the people of a busy and populous nation. But we can estimate the degree in which such influence may be marred by opening to the public, in a National Museum which they may suppose to give a complete epitome of Nature, only a partial view of it—say of three or four out of twenty classes—instead of a consistent and well-proportioned exhibition of all the classes of natural objects.

As to the extent to which the acquired specimens should be exhibited I find the opinion of Prof. Agassiz, as well as the practice of every public or national museum abroad, to accord with my own views. Prof. Agassiz, in his Inaugural Address, above cited, affirms that "Scientific collections are not simply made to afford the necessary facilities

to students: they should be sanctuaries revealing the advances of the science which by their very perfection would be a standard measure by which to test the scientific culture of a country."

Very different opinions of the aims or appliances of a National Natural History Museum have been propounded, and its extent estimated accordingly. A Museum of Natural History destined solely for the amusement or amazement of the general public need exhibit only such specimens as are peculiar for singularity of size or form, beauty of colour, or other striking character. In short, to achieve this aim the curator need only follow the system which the mercenary showman finds most successful with the public.

I need hardly say, however, that the appliances of a National Museum of Natural History are of a wider and higher nature than the mere amusement of a people or the gratification of the love of the marvellous.

Such a Museum should subserve the instruction of a people. But then, it may be urged, that for this educational end, specimens may be selected for exhibition which exemplify the characters of the family, order and class; and that a small exhibition of this elementary nature would be, especially if orally expounded at stated times, more instructive than a collection of species and varieties.

A third appliance of a National Museum of Natural History is to afford objects of study and comparison to professed or advanced naturalists, and so to serve as an instrument in the progress of Science. Such an application is consistent with modes of preservation and storage of specimens, as of dried unstuffed skins in boxes; shells and insects in drawers, &c., involving the smallest amount of space for the conservation of specimens.

It will be seen that the three foregoing appliances square with the aims, respectively: the first, of the commercial showman; the second, of the elementary school; the third, of the scientist's study.

But the one Metropolitan Museum of Natural History of a great nation has aims of a distinct and superior kind to the three foregoing applications. The proportion of the class of natural objects there to be seen should be such as will impart more than a mere elementary idea of the class; it should give an adequate idea of its extent, of the changes in or departure from the common and fundamental characters; it should exemplify the gradations by which one genus and order merges into another; and how the type of the class may have been raised from that of a lower, or how it mounts towards that of a higher class. Such a comprehensive, philosophic and connected view of a class of animals, plants or minerals necessitates a public gallery of proportionate size.

To such a National Museum of Natural History the public, moreover, resort, not only for amusement or for elementary instruction, but for special information on some particular subject. The local collector, the intelligent wage-man, tradesman or professional man, whose tastes may lead him to devote his modicum of leisure to the pursuit of some branch of Natural History, finds great help and solace in the galleries of a public Museum, where the specimens are arranged and displayed on such a principle as enables him to identify his own specimen with one he there finds displayed with its proper name and locality. Such visitors are sometimes averse to ask for, or intrude upon the time of the officer in charge in order to obtain the piece of information which a mere elementary exhibition of selected specimens would fail to impart.

The proportion of exhibited specimens for which galleries of the extent I have estimated are adapted would, in the majority of instances, supply the kind of information for which the last-named class of public visitors frequent them; the instances in which it would be requisite to make application to inspect the unexhibited stores would then be comparatively few.

A principle of selection for exhibition would, nevertheless, still guide the Curator in his illustrations of each class, according to the above-named appliances of a public Museum, and in regard to the proportionate space which I have estimated should be allotted to each class.

But such space being provided for a consistent

or equable display of every class, and a comprehensive view of the entire range of Natural History from Man to the Mineral once achieved, the increase of exhibition space would not, and need not, proceed with the increasing number of the discovered and obtained species of the several classes.

In my original Plan and Estimates† I had regard to the wishes expressed by Members of the House of Commons as to our National Museum, affording the public, and especially the wage-classes, the opportunity of visiting its collections in the evening. I conceived that in regard to Natural History such visitors would be most interested in the productions of their native land, and I proposed to combine with the British Collections such a selection of the more striking and elementarily instructive specimens of general Natural History as would be required to fulfil the first and second of the above-named appliances of a National Museum of Natural History. This combination of an "Elementary" with a "British Collection," I estimated, might be arranged in a circular-domed apartment of 150 feet in basal diameter. It might be so placed as to admit of the required arrangements for lighting and ventilation, and its form would be such as to enable sufficient supervision with a minimum of staff. It would be so insulated from the galleries of the main building as to reduce to a minimum the extent and chances of damage by fire. It would be easy of access, without interference with any of the normal galleries of the Natural History Collections. The simple and economical character of building exemplified in my Plan, included this Supplemental Apartment, with the two-storied galleries, in the site of five acres. And this, be it remembered, is less by one-half than is required for the building now in course of erection for the arrangement and display of the samples of the industrial products of the present generation of mankind.

Is there, then, anything inherently or patently extravagant in such an appreciation of the requirements of space in order to lodge samples of the works of Creation of every class, of all time, and from the whole world? Indeed, the very vastness of the field whence such samples have to be culled might seem to afford ground for evading or opposing the idea of attempting to provide the space required for such an epitome of Nature. "When you have got your five acres," it is said, "you will soon crowd them with specimens, and will then want more room for new discoveries."

It is to this fallacy that I would, finally, address a few words. It is no new objection: the improvement of any state of things notoriously inadequate or bad has always been opposed on the ground, either, that the proposed improvement,—at the time, perhaps, the sole practical one,—will but effect a partial reform, not worth the trouble to try to make, or, that, a thorough reform being impossible, it is useless to try to make any amendment at all. So, in discussing my subject, I hear it said, "You may have space for properly exhibiting only two, three, or four classes of natural objects, in their totality as classes, according to the evidences you now possess of such classes; and it may be true that to exhibit a corresponding or proportional series of the remaining score of classes of the objects of Natural History would require a building much less extensive than that which was erected in one year, or that which is now in course of being erected within the same period, for the temporary exhibition of the works of human industry. But as you never can exhibit all that future years may bring to light in the several classes of natural objects, it is useless to attempt to show a consistent and proportionable epitome of such classes, according as they are now known and are represented by specimens actually acquired. It is enough that you show the people the most attractive and beautiful of the classes, such as birds, shells, minerals."

To this I reply that we are able to estimate the full extent of space which would be required to exhibit, in the same degree of completeness, all the

† Replies to Questions, Nos. 2617, 2713, &c., before the Royal Commission on the British Museum, 1848.—'Address to the British Association at Leeds,' 8vo. 1859, p. 48.

† "Return," 16th of March, 1850.

other classes of natural objects, and at the same time provide for a certain future prospective increase.

That, in each of the classes so exhibited, the principle of selection guides the arranger, and a certain proportion of the species, varying according to the class, is preserved in store. That, with the increasing numbers of known species, the stored proportion of specimens would increase. That to a museum consistently exhibiting every class, the argument for more space which is now founded upon the inability to exhibit more than a few classes, would not apply. The consistent display of every class, in equable proportion, once being completed, any future requisition of space would have to be considered on the simple question of the proportion of specimens of each class to be displayed or to be stored. The arguments for and against such requisition would be easily weighed and the ground of discussion narrowed. This, at least, is most certain, that such a necessity of increase of space as now presses would never recur.

Practical acquaintance with the space required for the appropriate and convenient location, arrangement and display of a given number of specimens of each class of natural objects—an approximate knowledge of the known and named or described species of each class—the circumstances favouring or affecting future accessions to the several classes of objects—such have been the data on which I have estimated the space required for a National Museum of Natural History. Save in the instance of the State Museum of Massachusetts, I have abstained from referring to the extent of the natural history museums abroad. My object needed no such comparison. It might seem invidious in the cases where the foreign museum approaches to my estimate for completeness. Neither do the instances in which national museums in other countries fall short of such estimate afford any arguments to bar endeavours to realize it in this country.

England may well, in this matter, set the example rather than follow it. The greatest commercial and colonizing empire of the world can take her own befitting course for ennobling herself with that material symbol of advance in the march of civilization which a Public Museum of Natural History embodies, and for effecting which her resources and command of the world give her peculiar advantages and facilities.

EGYPTIAN CHRONOLOGY.

Claymore.

In the *Athenæum* of the 8th of June I observed, that the battle of Carchemish, and rise of the Babylonian empire out of the ruins of that of Assyria, could not have taken place earlier than the year B.C. 583, or two years later than the termination of the Lydo-Median war in the year B.C. 585, the year of the great solar eclipse: and that, according to Manetho's Egyptian chronology, the year B.C. 583 must have been the very year of that battle, when placed, as it should be, in the last year of Pharaoh Necho. I now proceed to show how Egyptian chronology, which I shall assume to be fixed with exactness from the year B.C. 704-3, or first year of Sabaco, the Ethiopian, to B.C. 515-14, the last year of Amasis, affords the key to the chronology of the several nations neighbouring upon Egypt, flourishing during that period, and of recovering a system of chronology, once entertained by many, but now nearly superseded by a less tenable series of dates.

I. It is the key to the chronology of the empire of Babylon. Because the battle of Carchemish was fought in the first year of Nebuchadnezzar (Jerem. xxv. 1), which in our Egyptian reckoning was the year B.C. 583-2. Now this is the very date affixed to the first year of Nebuchadnezzar by Demetrius, the Hellenistic Jew, who wrote not long after Manetho, and at a time when the true Babylonian reckoning had recently been laid down by Berosus. For Demetrius places the 23rd year of that king of Babylon, or the year of the "last carrying away of captives from Jerusalem" (Jerem. lii. 30), 338 years and 3 months before the reign of the fourth Ptolemy—viz., Philopator; in the year, therefore, B.C. 560: from which we collect that his first year was B.C. 583-2. This exact agreement

between Manetho and Demetrius is of extreme interest and importance, as corroborating the accuracy of the reckoning of Demetrius, for which I have long contended, and which has been too heedlessly called in question. When we consider also, that the only other authority set against Demetrius, viz., the Canon of Ptolemy, of the second century of the Christian era, places the first year of Nebuchadnezzar, and the battle therefore with Necho, in the year B.C. 604, six years before Necho came to the throne according to our reading of Manetho, and in the 7th year of the reign of Necho, instead of his 16th, or last, according to the common reckoning,—that the date of the battle so placed necessarily implies that the solar eclipse above referred to took place in B.C. 610, which is contrary both to tradition and astronomical science,—and that the eclipse so placed, which fell, according to Herodotus, not earlier than the 6th year of the reign of Alyattes, king of Lydia, would thus appear to have fallen five years before the first of Alyattes in the Parian Chronicle,—when we consider, I say, the extreme confusion of chronology thus introduced by the Canon of Ptolemy, and on the other hand that the reckoning of Demetrius accords exactly with the scientific and traditional date of the eclipse, with the Parian Chronicle as regards the reign of Alyattes, and with Josephus and Clemens as regards the year of Necho's reign in which the battle of Carchemish was fought,—there can be little doubt that the authority of the later Canon of Ptolemy must yield to the earlier authority of the Canon of Demetrius, and that the reckoning of the latter may safely be relied upon, as the true and acknowledged reckoning of his day. Following, therefore, Demetrius as our guide, the reigns of the several kings of Babylon, from Nebuchadnezzar to the time of the destruction of the outer wall of Babylon and the absorption of Babylonia amongst the Satrapies of Persia by Darius, stand thus:—

Nebuchadnezzar reigned 44 years	from 583-2 to 539
And died foretelling the coming of the Medes and Persians against Babylon (Megasthenes).	
Evilmerodach reigned 3 years	536
Conquered by Cyrus, son of Cambyses, in his first battle with the Babylonians (Xenophon).	
Nergal-sharezer reigned 4 years	531
Conquered by Cyrus (Xenophon).	
Laborosorachod (Belshazzar?) reigned 9 months . .	530
Babylon taken by Cyrus, while Cyaxares, son of Astyages, was reigning in Media, and Cambyses, husband of Mandane, in Persia	530
Nabonadus reigned 17 years	514
A native-Babylonian ruler, tributary to Cambyses, King of Persia and Babylon, conquered by Cyrus (Berosus).	
Naditabirus, usurping the title of Nabuchodrosser, son of Nabonadus	505
Araces, ditto	503
Both conquered by Darius, son of Hystaspes (Behistun Inscription).	
Darius, the Mede, "takes the kingdom, being about threescore and two years old," destroys the outer wall of Babylon, and puts an end to native rulers	494

—So that, if our reading of Manetho be correct, and the reckoning of Demetrius may be relied upon, it is certain that Darius the Mede of Daniel was no other than Darius son of Hystaspes: an hypothesis which in Smith's 'Dictionary of the Bible' is declared to "rest on no plausible evidence, and which may be dismissed at once."

II. It is the key to the chronology of the Assyrian empire. Because Demetrius reckons that Sennacherib, king of Assyria, carried away captives from Judea 466 years and 9 months before the reign of Ptolemy Philopator, that is, in February B.C. 688: from which we collect that the campaign of Sennacherib against Syria and Egypt took place in the previous year, say B.C. 689-90; and when we test this reckoning by Egyptian chronology we find that Sennacherib's campaign could not have taken place earlier than about B.C. 690-89, because Sivechus, or Sethos, came to the throne of Egypt, either in B.C. 690, if we allow 50 years to the Ethiopian dynasty, or 692, if we allow 52 years: and Herodotus from Egyptian information (Herod. ii. 141) certifies that Sennacherib came against Egypt in the reign of Sethos. Moreover, that the year B.C. 689-90 was the precise time of the invasion, appears from Assyrian inscriptions, which place the conquest of Luliya, or Iluless, king of

Sidon, in the beginning of that year of the reign of Sennacherib in which he came against Judea. Now Iluless began to reign according to Ptolemy's Canon in the year B.C. 726, and Ptolemy here is not to be mistrusted, as the year B.C. 721 in his reckoning is marked by an eclipse, and he is also in harmony with Demetrius—Josephus from the Tyrian annals certifies that Iluless reigned 36 years—and the year B.C. 690-89, or year of his fall, would thus be the 37th from the beginning of his reign. Clearly we are thus led to the recovery of a very early mode of adjusting the reigns of the kings of Assyria and Babylon with the reigns of the kings of Judah: and according to this adjustment the difficulties set forth by Sir H. Rawlinson in the *Athenæum* of the 18th of August, 1860, as standing in the way of identifying the Sabaco and Taracus of the 25th dynasty of Manetho with the So and Tirhakah of the Bible, entirely disappear. Moreover, there is no need under this adjustment for falsifying the Hebrew annals, by placing the invasion of Sennacherib, with Sir Henry and Dr. Hincks, in the 26th, instead of the 14th, year of Hezekiah, king of Judah, and of displacing the reign of Shalmanezzer as the predecessor of Sennacherib.

III. It is the key to the chronology of the kingdom of Media from Deioeces to Astyages, a period, according to Herodotus, of exactly 150 years. Because Josephus writes (Ant. x. ii. 2), "at this time," that is, about the time of Sennacherib's invasion of Judea, "the Medes overthrew the empire of the Assyrians," that is to say, cast off the yoke of subjection. And if we count 150 years from B.C. 688, or the first year of Deioeces, we arrive at the year B.C. 539 for the last year of Astyages, which accords with the reckoning both of the Astronomical and Ecclesiastical Canons as given by Syncellus, where the last year of Astyages is placed in B.C. 539. Here, again, we are led to the recovery of a very ancient mode of reckoning Median chronology; and I have already shown at some length in the *Journal* of the Royal Asiatic Society, Vol. xvii. Part I, that the true arrangement of the reigns of the kings of Media should be as follows:—

Deioeces reigned	53 years from 688
Phraortes = Arphaxad	23 635
Cyaxares = Ahasuerus	40 613
(Tobit)	
Astyages	35 573
Cyaxares = Ahasuerus	17 538
(Esther)	
Darius, son of Hystaspes, 36	521 to 486
or Darius the Mede	486

From whence it would appear that there is no further need of a series of absurd mis-identifications, which deform the common reckoning, in the endeavour to reconcile Scripture with profane history, and which are still maintained by writers in Smith's 'Dictionary of the Bible,' such as—

Ahasuerus = Cyaxares
Ahasuerus = Cambyses
Ahasuerus = Xerxes
Darius = Astyages.

IV. It is the key to the chronology of the kings of Lydia, from Gyges to Croesus, a period, according to Herodotus, of exactly 170 years. Because, if Nebuchadnezzar died in B.C. 539, with the words of the Delphic oracle on his lips, foretelling the destruction of Babylon by a Persian mule, assisted by the Medes, as Megasthenes, a writer in the time of Manetho, relates, and if Astyages ceased to reign in that same year, Croesus, who obtained that oracle from Delphi, must have lost his throne not long after the year B.C. 539. Now, if we take the date of the fall of Croesus as preserved by Syncellus, viz., B.C. 536, and count 170 years up to the 1st year of Gyges, we come to the year B.C. 705, or 4th year of the 18th Olympiad; and that the 18th Olympiad was the true date of the commencement of the reign of Gyges is attested by Pliny, Clemens Alexandrinus and Diogenes Laertius. Or if we place the fall of Croesus one year lower than Syncellus, viz., in B.C. 535, the 1st year of his predecessor, Alyattes, must have commenced in B.C. 605, which is the very year affixed in the Parian Chronicle to the 1st of Alyattes; and the Parian Chronicle was composed not many years after the time of Manetho. All which

not inaptly coincides with a passage in Dionysius Halicarnassus, which computes about 220 years (say 225) from Gyges to the flight of Xerxes. We thus appear to recover the chronology of the kings of Lydia as understood in the time of Manetho, thus:—

		B.C.
Gyges reigned	38 years from 704	
Ardys	49	666
Sadyattes	12	617
Alyattes	57	605
Croesus	14	548
		535

Having thus shown the mutual consistency of the chronological reckonings of the several kingdoms of Egypt, Babylonia, Assyria, Media, and Lydia, when arranged in conformity with the reckoning of Manetho and Demetrius, and their conformity also with the most ancient records, it now remains for me to show how the chronology of the Medo-Persian empire, which immediately followed that of the Medes, and how Hebrew chronology, which has been accurately preserved throughout the whole period we have been examining, may be arranged in harmony with the foregoing dates. This, with your permission, I propose to make the subject of a third and final letter.

I. W. BOSANQUET.

OUR WEEKLY GOSSIP.

Now that the final abolition of all taxes on Literature and the Press has been secured, the earnest workers in this matter feel that some appropriate acknowledgment is due to their chief, Mr. Milner Gibson. A Subscription List has therefore been opened at Messrs. Drummond's. The amount is limited to 1*l*. We learn that upwards of forty Members of Parliament have already subscribed to the fund, as well as many gentlemen connected with the Press. The Committee hope to close the List on the 1st of October next, at which time they propose to convene a meeting to determine the character of the testimonial and the manner of presentation.

Next year promises to be an active time for lovers of Art in every branch. The Art Museum, at South Kensington is to be entirely re-arranged; new courts and galleries are to be formed; collections of mediæval and renaissance sculpture are to be exhibited for the first time, including the famous acquisitions from the Campana collection. The Department proposes to assemble together a special collection of works of Art, in categories analogous to those represented in the Art Museum, with the view more particularly of bringing together for temporary exhibition the finest known specimens of their several kinds in this country. The following categories are specified:—Decorative works in metal of the mediæval and more recent epochs, gold and silver plate, bronzes, decorative arms and armour, jewelry, enamels, earthenware and porcelain, carvings in ivory and other materials, decorative furniture, miniatures and the like. Mr. J. C. Robinson, will have the superintendence of these collections.

Most persons think that Primrose Hill now forms a park, and belongs to the public. But the fact is that very much the greater portion of the northern side belongs to Eton College, and is separated from the public park by palings. There is reason to think that, unless the Government purchase the remaining part, it will soon be cut up for building; the consequence of which will be, not merely that the ground will be lost, never to be recovered by the public, but all the northern view from the brow will be reduced to backs of houses.

In making excavations recently for the erection of the new forts at the mouth of the Medway, to take the place of the Cavalier and Half-moon Batteries, which last were of a date anterior to the entrance of the Dutch into the Medway, a very curious relic was discovered—no less a thing than a shell, stamped "Van Tromp, 1666." This might be one of those which frightened Mr. Pepys, and his colleagues so much, fired on the occasion which Mr. Evelyn designates "a most audacious enterprise."

The first part of Mr. Robert Cole's collection of

autographs and manuscripts has been dispersed by Messrs. Puttick & Simpson. The following lots are of interest:—'Afton Braes,' song, in the autograph of Robert Burns, 3*l*. 6*s*.—several Tradesmen's Accounts, incurred by Burns, 5*l*. 5*s*.—Autograph Letters and Papers, relating to Caroline, Queen Consort of George the Fourth, in 9 vols., 5*l*..: these papers form a secret history of this *cause célèbre*.—Sir Francis Chantrey's Ledger-book of the busts, monuments and statues executed by him, 3*l*. 5*s*.—a Letter of Cowper the poet, 3*l*. 5*s*.—a volume of Autograph Letters and other papers illustrative of the biography of celebrated criminals, 1*l*. 10*s*.; this volume contained a receipt signed by Francis Blackbeard, Jonathan Wild, and other rascals, for blood-money, received of the sheriffs for the conviction of Thomas Draper and Samuel Davis, 1718, also a document in the handwriting of Eugene Aram,—a Deed signed by Daniel De Foe and his daughter, 4*l*. 10*s*.—a Letter of Dr. Donne, Dean of St. Paul's, 8*l*. 5*s*.—a short Letter of Oliver Cromwell, while captain, 6*l*. 10*s*.—a Letter of Gibbon, the historian, 5*l*. 2*s*. 6*d*.—a Document bearing the signatures of Nell Gwynn and Otway, the poet, 5*l*. 15*s*.—an Indenture signed by Handel, being an indenture engaging to return in as good order as when received by him from the Tower, the large kettle-drums lent to him by order of the Board of Ordnance, for the use of the oratorios at the King's Theatre, in the Haymarket, January 18, 1738–9, 4*l*. 4*s*.—a Letter of Handel to the Ordnance Office Keeper, Tower, dated ten years later, again soliciting the loan of the drums, 10*l*. 15*s*.: these documents are curious as showing the mean resources of our Opera orchestra in those days,—a Letter of David Hume, containing particulars of the incoherent conduct of the insane Marquis of Annandale, who was then under Hume's care, 7*l*. 2*s*. 6*d*.—three Letters of Dr. Samuel Johnson, addressed to Lewis Paul, inventor of the spinning-machine, 2*l*. 16*s*.—Letter of Flora Macdonald, who aided the escape of Charles Edward Stuart, better known as "the Young Pretender," with some other papers, all relating to the subscription set on foot for the benefit of the heroine, 15*l*. 5*s*.—a Letter of Sarah, Duchess of Marlborough, 3*l*. 8*s*.—the Correspondence, Letters and Papers of Lewis Paul, originally of Birmingham, the inventor and patentee of the machine for spinning cotton and wool by means of rollers, 68*l*. 5*s*.—Original Letters and Correspondence of Sir Michael Stanhope, whilst Lieut.-Governor of Hull, temp. Henry the Eighth, 8 vols. folio, 140*l*.: this collection contained several autographs of Archbishop Cranmer, Stephen Gardiner, Bishop of Winchester, Cuthbert Tunstall, Bishop of Winchester, and other celebrities of the period,—a Letter of William Warham, Archbishop of Canterbury, written in a most amiable spirit, 8*l*. The sale was well attended throughout, by amateurs and the representatives of the principal collectors and museums, English and foreign.

Marlborough House is now being put into complete repair, and has undergone considerable alteration to serve as a residence for the Prince of Wales. Three rooms on the ground floor, looking on to the garden terrace, have been thrown into one, supported by handsome columns, clustered with ivy leaves and carved in mahogany, which are remarkable for the sharpness and freedom of their execution. The recovery and restorations of the paintings in the hall and staircase are the most important part of the present operations. These walls were originally covered with oil paintings of battle-pieces and architectural decorations according to the fashion that prevailed at the beginning of the eighteenth century. In later times these pictures were wilfully obliterated and covered with successive layers of common house-paint, so as to show nothing but a monotonous flat colour to the eye. Laguerre is known to have executed these original decorations. In the vestibule at the entrance is recorded to have been painted the battles of Hochstet and Blenheim, with the capture of Marshal Tallard, the French general, and several other officers of distinction. The figures of the great Duke of Marlborough, Prince Eugene of Savoy, and General Cadogan were especially com-

mended. These vestiges have been entrusted to the care of Mr. Henry Merritt, who has already succeeded in bringing back to its original freshness, many of the most important figures, and in which the excellence of the portraiture fully bears out the praises formerly bestowed upon them. The architectural statues, and sculptural decorations are exceedingly well painted; and cordial thanks are due to those who first suggested to the Government the course which has been adopted for the restoration.

Under the name of 'The Royal Atlas of Modern Geography,' Messrs. Blackwood & Sons have published a book of maps, which for care of drawing and beauty of execution appears to leave nothing more to hope for or desire. Science and Art have done their best upon this magnificent book. Mr. A. Keith Johnston answers for the engraving and printing: to those who love clear forms and delicate bold type we need say no more. All that maps should be, these maps are: honest, accurate, intelligible guides to narrative or description. A very good feature is the Index of Names attached to each plate, with the easy mechanical arrangement of lines by which any particular name that may be sought, is at once found on the map. Of the many noble atlases prepared by Mr. Johnston, and published by Messrs. Blackwood & Sons, this Royal Atlas will be the most useful to the public, and will deserve to be the most popular.

Among the many fibrous novelties which promise to supply the continually increasing demand for paper, few are more curious than the material called "woody wool," made from pine-leaves. Extensive establishments for the preparation of this article have recently been erected near Breslau, and various articles of clothing—as stockings, vests, &c.—are now made from this substance. It is also stated that a valuable medicinal oil is produced in the preparation of the wool.

Tourists bound for the North who have a taste for archaeological pursuits may be tempted to cross the Pentland Firth by the intelligence that a rich discovery has lately been made near the celebrated stones of Stennis in Orkney. A large mound has been opened and within it is a chamber fourteen feet square and twenty feet high, the walls of which are covered by Runic inscriptions.

In a communication recently made by M. Denis to the Paris Academy of Sciences, 'On the Chemistry of Blood,' M. Denis states that he has succeeded in extracting a substance from blood, to which he has given the name of "plasmine," and that it has the property of solidifying in a remarkable manner.

The thirty-sixth meeting of the German Naturalists and Physicians, the prototype of our British Association, will commence on the morning of the 17th of September, at Speyer, in the Palatinate; and all men of science are invited to attend. If we may judge from the preliminary notice, the guests will meet with a cordial reception. The President states that ever since preparations for the festival have been made, all classes of the population have tendered him a perfect ovation. However, he warns visitors not to expect too much. Beyond the ancient Cathedral, the new Photometer of Prof. Schwert, and the quite Apennine beauties of the surrounding country, there are no sights; but he trusts that the well-known hospitality of the inhabitants and the good wines of historical renown, dating back to the time of the Emperor Probus, will make up for those shortcomings. The surrounding towns, as Mannheim, Neustadt and Ludwigshafen, are ready to receive those guests who may not be able to find room in Speyer, and a free pass will be given to all members and their families by the Railway Companies. To become a member, a fee of 6*s*. is charged, which entitles one to all the privileges accorded to the Association, admission to balls, concerts, pleasure excursions, public dinners, &c.

From all parts of Germany we hear of festivals and jubilees, some going on joyfully, some still in pleasant expectation. To look over the columns of the newspapers and read the descriptions of the great German Sängerefest at Nuremberg, the Sängerefest at Weimar, the Turner Festival (Turner, gymnastical exercises), at Cologne, the one prepared

at Berlin, the jubilee of the University of Breslau, another jubilee of the town of Brunswick, celebrating its thousand years' existence, another at Speyer, one would think that there was no evil in the world, and that Germany was a paradise of pleasure and gaiety. It is true, the sound of the pistol-shot in the Lichten-thaler-allee of Baden-Baden made a little diversion, and was not quite in accordance with the spirit of general festivity. However, it startled only for a moment, like a false note, and harmony was soon restored. The Sängersfest at Nuremberg went off in a grand style; 284 Gesangvereine from all parts of Germany had sent 5,300 singers, who with their different banners, scarfs and emblems in the great festival procession, made a gay appearance. Almost every domestic dining-room of Nuremberg was transformed for the time into a small national banquetting-hall, families vying with each other hospitably to harbour the welcome guests from north, south, east and west. Hardly a place in the world where German is spoken, and German songs are heard, failed to send some singers to the great national festival. Those who could not come in person sent telegraphic messages and greetings: thus from Transylvania, Constantinople, New York, Riga and other places. King Max, too, sent a salute from Scheveningen, in Holland. Bavaria sent 3,099 singers, Wurtemberg 183, Baden 132, Hesse 133, the Free Cities 257, Nassau 26, Lippe-Detmold 12, Hanover 10, Oldenburg 4, Brunswick 5, Rudolstadt 71, Holstein 17, Mecklenburg 44, the Saxon Duchies 341, Saxony 390, Prussia 151, Switzerland 13, Constantinople 1, London 5, and Austria 378. The first prize, consisting of a fine silver goblet, which the town of Berne had presented, was awarded to the Vienna Gesangverein. Nuremberg was during the three days of the festival in a fever of enthusiasm; all the houses were decorated with garlands, flowers and banners; wherever the Capellmeisters Lachner, Hiller, Neeb and Storch, or any of the composers and poets present, appeared, they were received with cheers and acclamations. No army coming home victorious from a murderous battle could be welcomed with greater enthusiasm than these peaceful singers, who were literally covered with flowers and wreaths from fair hands, wafting their handkerchiefs at the windows. If we cannot help wondering at so much enthusiasm—not exactly wasted—yet most liberally, not to say frivolously lavished, we must allow at the same time that a certain political excitement is just now prevalent, which gives a warmer tone to these festivals. The desire for national unity is throughout Germany stronger than ever; it is the watchword; a certain unity, it is true, was represented in this festival. Men from the north shook hands with the Suabians from the south; the Rhinelander met the Austrian as friend and brother; the songs of Arndt, Körner and Schenker-dorf excited the greatest storm of applause, which is not wholly to be attributed to their fine composition. All this will not solve the problem of German unity, of course—as little perhaps as Oskar Becker's bullet would have solved it—and the danger lies near, that Germany will sing itself to rest again, as it has done so often. We are disposed to place more confidence in the Turner meetings, which are held everywhere now, as more adapted to waken and strengthen a national spirit; they are the Rife Movement of Germany, of which we shall soon find an opportunity to say a few words. But before we part from the Nuremberg singers, we will name a few of the songs performed. One of the first pieces was a Festival March by Lachner, another by Herr Lux, Capellmeister at Mayence. Arndt's Fatherland Hymn was sung by the 5,000 voices, and created a never-ending applause; 'Sturmesmythe,' by Lenau, composed by Lachner; 'An das Vaterland,' by Müller, composed by Hiller; 'All-Deutschland,' by Abt; 'Stehe-fest, o Vaterland!' 'Der Schwert an meiner Linken,' by Theodor Körner, composed by Weber; Schenker-dorf's 'Frühlingsgruss an das Vaterland,' by Lachner; 'Des Deutsche Land-sturm,' by Kücken; 'Gebet vor der Schlacht,' by Körner; 'Stimmt an mit hellem hohem Klang,' by Claudius, composed by Methfessel; 'Deutsches Herz, verzage nicht,' by

Arndt, composed by Berner, &c. Much had been written and composed for the occasion, among others by the Duke of Coburg, and by the Herren Tschirsch, Emmerling.

BRITISH INSTITUTION, Pall Mall.—The GALLERY, with a Collection of **PICTURES BY ANCIENT MASTERS** and **DECEASED BRITISH ARTISTS**, is OPEN daily from Ten to Six. Admission, 1s.; Catalogue, 6d. GEORGE NICOL, Secretary.

Will Close next week.

HOLMAN HUNT'S GREAT PICTURE.—The EXHIBITION of Holman Hunt's celebrated Picture of 'THE FINDING OF THE SAVIOUR' in the TEMPLE, began in Jerusalem in 1854, and completed in 1860, is NOW OPEN at the GERMAN GALLERY, 128, New Bond Street, from Twelve to Six.—Admission, 1s.

LAZARUS, COME FORTH! By DOWLING.—This work, pronounced by the first critics to be the finest Scripture Picture of the age, is NOW ON VIEW at Bejemann's, 38, Oxford Street, W.—Admission, 6d.; Fridays and Saturdays, 1s.

SCIENCE

Mineral Veins: an Inquiry into their Origin. Founded on a Study of the Auriferous Quartz Veins of Australia. By Thomas Belt. (Weale.)

A mineral vein is commonly regarded as the very opposite to a vein of humour, and ordinary people are ready to suppose that though you may get good gold and silver, and tin and copper and lead out of metallic veins, nevertheless you cannot extract from them entertainment and popular instruction. This is a great mistake, for although Mr. Thomas Belt and a number of other technical writers put forth the most arid matter on this subject, and, therefore, can only expect technical readers, we have found mineral veins to be as suggestive of discursive flights, and as full of food for reflection as they are (and, alas! too often are not) of metal.

If you desire the possible poetry and amusement capable of being extracted from these repositories of useful minerals, you must needs personally visit and inspect the places where they run their hidden and subterranean courses, under hundreds of fathoms of hard rock, and beneath hundreds of miles of bare country. You must resort to some such locality as the open, breezy, bold Land's End or Cape Cornwall, and range over and about the sea-beaten, weather-worn crags and cliffs of granite, and, climbing out adventurously to jutting peak after peak, sit astride upon some huge boss or headland, and listen to the grand, solemn soundings of the oceanic organ, there making music most wild and melancholy, or anon swelling out its deep bass to the fullness of tempest tones. You must follow the devious and doubtful lines of sheep-tracks up and down rugged, narrow, and often slippery slopes, while the billows boom bewilderingly below you, and the suddenly wheeling sea-birds harshly and screechingly announce their flight above you. You must then descend to some adjoining bay, and press your deeply sinking feet into the whitest of shingles, sparkling gaily with granitic particles, embedding tiny shells of no despicable shapes; and, when fatigued with the too yielding surface, you may retreat for an hour into some one of the half-hollowed caves, partly shadowed by natural rock archways, that invite the sun-stricken pedestrian away from the glare of a summer mid-day and the reflected glow of the heated cliffs. Under such partial shades you may look out upon the broad expanse of waters, and watch vessels of all descriptions wearing round the promontory, and fancy the crews taking their last looks of land through telescopes directed towards your own position, as you lazily lie along the rock-roofed shingle, while ship after ship labours and heaves, and tacks upon the unquiet ocean—you yourself being the only unmoved and unlabouring of movable things in the whole scene. All this you may see and do, and enjoy as a pleasing preliminary to the study of mineral veins,

which perhaps are all the while somewhere beneath your feet—somewhere perhaps beneath the sea itself—running all along this wild district in an east and west direction, showing themselves obscurely here and there in the cliffs, and then stretching out seaward into "strings" of valuable metal which man will never set eyes and hands upon, and which will remain unexplored at least to the end of the present geological epoch—probably to the end of the world.

Manifestly enough, there are mineral veins, and consequently mines, along this very ridge of rock country. Yonder is Botallack copper and tin mine, half hanging upon the very verge of ocean. Planted at the western extremity of the great copper and tin veins which run eastward through Cornwall as far as the Dartmoor hills, and which are cut off by the waters of the Atlantic, it is a remarkable and, to the world in general, a little known triumph of trade. Standing below, and looking up from the sea, you have a prospect almost unique. In that wildest and ruggedest of rough coast scenes you behold a chimney loftily poised, at the summit, and smoking over to the sea, and another less ambitious chimney half way down. Closer to you, and well nigh just within grasp of the high tides of the sea, is perched a mining "office," or shaky boarded cabin. When this mine was in its full prosperity, that is, when it left a profit of 300,000*l.*, a singular view was presented to the visitor at this point. Glancing upward towards the loftier chimney, he could descry a strange and, at first sight, unaccountable assemblage of chains and pulleys, chimneys and sheds, posts and winding machines, scattered over the scarred face of the huge cliff, while a line or two of long ladders led from the top half way down, and down and up these ladders miners might be seen descending and ascending, toiling slowly while ascending round after round, and apparently, when descending, doing the dizziest day's work that could be contrived for human beings.

Making his way to the small counting-house perched on the rocks, the visitor in old time would pass by all kinds of mining gear, such as long chains and wires stretched out over vast bell-cranks and posts, crazy wooden platforms like battered remnants of Cornish coast-wrecks, and beams of timber, coils of rope, and odds and ends of cables and posts, and varied remnants of disused or disabled gear, which possibly may now be removed. Attaining to this cabin, whenever the miner is in work, you may enter, and presenting your note of introduction, prepare, if so disposed, to descend into the interior of the mine by this strange trap-door in the cliff-side. But if indisposed to try a descent by wet and soiled and slippery ladders, you may remain where you are, and entering into conversation with some old miner, learn from him how in the busiest and best paid working days of Botallack, the mining adventurers heeded not the boundaries of land and sea. For them there was no Land's End while there was no lode's end. When the lode or vein crept under water the miners crept under water too; and if you will but credit Cornish garrulity, and find out the right narrator, he will assure you that for 480 feet in extent under the ocean did the daring excavators pick away at the mineral vein which could not elude them, and so greedily did they work away the hard rock, that finally, in some parts, nothing but a moderate stone ceiling was left between them and the Atlantic overhead. Nor was that ceiling left too thick, wherever in it and through it ran the rich metallic lode with strips of pure copper interlaced with the very floor of the sea. Every inch of that ceiling to men, and that floor to the waters, was worth daring

deeds; and it is affirmed that the miners were not satisfied until they had brought down all but a few feet in thickness of the coppery mass. So few were the feet remaining in some spots, that masses of ooze, green and damp, hung upon the roof of the mine, and proved that the sea water percolated through apparently solid rock; while at one place the sea had actually found a manifest entrance which was carefully plugged up; and there, at that plug, only three or four feet of rock stood between the adventurers and the swelling Atlantic! Nay, some of them affirm that they have frequently heard, while underground, the dull booming of the rolling waters, and, occasionally, the clattering of loose stones dashed by the sea against this part of its floor, and intimating to the imprisoned miner his close proximity to a possible deluge!

This is, indeed, the pursuit of mineral veins under difficulties and under sea, and is the romantic aspect of the subject. Yet they have other aspects possessing little romance, but vast practical importance. It is not enough to discover a vein or lode, and to sink down to and upon it; for the course of a true lode, like the course of true love, hardly ever does run smooth. It may be as capricious as a lady's fancies. For a few hundred yards it may take its expected direction and yield its expected produce. Then suddenly some *fault*, or *leap*, or *slide*, or *upthrow*, or *downtrow*, or intersection, or *cross-cut* (all technical terms for interruptions), may disappoint your hopes, dip into your pockets, and occasion "calls" instead of dividends to shareholders. The study of displacements of various kinds has been locally persevered in for many years. One experienced gentleman has recorded his observations during a period of between twenty and thirty years; and yet a study of his volume has led us to conclude that we can arrive at no very extensive and sound conclusions upon the manners and customs and future course and conduct of capricious lodes. In fact, the laws presumed to be deducible from a large number of observations are subject to so many exceptions, that they almost lose the name and authority of laws. Could we really discover general rules for the continuance and re-discovery of interrupted lodes, the pleasing results of such knowledge would be estimated by thousands upon thousands of pounds. It is the uncertainty of continued richness in metal, and the numerous mischances of a lode being thrown out, or withered, or *nipped up*, or wrung out into worthless threads, that constitute the hazardous charm of speculative mining. A man may lose a fortune by the capricious changes of taste in his lady-love, and equally so by the sudden turn, or twist, or elopement, or breaking-off of a metallic vein.

These practical issues absorb the attention of speculative miners and of mining-share dealers, as well as of students of mineralogy and geology. But the latter alone are devoted to theories respecting the origin of mineral veins. "How were the original fissures in the containing rocks filled?" inquire the students. "How can we deal with them so as to fill our pockets?" ask the speculators. There may or may not be a mystery of iniquity in relation to mining money matters; but there certainly is a mystery of mineralogy in relation to the metallic origin of veins. To attempt the solution of this latter mystery various theoretical views have been entertained on the mechanical, chemical and electrical agencies presumed to have operated either in filling the rock-fissures, or arranging or modifying the contents thereof. Some of the most abstract and subtle questions of theoretic geology are

concerned in such investigations, and it is hardly possible to impart to them a general interest. Nevertheless, several scientific men have found herein ample scope for their speculations, and to this day are absorbed in them. The leading theoretic question is—Whether the production of the rock-fissures which form the exterior or bounds of mineral veins, together with the filling of them with that metallic matter which chiefly constitutes the veins themselves, are the results of aqueous or igneous action? Many, perhaps most, sound geologists incline to the igneous theory, and to this Mr. Belt lends his support. Others, however, and these also able geologists, are upholders of the aqueous theory. Both theories might be discussed for many hours, and expounded through many pages. What the plutonists have to advance and argue Mr. Belt sufficiently testifies in some fifty well-digested pages, although his chief attention is directed to the auriferous quartz veins of Australia. Chemical geologists will adduce experiments and opinions enough to detain interested auditors or readers for hours or even days, and to send away the uninterested with a conviction that mineral veins, like mining excavations, are matters much too deep for them.

Recent Science has thrown much light upon and, as we conceive, considerably strengthened the theory of the igneous origin of metalliferous veins; nor, if we admit the igneous origin of granite itself, need there be much hesitation in admitting that fissures have been produced in the rock by heat, and by heat filled with molten matter, but always under three essential conditions—enormous pressure, intense heat, and a very high temperature of the rocks into whose fissures the molten matter forced its fluid way. In illustration of pressure, Mr. Sorby's experiments show that granite has, in all probability, crystallized under the pressure of at least six thousand feet of superimposed strata.

No doubt as our knowledge of electrical agency becomes more extended and precise, it will be admitted, that to such agency many of the observable phenomena of mineral veins are attributable. To Mr. R. W. Fox, an eminent electrician, we are already indebted for much light upon this obscure subject. That gentleman has, in fact, formed in his laboratory many well-defined mineral veins on a small scale, by the long-continued employment of voltaic currents, so arranged as to imitate the presumed natural conditions of metalliferous lodes. Indeed, it can hardly now be questioned, that the peculiar and characteristic arrangements of the ores deposited in lodes or veins are due to electrical action, of course in combination also with chemical and mechanical actions. It could be shown that not only the *nature* of the deposits must have been determined by their relative electrical conditions, but that the *direction* of the metallic veins themselves must have been influenced by the directions of the earth's magnetic meridians; and it is a remarkable fact, that the greater part of the metallic deposits found in veins throughout the world, lie in parallel veins or fissures tending from east to west, or from north-east to south-west. Broad and striking truths of this kind can sometimes be deduced from the abstruse researches of the abstract mineralogist on the origin of metalliferous lodes.

Probably the principal problem now remaining in relation to electrical actions in the deposition of these metallic repositories, is to determine whether, as Mr. Fox believes, the electrical currents were voltaic and generated by the chemical action of particular solutions on particular substances, or thermo-electric

and depending on the application and conduction of heat. At present, experimental inquiry has predominated in favour of voltaic electricity; yet many observations warrant the belief that thermo-electric currents, however weak in intensity, are at present important, and may in primeval eras have been much more so, in their influence upon metallic arrangements.

Such theoretical researches do not entirely end in theory, or in merely abstract issues,—for sometimes the practical miner derives valuable hints from those whom he is commonly too apt to sneer at as mere theorists. As respects auriferous veins one tenet of geological science has received ample confirmation in Australian experience. Throughout the known world it has been found that auriferous veins are, as a general rule, only very rich near to the surface. They decrease rapidly in richness as they increase in depth, which is not true of the veins of the baser metals. Now the colonists of Victoria would not give due heed to this dictum of science, but believing the contrary, they commenced extensive works on nearly every lode which had proved rich near the surface, and intended to prosecute deep mining thereupon. Hence, in spite of science, a gold-mining fever arose, and unfounded speculation raged far and wide. The mining experience, however, of 1859–60 has warranted the truth of the scientific opinion,—or rather induction from numerous observations,—and has proved the folly of popular presumption. Not a tithe of the mining companies formed in 1859 are, according to Mr. Belt, now in existence; and "there are not six quartz veins in the colony of Victoria in which a sufficient quantity of gold has been obtained, at a depth of four hundred feet, to pay for the cost of extraction; while in every gold-field instances could be pointed to of mines, once worked with great profit, now deserted on account of the poverty of the deeper parts of the lodes." So affirms this eye-witness, and so predicted some geologists. But, objected the gold-diggers, "they are not practical men." Who now are the really practical men? The geologists would have saved thousands of squandered pounds and hundreds of ruined families!

FINE ARTS

Half-Hour Lectures on the History and Practice of the Fine and Ornamental Arts.
By William B. Scott. (Longman & Co.)

Mr. W. B. Scott, who is not unknown to the public as an artist and biographer of his brother, David Scott, R.S.A., here republishes a series of Lectures delivered by himself to students of Art, in which he attempts "to review the entire story of the Fine and Ornamental Arts since the commencement of our era,"—in doing which he has felt it necessary to give a popular, though not therefore superficial, character to them. He has accomplished his task in such a manner as to furnish a succinct and serviceable handbook,—not alone of mere events, the common chronicles of his theme. A lady might take it up in her most indolent mood with the zest appertaining to novel-reading, for it is succinct, vivid and cheerful in style: a boy, eager for compact information on the history of Art, will find not alone living matter, instead of dry dates, but the result of trained feeling and ardent thought pleasantly set out. If this were all, we might be content to rank these Lectures with a juvenile series, and say no more for them; but what will mark the book's individuality is, that the *motive* and heart of it are so thoroughly in the right Art-spirit that no artist will take it up

only to put it down again in contemptuous disgust, the common fate of popular essays of this sort.

Epitomizing the history of Art in the fourth century, Mr. Scott gives an account of early Christian iconoclasm, catacombs, chapels, basilicæ, the development of the cruciform ground-plan, the works of the Romans in Britain, not without a loving glance at the Northumbrian Wall, which is to be expected from a Newcastle man—the author being Master of the School of Design at that place,—primitive furniture of churches, which, in its turn, introduces the employment of pictorial decorations therein, *à propos* to which we get this curious glance as to the motives of a bishop of the fifth century for being profuse in that respect:

“Paulinus, of Noli, near Naples, about the same time, after describing the pictures he had had executed to an extraordinary extent in the Basilica of St. Felix, at Fondi, says: ‘If any should inquire why, contrary to common usage, I have made personal representations of holy persons in this sacred dwelling, I answer: Among the crowds attracted hither by the fame of St. Felix, there are peasants lately converted who cannot read, and who have long been the slaves of profane usages, and obeyed their senses as gods. They arrive here from far and from all parts of the country. Glowing with faith, they despise the chilling frosts, they pass the entire night in joyous watchings, they drive away slumbers by gaiety, and darkness by torches. But they mingle festivities with their prayers, and after singing hymns to God, abandon themselves to good cheer; they joyously stain with odiferous wine the tombs of the saints. They sing in the midst of their cups, and by their drunken lips the demon insults St. Felix. I have, therefore, thought it expedient to enliven with paintings the entire habitation of the Holy Spirit. Images thus traced and coloured will, perhaps, inspire those rude minds with astonishment. Inscriptions are placed above the pictures in order that the letters may explain what the hand has depicted. While showing them to each other, and reading thus by turns those pictured objects, they do not think of eating until later than before, their eyes aid them to endure fasting. Painting beguiles their hunger and thirst; these sober gazers are intoxicated with excitement, though they have ceased to indulge in wine. A great part of the time being spent in looking at these pictures, they drink much less, for there remain only a few short minutes for their repast.’”

The erection of a new capital of the world at Byzantium is rightly termed the turning-point for the history of Art as well as Religion. This leads to a sketch of the introduction of sacred Mosaics for ecclesiastical purposes, and how Byzantine forms displayed themselves over the world through the Church of San Vitale, at Ravenna, becoming the model for Charlemagne's church at Aix-la-Chapelle, which formed the connecting link with the Rhine, France and Saxony on the one hand, and Sicily on the other; whence the Normans brought what we style the Romanesque into Normandy and this island. Mr. Scott compiles with intelligence a history, political and artistic, of the iconoclastic *furor*, but it would be unjust to style him a mere compiler,—indeed, he uses his own power of observation with much originality. Thus, following an outline of the origin of the Veronica and the like miraculous pictures, with the separation of the Eastern and Western Empires,—deeply affected by the question of religious Art,—comes a remark upon the existence, even to the present time, of a traditional system of Art, dating from the decision of the question as to the use of sacred pictures or sculptures. He points out that the little altarpieces which were brought of late in such numbers from the Crimea, and are so common in countries professing the Greek form of faith, which exhibit as the ground a stamped gold

plate, perforated or sunk in the places occupied by the heads or hands of the figures represented, which are smoothly painted as if seen below the drapery or nimbus, these, he remarks, are examples of a traditional compromise which obviates the flatness of a picture by depression, not by the unlawful elevation. The immutability of Greek Christian Art is illustrated by an extract from that startling and vivid account furnished by M. Didron, who saw a monk produce pictures, absolute transcripts of the ancient manner, with the certain ease of a druggist's assistant compounding a prescription; the works being incontestably excellent, moreover. The reader will find much of the novelty of the French archaeologist reproduced in the *procès* of his discovery here furnished. Celtic Art, Runic sculpture, Irish-Saxon manuscripts, enamels of early date, illuminations, block-books and printing, furnish the theme for two succeeding chapters. Thence, we proceed over the history of English domestic architecture, tombs and monuments, which, in their varieties of brasses, altar-tombs and catafalques, bring us ultimately to the “*Renaissance*.”

Working in metals is briefly dwelt upon, but clearly enough to afford a good idea of its main current and character. Engraving follows, a subject we should have liked to see more fully developed; then the varieties of Earthenware—Majolica, Palissy, &c.; Porcelain—China, Dresden, Sèvres, &c.; Glass—Glass-painting and manufacture. A short historical account, needfully of the briefest, is given of the various methods of Painting proper, in Fresco, Tempera, and Oil. Then the great old masters and the modern schools bring up the rear of the author's task, down even to the so-called Pre-Raphaelites of this day, to whom he gives a few discriminating lines. Three lucid chapters upon the ideas which constitute the subjective basis of all Art are appended. These we recommend to the general reader. Without entirely agreeing with the principles laid down therein, it is impossible not to admit the critical value and force of Mr. Scott's arguments, or the careful manner in which they are produced by deduction from a thoughtful course of study, both practical and theoretical, of those principles he believes to form the groundwork of pictorial and decorative art.

FINE-ART GOSSIP.—A large picture by Hon. thurst, which hung upon the exit staircase at Hampton Court, has just been judiciously cleaned and restored. It had suffered severely from long-continued neglect. The picture is interesting as containing portraits of Charles the First and his family, Buckingham the favourite, and many others.

The Second Annual Examination of Science Teachers by the Department of Science and Art showed an increase of applicants for certificates of 32 over the number presenting themselves for the first year. There were 13 sub-divisions of subjects and 170 entries for sub-divisional certificates; 75 candidates were successful, and 121 sub-divisional certificates were taken. The Department has been at no cost for the scientific instruction of these teachers, who have come from all parts of the country to be examined. The number of students in the Science Schools of the Department of Science and Art in 1860 has been 386, paying 228*l.* 6*s.* in fees. 30 science classes have been established in the past year, under certificated teachers, in various places, and 1,340 candidates registered themselves for the first general examination. The Department has had to consider applications from Professors in Universities, and other persons of well-known acquirements, to be accepted as being certificated to teach classes in Science, without having to undergo the prescribed examination. While the Department has not refused to consider individually

such cases, it proposes to regard them as exceptional, considering that the proper proof of competency is the being able to pass the required examination. The attendance to the Navigation Schools established by this Department at Aberdeen, Glasgow, Hull, Newcastle-upon-Tyne, Poplar, Shadwell, Sunderland, Waterford, Wells Street, London Docks, and Great Yarmouth (the Leith School, having lost its head-master, was in abeyance for nearly the whole of the year 1861; it is now re-opened), had been, in 1859, 2,490 students, who contributed 1,239*l.* 19*s.* 10*d.*: in 1860, the number was 2,396, and the fees 1,152*l.* 1*s.* 9*d.* The decrease is probably due to the abeyance of the Leith School, and to the burning down of the Sailors' Home at Liverpool in April, 1860, which, destroying the premises in which the school was held, has caused a decrease in the number of students (116). Newcastle also decreased 8 in the same period, Sunderland 97, Waterford 8, Yarmouth 22. We surmise that this decrease is due to the progress of the Naval Volunteer movement in the eastern and north-eastern ports; for in all the other schools the increase of students has been large.

The recent discussion in the House of Commons respecting the statues to be placed in the Royal Gallery, in the Houses of Parliament, will be better understood if we state what the proposition is that has been made for their situation. It is proposed that twelve statues should be placed in the Royal Gallery, in the following order:—Those of William the Fourth and George the Fourth, one on each side of the doorway, at the north end of the gallery; the first on the east side. Along the same side are proposed to be placed those of George the Third, Anne, Mary the Second and Charles the Second; the statues of Charles the First and James the First, one on each side of the doorway, at the south end; Charles the First being on the east side. This explains why the money was recently asked for those oddly-chosen sovereigns, Charles the First, James the First, George the Fourth and William the Fourth,—they are to go in the corners of this Temple of Royalty, where no one will worship. Well might the House be amazed at the queer selection. The statue of Her present Majesty is proposed to be placed in the Prince's Chamber. Five statues are demanded for the Queen's Robing-Room,—Mary and Elizabeth, one on each side of the throne, on the east side, Elizabeth being on the south side; Henry the Eighth and Henry the Seventh to be on each side of the fireplace on the west side, the former being on the south; Edward the Sixth on the south side, between the windows. Sixteen statues are sought for the principal landing-place and in the Norman porch adjoining:—on the small pedestals provided by the architect, Richard the Third, Edward the Sixth, Edward the Fifth, Edward the Fourth, Henry the Sixth, Henry the Fourth, Richard the Second, Edward the Third, Edward the Second, Edward the First, Henry the Third, John, Richard the First, Henry the Second, Stephen, Henry the First. “These statues,” says the Report, “would comprise sovereigns of whom accurate portraits are less attainable.” Four statues are proposed for the lower landing-place:—William the Second, William the First, Harold and Edward the Confessor. The twelve in the Royal Gallery are sought to be in white marble, as well as the five in the Robing-Room, and are not to be less than seven feet at once. The price to be 800*l.* a-piece. The four above referred to, to be executed for the Royal Gallery, to be from the hands of Messrs. Thornycroft and Theed,—the latter doing the George and William, the former the Charles and James. Five feet ten, and electrotype castings, it is thought, will suffice for the remaining figures in this Wal-halla.

MUSIC AND THE DRAMA

ROYAL ITALIAN OPERA, COVENT GARDEN.—Mr. MELLON'S CONCERTS ON MONDAY NEXT.—Mr. Alfred Mellon begs most respectfully to announce, that his Annual Series of PROMENADE CONCERTS will COMMENCE ON MONDAY NEXT, August 1st. Commence at Eight.—Promenade, 1*s.*

NEW PUBLICATIONS.

THIS week we have to deal with what may be called picturesque music—that in which display, fancy and pleasurable sensation are attempted rather than an appeal made to thought by science. Mr. S. Waley's *Romance for Oboe or Violin, with Piano-forte Accompaniment*,—and a *Day-Dream, Impromptu* (Addison & Co.), come first before us. It need not be told that in both will be found an expressive idea and skilful treatment of the same. The *Impromptu*, too, has some novelty of figure.

We have elsewhere spoken of Signor Nacciarone as a pianist; here he gives us a *Fantasia on Neapolitan Tunes*,—and another on the *Garibaldi Hymn* (Addison & Co.). The first is of good quality as a piece of show-music: no player, be he ever so disdainful of difficulties, need despise it; but the difficulties are made subservient to local colour and character; and any pianist of the first class (as is the writer) who would like to have a brilliant Neapolitan show-piece would do well to try the effect of this on his public. The *Garibaldi fantasia* is less sterling; but when has any political music of the kind turned out well? Who remembers to-day the brilliant variations by M. H. Herz on 'La Parisienne'?—We should hear more of Signor Nacciarone;—other Italians, meaning to be no less difficult than he, are, in reality, far more flimsy.—Here we have another *Garibaldi* piece by J. T. Treklell (Addison & Co.).—The same composer (same publishers) is publishing a series of national airs, called *Household Melodies*, which are up to the average of such things.—A *Grand Fantasia*, from 'La Sonnambula,' by Enrico Bianchi (Op. 34) (Addison & Co.), is not worth trying. The "trick was won" by M. Thalberg long ago.—*Le Dèvouement*, Op. 58,—and *L'Andalousienne*, Op. 59, by J. Blumenthal (Cramer & Co.), are up to the level of their popular author's efforts.—*Rigoletto Fantaisie*, by R. Favarger (same publishers), is "harassed with difficulties" (to adapt a French phrase) not worth the trouble of trying to conquer.—Better is the *Galop Brillant*, from the same opera, by the same composer, (same publishers).

The *Birds at Sunset*, Op. 25, No. 1.—*Ophelia, Romance*, Op. 26, by Emanuel Aguilar (Ashdown & Parry), are pleasing, and show that improvement in fancy which, in musical composition, attends practice in writing. Bird-Music downward from the days of the weak little old waltz, dear (as Mr. Dickens has told us) to *Miss Lucretia Tox*,—can be little better than a tinkling of the highest strings of the pianoforte. Mr. Aguilar has done as much with his birds as probably most of his contemporaries could do.—*Rippling Waves*, and *Une Nuit d'Été*, are by Sydney Smith (same publishers).—We should prefer some better-considered composition to the latter slight and trite movement.—*Midnight—Whisperings of the Breeze and Song of the Leaves*, by John Aspinwall (same publishers), are of somewhat better quality. The second is not a bad study of accompaniment crossing a melody.—*Les Enfants de la Garde*, by A. Schlösser, Op. 76 (Ewer & Co.), is what it purports to be, a *Grand March*;—with a fair amount in it of spirit and motion—and some resemblance to the style of M. Meyerbeer.—*Paroles d'Amour*, Op. 11, by Wilhelm Ganz (Chappell & Co.), may, in some measure, owe its existence to Herr Henselt's 'Love Song'; the theme is pleasing.—*Maria Stella, Barcarolle*, by Wilhelm Schulthes, Op. 28 (Addison & Co.), is elegant, though chargeable with some incompleteness. We doubt if a seven-bar phrase be admissible in a *barcarolle*, however the unevenness be concealed, as it is here with some adroitness.—*Fleurs Chantantes*, Op. 28 (same composer and publishers), is a set of three graceful and not difficult movements in the pastoral style.—*Barcarolle, for Piano-forte*, by John Robert Christian (Augener & Co.), is not a bad *barcarolle*.—Something strongly illustrating the want of musical invention is to be found in the instrumental illustrations of 'Idylls of the King' (Jewell & Co.), by Bennett Gilbert, R. H. Gadsby, Lindberg and Adolphe Kesling. Nothing essentially poorer can be imagined than this manner of creating a false interest. Why not as well take 'Julian' as theme for one song without words, or

call a fugue 'Maddalo'?—why not write a symphony on 'Locksley Hall'?

Among the *Scherzo Menuet*, Op. 24,—*Romance Variée*, Op. 47,—and *Le Papillon*, by A. Daussoigne Mèhul (Metzler & Co.), we like the first the best, as reminding us, by a certain temperate grace of style, of Hummel's easier compositions. The "variations" are more ambitious, including many of the new pianoforte effects which are already worn threadbare.—*Alexandrina, Polonaise* (not so much a Polonaise as a very fair Mazurka),—and *Emilie, Notturmo* (Addison & Co.), are by Signor Biletta. The former is the better of the two; the *Notturmo* is not mended by the profuse administration of *arpeggi* to dress up the theme.—More Bird-Music!—this time, *The Birds and the Rivulet, Scherzo*, by Mr. Brinley Richards (Cramer & Co.), which may be commended for a certain lightness and grace; but in which, as too often happens in movements of its kind, the left hand is unfairly forgotten.—*Estelle: a Waltz, arranged as a Duett*, and *Octave Study in E Minor*, are two other works by the same composer (same publishers). The study is, on the whole, a good one, and can hardly be mastered unless the player has a loose wrist.—*Attendez-moi*, by M. Francesco Berger (Addison & Co.), is a gay little polka, with what from a second title, "Talk during the Dance," may be understood to mean an episodic, sentimental dialogue betwixt the partners.—Something more difficult is the *Rhapsodie Hongroise*, by E. Roeckel (Addison & Co.) (Op. 4). It was more ambitious than wise once more to treat the March by Schubert which Dr. Liszt amplified by his wonderful pianoforte playing.—*La Belle Marie, Serenade*, by Carl Lindfelt, is better than its composer's *L'Ondée des Roses* (same publishers). The latter calls itself a Mazurka, but is not in the Mazurka style.—*Les Cloches du Soir*, by W. Kruger (Op. 103) (Ewer & Co.),—and *Réverie du Cœur, Impromptu*, by P. De Vos (Op. 65) (Cramer & Co.), are two of the myriad pieces which have no character save such as lies in a sentimental title. We imagine that our readers have by this time enough of the long list set before them above. The tale it tells of the state of musical publication in this country is not encouraging, to say the very least of it.—We take *The Summer Shower*, by S. A. Sheppard (Ollivier), to be amateur music.

A heap of arrangements, &c. has still to be glanced at:—of these, two are on themes from Mr. Loder's graceful opera, 'The Night Dancers,' by M. Berger (Jeffreys & Co.), for players at an early stage of their proficiency.—*Amber Witch*, by Mr. Harold Thomas (Cramer & Co.), is more ambitious. From the same hand we have a nice arrangement of Signor Arditi's valse, 'Il Bacio,' an easy *fantasia* on themes from 'Un Ballo in Maschera,' and rather a vehement transcript of 'Santa Lucia' (same publishers). The last may be chronicled as a marvel of deafness in the present state of publication—half-a-crown as nominal price for five pages! These extortions must work their own cure.—Mr. G. Osborne has gone home for the subject of a new *Fantasia* (Ashdown & Parry)—this is the Irish melody, *Love's Young Dream*.—Mr. W. H. Callcott gives us an arrangement of the prelude to M. Meyerbeer's *Crociato* (Addison & Co.), for Mr. Lonsdale, a series of transcripts from some of the most familiar sacred airs and choruses by Handel and Mozart, &c., called "Readings."—Mr. Arthur O'Leary has taken in hand *The Admired Movements from Molique's 'Abraham'* (Ewer & Co.). Sterling as is the oratorio music in question, it is precisely for that very reason unfitted for a pianoforte solo or duett. If contrast was wanted, we could not find it more striking than by passing from Herr Molique's solemn ware to a heap of arrangements of the sprightly tunes in M. Aubert's 'La Circassienne,' by MM. Archer, Henrion, Strauss and Mr. Hutchins Callcott (Addison & Co.), showing that the veteran French composer has not lost his piquancy.—To conclude, let us be excused from giving half-a-dozen lines at this busy time to the titles of pieces of Dance-Music and Marches, which we should counsel our clients not to buy.

MUSICAL AND DRAMATIC GOSSIP.—We understand that Dr. Bennett has accepted the commission to represent England in the new music to be composed for the ceremonials of the Great Exhibition; Signor Verdi, too, conditionally.

The *Observer* of this week confirms the rumour, published on Saturday last, by stating that a meeting was held, on Thursday week, with Mr. Benedict in the chair, "to receive the report of the persons appointed to apply to the Secretary of the Royal Commissioners (1851) touching the erection of an International Concert Room, at Kensington, and to adopt such measures as might be considered most expedient for promoting the success of the undertaking."

Music holds out at the Crystal Palace. On Monday Lock's 'Macbeth' music was given under Mr. Martin's superintendence.—On Thursday the Charity Children kept festival in the Handel orchestra; and yesterday Mdle. Adelina Patti appeared there previous to her making a tour in the country. That "a tune" has some value, let the severe ones frown as they will, was again proved in the programme of this entertainment. Mdle. Patti's British ballad was the imitation Scotch song 'I was within a mile';—one of Hook's Vauxhall ditties. If such tune-makers as Hook were to be found now-a-days—considering the improved state of science—we should not wait long for a triumphant English opera.

The police-band movement spreads. Divisions L and M, we perceive, have been playing in Kennington Park with great success.

On the 5th of this month a Festival was to be held at Caen, the orchestra and chorus numbering 600 persons. M. Padeloup was to conduct. Among the principal features in the programme were Beethoven's C minor Symphony and selections from 'Moïse' and from 'Jerusalem,' by Signor Verdi. Mdle. Artot and Herr Joachim are to be the "stars" of the festival at Antwerp on the 19th. There the orchestra and chorus will number 450 persons.

The 965th number of the *Builder* contained a full account of the works in prospect for the New Opera House in Paris, and of the new method of lighting the present one, lately devised by M. Lissajous, and put into operation.—The following extract will interest all who are occupied in the construction of theatres:—"The gas-burners in a row, are placed 80 centimètres below the stage, where they are completely enclosed. The luminous rays are gathered by opposed reflectors of curved form in section, and projected to the scene through a conveniently inclined slit or opening in that part of the contrivance which is necessarily above the stage, extending the length of the 'ramp,' as of the row of lights below, and which opening is glazed with ground glass. The eyes of the actors are not dazzled; and sitting in the pit, we can say there is a very decided gain for the spectators. Some of the principal singers were at first not pleased with the change; but such objections, we believe, may disappear when it is discovered that sound will now more readily than before, reach the audience. It remains to be explained that the products of combustion being passed by the several chimneys of the burners into the long horizontally-placed light-reflecting recipient, pass from that by transverse ducts (of terra cotta) into a pipe or channel placed parallel to the former, and connected at each end, that is each side of the house, with a pipe placed perpendicularly and ending above the roof. There may be a question as to the quantity of light, as at present arranged; but in the diffusion of the light, as well as those respects which are obvious, the system is a great improvement on the old one. There is so little danger to persons on the stage, that we are told a cambric handkerchief can be dropped on the 'ramp' without being ignited."

A great Festival was held at Riga on the 29th and 30th of June, by the united choral societies of St. Petersburg, Moscow, and the Baltic towns. The programme of their grand performance comprised Cherubini's 'Requiem'; the ninth Psalm, by Dr. Marschner (with whose sacred music we are entirely unacquainted); and Motets by Klein and Schneider.—The first prize at the monster Nuremberg meeting—"a magnificent goblet given by the

town of Berns,"—was carried away by the Vienna singers.—The second festival of French *Orphéonistes*, numbering 225 choral societies, who contribute in all 8,000 singers, is to be held in Paris from the 13th to the 17th of next month.

Announcements in this week's *Gazette Musicale* show how the foreign baths are becoming so many well-springs of music. At Ems there are to be new operas by MM. Alary and Deffes on the 13th and 17th. The former composer has written a two-act opera (the *Gazette Musicale* assures us) for the *Grand Opéra*, which is to be given early in the winter.—M. Gevaert has just produced a new stage work at Baden with success, says the same journal.

Foreign journals announce that M. von Flotow is at work on a new opera, the book of which is by Dr. Dingelstedt,—an announcement promising something superior to a common opera-book, whether French or German.

Madame Luther-Félix, a charming French actress, as Londoners may recollect, is dead; aged thirty.

The Princess's Theatre, which closes this evening, is to re-open in October, with a new comedy, by Mr. J. Brougham, entitled 'Playing with Fire.'

MISCELLANEA

Whales and Whaling.—The Southern Whale alluded to by Mr. Brierly as "in every respect similar to those taken in the Northern Seas," was first distinguished by Cuvier from the "right whale," under the name "Baleine du Cap," or *Balæna Capensis*; and its specific distinction from the *Balæna mysticetus* has been recognized by all subsequent naturalists. In my proposed Osteological Gallery, Cuvier's statement, "that the skull of the Greenland 'right whale' differs more from that of the 'southern right whale' than the skulls of the porquals or 'finer whales' do from one another,"† would be at once tested by comparison with Nature. Britain now affords no opportunity to the zoologist of repeating, not to say adding to, the scanty but most interesting observations which France, forty years ago, by her more advanced Natural History collections, enabled her great comparative anatomist to enrich his science with. No wonder, therefore, that the practical men like Mr. Brierly, who have opportunities of observing the various living whales in their native haunts, should go unprepared to take the advantages of those opportunities which a few visits to a proper National Museum of Natural History, including the skin and skeleton of the 'killer' in its Mammalian Gallery, would have afforded.

R. OWEN.

Harebells and Hyacinths.—In the review of Mrs. Lankester's book on Wild Flowers, in last week's *Athenæum*, I find it stated that the Wild Hyacinth (*Hyacinthus non-scriptus*) is the flower alluded to in the following lines from the 'Lay of the Last Minstrel':—

But still,
When Summer smiled on sweet Bowhill,
And July's eve, with balmy breath,
Waved the blue-bells on Newark's heath.

—Now, as Hyacinths do not blossom in July, and do not, unless in exceptional cases, grow upon heaths, it is clearly not the hyacinth that is referred to, but the harebell, *Campanula rotundifolia*, which blossoms in July and grows almost invariably on dry and hilly places. However plausible the suggestion may be, that the waving of the blue-bells on Newark heath was a feature of the scene, I am quite sure that Sir Walter Scott was too good a "field naturalist" to be guilty of the anachronism of making hyacinths blossom in July. I may add, in conclusion, that though it is unusual for harebells to form so prominent a feature in landscapes as hyacinths do in May, yet, within the last month, I have in this neighbourhood seen harebells growing in such profusion as to form a conspicuous object at no inconsiderable distance.

NEW GUIDES FOR 1861.

I. SCOTLAND.

Just published, in a neat portable volume, price 8s. 6d. cloth,

A NEW EDITION (THE 15TH, 1861) OF

BLACK'S PICTURESQUE TOURIST OF SCOTLAND,

Containing an Account of all the Places most worthy of being Visited, the Names of the best Hotels and Inns, and other useful information; a correct Travelling Map, 22 Charts of interesting Localities, and 4 Plans of Towns. Illustrated by 9 Engravings in Steel, and 147 Woodcuts.

(From The Times, July 28, 1861.)

"With the prospect of a tour in the Highlands before us, we gladly welcome the appearance of the 15th edition of this popular and excellent handbook, which, in addition to copious illustrations of the scenery and remarkable objects which it describes, contains a clear and accurate Map, corrected to the latest date. We feel the greater pleasure in noticing this work, as we have frequently complained of the want both of reliable maps and of comprehensive guide-books for this favourite resort of tourists."

II.

SOUTH OF ENGLAND.

KENT (Canterbury, Margate, Dover), 3s. 6d.

SUSSEX (Hastings, Chichester, Lewes), 2s. 6d.

HAMPSHIRE and ISLE OF WIGHT, 2s. 6d.

III.

SURREY.

Just published, in One neat Volume, price 5s., with Map and numerous illustrations,

BLACK'S GUIDE TO SURREY,

Including a full Description of the History, Antiquities, and Topography of the County.

(From The Athenæum, June 1, 1861.)

"To one of the most pleasant and picturesque of English Counties, this is one of the most efficient Guides that we have yet met with. It is convenient in form, correct in its information, legibly printed, and well illustrated. We could not award higher praise. It is a book, not merely for the hand or pocket of the tourist, but for his library and consultation afterwards. It has not accompanied us in travel, but, by aid of its pages, we have again gone over many a route, sat down in many a valley, ascended many a hill, tabernacled at many a hostelry, and sallied forth once more rejoicing. Next to making the tour, in the pleasure of remembering it; and this pleasure we have amply enjoyed in this volume, and are thereby all the better enabled to award it the commendation which it justly merits."

Edinburgh: A. & C. BLACK. London: SMITH & SON, Strand.

BLACK'S ATLASES.

I.

BLACK'S GENERAL ATLAS OF THE WORLD. A Series of Fifty-six Maps of the Principal Countries of the World, accompanied by an Index of 65,000 Names. Imperial Folio, half morocco, gilt edges, 60s.

SCHOOL ATLASES.

Price 12s. 6d. cloth, lettered (postage 10d.),

THE HARROW ATLAS of MODERN
GEOGRAPHY, containing 80 Coloured Maps, from the Use-
 ful Knowledge Society's Series, with Index to the Principal Places,
 and embracing all the most Recent Discoveries, including those of
 Dr. Livingstone, Sir R. M'Clintock, Messrs. Gregory, Stuart, and
 others. Folio, price 12s. 6d. cloth, lettered (1861).

"Without doubt, the most useful series of school maps, upon a
 scale considerably larger than are the majority of such publica-
 tions for school use."—*Mair's Scholastic Register.*

"Printed on fine paper, coloured in a careful and distinct
 manner."—*Bookseller.*

"Nothing could be better adapted for military service than these
 publications."—*United Service Magazine.*

"The maps are remarkably beautiful and clear. . . . A reference
 to particular maps justifies the date (1860) affixed to the modern
 atlases."—*Museum.*

N.B. This Atlas is now further corrected.

Price 7s. cloth, lettered (postage 6d.),

THE JUNIOR HARROW ATLAS of
MODERN GEOGRAPHY, containing 14 Coloured Maps,
 from the Useful Knowledge Society's Series, with Index to the
 Principal Places, and embracing all the Recent Discoveries. Folio,
 price 7s. cloth, lettered.

"There is no difference between the Senior and Junior Atlases in
 respect to the size of the maps, which is in a higher degree than
 the price of the atlases above the common."—*Museum.*

A Specimen Map and Detailed Catalogue of the Harrow Atlases
 may be had gratis and post free by the principal of any school or
 college forwarding his prospectus or card of address to the publisher.
 Special selections may be had bound to order if a sufficient quantity
 is taken.

Price 12s. 6d. cloth, lettered (postage, 8d.),

THE HARROW ATLAS of CLASSICAL
GEOGRAPHY, containing 23 coloured Maps, from the
 Useful Knowledge Society's Series, with Index. Folio, price
 12s. 6d. cloth lettered.

"The plans of Rome, Athens, and Syracuse, instead of being on
 a reduced scale, are exhibited in three separate maps of the full
 size, and adorned with views of the surrounding scenery, and of
 the principal buildings which these ancient cities contained."—*Museum.*

Price 7s. cloth lettered (postage, 6d.),

**THE JUNIOR HARROW ATLAS of CLAS-
 SICAL GEOGRAPHY,** containing 11 coloured Maps, from
 the Useful Knowledge Society's Series, with Index. Folio, price 7s.
 cloth lettered.

Price 1l. 11s. 6d. half morocco, gilt edges,

**THE UNIVERSITY ATLAS of CLAS-
 SICAL and MODERN GEOGRAPHY,** containing 25
 coloured Maps, from the Useful Knowledge Society's Series, with
 valuable Consulting Indexes. Folio, price 1l. 11s. 6d. handsomely
 bound in half morocco, gilt edges.

N.B. This also forms an elegant Atlas for the private library, at
 a very moderate cost.

Price 12s. 6d. cloth lettered (postage, 10d.),

A SCHOOL ATLAS of CLASSICAL and
MODERN GEOGRAPHY, containing 25 coloured Maps,
 from the Useful Knowledge Society's Series, with Index. Folio,
 price 12s. 6d. cloth lettered. A useful selection of the more im-
 portant Ancient and Modern Maps.

London: EDWARD STANFORD, 5, Charing Cross, S.W.

A. PETSCH & CO., Foreign Booksellers,

 Rev. A. J. D. DORSEY. 8vo. 7s.

COLLOQUIAL PORTUGUESE: the Words
 and Phrases of Every-day Life. By the same Author. 8vo. 2s. 6d.

MADEIRA as a WINTER RESIDENCE.
 By the same Author. 6d.

Trübner & Co. 60, Paternoster-row.

Just published, in a closely-printed volume, 8vo. pp. 648, price 12s.

A COURSE of ELEMENTARY
MATHEMATICS,

FOR THE USE OF CANDIDATES FOR ADMISSION INTO
 EITHER OF THE MILITARY COLLEGES;

OF APPLICANTS FOR APPOINTMENTS IN THE HOME
 OR INDIAN CIVIL SERVICE; AND OF MATHE-
 MATICAL STUDENTS GENERALLY.

"In the work before us he has digested a complete Elementary
 Course by aid of his long experience as a teacher and a writer;
 and he has produced a very useful book. . . . Mr. Young has not
 allowed his own tastes to rule the distribution, but has adjusted
 his parts with the skill of a veteran."—*Athenæum*, March 9, 1861.

"Considering the difficulty of the task which Mr. Young has
 undertaken to discharge, and the extent of useful knowledge he
 has succeeded in imparting accurately and lucidly in so small a
 compass, we can without hesitation commend this work to the
 public as by far the best elementary Course of Mathematics in our
 language."—*London Review*, April 6, 1861.

London: Wm. H. Allen & Co. 7, Leadenhall-street.

Just published, in fcap. 8vo. price 5s. cloth,

**OBSCURE TEXTS of SCRIPTURE ILLUS-
 TRATED** ACCORDING TO THE SPIRITUAL SENSE.

 Price 12s.

A TREATISE on DISEASES of the JOINTS.
 By R. BARWELL, F.R.C.S.E., Assistant-Surgeon Charing
 Cross Hospital.

"Mr. Barwell has so prudently concentrated his powers, having
 as he tells us devoted himself for the last six or seven years almost
 unremittently to the study of Joint Diseases, that he has been
 enabled to write with much ability on the subject of which he
 treats."—*British Medical Journal*, April, 1861.

"A work which must place its author amongst the first rank
 of those who have made the treatment of Diseases of the Joints
 their special consideration."—*Dublin Quarterly*, August, 1861.

London: John Churchill.

NEW and GREATLY IMPROVED EDITIONS OF
DR. MCCULLOCH'S READING-BOOKS for
SCHOOLS.

The Publishers confidently invite the attention of Teachers to
 the New Editions of these works, in the belief that, after the
 thorough revision to which they have just been subjected by the
 Author, they will be found to be in all respects adapted to the pre-
 sent advanced state of Education.

GREAT EXPECTATIONS.

By CHARLES DICKENS.

London: CHAPMAN & HALL, 193, Piccadilly.

This day is published, the Second Edition, in 2 vols. 8vo. with Portrait of the Princess Charlotte of Wales, price 26s.

AUTOBIOGRAPHY OF MISS CORNELIA KNIGHT,

LADY COMPANION TO THE PRINCESS CHARLOTTE OF WALES.

With Extracts from her Journals and Anecdote-Books.

"Of the popularity of these volumes, on account of their historical as well as gossiping merits, there can be no doubt whatever."—*Athenæum*, June 8, 1861.

"We can heartily recommend the entire work to our readers as one of the most curious and authentic disclosures of State affairs in this country, and one of the most interesting and graphic journals of travel which the literary world has for a long time been called upon to notice."—*Press*, June 22, 1861.

"The journal of a clever and lady-like woman, who saw many men and many cities, and whose testimony is not heightened by the warmth of too lively an imagination, nor blackened by the tints of malice, must be—what we have found it to be—unusually interesting reading."—*Spectator*, June 29, 1861.

"The matters which will secure popularity for the Autobiography are those which resuscitate the stories that excited the curiosity of our forefathers, and made them invent other scandals, scarcely any one of which, fiction as they were, exhibited half the strangeness of the facts themselves, as they are now recorded."—*Bell's Messenger*, June 15, 1861.

"These are highly interesting volumes.... Miss Knight, speaking in the fullness of the knowledge derived from her confidential position in the Princess's household, more than confirms what has been previously asserted of the Prince's cruelty; and presents us with a picture of royal littleness in the father, and of royal wretchedness in the daughter, such as we hope may never again be exhibited within the walls of an English palace."—*Observer*, June 30, 1861.

UNITED KINGDOM LIFE ASSURANCE COMPANY,

8, WATERLOO-PLACE, PALL MALL, S.W.

The HON. FRANCIS SCOTT, Chairman.

CHARLES BERWICK CURTIS, Esq., Deputy-Chairman.

FOURTH DIVISION OF PROFITS.

SPECIAL NOTICE.—Parties desirous of participating in the Fourth Division of Profits to be declared on Policies effected prior to the 31st of December, 1861, should make immediate application. There have already been Three Divisions of Profits, and the Bonuses divided have averaged nearly 2 per cent. per annum on the sums assured, or from 30 to 100 per cent. on the premiums paid, without the risk of copartnership.

To show more clearly what these Bonuses amount to, the three following cases are given as examples:—

Sums Insured.	Bonuses added.	Amount payable up to Dec. 1854.
£5,000	£1,987 10	£6,987 10
1,000	397 10	1,397 10
100	39 15	139 15

Notwithstanding these large additions, the Premiums are on the lowest scale compatible with security; in addition to which advantages, one-half of the premiums may, if desired, for the term of five years, remain unpaid at 5 per cent. interest, without security or deposit of the Policy.

The Assets of the Company at the 31st of December, 1860, amounted to £730,665 7s. 10d., all of which has been invested in Government and other approved securities.

No charge for Volunteer Military Corps whilst serving in the United Kingdom.

Policy stamps paid by the office.

For Prospectuses, &c. apply to the Resident Director, No. 8, Waterloo-place, Pall Mall.

By order,

E. L. BOYD, Resident Director.

To MICROSCOPISTS and OTHERS.

To complete our system of Manufacture, and to meet the demand for our Instruments, we have built an entirely new Factory; and whilst we shall thus be enabled to continue our improvements in Manufacture, we shall also concede to our Customers every reduction that we can in Price.

ACHROMATIC MICROSCOPES.

We have carefully arranged our different forms of Stand with various Object-Glasses and Apparatus, so as to offer Microscopes, more or less complete, at certain amounts, in each instance considerably less than the sum of the individual prices of the several parts, and these we keep constantly in stock.

WENHAM'S BINOCULAR MICROSCOPE.

We are now manufacturing, under the immediate superintendence of the Inventor, this valuable addition to the Microscope. Mr. Wenham's arrangement not only gives the most perfect and well-defined Stereoscopic vision with any Object-Glass or Eye-Piece, but it can be applied to almost any Microscope, and when adapted, it in no way whatever interferes with the ordinary use of the Instrument.

MALTWOOD'S FINDER FOR THE MICROSCOPE.

This is the only method that has become universal for the purpose of finding Objects.

MICROSCOPIC OBJECTS.

In the endeavour to make our Collection of Prepared Specimens complete in every branch, we have lately secured the sole agency for the sale of some most remarkable transparent injections.

ICELAND SPAR.

We have a number of Cabinet Specimens of this interesting substance on Sale, the pieces having been selected from a large quantity which we have purchased, and besides being of very fine quality, we are enabled to offer them at prices considerably below the ordinary value.

ACHROMATIC STEREOSCOPIES.**GORHAM'S KALEIDOSCOPIIC COLOUR TOP, &c.**

Catalogues, giving full particulars, may be had on application, or sent post free.

SMITH, BECK & BECK,
6, Coleman-street, London, E.C.
and Lister Works, Holloway.

T. ROSS,**OPTICIAN,**

(SON AND SUCCESSOR OF THE LATE
ANDREW ROSS,)

A LARGE COLLECTION of MICROSCOPIC PREPARATIONS.

RACE, FIELD and OPERA GLASSES, &c., as usual.

See Catalogues, to be had on application at

2 and 3, FEATHERSTONE-BUILDINGS,
HIGH HOLBORN, LONDON, W.C.

Sixth Edition, price 4s. 6d., counters adapted to the same.
SYLLABIC SPELLING AND READING.
 By Mrs. WILLIAMS, Author of the 'Conversations on Grammar.' With Complete Exercises. Revised and corrected by her Daughter, LADY LEIGHTON.
 Whittaker & Co. Ave Maria-lane, London.

Just published, fcap. 8vo. with 6 Plates of rare and choice Examples, cloth, 3s.

A HAND-BOOK TO ROMAN COINS. By FRED. W. MADDEN, of the Medal Room, British Museum, Hon. Sec. of the Numismatic Society.
 J. Russell Smith, 36, Soho-square, London.

J. H. DALLMEYER (Son-in-Law and Pupil of the late ANDREW ROSS)

Respectfully begs to inform the Scientific Public that he exclusively manufactures the ASTRONOMICAL TELESCOPE according to A. R.'s processes, who has also bequeathed to him the whole of that family.

For particulars of J. H. D.'s recent IMPROVEMENTS in MICROSCOPIC OBJECT-GLASSES, PHOTOGRAPHIC LENSES, &c. see Catalogue, which may be had on application at 19, BLOOMSBURY-STREET, Oxford-street, W.C.

APPARATUS AND CHEMICALS.
 Folding, Rigid, and Stereoscopic CAMERAS in variety, combining great portability and lightness, with every Adjustment suggested by the most experienced Operators. Pressure Frames, Water-tight Glass and Guttapercha Boxes, Pressure Frames, Plate-Holders, and all needful Apparatus, of best Quality only.—LENSES by Ross, Lezebours and Vallentin.

COLLODIONS for Positive and Negative Pictures, highly sensitive and uniform in action. Varieties, Cases, Passepartouts, Albumenized Base Paper, and every requisite for the Amateur or Professional Photographer.

Importers of the True Base Paper. Wholesale Manufacturers of all Chemical Preparations.—Illustrated Catalogue, free, on application.

 Operative and Photographic Chemists,
 146, HOLBORN BARS, London.

HER MAJESTY'S VISIT TO IRELAND.
 CALLAGHAN'S OPERA, RACE AND FIELD GLASSES, matchless for power and portability, may be worn round the neck as a double eyeglass. Invaluable to the Tourist, and for viewing scenery at four to five miles' distance, are preferred to the telescope. Equally available at the Opera-House, Race-Course, or Review. Price, 30s., 45s., 50s., 70s., and 90s., according to size and power. May be had at Messrs. Smith & Son's Bookstalls, at the principal Railway Stations; and in Ireland at Bray, the Curragh, Killarney, Kingston, Limerick, Malton, Newbridge and at No. 21, Lower Kew-street, Dublin, or will be sent free on remittance to William Callaghan, Optician, 32A, New Bond-street, W., corner of Oanduit-street, London.

Auditors.
 Lewis Lloyd, Esq.
 John Henry Smith, Esq.
 Thos. Tallamash, Esq., Secretary. Samuel Brown, Esq., Actuary.
LIFE DEPARTMENT.—Under the provisions of an Act of Parliament, this Company now offers to new Insurers Eighty per Cent. of the Profits, at Quinquennial Divisions, or a Low Rate of Premium without participation of Profits.
 Since the establishment of the Company in 1821, the Amount of Profits allotted to the Assured has exceeded in cash value 660,000l., which represents equivalent Reversionary Bonuses of 1,036,000l.

After the Division of Profits at Christmas 1859, the Life Assurances in force, with existing Bonuses thereon, amounted to upwards of 4,720,000l., the income from the Life Branch, 207,000l. per annum; and the Life Assurance Fund exceeded 1,618,000l.

LOCAL MILITIA AND VOLUNTEER CORPS.—No extra Premium is required for Service therein.
INVALID LIVES assured at corresponding Extra Premiums.
LOANS granted on Life Policies to the extent of their values, if such value be not less than 50s.
ASSIGNMENTS OF POLICIES.—Written Notices of, received and registered.

MEDICAL FEES paid by the Company, and no charge for Policy Stamp.

FIRE DEPARTMENT.—Insurances are effected upon every description of property at moderate rates.
 Losses caused by Explosion of Gas are admitted by this Company.

V.R. THE QUEEN IN IRELAND.

As few copies remain of the

IRISH TOURIST'S ILLUSTRATED HAND-BOOK. 2s. 6d. (Ninth Year's Official Edition), containing 150 original designs, and fullest information, immediate application is necessary.
 W. H. Smith & Son, 186, Strand; M'Glashan, Dublin; and all Railways.

GOVERNMENT SECURITY LIFE POLICIES.
THE CONSOLS ASSOCIATION,
 430, STRAND, LONDON.

1. Provides the Security of Consols for its Policies.
 2. It lends, or returns to Insurers ON DEMAND at any time, about One-Half of all Premiums paid.
 Undoubted Security for Money, with a liberal Rate of Interest.
 The Association possesses a large Capital, subscribed by several hundreds of Shareholders.
 Full information may be obtained on application to
 THOMAS H. BAYLIS, Managing Director.

ACCIDENTS OF ALL KINDS, AND FROM ANY CAUSE,
 may be provided against by an Annual Payment of 2s. to the RAILWAY PASSENGERS ASSURANCE COMPANY, which secures 1,000l. at death, or Accident, or 6s. weekly for Injury.
NO EXTRA PREMIUM FOR VOLUNTEERS.
ONE PERSON IN every TWELVE insured is injured yearly by ACCIDENT.

75,000l. has been already PAID as COMPENSATION.
 For further information apply to the Provincial Agents, the Railway Stations, or at the Head Office, 64, Cornhill (late 2, Old Broad-street).

ANNUAL INCOME, 40,000l.
 CAPITAL, ONE MILLION.
 WILLIAM J. VIAN, Secretary.
 64, Cornhill, E.C., January, 1861.

ROYAL INSURANCE COMPANY.
 Head Office:—20, Lombard-street, LONDON,
 and Royal Insurance Buildings, LIVERPOOL.
 Branch Offices:—Manchester, Birmingham, Bristol, Leeds, Dublin, Glasgow and Edinburgh.

EXTRACTS FROM THE REPORT FOR THE YEAR 1860.

"The success of the Company, even in its earliest years, received the marked attention, and elicited the surprised comments of writers best acquainted with the history of Insurance Companies."

"Fire Premiums for 1860 EQUAL the Total Fire Premiums for the SEVEN YEARS 1845 to 1851."

"Life Premiums for 1860 EXCEED the Entire Life Premiums for the EIGHT YEARS ending 1853."

"Purchase of Annuities in 1860, LARGELY EXCEEDS the similar receipts for the first TEN YEARS, 1845 to 1854."

"This progress, it is believed, is unsurpassed, considering that it applies to each of the three branches of the business."

FIRE BRANCH.

"The Fire Branch has certainly shown no exhaustion during the year 1860 of that impetus which had previously brought it to a position of the first magnitude among the Insurance Companies of the United Kingdom. The Fire Premiums in 1860 had advanced to the sum of 283,264. 7s. 3d., or 12s. 11d. more than in 1859. The Fire Premiums had arrived at a sum of 262,977. 13s. 11d., showing an increase of 34,685. 12s. 6d., exceeding the large advance of the preceding year, so that in two years the Fire Revenue of the Company has been enhanced by the enormous sum of 68,881. 17s. 6d."

"The Parliamentary Report of Returns of Duty paid to Government for the year 1860 exhibits the augmentation of the business in a more prominent way, as it affords the means of comparison with other Companies. The Proprietors will be gratified to learn that the increase of Duty paid by the Royal in the last year is more than double that of any other Company, either London or Provincial, whilst only one of those Companies even approaches to 50 per cent. of the advance of this Company. Our increase actually equals 30 per cent. of the entire increase of the whole of the Metropolitan Offices combined, whilst of the Provincial Offices its forms upwards of 30 per cent. of the total advance of the other 25 offices established out of London."

LIFE BRANCH.

"The Reports of the Company for several years have had invariably announce a constant periodical expansion of Life Business, the new Policies of each succeeding year showing an advance over the one that had immediately preceded it. A similar result is shown in the year 1860, the Premiums on New Policies, after deducting Guarantees, being 15,092. 12s. 10d., which is an increase in the item of 1,993. 17s. 8d., above the amount received for the year 1859."

"But even this advance is small when compared with the sudden and remarkable momentum which has been given to this branch of the business in the present year (1861)."

"It was not until the commencement of the year that the public seemed to have become fully acquainted with the fact that the Royal Insurance Company had published late in the last year an account of the investigation into the assets and liabilities of its Life Department, under a novel form, and in as plain and intelligible a manner as the abstruseness of the subject admitted, together with the entire statements and valuations necessary for that purpose."

"It is conjectured from the extensive notices of this Pamphlet, and its accompanying Diagrams, which have appeared in the Periodicals of the day, that it has largely attracted the attention of vast numbers of persons in all parts of the United Kingdom, as well as in other parts of the world. Indeed, a most satisfactory and conclusive evidence that such is the case is afforded by the fact that the Sum Assured on new Policies in the six months to the 31st June of the present year, is actually fifty per cent. in excess of the Sum Assured in the corresponding months of the year 1860, although the latter amount in itself exceeded the Sum Assured in any like previous period of time."

"If this success be continued, the Royal Insurance Company would, with respect to the amount of its new business, be at once placed (at least with one or two exceptions) at the head of all the Insurance Companies doing business in this country, and the anticipations of the last Report, to the effect that the details of the Life Business then to be published would form a spot of the Establishment, will have a speedy and very happy realization."

SPECIAL ADVANTAGES OF THE LIFE BRANCH.

PROFITS.—Large Proportion returned every Five Years to Policies then in existence Two entire years.
Expenses chiefly borne by the Fire Branch, in order to increase the Bonus to be returned.

LIFE BONUSES DECLARED.
 Two per Cent. per Annum on the Sum Assured; the greatest Bonus ever continuously declared by any Company.

SECURITY FOR BOTH FIRE AND LIFE BRANCHES.

Capital TWO MILLIONS Sterling.

Accumulated Funds in hand exceed 800,000l.

PERCY M. DOVE, Manager and Actuary.

Every description of Life Assurance business is transacted. Advances are made on Mortgage of Freehold Property, Life and Reversionary Interests, &c., and also to Assurers on Personal Security. The Assets are 240,000l., and the Income is over 63,000l. per annum. Four-fifths of the entire Profits are appropriated to the Assured. Three divisions of considerable amount have already taken place.
 WILLIAM RATHAY, Actuary.

THE SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY

is a purely Mutual Office, in which the whole Funds belong to the Members; and the Profits are divided among them alone. Since it was founded, in 1815, its history has been one of constant and increasing prosperity; and it is now, in point of Funds, Annual Revenue and number of Members, one of the largest Life Offices in the world. The Security presented by the Society to its Members and their Representatives is of the most unquestionable character; while the Returns made in the form of Bonuses are, it is believed, not exceeded by those of any other similar Institution. The following is a

MEMORANDUM OF BUSINESS, BONUSES, FUNDS AND REVENUE.

Extracted from the Society's detailed Prospectus.

1. TOTAL ASSURANCES ISSUED	£14,621,784
2. TOTAL BONUSES DECLARED	3,083,049
3. SUMS ASSURED AND BONUSES EXISTING	10,886,291
4. TOTAL CLAIMS PAID EXCEED	3,600,000
5. INVESTED FUNDS	3,601,764
6. ANNUAL REVENUE	425,738

Forms of Proposal, detailed Prospectuses and Reports, and every Information, may be had at the Head Office, or any of the Society's Agents.

SAMUEL RALEIGH, Manager.
 J. J. P. ANDERSON, Secretary.
 Edinburgh, 5, St. Andrew-square.

SPECIAL NOTICE.

Proposals dated and lodged at the Head Office, or with any of the Society's Agents, during the current year, will secure One Bonus more than those of later date.

ACIDITY, HEARTBURN, HEADACHE, GOUT, &c.

May be drunk freely by the most delicate with advantage to the general health.

Apply to W. & J. BURROW, Great Malvern.

Sole Local Agents for J. SCHWEPPE & CO.'S SELTZER, VICHY, SODA, and LITHIA WATERS;

And Sole Proprietors of "BURROW'S TARAXACUM" for Liver Complaints.

TEETH.—By her Majesty's Royal Letters Patent.—Newly-invented Application of Chemically Prepared India-rubber in the construction of Artificial Teeth, Gums, and Palates.—MR. EPHRAIM MOSELY, Surgeon-Dentist, sole inventor and patentee.—A new, original, and invaluable invention consisting in the adaptation, with the most absolute perfection and success, of CHEMICALLY PREPARED INDIA-RUBBER, as a lining to the gold or bone frame.—All sharp edges are avoided; no spring wires or fastenings are required; a greatly increased freedom of suction is supplied; a natural elasticity, hitherto wholly unobtainable, and a soft, perfect, and most upbearing accuracy, are secured; while from the softness and flexibility of the gum employed, the greatest support is given to the adjoining teeth when loose or rendered tender by the absorption of the gums.—To be obtained only at 9, Lower Grosvenor-street, Grosvenor-square, London, W.

DR. DE JONGHE'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL,

Prescribed by the most eminent Medical Men throughout the world as the safest, speediest and most effectual remedy for

Consumption, Chronic Bronchitis, Asthma, Coughs, Rheumatism, Gout, General Debility, Diseases of the Skin, Rickets, Infantile Wasting, and all Scrofulous Affections,

Is incomparably superior to every other variety.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart. M.D., Physician in Ordinary to the Queen in Ireland.—"I consider Dr. de Jonghe's Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. GRANVILLE, F.R.S.—"Dr. Granville has found that Dr. de Jonghe's Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

Dr. LANKESTER, F.R.S.—"I deem the Cod Liver Oil sold under Dr. de Jonghe's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

Dr. LAWRENCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.—"I invariably prescribe Dr. de Jonghe's Oil in preference to any other, feeling assured that I am recommending a genuine article, and not a manufactured compound, in which the efficacy of this invaluable medicine is destroyed."

DR. DE JONGHE'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-Pint, 2s. 6d.; Pint, 4s. 9d.; Quart, 9s.; and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists.

SOLE DEPOT:

ANSAR, HARFORD & CO. 77, Strand, London, W.C.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 500 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of a steel spring, so often hurtful in its effects, is here avoided: a soft bandage belted worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, acting with so much ease and accuracy that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the truss (which cannot fail to fit) forwarded by post, on the circumference of the body, two inches below the hips, being sent to the Manufacturer.

MR. WHITE, 233, PICCADILLY, LONDON.

ELASTIC STOCKINGS, KNEE-CAPS, &c. for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light in texture, and inexpensive, and are drawn on like an ordinary stocking, from 7s. 6d. to 15s. each; and 15s. each.

JOHN WHITE, MANUFACTURER, 233, Piccadilly, London.

RIMMEL'S TOILET VINEGAR will be found a perfect Luxury this Weather, either used for the Toilet or Bath, or as a reviving Scent for the Handkerchief. A special, unflammable sort is prepared to be used in Rimmel's Patent Vaporizer for purifying the air and fumigating sick rooms.—RIMMEL, Perfumer, 96, Strand, and 24, Cornhill.

NO MORE PILLS NOR ANY OTHER MEDICINE.—"W. and DR. BARRY'S HEALTH RESTORING REVALENT ARABIC FOOD," the safest remedy for habitual constipation, indigestion (dyspepsia), palpitation, coughs, colds, asthma, bronchitis, consumption, diarrhoea, nervousness, biliousness, torpidity of the liver, &c.—Andrew Barr, M.D., F.R.S., Dr. Harvey, Dr. Shorland, Dr. Campbell, Dr. Wurtz's Testimony, 18th July 1858. Dr. Barry's Food is particularly effective in effectually curing indigestion (dyspepsia), a confirmed habit of body, as also in diarrhoea, bowel and liver complaints, inflammatory irritation and cramp of the urethra, the kidneys and bladder, and hæmorrhoids; also in cough, asthma, debility, bronchitis, and pulmonary and bronchial consumption.—Dr. Rud. Wurtz, Professor of Medicine and Practical M.D. in Bonn. Packed in tins, with full instructions, 11b., 2s. 6d.; 5lb., 4s. 6d.; 11b., 11s.; 25b., 25s.; 50b., free of carriage. Dr. Barry & Co., 77, Strand, London. Sole Agents, Fortnum & Mason, also at 90, Gracechurch-street, 4, Cheap-side; 69 and 150, Oxford-street; 232, 230, 430 and 431, Strand; and all Grocers.

DINNEFORD'S PURE FLUID MAGNESIA has been, during twenty-five years, emphatically sanctioned by the Medical Profession and universally accepted by the Public as the Best Remedy for acidity of the stomach, heartburn, head-ache, gout and indigestion, and as a mild aperient for delicate constitutions, more especially for Ladies and Children. Combined with the Acidulated Lemon Syrup, it forms an agreeable Effervescent Draught, in which the most delicate and much increased. During Hot Seasons and in Hot Climates, the regular use of this simple and elegant remedy has been found highly beneficial. Manufactured with the utmost attention to strength and purity by DINNEFORD & CO., 178, New Bond-street, London; and sold by all respectable Chemists throughout the Empire.

COCKLE'S PILLS.—To those who suffer from Indigestion and Sick Headache, Torpid Liver, Inactive Bowels, &c., COCKLE'S ANTIBILIOUS PILLS are strongly recommended, as, by combining aromatic, tonic, and aperient properties, they remove all poisonous accumulations, strengthen the stomach, induce a healthy appetite, and impart tranquillity to the nervous system. Prepared only by JAMES COCKLE, 18, New Ormond-street; and to be had of all Medicine Vendors, in boxes, at 1s. 12d., 2s. 6d., 4s. 6d. and 11s. each.

BLAIR'S GOUT and RHEUMATIC PILLS.

Price 1s. 12d. and 2s. 6d. per box. This Preparation is one of the benefits which the Science of Modern Chemistry has conferred upon Mankind; for, during the first twenty years of the present century, to speak of a Cure for the Gout was considered a romance; but now the efficacy and safety of this Medicine are so fully demonstrated by unalloyed testimonials from persons in every rank of life, that Public Opinion proclaims this as one of the most important Discoveries of the Present Age. These Pills require no restraint of diet or confinement during their use, and are certain to prevent the disease attacking any vital part.

Sold by all Medicine Vendors, and at 232, Strand, London.

IN HOT WEATHER.—DR. HUGO'S MEDICAL ATOMS, taken at night, produce refreshing sleep, cool the whole system, and give lightness and energy to mind and body. They have a delightful taste, and may be eaten as sweets. Sold by BARCLAY & SONS, 35, Farringdon-street, and all Druggists, at 1s. 12d. and 2s. 6d. per packet.

HOLLOWAY'S PILLS.—LIFE'S GRAND BANE.—Indigestion, dyspepsia, or disordered stomach, are more or less the companions of most men whose time is occupied by literary, legal, or commercial pursuits, which prevent their outdoor exercise essential to health. This list is increased in winter by females, and all whom the weather makes prisoners. Holloway's Pills have long been famed as the easiest, safest, and most powerful remedy for weak stomachs, disordered livers, or torpid bowels. They induce a healthy action throughout the alimentary canal, without distressing or debilitating the system. They are the most efficient yet painless antidote of all visceral disturbances; they stimulate, moderate or repress any disordered function; they make the digestion good, the body strong, and the mind vigorous.

E. H. PLUMPTRE, M.A., Dean.

QUEEN'S UNIVERSITY IN IRELAND. QUEEN'S COLLEGE, GALWAY.

On FRIDAY, the 18th of OCTOBER NEXT, an EXAMINATION will be held for the Matriculation of Students in the Faculties of ARTS, LAW, and MEDICINE, and in the Departments of CIVIL ENGINEERING and AGRICULTURE.

The Matriculation Examination for Students intending to pursue the course of study for the Diploma of Licentiate in Arts, will take place on the same day. The Subjects of Examination are the same as those for the ordinary Matriculation Examination in Arts, save that Latin and Greek are not required.

An Additional Matriculation Examination for Students in the Faculty of Medicine will be held on the 24th of November.

The Examinations for Scholarships will commence on Tuesday, the 15th of October. The Council have the power of conferring at these Examinations Ten Senior Scholarships of the value of 40s. each, viz.:—Seven in the Faculty of Arts, Two in the Faculty of Medicine, and One in the Faculty of Law; and Forty-five Junior Scholarships, viz.:—Fifteen in Literature, and Fifteen in Science, of the value of 24s. each; Six in Medicine, Three in Law, and Two in Civil Engineering, of the value of 30s. each; and Four in Agriculture, of the value of 12s. each.

The Council is also empowered to award at the same Examinations several Prizes, varying in value from 5s. to 15s.

A Prospectus, containing full information as to the Subjects of Examination and Courses of Instruction, may be had on application to the Registrar.

By order of the President,
WILLIAM LUPTON, A.M., Registrar.
Galway, 10th July, 1861.

ST. BARTHOLOMEW'S HOSPITAL and MEDICAL COLLEGE.—THE WINTER SESSION will COMMENCE October 1, with an INTRODUCTORY ADDRESS by Dr. FRANKLAND, at Five o'clock p.m.

LECTURES.

Medicine—Dr. Black and Dr. Kirkes.
Surgery—Mr. Lawrence.
Descriptive Anatomy—Mr. Skey and Mr. Holden.
Physiology and General Anatomy—Mr. Savory.
Chemistry—Dr. Frankland.
Demonstrators of Anatomy—Mr. Callender and Mr. Smith.
Demonstrator of Morbid Anatomy—Dr. Andrew.

SUMMER SESSION, commencing May 1, 1862.

Material Medicine—Dr. F. Farre.
Botany—Dr. Harris.
Forensic Medicine—Dr. Martin.
Midwifery.
Comparative Anatomy—Mr. Coote.
Practical Chemistry—Dr. Frankland.

The Hospital contains 650 beds, and Clinical Lectures are delivered—On the Medical Cases, by Dr. Burrows, Dr. Farre, and Dr. Black; on the Surgical Cases, by Mr. Lawrence, Mr. Skey, and Mr. Paget; and on Orthopedic Surgery, by Mr. Coote.

Collegiate Establishment.—Students can reside within the Hospital walls, subject to the collegiate regulations. Some of the Teachers connected with the Hospital also receive Students to reside with them.

Information respecting Scholarships and other details may be obtained from Mr. Paret, Mr. Coote, Mr. Callender, or any of the Medical or Surgical Officers or Lecturers; or at the Anatomical Museum or Library.

FREDERICK PLEDY, late of Worcester, has REMOVED his ARCHITECTURAL PRACTICE to 15, YORK-PLACE, Portman-square, LONDON, greater facilities being thereby afforded for continuing the execution of Stained Glass, Mural and other Ecclesiastical Decorations.

ST. THOMAS'S MEDICAL SESSION.

A GENERAL INTRODUCTORY ADDRESS will be delivered by ALBERT J. BERNAYS, Esq. M.A. Ph.D., the Dean, on TUESDAY, 1st October, 1861, at 8 o'clock p.m.

After which the DISTRIBUTION OF PRIZES will take place.

Gentlemen have the option of paying 40s. for the first year, a similar sum for the second, and 10s. for each succeeding year; or 30s. at one payment, as perpetual.

Matriculation Prizes, &c.

Voluntary Matriculation Examinations are held early in October, and Prizes are given in each of the three following divisions:—

1st. In Mathematics, Classics, and Ancient History. The President's Prize of Twenty Guineas.
2nd. In Physics and Natural History. A College Prize of 20s.
3rd. In Modern Languages and Modern History. A College Prize of 20s.

The WM. TITE SCHOLARSHIP, founded by W. TITE, Esq. M.P. F.R.S., the proceeds of 1,000l. Consols, tenable for three years, is awarded every third year.

To the Three most distinguished Pupils for General Proficiency in each year, the following Prizes are awarded:—

FIRST YEAR'S STUDENTS.

1st. The Treasurer's Prize of Thirty Guineas. 2nd. A College Prize of 20s. 3rd. A College Prize of 10s.

SECOND YEAR'S STUDENTS.

1st. A College Prize of 30s. 2nd. A College Prize of 20s. 3rd. A College Prize of 10s.

The Dressers and the Clinical Clerks are awarded to merit, after examination.

THIRD YEAR'S STUDENTS.

1st. A College Prize of 30s. 2nd. A College Prize of 20s. 3rd. A College Prize of 10s.

Mr. Geo. Vaughan's Cheesden Medal. The Treasurer's Gold Medal.

Mr. Newman Smith's Prize of 5s. for the best Essay on "Neurasthenia."

The Two House-Surgeons, the Resident Accoucheurs, and the Dressers are periodically selected, and are provided with Rooms and Commons in the Hospital, free of expense.

Two Hospital Registrars at an Annual Salary of 40s. each, or one at 50s.

The Committee of the "Nightingale Fund" has arranged with the authorities of St. Thomas's for educating Women as Hospital Nurses, who, on the satisfactory completion of one year's training, will be considered eligible to receive appointments as Nurses in the Metropolitan or Provincial Hospitals.

Prior to Midsummer in each year application should be made to Mrs. W. W. WADSWORTH, at St. Thomas's Hospital, either by Women as Candidates for Training, or by Institutions for Trained Nurses.

The Patients are admitted daily at half-past 11 a.m., and the Out-Patients seen at half-past 12 daily.

To enter, or to obtain Prospectuses, the Conditions of the Title Scholarship, and further Information, apply to Mr. WHITFIELD, Medical Secretary, resident at the Hospital.

ORIENTAL LANGUAGES.—Sanskrit, Hin-

dustani, Bengali, and Persian, as also Hebrew and Syriac, are TAUGHT by the Rev. G. SMALL, M.A. M.R.A.S. &c., ten years a Missionary in India, and ten years a teacher of those languages since his return home.—Featherstone-buildings, Holborn, W.C.; and 17, Church-street, Cliftonville, Brighton.

PRACTICAL INSTRUCTION.—ROYAL INFIRMARY, 12 noon:
 Perpetual Ticket, at one payment, 10*l.*; annual, 5*l.*; half-yearly, 3*l.* 6*s.*; separate payments for two years and a half entitle the student to a perpetual ticket. Sick Children's Hospital—Ticket, three months, 1*l.* 1*s.*; perpetual, 2*l.* 2*s.*
DISPENSARY VISIT—Royal Public Dispensary, and New Town Dispensary, each, six months, 2*l.* 3*s.* PRACTICAL MIDWIFERY—Royal Maternity Hospital, Royal Public Dispensary, New Town Dispensary, and Eye Infirmary, each, six months, 2*l.* 3*s.* Dispensary, and Eye Infirmary. DISEASES OF THE EAR—Dispensary, Lawnmarket. PRACTICAL PHARMACY—Royal Public Dispensary, New Town Dispensary, six months, 3*l.* 3*s.*

FEES.—For the First of each of the above Courses, 2*l.* 5*s.*; for the Second, 2*l.* 4*s.* 6*d.* To those who have already attended a First Course in Edinburgh, the Perpetual Fee for that class is 2*l.* 4*s.* The Fees for the following Courses are:—Natural Philosophy, 2*l.* 2*s.*; Practical Chemistry and Practical Anatomy, 2*l.* 3*s.*; Anatomical Demonstrations, 2*l.* 3*s.*; Practical Anatomy with Demonstrations, 4*l.* 4*s.* ANALYTICAL CHEMISTRY, 2*l.* a Month, 5*l.* for Three Months, or 10*l.* for the Winter Session.

During the SUMMER SESSION, 1862, the following Three Months' Courses will be delivered:

Midwifery—Dr. Kellier.
Midwifery (4, High School Yards)—Dr. J. Matthews Duncan.
Medical Jurisprudence—Dr. Littlejohn.
Botany—Mr. Baylton.
Maternal Appliances—Dr. Kellier.
Clinical Surgery—Mr. Spence.
Clinical Medicine—Drs. W. T. Gaither, Warburton Begbie, Sanders, and J. Matthews Duncan.
Practical and Analytical Chemistry—Dr. Stevenson Macadam.
Practical and Analytical Chemistry—Dr. Murray Thomson (8, Infirmary-street).
Practical Anatomy and Demonstrations, Comparative Anatomy—Dr. John Struthers.
Pathological Anatomy—Dr. Rutherford Haldane.
Natural Philosophy—W. Lees, A.M.
History—Dr. Sanders.
History of Medicine—Dr. Warburton Begbie.
Dental Surgery—Dr. John Smith.
General Diseases—Dr. P. H. Watson.
Surgical Appliances—Mr. Edwards.

The above Courses qualify for Examination for the Diplomas of the Royal Colleges of Physicians and Surgeons of Edinburgh; the Royal Colleges of Physicians and Surgeons of London; the Royal Colleges of Physicians and Surgeons of Dublin; the Faculty of Physicians and Surgeons of Glasgow; the Apothecaries' Societies of London and Dublin; and the Boards of the Navy, Army, and Indian Medical Service.

The above Courses also qualify for the Universities of Oxford and Cambridge, and the Queen's University in Ireland, during the years in which residence is not required.

In accordance with the Regulations of the University of Edinburgh, any four of the entire Medical Classes required may be attended under the above Teachers; and one of the four years of Study required may be constituted by attendance, in one year, on two of the above Six Months' Courses, or on one of these and two Three Months' Courses. The Regulations require that, in this case, the Fee for any of the above Classes shall be the same as that for the corresponding class in the University. When Surgery and Clinical Surgery are taught, as at present, by the same Lecturer, they do not qualify for the University of Edinburgh, but for every other British University.

The whole of the education required for graduation at the University of London may be taken under the above Teachers. Those who hold the Double Qualification of Physician and Surgeon from the Royal College of Physicians and Surgeons of Edinburgh are eligible for English Poor-Law appointments equally with those who hold English Medical and Surgical Diplomas; and are, under the Medical Act, entitled to practise Medicine and Surgery in any part of Her Majesty's Dominions.

NOTICE.—In order that the Regulations of the Medical Council, applicable to all Medical Schools and Licensing Boards, those commencing professional study after September 1861 will be required to have passed a Preliminary Examination in General Education, before being registered as Students of Medicine; and the Register at the Medical School is required to be closed within *After days* after the commencement of each Session, except in cases of detention from illness or other unavoidable cause.

Preliminary Examinations in General Education by the Royal Colleges of Physicians and Surgeons of Edinburgh take place in October and November, also in February, May, and August. Lists of the subjects and books may be obtained on application to the officer of either College.

JOHN STRUTHERS,
Secretary to the Medical and Surgical Schools.

AN UNMARRIED MAN, aged 37, who has for fifteen years been accustomed to Tuition of a high character, wishes to obtain an appointment as SECRETARY, LIBRARIAN, AGENT to a Nobleman or Gentleman, or some other non-educational post, for which his education, habits and experience may qualify him. In addition to his Classical and Mathematical acquirements, he is a skilful Accountant and Book-keeper, a ready Correspondent, speaks and writes French and German, and understands Italian and Spanish. Unexceptionable references.—Address L. L., Goddard's Library, 84, Great Portland-street, W.

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

MANCHESTER MEETING, 4th to 11th September, 1861.
Reception Room, The Portico, Manchester.

President,
WILLIAM FAIRBAIRN, Esq., LL.D. F.R.S. &c.

The objects of the Association are—"To give a stronger impulse and more systematic direction to scientific inquiry; to promote the intercourse of those who cultivate science in different parts of the British empire with one another and with foreign philosophers; to obtain a more general attention to the objects of science and a removal of disadvantages of a public kind which impede its progress."

General Arrangements.

WEDNESDAY, 4th September.—OPENING MEETING and PRESIDENT'S ADDRESS, at 3 P.M., in the Free-Trade Hall. SECTIONAL MEETINGS daily, as usual, from the 5th to the 10th inclusive.

WEDNESDAY, 11th September.—CONCLUDING GENERAL MEETING, in the Free-Trade Hall.

THURSDAY, 8th September.—SOIRÉE (Microscopes), in the Free-Trade Hall.

FRIDAY, 9th September.—EVENING DISCOURSE.

SATURDAY, 10th September.—SOIRÉE (Telegraphs), in the Free-Trade Hall.

MONDAY, 9th September.—EVENING DISCOURSE.

TUESDAY, 10th September.—SOIRÉE (Field Naturalists' Society), in the Free-Trade Hall.

On THURSDAY, the 11th of September.—Important EXCURSIONS.

Gentlemen desirous of attending the meeting may make their choice of being proposed as Life Members, paying 10*l.* as a composition, or Annual Subscribers, paying an admission fee of 1*l.*, and (additional) 1*l.* annually, or Associates for the meeting, paying 1*l.* Ladies may become members on the same terms as gentlemen; or ladies' tickets (transferable to ladies only) may be obtained in the Reception Room, by members, on payment of 1*l.*

Life members receive gratuitously the Reports of the Association which may be published after the date of payment. Annual subscribers receive gratuitously the Report of the Association for the year of their subscription, and for every following year of subscription, without intermission. Associates for the meeting are entitled to the Report of the meeting, at two-thirds of the publication price.

In order to facilitate arrangements for the meeting, it is desirable that application for tickets should be made as early as possible.

Forms of proposal will be supplied in the Reception Room during the meeting, or the names of candidates for admission may be transmitted to the Local Secretaries.

As the funds which the Association has to expend for its scientific objects consist only of the payments made by its members and associates, it is particularly desirable that every opportunity should be taken of increasing their number.

Compositions and subscriptions of new members or associates will be received by the Local Secretaries until the commencement of the meeting; afterwards, as well as the subscriptions and names of former members, by the Local Treasurer.

For information respecting the local arrangements, application may be made by letter addressed to any of the Local Secretaries for the meeting, at "The Portico, Manchester."

R. D. DARBISHIRE,
ALFRED NEILD,
ARTHUR RANSOME,
H. E. ROSCOE, } Local Secretaries for the Meeting.

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

MANCHESTER MEETING.

Notice to Exhibitors.

Portico, August, 1861.

Gentlemen proposing to send specimens or apparatus for exhibition during the meeting, will please to address their contributions as follows:

Zoological Specimens, to Dr. Alcock, Museum, Peter-street, Manchester.

Botanical Specimens, to Leo H. Grindon, Esq., Museum, Peter-street, Manchester.

Geological Specimens, to Rev. G. Perkins, Museum, Peter-street, Manchester.

Chemical Products, to Dr. Roscoe, Owens College, Manchester.

The above may be forwarded at once; the earlier the better.

Microscopes, to G. Moxley, Esq., Free-Trade Hall, Manchester.

These are to arrive on Tuesday, the 3rd, and Wednesday, the 4th of September.

The owners of private microscopes are expected to see to the delivery, unpacking, arranging, and removal themselves.

Philosophical Apparatus, to R. B. Clifton, Esq., care of John Pender, Esq., Mount-street, Manchester. These must arrive before Saturday, the 31st of August.

Mechanical Models, to John Robinson, Esq., care of John Pender, Esq., Mount-street, Manchester.

All contributions must be announced in letters addressed to the gentlemen named at the British Association, Portico, Manchester. All contributions will be carefully unpacked by skilled persons, and afterwards repacked. Carriage must be prepaid on all, except solicited contributions.

Manufacturers exhibiting their own apparatus are expected to provide for the unpacking and arrangement (within the limits at the disposal of the Local Committee), and to attend for the purpose at the Free-Trade Hall, on Tuesday, the 3rd, and Wednesday, the 4th; on the latter day before 3 P.M. All this apparatus must be removed by the exhibitors on Thursday, the 11th of September.

The Local Committee intend to exhibit during Soirées only, on tables, in the Free-Trade Hall. The arrangements for special notices (see general advertisement) will not interfere with the tables appropriated for general purposes, which will remain during the week of the meeting.

The articles in the Free-Trade Hall will be insured against risk by fire by the Local Committee, who will provide a general police supervision in the Hall.

Cabinet Specimens which are accepted for exhibition will be shown in locked glass cases, which, if desired, may be placed in charge of the exhibitors.

Inquiries to be addressed to the gentlemen named; or to the undersigned, at The Portico, DARBISHIRE,

ALFRED NEILD,
ARTHUR RANSOME,
H. E. ROSCOE, } Local Secretaries for the Meeting.

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

MEETING IN MANCHESTER,

4th to 11th SEPTEMBER, 1861.

RAILWAY PASSES.

Reception Room, Portico, Manchester, August, 1861. The Executive Committee have arranged with the undersigned Railway and Steam-Packet Companies to issue to gentlemen and ladies attending the meeting in September, as members or associates, PASSES entitling the bearer to a ticket to Manchester and back for one fare, between the 2nd and 14th of September:—

Lancashire and Yorkshire Railway Company.
 London and North-Western Railway Company.
 Manchester, Sheffield, and Lincolnshire Railway Company.
 Great Northern Railway Company.
 North-Eastern Railway Company.
 Midland Railway Company.
 Sledonian Railway Company.
 Great Western Railway Company.
 City of Dublin Steam-Packet Company (via Holyhead).
 North Lancashire Steam Navigation Company (to Fleetwood).
 Belfast Steamship Company (to Liverpool).
 Glasgow and Liverpool Royal Mail Steam-Packet Company.

Application for these Passes must be made (the sooner the better) to Local Secretaries, R. A. Portico, Manchester, stating the names of those who will use them, and if any are not yet members or associates, their full names and addresses, and the particular class of membership desired.

The pass cards will have to be exchanged at the railway or packet office for the Company's special ticket.

R. D. DARBISHIRE,
ALFRED NEILD,
ARTHUR RANSOME,
H. E. ROSCOE, } Local Secretaries for the Meeting. See other Advertisements.

NOTICE—TESTIMONIAL to the Right Hon. J. MILNER GIBSON.

Subscriptions limited to 1*l.*

Gentlemen connected with the County Press are respectfully requested to make their subscriptions payable to ROBERT CHAMBERS, Esq., 47, Paternoster-row, London, E.C.

(Signed) JOHN FRANCIS, Esq. Sec.

August 10, 1861.

London Agents for New York Times, Herald, and Tribune: SAMUEL LOW, Son & Co., English, American and Colonial Booksellers, 47, Ludgate-hill.

ENGLISH BOOKSELLING IN CANADA.

The undersigned, established twenty years, would invite the attention of the Publishers of Great Britain to their facilities for the sale of small Compendiums of new English Books entering Canada. There is a rapidly increasing reading population; and the present troubles in the United States have operated largely in stopping reprints of English Works. Returns will be promptly made every four months, with bill at sixty days.—Reference to W. C. CHURCH & Co., 15, King-street East, London, E.C., who will receive packages, and forward with our regular orders.

W. C. CHURCH & Co., Booksellers, 17 and 19, King-street East Toronto, C.W.

THE AQUARIUM.—LLOYD'S PRACTICAL INSTRUCTIONS for TANK MANAGEMENT.

With Descriptive and Priced List, 166 pages and 101 Engravings, post free for two shilling stamps. Apply direct to W. ALFRED LLOYD, Portland-road, Regent's Park, London, W.

"Many manuals have been published upon aquaria, but we have none we have seen so practical and so useful like this."—*Rev.* Oct. 14, 1860.

A PHYSICIAN seeks a Re-engagement as TRAVELLING MEDICAL ATTENDANT. Has some much practice, travelled with Noblemen, and speaks French fluently.—Address MEXICO, 215, Regent-street, W.

A GENTLEMAN, thoroughly acquainted with Modern Languages, and accustomed to travelling, desires an ENGAGEMENT as SECRETARY or COMPANION to a Gentleman about to travel; or as PRIVATE TUTOR.—Address P., care of Messrs. Bell & Daldy, 126, Fleet-street.

PRIVATE TUITION.—A Married Clergyman, Gold Medalist and Hebrew Prize-man, residing in Surrey six miles from London, RECEIVES a limited number of PUPILS. He is assisted by competent Tutors for the Modern Languages, &c.; and the Course of Instruction embraces all that is necessary to prepare for the Universities, the Public Schools, and the Military or Civil Service. His house is very healthily situated in its own grounds, of 20 acres.—For Terms, address Rev. N. W. Field, Bookseller, Regent-street, London, W.

GERMAN, French, Italian.—Dr. ALTSCHUL, Author of 'First German Reading-Book' (dedicated to Her Grace the Duchess of Sutherland, &c.), M. Philolog. Soc., Prof. Education.—TWO LANGUAGES TAUGHT in the same lesson, or alternately, on the same Terms as One, at the pupils' or at his house. Each language spoken in his PRIVATE Lessons, and select CLASSES for Ladies and Gentlemen. Preparation for all ordinary pursuits of life, the Universities, Army and Civil Service Examinations.—9, OLD BOND-STREET, PICCADILLY.

CANDOVER SCHOOL.
Vision.—THE LORD BISHOP OF WINCHESTER.

A Senior Department for the Education of Ladies and for the Special Training of Governesses, has been opened under the sanction of the Bishops of London, Lincoln, and Oxford, and other Members of the Council of Queen's College for Ladies. The Board of Education consists of the Rev. F. V. Thornton, the Rev. T. Gwynn, the Rev. G. B. Conybeare, the Rev. C. Balston, S. S. Wesley, Mus. Doc., and W. Dimes, Esq.

Lady Superintendent.—MRS. GWYNN.

Special Instruction in each subject of Lectures given by Resident Governesses; and the Pupils are periodically examined by the Professors of Queen's College for Ladies.

Great advantages of Instruction and Training are thus combined with the benefits of a healthy country life; and special opportunities of learning the future work are afforded to those who wish to make Education their profession.

Terms for Pupils under 15 years of age, 45l. per annum. Terms for Pupils above 15 years of age, 50l. per annum, if nominated by a Donor of 50l. 60l. per annum, if admitted without such nomination.

The next Term begins on September 24th. For further particulars apply to Mrs. GWYNN, Candover School, Micheldever Station, Hants.

PAINTING ON GLASS.—A. LUSSON, Painter on Glass of the Sainte Chapelle, 21, Rue de Laval, Paris. Painted Glass, in every style, for the Decoration of Churches; Grilles, Monies, Great Figures, Medallions, Legendaries; Fancy Subjects, such as Mosaic; Hunting and other Subjects, of the old style, or modern, for Rooms, Country Houses, &c. Sent free to all parts of England.

TO CAPITALISTS.—LITERARY.—An opportunity offers by which any eligible Gentleman, by investing from 300l. to 500l. in the Purchase of a Share in an established Literary Property, and devoting some portion of his time to its interests, may secure an income beginning at 200l. a year, and capable of being increased to 1,000l. a year.—Address A. L., Post-Office, Temple Bar, Fleet-street, E.C.

MR. JEANS, BOOKSELLER, WHITE LION-STREET, NORWICH, who has a very good Collection of 15,000 Volumes of Old and New Books, would be glad to meet with a PARTNER, who can command 1,500l., to join him in his Business, and to conduct the New Book and Stationery department, which may be much extended, the house he occupies being well adapted to that end.

This Advertisement will not be repeated beyond Saturday, August the 24th.

MR. CLAUDET'S CARTES DE VISITE.—Mr. CLAUDET, Photographer to the Queen, cautions the Public that some shops are selling spurious imitations of his Carte-de-Visite Portraits, although the imperfection of them is manifest. These counterfeit productions are capable of deceiving persons who do not examine the Photographs attentively. To prevent this deception, Mr. Claudet begs to observe, that all the Cartes de Visite which come from his Establishment are stamped with his name on the back.—107, Regent-street (three doors from Vigo-street, in the Quadrant).

MANSIONS and ESTATES PHOTOGRAPHED, on very moderate terms, by "THE LONDON SCHOOL OF PHOTOGRAPHY," 125, Newgate-street, E.C. Wedding Groups, Schools, and every kind of out-door Photography.

 London: George Manwaring, 8, King William-street, Strand.

Next week will be published, in 2 vols. 8vo. cloth,
MYSTERIES; or, Faith the Knowledge of
 God.
 London: George Manwaring, 8, King William-street, Strand.

This day, in 8vo. price 1s.
EXONERAVI ANIMAM; or, ONE RADI-
CAL REFORMER'S WAY of THINKING: containing
 a Few Suggestions touching the 'Essays and Reviews' as appre-
 ciated by Convocation, and the Discrepancy between Genuine
 Judaism and Vulgar Christianity, still requiring reformation.
 By JOHN BUES HUMPERLEY.
 London: George Manwaring, 8, King William-street, Strand.

EQUATORIAL AFRICA and ITS INHA-
BITANTS.—See the WESTMINSTER REVIEW for JULY.
 "The question of the origin of man and his alleged relation to
 the apes is exhaustively treated in the current number of the
 Westminster Review, where our readers will find a full account of
 the controversies between Prof. Owen, Huxley, and others on the
 relative development of the posterior cerebral lobes and lesser
 hippocampi, and of the discoveries of skulls of a low type which
 approximate more nearly to the ape than do even those of the
 African or Polynesian savage."
 London: George Manwaring, 8, King William-street, Strand.

MR. BENTLEY'S LIST OF NEW BOOKS FOR AUGUST.

MEMOIRS of KING RICHARD the

THIRD and SOME of his CONTEMPORARIES. By J. HENEGAGE JESSE. Author of 'The Court of England under the Stuarts.' 8vo. with a Portrait, &c.

NEW WORK ON JAPAN.

A RESIDENCE at NAGASAKI and

HA-KODATI in 1859-60. With an Account of Japan generally. By C. PEMBERTON HODGSON, late Her Majesty's Consul. To which are added, a Series of Letters on Japan, by HIS WIFE. 8vo. with numerous Illustrations.

The COOK'S GUIDE and HOUSE-

KEEPER and BUTLER'S ASSISTANT: a Practical Treatise on English and Foreign Cookery in all its Branches, and also Instructions for Pickling and Preserving Vegetables, Fruit, Game, &c.; the Curing of Hams and Bacon; the Art of Confectionery and Ice-making; and the Arrangement of Desserts. By CHARLES ELME FRANCAVELLI, Author of 'The Modern Cook.' Small 8vo. with numerous Illustrations, &c.

M. GUIZOT'S PERSONAL

MEMOIRS. Vol. IV. 8vo. 14s.

"The calmness of M. Guizot, in reviewing his own career and his refined criticism of the public events in which he was a prominent actor, give a peculiar grace and charm to his Memoirs."

"These Memoirs deal with a brilliant and dramatic period in the contemporary history of France, and aim at something far higher than a passing popularity."—*Athenæum*.

"We have here sketches of M. Guizot's great contemporaries—Talleyrand, Metternich, Wellington, Emperor Nicholas, Louis Napoleon, Palmerston, &c."—*Birmingham Journal*.

LORD DUNDONALD.—A REPLY

to the OBSERVATIONS in THE QUARTERLY REVIEW on THE AUTOBIOGRAPHY of LORD DUNDONALD. By MÆCÆUS. 8vo. with Charts.

NEW STORY OF SOCIAL LIFE.

EAST LYNNE. By the Author of

'Ashley.' 3 vols. post 8vo.

The Hon. Mrs. YELVERTON'S

'MARTYRS to CIRCUMSTANCE.' Second and Concluding Part, price 3s.

BIOGRAPHICAL MEMOIRS of

MARSHALL HALL, M.D. F.R.S., Corresponding Member of the Institute of France, and Foreign Associate of the Academy of Medicine at Paris. By HIS WIDOW. 8vo. with a Portrait, 14s.

"Dr. Marshall Hall was not less an amiable man than a scientific inquirer, with an intellect of noble proportions and lofty aim. In the world of physiological science he may fairly be ranked as the companion of Harvey and Bell."—*Athenæum*.

"Will command respect and sympathy. Dr. Hall was a public benefactor, an able physician, an accomplished gentleman, and a thoroughly good-hearted man."—*Observer*.

"Dr. Hall did enough good service to earn for himself the esteem of many generations."—*Examiner*.

Dr. CUMMING'S POPULAR AN-

SWERS to the 'ESSAYS and REVIEWS.' Small 8vo. 4s.

JOHN HUSS and JEROME OF PRAGUE.

The LIFE and TIMES of CARDINAL

JULIAN. By the Rev. R. C. JENKINS. 8vo. 14s.

"Mr. Jenkins treats with candour and learning a life which bears the impress of greatness. He has succeeded in developing the high aims and profound statesmanship of Cardinal Julian."

"This work, soberly and truthfully written, has solid value, and deserves close attention."—*Examiner*.

"Cardinal Julian played so important a part in European history that he deserved a niche in the gallery of historical celebrities. This work deserves a respectful reception."—*Spectator*.

With Four Charts and Portrait, price 5s.

LORD DUNDONALD'S AUTOBIO-

GRAPHY.

"Ought to be a prize-book in every military and naval school."

London Review.

A LIBRARY EDITION, in 2 vols. 8vo. with Plans, 32s.

NEW MODERN SEA STORY.

VONVED the DANE, the ROVER

of the BALTIC. 3 vols.

"This is a great book, both in conception and execution. The Author possesses a rare faculty of exciting and arresting attention. In its own school this story has no rival. Victor Hugo might be proud to have written some of its chapters, than which he has never written anything more thrilling or more terrible; and Alexandre Dumas himself, so powerful in describing prison scenes, has not exceeded this writer in his account of the Rover of the Baltic."—*Morning Post*.

RICHARD BENTLEY, Publisher in Ordinary to Her Majesty.

13, Great Marlborough-street.

HURST & BLACKETT'S NEW PUBLICATIONS.

THE OKAVANGO RIVER. A Nar-

rative of Travel, Exploration, and Adventure. By CHARLES JOHN ANDERSSON, Author of 'Lake Ngami.' 8vo. with Portrait of the Author, and numerous Illustrations. 21s.

"Mr. Andersson's book, illustrated with many animated pictures of adventures connected with the wild sports of the journey it describes, is one that will be popular as a budget of trustworthy traveller's tales, besides being valued for the information it gives to geographers."—*Examiner*.

"This volume, profusely and splendidly illustrated, will take a high rank among works of adventure and exploration. There can be no question of the great service Mr. Andersson has rendered to geographical science."—*Herald*.

"Mr. Andersson's adventures stamp him as one of the most enterprising travellers of modern times, and well worthy to take rank by the side of the Livingstones and others, who have attempted to penetrate the interior of the great African continent. Every page of his present work is full of interest."—*Observer*.

"This work is a valuable addition to geographical knowledge, and a stirring record of adventurous achievement for the delight of stay-at-home travellers. It is profusely illustrated with striking scenes from African life and sporting adventures."—*John Bull*.

THE SECRET HISTORY of the

COURT of FRANCE under LOUIS XV. Edited, from rare and unpublished Documents; by Dr. CHALLICE. 3 vols. with Portraits, 21s.

HENRY IV. and MARIE de MEDICI.

From Original and Authentic Sources. By Miss FREER, Author of 'The Lives of Marguerite d'Angoulême, Jeanne d'Albret,' &c. 3 vols. with Portraits, 21s.

A SAUNTER THROUGH the WEST

END. By LEIGH HUNT. 1 vol. 10s. 6d. bound.

"Few men felt, as Leigh Hunt did, the human poetry of the old memories that crowd upon the lettered and thoughtful rambler about London streets. His gentle, genial humour shines in a book like this—a worthy companion to his 'Town' and 'Old Court Suburb.'"—*Examiner*.

NOTHING NEW. By the Author of

'JOHN HALIFAX.' Illustrated by J. E. MILLAIS, A.R.A. Forming the New Volume of HURST & BLACKETT'S STANDARD LIBRARY of CHEAP EDITIONS of POPULAR MODERN WORKS. 5s. each bound. Now also comprising

1. Sam Slick's Nature & Human Nature.
2. John Halifax, Gentleman.
3. The Crescent and the Cross.
4. Nathalie. By Julia Kavanagh.
5. A Woman's Thoughts about Women.
6. Adam Graeme of Mossgray.
7. Sam Slick's Wise Saws.
8. Wiseman's Popes.
9. A Life for a Life.
10. Leigh Hunt's Old Court Suburb.
11. Margaret and her Bridesmaids.
12. Sam Slick's Old Judge.
13. Darien. By Eliot Warburton.
14. Sir B. Burke's Family Romance.
15. The Laird of Norlaw.
16. The Englishwoman in Italy.

THE NEW NOVELS.

A HERO in SPITE of HIMSELF.

By Captain MAYNE REID, Author of 'The Scalp Hunters,' &c. 3 vols. [On Aug. 22.]

ALONE in the WORLD. By the

Author of 'COUSIN GEOFFREY,' &c. 3 vols.

"This new tale by Mrs. Gordon Smythies (whom Thomas Campbell, the poet, decided to be the queen of the domestic novel) unites the pathos and high morals of her 'Married for Love,' with the wit of her 'Cousin Geoffrey' and the humour of her 'Marrying Man.'"—*Chronicle*.

PAUL FOSTER'S DAUGHTER. By

DUTTON COOK. 3 vols.

"This novel has the rare merit of growing more and more interesting as it proceeds. It is not often that a novel so witty, wise, and healthful in spirit offers itself for perusal. It is a thoroughly right-minded book. The characters are most of them artists. Paul Foster himself is an excellent character, and his daughter Sylvia is a young lady who will find an adorer in every man who reads the book. We recommend our readers to get the book for themselves."—*Athenæum*.

A FAMILY HISTORY. By the

Author of 'THE QUEEN'S PARDON.' 3 vols.

"A very good novel, well imagined and well told."—*Post*.

UNDER THE SPELL. By the Author

of 'GRANDMOTHER'S MONKEY,' 'WILDFLOWERS,' &c. 3 vols.

EAST and WEST. By J. Fraser

CORRAN. 3 vols.

[Just ready.]

LEBAHN'S WORKS ON THE GERMAN LANGUAGE.

Just published, Second Edition, price 2s. 6d.

Lebahn's First German Course.

"It is hardly possible to have a simpler or better book for beginners in German."—*Athenæum*.
"It is really what it professes to be, a simple, clear and concise introduction to the German language; one, too, which will be equally useful to the self-instructing student and the member of a German class."—*Oriskany*.
"This is German made easy. Nothing can exceed the clearness and simplicity of the work."—*Christian Witness*.

Fourth Edition, price 2s. 6d.

Lebahn's First German Reader.

"An excellent elementary work."—*Sunday Times*.
"Like all Lebahn's works, most thoroughly practical."—*Britannia*.
"An admirable book for beginners, which indeed may be used without a master."—*Leader*.

Sixth Edition, price 2s. 6d.

Lebahn's Eichenfels and Dialogues.

"A charming production.—The Dialogues are as perfectly adapted to render the student a speaker of this interesting language, as is the Vocabulary for making him a reader."

"Equally with Mr. Lebahn's previous publications, excellently adapted to assist self-exercise in the German language."—*Spectator*.

"Mr. Lebahn has done his work in his usual clever, painstaking, and (to the student) profitable style."—*Church and State Gazette*.

Sixth Edition, price 8s.; with KEY, 10s. 6d.

Lebahn's German in One Volume.

"This is the best German Grammar that has yet been published."—*Morning Post*.

"The exercises are very good, well graduated, and well designed to illustrate the rules. The 4,500 words, synonymous in German and English, is a very advantageous feature."—*Spectator*.
"Had we to re-commence the study of German, of all the German grammars which we have examined—and they are not a few—we should unhesitatingly say—Falk Lebahn's is the book for us."—*Educational Times*.

"To those who would obtain a practical use of the language, with a moderate expenditure of time and labour, this work will be a welcome help."—*Illustrated London News*.

Price 6s.

Lebahn's Practice in German: adapted

for Self-Instruction.
"Whoever fails to learn the German language with this help, must have an intellect irredeemably dull and obtunded."—*Sum*.
"A work perfect of its kind."—*Lady's Newspaper*.

"It will be found invaluable—indeed absolutely necessary to all students of German, who wish with little labour and great certainty to attain a knowledge of this magnificent language. The plan of the book is original, its execution is admirable."—*Sharpe's Magazine*.

Price 2s. 6d.

Lebahn's Exercises in German.

"A volume of 'Exercises in German,' including in itself all the vocabularies they require. The book is well planned; the selections for translation from German into English, or from English into German, being sometimes curiously well suited to the purpose for which they are taken."—*Examiner*.
"As an educational writer in the German tongue, Dr. Lebahn stands alone; none other has made even a distant approach to him. The magnitude and value of his services have been acknowledged by the Public Press to an extent, and with a unanimity of which there is no example.... The present volume is compiled with all the clearness and fulness by which the other works of the writer are so happily characterised."—*British Standard*.

Price 6s. 6d.

Lebahn's Self-Instructor in German.

"One of the most amusing elementary reading-books that ever passed under our hands."—*John Bull*.
"The student could have no guide superior to Mr. Lebahn."—*Literary Gazette*.

Price 2s. 6d. each.

Lebahn's German Classics: with Notes and Complete Vocabularies.

PETER SCHLEIMHL, the Shadowless Man. By Chamisso.
EGMONT. A Tragedy, in Five Acts, by Goethe.
WILHELM TELL. A Drama, in Five Acts, by Schiller.
GOETZ VON DER LICHTEN. A Drama, by Goethe.
PAGETWITZ, a Page's Fancies. A Comedy, by Kotzebue.
EMILIA GALOTTI. A Tragedy, in Five Acts, by Lessing.
UNDINE. A Tale, by Fouqué.
SELECTIONS FROM THE GERMAN POETS.

"These editions are prepared for the use of learners who read without a master; and they will be found convenient for that purpose. In each, the text is followed by a glossary, wherein not only the sense of every particular phrase, but also the dictionary meaning of most of the several words, is given in good English. With such aids, a student will find no difficulty in these masterpieces."—*Athenæum*.

Price 2s. 6d.

Lebahn's German Copy-Book: being a Series of Exercises in German Penmanship, beautifully engraved on Steel.

"* About Seven Hundred Commendatory Notices of Lebahn's Works have appeared."

May be had of all Booksellers, and at

DR. LEBAHN'S CLASS-ROOMS,

LONDON, SATURDAY, AUGUST 17, 1861.

LITERATURE

History of the Consulate and the Empire — [Histoire du Consulat et de l'Empire, par M. A. Thiers. Tome XI.] (Paris, Libraires; London, Dulau & Co.)

THE scene narrows to Elba and widens to the Field of May. At length the squadrons are gathered which will ride against the English squares at Waterloo. The next volume is to open upon that Battle of Battles. To Napoleon in his inlet demision M. Thiers devotes only a few disdainful sketches. It was not tempting to exhibit the man of Austerlitz and Lodi, like a veteran in second childhood, amusing himself with a toy army, miniature politicians, and a mimic fleet. Yet those little battalions and that light flotilla opened the path to the Tuileries. It is all but demonstrated that, after the adieu of Fontainebleau, when 70,000 men might still have been rallied behind the Forest, the Emperor insincerely signed his abdication. He had not renounced the sceptre; he submitted, in order that he might breathe, and that the world might contrast the glory of his reign with the impotence of the Bourbon monarchy. Certainly, it was impossible to believe too implicitly in the imbecility of the legitimate race. The Restoration began with a masquerade of hypocrisy, and it is difficult to decide whether the King or the Imperialist, who pretended to be cajoled, proved himself the worst imposture. But the Bourbons could never wheedle cleverly. There was always a strut in their affability,—an affability in their condescension. Whatever they did well, they did too late. And in their policy, organized for the security of the restored throne, a similar dilatoriness displayed itself. In January, 1815, there yet remained in Europe a fragment of the Bonapartist Empire—the kingdom of Murat. All was at length prepared for its overthrow. France and Austria were united to consummate their last revenge, when the seal of Solomon was broken, the giant was once more at liberty, and the patched-up dynasty vanished like an image of snow. Louis the Eighteenth had left himself absolutely without support. He could not be, to the army, the successor of Napoleon; he hesitated to invoke a political power by assembling the Chambers; he evinced a strange desire to tamper with established rights; old prejudices and hatreds were raised from the tombs of the Revolution; the King showed, in fact, that, as one prerogative of his position, he was determined to provide himself with enemies; and this with the legions of the popular Caesar encamped around him. A military plot preceded the Elba exodus. It was reported to the Emperor in his island. Great names and great influences hovered near it, half resolved and undeclared. The matter ripened swiftly, while the downcast master of nations acted Robinson Crusoe in the purple over his few miles of territory, and, by dint of military genius, contrived to parade eleven hundred men. The people who, a few days before his arrival, had burnt him in effigy, were now his rejoicing subjects; they were delighted to see his engineers scarping and building at Porto-Ferraio; they expected infinite results when they saw the Napoleonic horses and cattle turned forth on the pastures of Pianosa, where, on the peak of a rock, stood a solitary fort, which, says M. Thiers, fifty men might have rendered impregnable. Suppose that, instead of humbling him at Waterloo, a Coalition had locked him up in that cloudy, little Gibraltar, or blown the hill from beneath

him! Now, all was ready at Elba, except a Treasury. Napoleon waited, vaguely. His mother watched him closely. The Princess Pauline Borghese divined, perhaps, the mysterious hopes of his soul. Moreover, she had partly been taken into his confidence, when, as bearer of a message to Murat, she told that unlucky Paladin to reserve himself for future opportunities. And so the Elba potentate held his court, went to the theatre, rode, walked, boated, contemplated writing his own history, read the French newspapers, and, it cannot be doubted, convinced himself that he might and must return to France. M. Thiers is not emphatic on this point; but the truth speaks in every act, and, so to speak, every attitude of Napoleon during his Elba retreat. The sovereigns of Europe, persuaded by Alexander of Russia, had grotesquely deluded themselves when they thought to imprison this explosive spirit for ever within sight of the continent which he had swept with his victories. When too late, they regretted the error, and it was in contemplation at Vienna to change his place of exile from the Mediterranean to the Atlantic. Not from his Imperial wife did he receive this intelligence. She, the real avenger of Josephine, was waiting for the ultimate downfall of her husband to lean on the arm of Wellington at a Court ball. The beginning of the end was come, and then began the march from Cannes to Paris.

It is a familiar story, but M. Thiers tells it in a way to fascinate all readers. The little army sweeps on exultingly, gathering power and volume as it goes; the march becomes triumphal: gates open; arches are flung across the streets; regiment after regiment links itself to the lengthening column; Napoleon bares his breast and asks what soldier of the Empire will fire at the Emperor; the royalist cities are avoided: the eagles are "flying from steeple to steeple until they settle upon the towers of Notre Dame." At first the returned Exile is familiar and popular; as his force increases he becomes slightly more imperial; his manifestoes change into proclamations; his offer of service to France assumes the tone of authority: he is a candidate at Grenoble, but at Lyon he is a king; in the former place he lodged at a tavern; at the latter he drove direct to the door of a palace. On the road, a carriage is stopped. It contains the Prince of Monaco, once devoutly Imperialist, now Royalist to the marrow. "Where are you going?" asked Napoleon. "I am going home," answered the Prince. "And so am I," said the Emperor! And then the Emperor met an old woman who had never heard of his downfall, fancying him still at the Tuileries. So he fell musing on the vanity of human ambition, but he did not, on that account, think of returning to Elba. No; France, he exclaimed, was crying aloud to him. How distinctly the cries of nations are heard by the aspirants to thrones, before they mount them, and how deaf are autocrats sometimes in the rarefied atmosphere of that altitude! The stream rolls on, swelling and brightening, and the demi-god it was carrying upon its waves proclaimed that he bore in his hands the gifts of peace for Europe and liberty for France. Neither Europe nor France believed. M. Thiers is a votary of Bonapartism; but he admits that all far-sighted men, even among those who loved the Bonapartist name, deplored the attempt and foresaw the catastrophe. They knew how his invitation to Marie Louise would be received, and what credit the Emperor Francis of Austria would attach to his professions. Louis the Eighteenth, however, was stunned, and again did the right thing at the wrong time. He

made a constitutional speech in the Chambers—a fortnight too late. Efforts were made to blind the public; reports were circulated that Bonaparte had been defeated, and had taken refuge among the mountains, in which, it was added, he would speedily be entrapped, and executed like a common malefactor. Destiny, faithless to the Bourbons, did not permit their mild representative to hang the conqueror of Austerlitz; or, as they preferred to express it, "the cowardly brigand." Ney's part was the most ignoble of all. He went to the King, promising to lead an army which should return with Napoleon, "vanquished and a captive." M. Thiers says that he was reported to have added "in a cage of iron." He thinks the words might have been used, and that they would have been pardonable in a soldier. Were they pardonable in Marshal Ney? Perhaps Macdonald behaved better when, afraid of being reconciled with the Emperor against his will, he put spurs to his horse, and galloped away as though an enchantment were pursuing him. Assuredly, that he and Ney never fought Napoleon was owing to no treachery on their part. The troops, even at Paris, refused to shout *Vive le Roi!*—in presence of Napoleon they thronged to their idol as Xenophon's Greeks might have thronged had the great God of War suddenly appeared to them, helmeted and sandaled, to lead the war. The Marshals were nothing, in their eyes, unless they were Marshals of the Empire. They would die for Ney, if Ney were fighting for the Little Corporal; they disdained him as the general of Louis the Eighteenth. All this is most picturesquely and cogently set forth by M. Thiers in one of the most admirable volumes of his magnificent History. "The brigand of Elba" was clearly making progress when the pliant Ney exclaimed, "Soldiers, the cause of the Bourbons is lost for ever!" A Royalist officer then broke his sword, saying, "Sir, we must turn away, that we may not behold this spectacle!"—

"And what would you have me do?" answered the Marshal: "Can I drive back the sea with my hand?" Others, admitting the impossibility of compelling the soldiers to fight against Napoleon, expressed their regret that Ney should, within so short a space of time, have played two such opposite parts. "You are children," replied the Marshal; "it was necessary to decide in one way or the other. Could I go and hide myself like a coward, in order to evade the responsibility of events?" The Marshal Ney could not have taken refuge in obscurity. Moreover, there was only one way of mitigating the evil, which was to make an immediate declaration, in order to avert civil war, and in order to get into our power this man who is returning, to prevent him doing mischief; "for," he added, "I do not mean to give myself up to a man, but to France; and if this man wants to take us again to the Vistula, I will not follow him." After having thus silenced his rebukers, Ney received at dinner, besides his generals, all the commanders of regiments, with the exception of one officer, who refused to be present.

But it was distinctly understood, and on this point M. Thiers leaves us in no doubt, that the chiefs of the army were resolved to endure no longer the warlike tyranny of Napoleon, his arrogance, his passion for conquest, or his habit of crushing the French people while he flattered them.—

"I am going to see him," said Ney; "I am going to talk with him, and I will declare to him that he shall not lead us to another Moscow. It is not to him that I give myself; it is to France; and if we adopt him as the representative of our glory, it is not to a restoration of the Imperial system that we shall lend ourselves." * * * He wrote a letter to his wife, in which he detailed all he had done,

and concluded with these characteristic words, "My friend, you will not weep when you come out of the Tuileries."

There was a touch of shame in that; it betrayed, too, something ignominious in the nature of the man. The Tuileries then was the temple in which he worshipped; it mattered little whether a Bourbon or a Bonaparte sat under the crimson canopies. Clearly, at the moment, the Bourbons were at a discount. Louis the Eighteenth was promising to die for his people, as a preliminary to running away. Napoleon had now recovered his dear Marshal Ney:—

With profound sagacity, having divined all that the Marshal had prepared to say, it required but a moment to inform him that Ney would encounter him at once with excuses and remonstrances. Now, he wanted to dispense with the one, and to spare himself the other. He met him with open arms, exclaiming—"Embrace me, my dear Marshal." Then Ney unfolded his papers, and was about to begin, when he interfered. "You have no need to excuse yourself," he said; "your excuses and mine are to be found in events, which are stronger than men. But let us speak no more of the past, and indeed only remember it that we may conduct ourselves better in the future." After these preliminary words, Napoleon, leaving the Marshal no time to utter a word, explained to him the position of affairs. * * * He declared that he would accept the Treaty of Paris; he mentioned what he had caused to be said at Vienna; that he relied much on this communication and the intervention of Marie Louise to prevent a fresh struggle with Europe, and that, on his arrival at Paris, he would surround himself with the most enlightened men, in order to deliberate with them on the reforms to be effected in the Imperial constitution.

Ney was anticipated in all that he had proposed to say. But he and the Emperor pretended to be more mutually satisfied than they actually were. Napoleon's road lay through the shadows of Fontainebleau:—

At four in the morning, on the 28th March, he entered that court of the palace of Fontainebleau where, eleven months previously, he had addressed his adieux to the Imperial Guard. Already a group of cavalry, deserters from the army of Milan, had arrived to form his guard. On setting foot inside the palace, where the first Empire had reached its end, and where the second seemed likely to begin, his face became lit up as by a sentiment of intense satisfaction. The turn of fortune had been indeed amazing, and in that vast mind, which at Elba had been cured of all illusions (we shall presently see the proofs), joy, for an instant, silenced policy.

But the turmoil at the Tuileries! The feeble fury of the Royalists! The prospects of a second emigration! The glimpses of coat-linings in the wardrobes of gentlemen anxious to wear their garments inside out! All Paris was expectant. The very horses in the cavalry barracks seemed to sniff the approach of the man who had fed so many vultures. Napoleon being at Fontainebleau, the Bourbon thought better of dying; the gates of the Palace court were closed at eleven o'clock; the royal family entered a carriage; the old dynasty drove through the silent streets. Next morning—

Great anxiety was prevalent throughout a curious multitude to know what had happened. There were some servants in livery moving about, but not a single officer or a single guard mounted, except the ordinary groups of the National Guard outside the gates. The white flag floated above the main dome; some cries of *Vive le Roi!* were heard, but that of *Vive l'Empereur!* the military, as yet, dared not utter. Soon the fatal secret was discovered, and the news filled Paris in the twinkling of an eye.

Then assembled the spirits of the resurgent Empire. First came Excelmans, who stalked through the chambers and corridors of the

empty palace, and ordered the tricolor to be set floating. Then followed Bassano, Rovigo, Decres, Mollien, Gaudin, the Queen Hortense and the Ex-queen of Spain, the wife of Joseph. In a moment the Tuileries was crowded with the Imperialist aristocracy. About nine o'clock in the evening, a single carriage turned from the Boulevards, outside the Invalides, along the Quays, and thence to the gates:—

The carriage was driven into the court before any one knew whom it contained. But a moment sufficed to spread the intelligence. Then, Napoleon, snatched from the hands of Caulaincourt, Bertrand and Drouet, was carried in the arms of his old officers, seized with a delirium of joy. A tremendous shout of *Vive l'Empereur!* had given notice to the crowd of high functionaries that swarmed through the Tuileries. They rushed towards the staircase, and, forming a current opposed to that of the officers, who were struggling up, a sort of contest took place which was almost alarming, since they were smothering one another and stifling Napoleon. They carried him thus to the top of the staircase, uttering frenzied cries, and he, for the first time in his life, unable to conquer the emotion he felt, allowed some tears to escape, and then, being deposited on the floor, walked on without recognizing any one, but yielding his hands to those who pressed around him, kissing them, and overwhelming him with homage. In a few moments, recovering himself, he welcomed his most faithful adherents, embraced them, and, without taking a moment for repose, consulted with them as to the formation of a government.

In twenty days the Empire had been re-established. But wise men looked on and doubted. Hortense, protected by the Emperor Alexander, had remained at the French capital, a circumstance which embittered Napoleon against her:—

"You at Paris!" he said, on perceiving her; "You are the only person I had not wished to see here."—"I remained," she answered, weeping, "to nurse my mother."—"But after the death of your father!"—"After that death I found in the Emperor Alexander a protector for my children, and I was compelled to take care of their prospects."—"Your children! better for them exile and misery than the protection of the Emperor of Russia."—"But you, sire, did you not consent that the King of Rome should owe the Duchy of Parma to the generosity of that Prince." Not replying to this cogent argument, Napoleon proceeded, "And this action—who advised you to it? (The Princess was pleading before the French tribunals to recover the custody of her children.) They have forced you to reveal family miseries which ought to have remained concealed, and you have lost your cause—very well done!" But immediately repenting his severity, and opening his arms to an adopted daughter whom he loved, Napoleon embraced her, saying, "I am a good father, you know, and we will speak no more of these things. You saw, then, our poor Josephine die—in the midst of our disasters, that death was a blow to my heart."

The file of ancient comrades lengthened—Cambacères, Bassano, the Dukes Vicenza, Gaeta, Rovigo, Decres, Counts Mollien, Regnaud de St. Angely, Lavalette:—then, the glorious Davoust. Fouché played a more careful game. To all Napoleon held moderate, reassuring, even caressing language. "I was a year in the Isle of Elba, and there, as in a tomb, I heard the voice of posterity." He thought Austria anxious for peace, and England crippled by her debts. Vanity might induce Russia, and hatred Prussia, to resume the war. And to France he promised the millennium. But he knew that war, and war on a terrible scale, was inevitable. Alexander of Russia had pledged his last man and his last rouble to help in crushing him. France again assumed a martial aspect. Four hundred thousand men were to take the field; two hundred thousand were to garrison the fortresses. Europe burned with impatience to

see these new legions dispersed and the disturber chained; and M. Thiers, in a series of eloquent passages, explains how it had become next to an impossibility that the civilized world should be convinced or conciliated by Napoleon. But in the estimation of the English people, he assumes, the Bourbons had fallen, and Napoleon risen proportionately; so that the Cabinet, in resolving on a war policy, had to announce with caution, and almost with an apology. There can be no question, however, but that the preponderating sentiment, in and out of Parliament, was in favour of the war. The narrative is diffuse in the explanation it affords of the exact views with which the most prominent statesmen in France regarded the resumption by Napoleon of the Imperial authority, and of the feelings which animated the various classes of the population. There was, we think, more excitement than confidence in the sudden show of zeal on the part of the populace. The revised Constitution was coldly received in all quarters of the realm. Because, says M. Thiers, France could no more believe a Napoleon when he talked of liberty than Europe could when he talked of peace. The Royalists were, of course, hostile; the Revolutionists suspected the champion who had put his feet on their necks. And now, on the First of June, Napoleon meets the citizens of Paris. Shall he appear as Emperor or General? He wishes to appear as he would when taking the oath. He stands forth, then, in robes of silk, in plume and imperial mantle, in the coronation coach drawn by eight horses; fifty thousand soldiers greet him; a gorgeous amphitheatre receives the Emperor, the army and the multitude; the altar fronts the throne; a hundred cannon thunder into the arena; but the countenance of Napoleon is sad: he has no wife on his right hand; on his left hand he has no son. Both are away from him. Laying aside his imperial splendour, he distributes standards to the legions which are to "fetch his wife and son."

He is impatient to be in the field, to spring from his throne into his saddle. People around him think he is melancholy; he never smiles; perhaps he has had a vision of Waterloo; possibly, he remembers what they had been saying at Vienna about an island in the Atlantic. And in this mood, after sundry strange night vigils, he went to Malmaison, where Josephine had died in the spring of the last year; he stayed several hours, walking through the château and the gardens, full of Josephine's flowers. "Poor Josephine!" he said to Hortense at every turn of the walk; "I think I see her!" So he ordered a portrait of Josephine; kissed Hortense; said to Madame Bertrand as he entered the carriage, "Let us hope, Madame Bertrand, that we may not soon have to regret the Isle of Elba."—and went to Waterloo. A week later he *did*, most probably, regret Elba, and much else.

M. Thiers has two superb opportunities left; the Battle in Brabant, and St. Helena. We doubt not but that he has nearly completed the picture, radiant with the life of an unrivalled epoch.

In the Arches Court of Canterbury. The Office of the Judge promoted by the Bishop of Salisbury against Williams. Articles of Accusation.

Charge delivered by the Lord Bishop of Salisbury, August 8, 1861.

AFTER being in abeyance for more than a century, because its effect was that of a poker upon the coals of bigotry and the flames of discord, the Convocation has been allowed a tongue. The Government, which probably thought that a tongue is not a pair of hands, has now

to learn that it is, in effect, as many hands as it can excite to action. The Convocation, it is true, no longer ventures to call offenders before it, nor does it even put forth definite censures; but it pronounces the existence of heresy, and gives a Bishop excuse for proceeding. Of this plea, among others, the Bishop of Salisbury avails himself, and we are to have the old work over again. It matters nothing that such methods of repression as are revived never put down any sect or party: it matters nothing that they create a sympathy which recommends the obnoxious opinion, and, as the Bishop admits, "extend and intensify its influence, whatever it may be." The revived Convocation is a recalled Bourbon, which has forgotten nothing and learnt nothing.

In the name of common sense, what does the Bishop of Salisbury suppose he is to gain? He extends and intensifies the power of the heretical opinion: the consequence is, that others of the clergy begin to teach it. What is to be done? Why, of course, more extension, more intensification; and so on. And all this because "there must be a limit somewhere." We never heard of any logician but one who could be compared to the Bishop of Salisbury: we mean the tradesman who said to his customer—"Sir, I assure you that I lose by everything I sell, and nothing but the enormous business I do makes it answer." We strongly suspect that nothing but the Committee of the Privy Council will save the Courts from doing such an amount of business as would oblige reflecting people to meditate upon a question which we never yet heard definitely answered by any of those whose proposals invite it: namely, if the Church of England should fall, what is to be put in its place?

The Articles of Accusation, extended over many a page by the Judge who is made to "article and object as above," may be compressed into a very narrow compass. We do not intend to detail them: not merely because our readers have recently seen the substance in the daily papers, but also because they have no relation to our argument, and because it will be time enough to make our selection when we shall have seen the answers made by the accused. Mr. Rowland Williams, in producing and commenting upon the opinions of Baron Bunsen, is accused of various heterodoxies: the Articles give his words in red ink, and the construction put upon them in black ink. This typographical convenience reminds us of the practice of the Inquisition, which dressed those who were to be burnt in flame-coloured garments. We approve in both cases: the officials might have burnt the wrong person but for the dress; and an innocent reader might, in some cases, not know which was the true doctrine and which the false one, if it were not for the colour of the ink. One of the accusations, we see, is either on the very point on which the Privy Council decided in the Gorham case that freedom existed, or as near to it as possible.

We will, for the present, suppose Mr. Rowland Williams to be wrong in his doctrine: nothing that we have to say demands that it should be otherwise. But we shall assume that it is not Mr. Williams who is the object of attack, but a growing school of theological criticism. The Convocation, the Bishop, and all the country, are aware that a certain texture of opinion, alleged to bear much resemblance to German Rationalism, is finding favour at Oxford. The true question then is, whether or no the clergy are to be permitted the freedom of the laity in the extra-cathedral discussion of current theological divisions of opinion. If Mr. Williams had uttered these supposed errors of doctrine in his pulpit, the question would have been

very different. The Salisbury case is a grosser one than that of Exeter. Mr. Gorham came to a Bishop for institution: the Bishop had heard grounds of objection to Mr. Gorham's doctrine. These it was his bounden duty to examine into: he did so, and in his discretion he refused institution. The law decided that the difference between the Bishop and Mr. Gorham was allowable: no man has a right to say the Bishop ought to have known the law would so decide; for the Bishop had the letter on his side. Circumstances are wholly different in the present case. Mr. Williams is a parish priest: he teaches and has taught, under the eye of his Bishop, be the same an archdeacon or a churchwarden. (We say this because, when the Bishop of Exeter was beaten, he wrote to Mr. Gorham's churchwarden, telling him it was his duty to watch his vicar's doctrine, and to report: forgetting that possibly the churchwarden might be a *dissenter*, who had been obliged to serve that office.) If Mr. Williams should teach heresy to his parishioners, the Bishop may interfere. But whether the Bishop ought to subject discussion of doctrine of a literary character to canonical penalties, is altogether another question, and one we hope to see decided against him. He himself says, he does not think "that the constitution of our courts of judicature is as well fitted as one could desire to weigh the balance of truth." We hope it is so, the *one* being the Bishop himself. The root of the meaning is, that he does not like the Privy Council, which represents the Queen's Supremacy: but the country likes it for the very reasons which make the Bishop dislike it.

Our readers will remember that in all time, since the first imposition of subscriptions, there has been a large party which has insisted that the Articles subscribed to are simply articles of *peace*. That is to say, the subscription means that the subscriber undertakes not to oppose these Articles in his clerical teaching. We certainly should not, ourselves, be the first to start such an interpretation; but it is started, is in the field, and is admitted as one—only one—of the equivocations under which subscription is made. This much, however, is certain, that the subscriptions are either articles of *peace* or articles of *faith*. No other alternative has ever been proposed.

First, let them be articles of peace. It is clear that a large, and, with the age, a growing liberty of discussion must be allowed out of the pulpit. It is impossible that it should be contemplated that agreement in a *form* of doctrine, as a waiver of difference, should accompany the subscriber into his discussion of doctrine. Either these articles of peace are to be taken as prohibitions of all discussion, or they are not to claim obedience from the disputant. This is not our principle; but it is the necessary consequence of that interpretation which a large and respectable party has always contended for. Those who accept the peace hypothesis must accept its consequences.

Next, let the Articles be articles of faith. In this case a subterfuge exists, which is a hundred times worse than any arising out of the lower alternative. The actual state of things, upon the faith hypothesis, requires that a certain amount of absolute dishonesty should be admitted as existing, as necessary,—and, we suppose, as desirable, for no complaint is made. It is notorious to all the world that the majority of the clergy do *not* believe that the Omnipotence will consign all the members of the Greek Church, for example, to everlasting punishment. It is just as notorious that they declare, if plain English have its meaning, that they *do* believe it. All the Articles are

acknowledged to be "agreeable to the Word of God": one of the Articles declares that the Athanasian Creed is "thoroughly to be received and believed": the Athanasian Creed more than once denounces the extreme of divine wrath, with certainty, "without doubt," upon all who shall not believe that creed, "whole and undefiled": and the Greek Church does not believe *the whole*. All this is indisputable; those who dislike the idea of change are vexed and fretted to hear it; but hear it they must when questions like the present are raised. There is a general consent to a certain amount of rejection of that which is declared to be true and to be believed. Those who make this tacit rejection pray for silence from all quarters. But it is obvious that the moment any clergyman is questioned for general discussion of doctrine upon heterodoxy drawn inferentially from the sense of the Articles, the whole force of subscription, as gathered from the actual state of belief, must be investigated. The existing admission, existing because it exists, of a distinction between current and obsolete doctrine, must be made explicit. Where, it must be asked, is the line to be drawn between what is to be subscribed and not believed, and what is to be both subscribed and believed? Who draws it?

This, we admit, is no question for the Court of Arches, which will take for granted that there are neither dissenters outside the Church, nor dissentients in it. But it is a question for the educated English world. The Bishop of Salisbury is forcing an inquiry which we should be glad to see him promoting in a more creditable way. We value every step towards a re-consideration of the whole question of subscription: and we think the Convocation will be one instrument of a benefit to society which is beyond its intention and above its appreciation.

Our main object is to secure the literary freedom of the clergy. So long as we are allowed to think that they speak their full thoughts and show their whole counsel, we read their writings with interest, and weigh their arguments with respect. Should we be compelled to look upon them as unable to reason with us as free men with free men, we shall turn with contempt from the tongue-tied, thought-muzzled slaves of a code of inferences. We want to strike true interpretation out of the collision of opinions. A large discussion is before the world, which the Bishop of Salisbury and his celebrated steeple are equally powerless to hinder. We shall have more to say about the matter: for the present, we "article and object as above."

Havelock's March; and other Poems. By Gerald Massey. (Trübner & Co.)

Among the bands of young poets who in our day have fed on the fiery wine of 'Festus,' or beaten time to the music of 'Pippa Passes,' few have been so healthful and robust in the midst of imitation as Mr. Massey. We had hope of him at the first, and we have faith in him now. Of course he has not wholly escaped from the vices of his age. The voices of the syrens have been sweet and seductive in his ear. He has not, indeed, lost himself in the light of gorgeous sunsets so often as Mr. Alexander Smith,—or floated into cloudland and poetical storm with Mr. Sydney Dobell,—ordropped into the voluptuous southern paradise of Mr. Owen Meredith. He has been neither spasmodist nor sensualist in his verse. Generally, his flights of imagination have been modest, and his tone and expression pure. But like these poetical sinners, he has been

very free with the stars. The sun and the moon have both had cause to complain of him. He has taken liberties with the sea. He has talked of the thunder and lightning as if they were friends whose familiarity had ended in contempt. Oftentimes he has been rather hard upon Mother Earth, Old England, and other elderly females whose names ought not to be lightly taken in vain. Occasionally, too, though rarely, he has misused the Queen's English, and especially in the needful matter of sound and rhyme. But these are trifling defects, which have to be set off against many masculine and artistic merits.

The volume now published by Mr. Massey is divided into three sections:—National Poems—Christie's Poems—and Love Poems. The whole mass of song and celebration is inscribed to Lady Marian Alford, in a Poem of great beauty. One of the Elizabethans might have written these lines:—

Lady! Gorgione should have painted you
With live warm flesh-tints golden thro' and thro';
The sun-soul making luminous its prison
With sunken splendours, rarer than have risen;
Bird-peeps of brightness—dawn-dew—smiling fire—
Full of all freshness as a spring-wood quire;

A glow and glory of impetuous blood;
Brave spirits that crowd all sail to take the flood
Of large, abounding life, that in the sun
Heaves flashing, with a frolic fringe of fun;
A happy wit! creative genius proved
In Pictures that Angelico would have loved;

A stately soul: yet with a laugh that brings
Echoes from Girlhood's heaven as it rings!
And that fine spirit of motion's airy charm,
Which hovers glancing round the flower of form:
A lofty lady of a proud old race,
Recklessly splendid in her gifts and grace.

'Havelock's March' leads off the National poems. It has some noble lines; but the general effect of the poem is such as to discourage the poet from attempting themes too near and too familiar. Laureate verse—even at its best—is what neither gods nor men can bear: as witness Tennyson's 'Ode on the Death of Wellington,' a poem, like 'Havelock's March,' abounding in gracious phrase and vigorous thought—yet quite unable to hold its place in the affections or in the memory. Newspaper themes should be left to plain prose.

'The Norseman' follows, which the poet, left free from the hard necessities of coupling Hodson of Hodson's Horse and noble Niel with the captain of the Shannon, Sir William Peel, flings off with a delightful sense of ease and strength:—

THE NORSEMAN.

A swarthy strength, with face of light,
As dark sword-iron is beaten bright:
A brave frank look, with health a-glow,
Bonny blue eyes and open brow;
His friend he welcomes heart-in-hand,
But foot to foot his foe must stand;
A man who will face to his last breath
The sternest facts of life and death:
This is the daring Norseman.

The wild wave-motion, weird and strange,
Rocks in him: seaward he must range.
For life is just a mighty lust
To wear away with use, not rust.
Though bitter wintry cold the storm,
The fire within him keeps him warm.
Kings quiver at his flag unfurled:
The sea-king's master of the world:
Conquering comes the Norseman.

He hides, at heart of his rough life,
A world of sweetness for the wife;
From his rude breast a babe may press
Soft milk of human tenderness,
Make his eyes water, his heart dance,
And sunrise in his countenance:
In merry mood his ale he quaffs
By firelight, and his jolly heart laughs:
The blithe great-hearted Norseman.

But when the battle-trumpet rings,
His soul's a war-horse clad with wings!
He drinks delight in with the breath
Of battle and the dust of death!
The axes redden, spring the sparks,
Blood-radiant grow the grey mail-arks:
Such blows might batter, as they fell,
Heaven's gates, or burst the booms of hell:
So fights the fearless Norseman.

The Norseman's King must stand up tall;
A head that could be seen o'er all;
Majestest of Battle! when the plain
Grew nairy red with bloody rain;
And grip his weapon for the fight,
Until his knuckles all grew white!
Their banner-staff he bears in best
If double handful for the rest,
When "follow me" cries the Norseman.

Valiant and true, as Sagas tell,
The Norseman hated lies like hell;
Hardy from cradle to the grave,
'Twas their religion to be brave;
Great silent fighting men, whose words
Were few, soon said, and out with swords!
One, saw his heart cut from his side,
Living—and smiling; and smiling, died!
The unconquerable Norseman.

They swam the flood, they strode the flame;
Nor quailed when the Valkyrie came
To kiss the chosen for her charms,
With "East, my hero, in mine arms."
Their spirits through a grim wide wound,
The Norse doorway to Heaven found.
And borne upon the battle-blast,
Into the Hall of Heroes passed:
And there was crowned the Norseman.

The Norseman wrestled with old Rome
For Freedom in our island home:
He taught us how to ride the sea,
With hempen bridle, horse of tree.
His spirit stood with Robin Hood,
By Freedom in the merry green wood,
When William ruled the English land,
With cruel heart and bloody hand;
For freedom fights the Norseman.

Still in our race the Norse king reigns,
His best blood beats along our veins;
With his old glory we can glow,
And surely steam where he could row.
Is danger stirring? Up from sleep
Our war-dog wakes, his watch to keep;
Stands with our banner over him,
True as of old, and stern and grim:
Come on, you'll find the Norseman.

When swords are gleaming you shall see
The Norseman's face flash gloriously,
With look that makes the foeman reel:
His mirror from of old was steel.
And still he wields, in battle's hour,
That old Thor's hammer of Norse power;
Strikes with a desperate arm of might,
And at the last tug turns the fight:
For never yields the Norseman.

'Robert Blake' is no less good, and indeed all the sea pieces have the dash and saltiness of the ocean in them. They will deserve to be read, and if read are sure to be admired. The political poems are less to our liking. The topics dealt with are ephemeral, and the satire, where this is not personally offensive, as it often is, wants the breadth and largeness necessary in art. Louis Napoleon and the Manchester School should be left to the daily and weekly papers. On the other side, the poet's love lyrics will find many admirers. In the lines addressed to a wife 'On a Wedding Day,' there is the true touch of nature:—

Nine years ago you came to me,
And nestled on my breast,
A soft and winged mystery,
That settled here to rest;
And my heart rocked its Babe of bliss,
And soothed its child of air,
With something 'twixt a song and kiss,
To keep it nestling there.

At first I thought the fairy form
Too spirit-soft and good
To fill my poor, low nest with warm
And wisely womanhood.
But such a cozy peep of home
Did your dear eyes unfold;
And in their deep and dewy gloom
What tales of love were told!

In dreamy curves your beauty droopt,
As tendrils lean to twine,
And very graciously they stoopt
To bear their fruit, my Vine!
To bear such blessed fruit of love
As tenderly increased
Among the ripe vine-bunches of
Your balmy-breathing breast.

We cannot boast to have bickered not
Since you and I were wed;
We have not lived the smoothest lot,
Nor found the downiest bed!
Time hath not passed o'er-head in stars,
And underfoot in flowers,
With wings that slept on fragrant airs
Thro' all the happy hours.

It is our way, more fate than fault,
Love's cloudy fire to clear;
To find some virtue in the salt
That sparkles in a tear!

Pray God it all come right at last,
Pray God it so befall,
That when our day of life is past
The end may crown it all.

Readers who find this vein of feeling in their own humour—and there must be many such—will get the volume for themselves.

Mr. Massey's poetry shows growth. His powers are evidently not yet at their prime. Hence, an appearance of inequality—sometimes of crudeness—in the work achieved, which will puzzle and discourage Mr. Massey's defenders. Some of the finest and weakest lines produced in our generation may be found in this volume. What we have quoted answers for itself; but a critic who is bent on finding flaws will be at no loss to quote passages answering to his assertion that Mr. Massey's poetry is only very bad prose. Of course, such quotations would be very unfair; but then Mr. Massey should take care that he be not condemned by quotation out of his own mouth. He who can do so well has no right to do ill. Poetry is nothing, unless perfect as to form.

The Story of Savonarola and of his Times—[La Storia di Savonarola, &c.]. Related by Pasquale Villari. With the assistance of New Documents. Vol. II. (Florence, Le Monnier.)

Prof. Villari's Life of Savonarola is now complete. The second volume has a more vivid interest than the first, since it takes in the last eventful year of the great Friar's life, from his triumphant "Bonfire of the Vanities" at the end of the Carnival of 1497, to the pitiless judicial murder which terminated his forty days' trial in that same storied old Piazza where he and his disciples had circled with linked hands round the blazing pile amid the lauds and spiritual songs and shouts of "Viva Cristo!"—which by his behest had succeeded to the abominable Carnival-songs of the Medici, throughout the streets of Florence.

In the year 1497, the great Friar's power, religious and political, was at its zenith. In his celebrated Lent sermons in the spring of that year on the Prophecies of Ezekiel, he relentlessly lashed the monstrous vices of the Court of Rome, then headed by that very crown and blossom of all iniquity, Alexander Borgia; while the strong republican spirit he had kindled and fostered kept the gates of Florence pitilessly closed against the degraded Piero de' Medici, who, living steeped to the eyes in every revolting depravity under the friendly shadow of the Papal fans, ceased not from intriguing with his Florentine adherents to regain the sovereignty he had lost. The election of Bernardo del Nero, a man of influence and sagacity, though a creature of the Medici, to the post of Gonfaloniere of Florence, just then gave good hope of a possible Medicean restoration, and Piero de' Medici ceased not to pay abject court to every petty tyrant of Italy, to gain favour and assistance for the enterprise, while his tyrant's nature gloated over the prospect of summary vengeance to be wreaked on such as had procured his exile or opposed his return. To this end "he kept always by him a list of such families as he intended to destroy, razing their dwellings and confiscating their property to his own use." And on one occasion, when Messer Lodovico da San Miniato remarked to him, that he would soon be master of a fair dominion, and that with a good and discreet council of thirty or forty citizens he might quietly govern it to his liking, Piero, with an unseemly gesture, replied "You should know by this time that I will take advice from no

one, and that I had rather go wrong after my own will than right after that of any other man!"

But the wicked will was destined to hunger vainly after its fulfilment, and the expedition which was to excite a triumphant revolt in Florence, after waiting in violent rain for a day and a night a few miles from the Porta Romana, was fain to betake itself, dragged and exhausted, to a disgraceful flight; Piero himself having vainly spent the whole day in undignified concealment behind a wall close outside the gates, in the hope that the city would rise in his favour. It was on this occasion that one of the Signori, a tried friend of Savonarola, sent Girolamo Benivieni to the Convent of San Marco to question him as to the upshot of that day's events. To whom the Friar, as Benivieni himself relates, said, as he entered the cell, without giving him time to speak a word: "*Modice fides, quare dubitasti?* Go tell the Signori, that Piero de' Medici shall come to the gates and turn him back again without in anywise gaining his point." A shrewd suggestion of mother wit and political foresight, which was, of course, laid by the Friar's disciples to the account of prophetic inspiration.

Prof. Villari seeks to prove, and, as we think, successfully, that his hero, from first to last, was essentially a Catholic Reformer, at war, not with the dogmas of his Church, but with the degraded and scandalous lives of her ministers. It was against these that he unweariedly sought to evoke the supreme authority of a General Council, and it was to protect his beloved brotherhood of San Marco from their contagion that he obstinately refused to obey the reiterated commands of the Pope to unite them with the so-called Toscano-Lombard monastic congregation, a species of religious and political League, recently set on foot by the Court of Rome. Certain it is that, unlike the great reformers of Germany, Savonarola never aimed at creating division in the Church; and even while fervently preaching the doctrine of justification by faith, never for a moment contemplated a separation from the very letter of the law, whose servant he was, as is amply proved by the fact of Alexander the Sixth, who had at first prohibited the diffusion of his works on pain of excommunication, revoking his sentence, and permitting them to be freely reprinted.

For a considerable time after the Pope had resolved on launching his anathema against the Friar,—whose holy life and powerful preaching were, of course, the strongest titles to the unquenchable hatred of such a man as he,—the sending of the brief to Florence was delayed, probably to wait the result of Piero de' Medici's feckless enterprise, or the far more probable success of a carefully organized riot, under cover of which, it was hoped, that the daggers of the Compagnacci, a band of dissolute young Florentines, expressly sworn to combat the new Puritan doctrine and its upholders, would silence the dangerous Friar once and for ever while preaching at the Duomo on the Feast of the Ascension.

But public opinion, backed up by a "Signoria," including many of the Friar's friends, was yet too strong in Florence for the accomplishment of this plan of Papal vengeance. The rioters, indeed, succeeded in driving the preacher from his pulpit at the Duomo, but only to be escorted back to San Marco by thousands of his followers, in the midst of brandished pikes and waving swords and shouts of "*Viva Christo!*" There, in the convent garden, he finished his interrupted sermon, with a thundering denunciation of coming woe to

"the wicked who will not hear, neither will they believe," and a prophecy to the effect, that when these things should come to pass, the prophet himself would "sing praises to the Lord, and joyfully depart this life." An eye-witness of the stormy scene at the Duomo quaintly enough relates, in a letter still extant at the Magliabechian Library, how Bartolommeo Giugni and Giuliano Mazzinghi, who were of "the Eight," thinking themselves safe in the dignity of their office, approached the pulpit, hoping to kill Savonarola; but they found him too well guarded, and Giugni received from Carbizzo da Castrocaro a sound slap on the face, "a thing never before heard of as having happened to one of the Eight!"

It was after this Ascension-Day riot that Savonarola, to avoid giving further cause for similar scandals in the city, announced his intention to discontinue his accustomed preaching, and addressed a submissive but dignified letter to the Pope, complaining that the Pontiff's ear, which had uniformly been closed against his pleading, was, nevertheless, always open to the lying accusations of his enemies. He especially protested against the bold calumnies of his bitter foe, Frà Mariano da Gennazano, a man whom in former days he had, on one occasion, reproved before the whole congregation for vituperating the Pontiff, and he declared that he was ready to submit his doctrine and himself to the decisions of the Church in Council, as being in nowise opposed to the teaching of the Holy Fathers. This letter bears the date of the 22nd of May, 1497, and consequently arrived at Rome after the Brief of Excommunication, dated the 12th of the same month, had been despatched to Florence. And at this point of the story Prof. Villari rectifies a most important error into which all the former chroniclers of Savonarola have fallen, and which only a diligent search through the manuscript letters of Savonarola has enabled him to clear up. The Brief left Rome, indeed, about the 12th of May, in charge of Giovanni da Camerino, in the form of a letter addressed to the Friars of the Santissima Annunziata at Florence, instead of, as was usual in such cases, the universal body of the faithful. The bearer of this dangerous missive "lingered several days at Siena, doubting whether to go on or not. At length, being overcome by fear lest the disciples of the Friar should cut him in pieces, he turned back again to Rome, leaving the Brief in other hands, so that it only arrived in Florence about the end of the month." The letter of Savonarola, therefore, which has till now been considered as a totally irrelevant, nay, servile, reply to the Papal Brief, was, in fact, on its way to Rome before the Servite friars of the Annunziata had the dreaded weapon in their hands. And even after its arrival, many of the Florentine clergy refused to publish the excommunication, to the validity of which the presence of an Apostolic Commissioner was lacking. Yet, even in this terrible document, so weak was the testimony on which the Friar was condemned, that he is excommunicated, and cut off from the help and society of the faithful, as "*suspected of heresy*" only.

Prof. Villari enters at length into the intricate ups and downs of popular favour and disfavour which swayed the Friar's cause, as the ever-changing government of Florence numbered more or less *Arrabbiati* or *Piagnoni* among its members. Brawls, dissensions and dissolute living became more general than before. The churches grew empty. The Carnival-songs took the place of lauds, and the friars of San Marco especially were attacked at night, or when in choir, with stones and

ribald songs, and every species of insult. In less than a month, the times of Lorenzo the Magnificent seemed come again.

As often as the majority of the Eight were favourable to the Friar, they entered into correspondence with Rome to obtain a reversal of the excommunication; and at one time there seems to have been good hopes of inducing the Pope to revoke his sentence, so much so that the Cardinal of Siena (afterwards Pius the Third), with inconceivable effrontery, sent word to Savonarola, that if the sum of five thousand crowns were paid to a certain creditor of his, he, the Cardinal, would pledge himself to have the censure taken off!—an offer which the Friar, as may be supposed, indignantly rejected, saying, in a letter to a friend, that he should esteem the making up such payment worthy of far greater censure than that which had been launched against him by Rome.

So stood matters in Florence when the plague broke out.

And here, again, Prof. Villari successfully as we think, vindicates Savonarola from the grave charge of timidity or indifference to the sufferings of his flock in that terrible time of public calamity; an accusation brought against him by M. Perrens, on the strength of testimony which affirms that he took no share in giving spiritual aid to the afflicted townsfolk. M. Perrens falls into error on this head from failing to remember that the sentence of excommunication must have entirely prevented Savonarola from exercising his sacred office among the people. When the plague struck down its victims within the walls of the convent, among the two hundred and fifty brethren under his care, the Prior was indefatigable in assisting, consoling, providing for the safety and comfort of the community, sending the more timorous to a distance from the plague-stricken city, among them his own brother, Aurelio; tending the sick, exhorting the weak of faith, shriving the dying; ever full of love, of trust in God, and of "a great serenity of mind." Utterly refusing, moreover, the reiterated and earnest entreaties of his friends to quit the scene of contagion, and, as he said himself, "rejoicing in the joy of those that die, in that I see men and women, friars and laymen, give up their souls praising the Lord."

Scarcely was the plague stayed, when the city was thrown into a fresh phase of tumult and distraction by the discovery of a widely-spread and dangerous Medician conspiracy in the very heart of the Republic and among its most influential citizens, including the septuagenarian Bernardo del Nero, late Gonfaloniere of Florence. Lamberto dell' Antella, a friend and partisan, who had accompanied the would-be tyrant, Piero de' Medici, in his expedition against Florence and the disgraceful retreat which followed it, fell, together with his brother, into disgrace with their thankless master soon after arriving at Siena, and was imprisoned there on pretence of disaffection to his cause. Piero, when he had quitted Siena for Rome, with an afterthought worthy of his name, sent repeated messages back to Pandolfo Petrucci, then the head of the Siennese Republic, enjoining him to throw the brothers into a horrible dungeon called the *Carmaio*, or slaughter-house, out of which no prisoner was ever known to have escaped alive. But Petrucci, though a friend to the Medici, instead of obeying his barbarous behest, set the two Antella at liberty, with orders not to quit the Siennese territory on pain of a fine of two thousand florins. The brothers, released, and burning with revenge, fled instantly to Florence, where Lamberto was captured, or most probably gave himself up to the authorities, and a letter was found upon

him addressed to his brother-in-law, Francesco Gualterotti, one of the Ten, containing a promise of important revelations with regard to the plot. This curious letter, together with Lamberto's after-confession, when, according to the inhuman practice of the time, he had been tortured to extract the last drops of the truth that was in him, and afterwards soothed with a promise of full pardon, is published by Prof. Villari in the Appendix to his work.

After long and weary perplexities respecting the due course to be pursued in conducting the judicial proceedings against criminals of such note, the five conspirators were tried, found guilty and condemned to die, most assuredly according to their deserts, although their execution occasioned bitter indignation among a large portion of the citizens. Savonarola, it seems, took little or no share in the burning excitement arising from this affair; but remained for the most part shut up in his cell occupied in correcting the proof of his forthcoming work, the 'Trionfo della Croce.' Yet his detractors have not failed to accuse him of refusing to the criminals the right of appeal, when, in fact, he had spoken decidedly in favour of the law by which it was granted them. He himself, when put on his trial at a later period, only remarked, speaking of Bernardo del Nero, "I did not counsel his death, but I would fain have had him sent away." Moreover, he referred to the fact of his having recommended one of the conspirators, Lorenzo Tornabuoni, to mercy; so that it is clear that whatever part he did take in the trial leaned rather to the side of clemency than severity.

The beginning of the end was now nigh at hand. The struggle for life and death between Pontiff and Reformer grew fiercer as the year drew to a close. While the Signoria, by the mouth of its ambassadors at Rome, was still anxiously pleading for the reversal of the censure, and the Pope demanding that the recalcitrant Friar should, unconditionally, be given up to him and to the tender mercies of Mother Church, Savonarola, the excommunicated heretic, celebrated three solemn masses in his convent church on Christmas-Day, administered the communion to a great multitude of persons, and headed a solemn procession around the Piazza San Marco, despite the furious denunciations of the Archbishop of Florence, Lionardo de' Medici. Strong in the support of the Signoria, which at this time was mainly composed of liberal elements, he again mounted the pulpit in the following Carnival, and once more inveighed against the vices and abuses of the Church in trenchant words, the echo of which seems yet to witness with bitter truth against the hierarchy of the nineteenth century:—

Thou hast been to Rome [cried he, addressing, according to his wont, his congregation as though it were a single individual], and knowest the life of these priests. Whether do they seem to thee, supporters of the Church or temporal lords? They have their courtiers and equeries; their horses and dogs; their dwellings are full of rich carpets, silks, and perfumes. Does this seem to thee like the Church of God? The world is full of their pride, and their avarice is equal to it. They do all things for gain; their bells ring for lust of gold, and have no call but for bread, money and wax-tapers. They throng into choir for vespers and offices, because thereby they gather their gains. To matins they go not, because no almsgiving accompanies them. They sell benefices, they sell the sacraments, they sell marriage masses, —everything they sell. And then they are afraid of the excommunication! They will take no part in *divinis* with such as come to this preaching, but they do not mention that at funerals

they go side by side with the very friars of St. Mark's. Thus, then, where gain is to be gotten, the excommunication is of none effect; but has power only where it serves their ends. O, Lord! Lord! send forth thy sword against them!

The Carnival of 1498 ended with a second "Bonfire of the Vanities," previously to which Savonarola mounted a temporary pulpit, erected at the door of his convent, and in presence of a vast throng of people, holding in his hands the consecrated wafer, besought of God to strike him with the lightnings of His wrath, if in word or deed he dealt not truly with his flock.

Savonarola's as yet darkly-hinted project for assembling a General Council and reforming the Church, seems to have been all along as a red flag in rousing and lashing on the fury of his Papal foe. The more the Republic pleaded for indulgence, the fiercer waxed the Borgia against the pestilent Friar, for whose detested sake he threatened to lay his interdict on the rebellious city, which yet ventured to uphold so foul a doctrine. The Pope, in council with his cardinals and bishops, fell into paroxysms of fearful rage at the mention of the Friar's name. All Christian men, it was said, were to be prohibited from having any dealings with the merchants of Florence. The Florentine ambassadors held their very lives unsafe,—nay, one of them was severely wounded by hired bravoos in the streets of Rome. Above all, Piero de' Medici was lavish of gold to such as he hoped would betray the Republic into his gripe. The Pope issued a new and severer Brief, marvelling at "the audacity of the Signoria in setting itself up to dare dispute with us concerning the matter of Friar Jerome Savonarola"; commanding, moreover, that "this preaching do cease," and the preacher be presently sent to Rome, and threatening Florence with the Interdict, which should last "as long as ye shall favour and protect this your monstrous idol."

Was it wonderful that under such circumstances of peril the best friends of the Republic should have counselled the Signoria to seek some speedy means of reconciliation with Rome? The Friar was forthwith forbidden to preach, and mournfully, on the third Sunday in Lent, took leave of his beloved congregation. Cut off henceforth from the teaching which had been the mainspring of his life, Savonarola gathered up his strength, and wrote and despatched by trusty friends secret letters to the sovereign princes of Europe, praying for the convocation of a Council, in which he purposed to prove the election of Pope Alexander null and void, because simoniacally obtained,—to hold up to infamy his life of hideous debauchery and cruelty,—and, moreover, to prove him a heretic and unbeliever, and, therefore, the chief cause of the ills that rent the Church asunder. And here Prof. Villari observes:—

The convocation of a Council without the Pope, or contrary to his will, was not then, as it would be now, considered an act of bold insubordination and violence. According to the decisions of the Council of Constance, the Pope himself was bound to convoke it every ten years; and in case of his neglecting to do so, the princes were authorized to call together the scattered members of Christendom to represent the Universal Church. Charles the Eighth (then King of France) "was always inclined to favour the convocation of a Council, and instigated by Savonarola, by the Cardinal of St. Peter-in-Vincula and others, he had been many times on the point of assuming the initiative in the matter, so much so as to have interrogated the Doctors of the Sorbonne on the question, as to whether he had a right to take such a step, and they pronounced, on the 7th of January, 1497, a decision favourable to the assembling of a Council."

As early as the month of March the Friar placed himself in communication with the Florentine ambassadors then resident at the different Courts of Europe. Two of his most trusty friends, Simone del Nero and Domenico Mazzinghi, wrote, the first to his brother, then Ambassador in Spain, the second to the Ambassador to France, with whom he was intimately acquainted. Francesco del Pugliese was charged to write to England, and Giovanni di Niccolò Cambi to Germany. In May, Savonarola despatched his famous Letters to the Kings of France, Spain, England, Hungary, and the Emperor of Germany:—

The hour of vengeance is come [wrote he]. It is the Lord's will that I should reveal new mysteries and show to the world the perils which threaten the barque of Peter, by reason of your long neglect. The church is brimful of abomination from head to heel; and ye not only lend no aid to remedy it, but do adore the very cause of the evil which pollutes her. Wherefore the Lord is very wroth, and has for this long time left his church without a shepherd.....I bear witness to you *in verbo Domini*, that this Alexander is not Pope, nor can be as such considered; for putting aside the most detestable sin of simony, by which he bought the papal chair, and every day sells church benefices to the highest bidder, and, not to speak of his other glaring vices, I affirm that he is no Christian and believes not in the existence of a God, the which oversteps the measure of all infidelity.

The blow was well aimed and weighted with crushing truths, but upon these fatal letters hinged the turning-point of the Friar's destiny. While waiting eagerly for a reply from Charles the Eighth, the first of the sovereigns to whom his exhortation had been addressed, news came to Savonarola of his courier having been plundered by the bravoos of Lodovico il Moro, and the letters dutifully consigned by him with all speed to the keeping of the enraged Pontiff himself. With such a weapon in his hands and every petty tyrant of Italy ready and willing to assist him, the Borgia's vengeance was speedy and secure.

Of all the strange spectacles exhibited in Florence in that eventful year, none was, perhaps, stranger than the solemn preparation for a fanatical duel, or "trial by fire," in which the champions were a Franciscan, one Frà Francesco da Puglia, a virulent calumniator of Savonarola and his doctrines, and Frà Domenico, the well-known friend and fellow-martyr of the Friar. The Franciscan in his Lent sermons, at Santa Croce, had indulged in abundance of boastful vapourings at the expense of "the false prophet" and his followers, and had even gone so far as to challenge Savonarola to a fiery ordeal in defence of his creed. Frà Domenico, burning with zeal in his master's cause, eagerly caught up and accepted the challenge in simple good faith, to the no small disgust of Frà Francesco, who had evidently no intention of being put to the proof, and the severe displeasure of the Friar himself, who was not aware of his disciple's ill-judged eagerness for the trial until it was too late to stifle the dispute. The whole city at once took part in the quarrel; the Signoria, now again Medicean in its leanings, freely gave permission for the ordeal, and causing Savonarola's three celebrated *Conclusions* to be written out by a notary, publicly invited the assailants and defenders of them to append their names thereto. For a long time, that of Frà Domenico stood alone on the list. The Franciscan, now fairly frightened out of his arrogance, tried hard to unsay his challenge, declaring that "though he knew he was not to be compared to Savonarola, either in goodness or in wisdom, still he would have entered the fire with him; but that as to

Frà Domenico, he would have nothing to do with him." The Signoria and their insolent Free-lances, the band of the *Compagnacci*, tried vainly to re-assure the trembling Bobadil, by protesting that "he would not have to enter the flames at all; for that they only wanted to burn one of the Friars of San Marco, and that if this plan should fail, they would soon find means of putting an end to the whole affair." Still the wretched Franciscan remained irresolute and inert, and all they could extort from him was a declaration that he would enter the fire with Savonarola, adding that he did so at the express request and entreaty of the "*Magnifici Signori*." At the heart of the whole matter lay the treacherous design entertained by the Signoria of, in one way or other, working the ruin of the Friar; as was affirmed by Sandro Botticelli, the painter, in a chronicle now no longer extant, of which Violi speaks, and which related how Doffo Spini was wont to talk over the matter with other choice spirits in Sandro's workshop, and often declared that they had no wish to have the Franciscan burnt, but only to drag things on so as to compass their aim of putting an end to these doings of the Friar.

We cannot resist laying before our readers Prof. Villari's sketch of the scene of the "trial by fire," which, in its deliberate and evident truthfulness, stands out wild and uncanny as the phantasms of a fever-dream. We must premise, however, that so strongly did the Friar doubt the good faith of his opponents that, on the very morning of the 7th of April, appointed for the ordeal, he besought the Ten, who were yet friendly to him, so to order things that neither of the champions might retreat and leave the other in the flames. He demanded that the fire should be lighted at one end of the pile, and that the friars should enter at the other, which should be immediately kindled in their rear. As the hour for the trial approached, Savonarola celebrated a solemn mass in his convent church, and this over, while he was yet exhorting his congregation to await in earnest prayer his return and that of the brethren from their perilous enterprise, the mace-bearers of the Signoria arrived and announced that all was ready, and the friars of San Marco set forth without delay.

Frà Domenico [says Prof. Villari] walked between his brethren, Malatesta Sacromoro and Francesco Salviati; arrayed in a cope of bright red velvet, and bearing a tall cross in his hand, he went a little in advance of all, with head erect and tranquil brow. Then followed Savonarola, clothed in white, with the Sacramental wafer in his hands. Behind him came all the friars, about two hundred in number, chanting with deep voices the Psalm, "Exurgat Deus, et dissipentur inimici ejus." Arrived at the Piazza towards eighteen of the clock [about one in the afternoon], they found the issues barricaded and guarded by armed men. They passed in, therefore, two by two, and scarcely had they mingled with the crowd than all the people bore burden to their chant with such power that the very ground seemed to tremble. The throng was enormous. The whole city seemed gathered in the Piazza, and the surrounding buildings, windows, balconies, roofs were wedged full of people. The most active clung to the iron rails, climbed up the columns, hung upon the statues or even the walls, and had waited in that position since morning. The Loggia de' Lanzi was divided with planks into two parts. In that furthest from the Palazzo were the Minorites; in the other, in the midst of which was a small altar, were the Dominicans. Frà Domenico, after placing the sacrament on the altar, knelt down before it and remained absorbed in prayer. His companions stood around in silence. In front of the Loggia was ranged a guard of three hundred men, commanded by Marcuccio Salviati, all men of courage and true friends to the Convent of San Marco.

But under the *Tetto dei Pisani* stood in arms five hundred Compagnacci, commanded by Doffo Spini, and five hundred more soldiers of the Signoria before the Palazzo, besides the guards who kept the entrance to the streets. These thousand men, thus masters of the Piazza, were eager to assault Savonarola, who quietly contemplated the danger in which he stood, and examined the pile all ready now for lighting. This singular erection extended forty braccia in length [the braccia measures about twenty-three inches] from the *Marzocco* (the venerable marble lion still seated on the steps of the *Palazzo Vecchio*) towards the *Tetto dei Pisani*. Its base, which was five braccia wide, and two-and-a-half high, was covered with earth and bricks, on which were piled up logs and gunpowder, oil and resinous materials, leaving a passage in the middle for the two Champions, about a braccio wide..... But neither Francesco di Puglia, who had demanded the trial, nor Girolamo Rondinelli, who was to assist him in it, had yet appeared under the Loggia. They remained in the Palazzo in secret discourse with the Signoria, and the Signori, instead of entering their balcony to assist at the solemn spectacle, remained within, disputing among themselves, as not knowing what course to take. Yet they had the impudence to send and ask why the Dominicans did not begin, when they only awaited the coming of the Minorites and of the Signoria. At these words, Frà Domenico was indignant, and Savonarola sent to bid them make haste and not keep the people waiting. Then the Minorites seeing themselves in evil case, began to find a world of excuses.

Taking exception, first of all, at Frà Domenico's red cope, they declared that it might be enchanted by Savonarola, and demanded that he should strip it off. Though their demand was at first refused by Frà Domenico, he afterwards complied with it, and laid the cope aside. Whereupon it was objected, that his habit also might be similarly bewitched, and this, too he consented to change for that of one of his brethren. On his return to the Loggia, newly clothed, it was suspected that his vicinity to Savonarola might bewitch him over again; and the earnest enthusiast, eager for his task, again assented and stood meekly among the ranks of the Minorites.

But the patience of the fasting multitude was now well nigh worn out, and a threatening murmur through the crowd soon broke forth into seditious cries. The *Arrabbiati* thought the moment ripe to accomplish the real work of that day's terrible mumery, and a fearful tumult began in the Piazza. The crowd pent up and denied egress, rushed madly towards the Palazzo, where the foreign soldiers of the Signoria, not knowing the cause of the riot, drove them violently back. The intention of the *Arrabbiati* was to seize the Friar's person in the confusion and "finish him with their own hands"; but the brave Salviati manfully stood his ground before the Loggia, and defended Savonarola's life at the peril of his own. Drawing a line on the ground with his sword's point, he exclaimed, "Whoso steps over this line shall try of what temper is the sword of Marcuccio Salviati."

Foiled once again in their intent, the *Arrabbiati* began to make new objections in the midst of a fearful storm of rain, thunder and lightning. Frà Domenico must leave his very crucifix behind on entering the fire, they said. To this also he consented, and took up the Sacrament in its stead. Whereupon, the cry changed to a storm of reproach for purposing to burn the consecrated wafer. Now, however, to his adversaries' great satisfaction, Frà Domenico refused to yield his last point; and a stormy argument respecting the possibility of the fire consuming more than the "accidental" parts of the wafer was summarily cut short by an order from the Signoria to suspend the ordeal.

We must refer our readers to Prof. Villari's pages for an eloquent description of the attack and defence of the Convent of San Marco on Palm Sunday; the terrible night of blood, fire and distraction within its peaceful walls; the desperate resistance of the friars, in the vain hope of saving their beloved master from his doom; the noble and touching bearing of Savonarola amid their frenzy and despair, and his subsequent removal to a dungeon with Frà Domenico, pursued by the insults and curses of the people he had loved and laboured for. Prof. Villari has carefully collected in minute detail the circumstances of the Friar's thrice-repeated trial; of the atrocious tortures to which he and the two brethren who suffered with him were subjected again and again, and of the false confessions and garbled depositions which were published as his, both before and after his execution, and used as a bait to wrest further disclosures from his companions in misfortune. It required more than a month to put together the documents composing his so-called confession, which, by the laws then in force at Florence, should have been written by his own hand. During this fearful time of suffering, the torture was constantly applied to him; nay, an eye-witness deposes to having seen him endure in one day fourteen turns on the rack; and Pico della Mirandola and Burlamacchi declare, that while stretched upon it, and while burning coals were applied to his feet, he was constantly plied with questions. It was by no means strange that a man of such nervous and delicate fibre, worn out with fasts and vigils, exhausted by the fervent preaching of eight years; a man whose very life seemed centred in his indomitable will, should have been driven by such a course of intolerable torments into occasional fits of wild and contradictory wanderings; into mystical rhapsodies and disjointed prophecies without number. But of the three points on which the question was applied to him for eleven consecutive days—namely, his religion, his political conduct, and his claims to prophecy—on one only, the last, did he once waver or prevaricate. In all else, the strong heroic nature of the man stood out in its rugged truth,—all the nobler by contrast with the fanatical sophistries which failed him, like a broken reed, in the hour of trial.

Prof. Villari publishes in his Appendix, among a variety of other remarkable documents, two *soi-disant* confessions of Savonarola, in parallel columns, differing greatly from each other on almost every head. They are both the work of a Florentine notary, Ser Ceccone by name, who, after being implicated in the Medicean conspiracy, took refuge in the Convent of San Marco, and assumed the part of a rigid *Piagnone*; although he ceased not to play the spy for the Duke of Milan, to whom he daily wrote in cipher, informing him of all that passed in Florence. This abject wretch offered the perplexed Signoria to compile a confession which should ensure the Friar's condemnation, yet be such as to be signed by his own hand. The result of his labours appears in these pages; and it is most probable that the former of the two confessions was read over to the luckless Friar, and afterwards skilfully exchanged for the later one, which bears his signature. In proof of this shameless violation of every shade of law or honour, Nardi, in his '*Storia di Firenze*,' relates, that long after the Friar's death and the return of the Medici, he, when staying at the villa of "a great and noble Florentine citizen," who had taken part in the Friar's trial, questioned his host as to the truth of the published confession." To which he replied, simply, in presence of his wife, that it was true that in the confession of Friar Jerome

some things had been struck out and some added, but with a good intent.

The last sad scenes of the moving tragedy are well and unaffectedly told by Prof. Villari. The two Papal Commissioners arrived from Rome on the 19th of May, to hunt the wearied victims to their grave. A third trial was instituted; tortures fiercer than those former "turns of the rack" again and again plunged the agonized Friar into delirious ravings, and his wild replies were duly dressed up and recorded by the infamous Ser Cecone; but "when they came to question him on the main points of his doctrine, then, as before, neither torture nor cunning equivocation availed anything. They asked him if he had ever sought to divide the Church of Christ; and, instantly, as though awaking from delirium, Savonarola made answer:—"Never! Unless, indeed, by that expression you refer to some observances intended as a check upon the life of my friars. But true it is, that of the excommunication I had no fear." After five more days of torment, both of soul and body, the peace of death was at last granted to the three sufferers. Once more a pile was built up in face of the grand Palazzo Vecchio, and above it rose a gallows, the outstretched arms of which, though thrice shortened in the course of its erection, to prevent the possibility of such resemblance, gave it the figure of a cross. Hither were led the three friars, and here were their tortured bodies at last done to death: Frà Domenico exulting as for a festival; Frà Silvestro resignedly composed; Savonarola himself firm, lofty, self-possessed, fervent in prayer, and prompt in answer to the trembling Papal Commissioner, who, after stripping him of his habit, confusedly pronounced the words, "*Separo te ab Ecclesiâ militante atque triumphante*,"—which last two words, being no part of the proper formula, were added by the Commissioner in the excess of his trepidation. With a clear, ringing voice, which none who heard it ever was destined to forget, Savonarola corrected the error, saying, "*Militante, non triumphante: hoc enim tuum non est!*"

We venture to predict success for this conscientiously-written and deeply-interesting work.

The Handbook of Roman Numismatics. By F. W. Madden. (J. R. Smith.)

WITH pleasure we receive this little volume, which appears to us calculated to fill up a want. No one will expect a numismatic book to prove lively study on a rainy day; yet it is remarkable how extensive is the literature which, during the last three centuries and a half, has been devoted to the history or the description of coins and medals, and how many volumes have issued from the press of the most famous printers of the day, in some instances adorned with illustrations from the pencil of the best living engravers. Need we mention how the skill of Aldus was brought to bear on this favourite subject at the dawn of the revival of learning, and how the pencil of Bartolozzi was evoked to give true representations of the finest Greek coins published in Gough's 'Seleucidæ'? Hence, in some degree it befell that for a long time numismatic works appeared only in folios and quartos, often so prolix in description as easily to shock or turn aside from the pursuit of the science the minds of an age more versatile in its pursuits, if not less steady in its mastery of such studies,—an indisposition which was naturally increased by the cost at which alone the more useful volumes could be obtained. Even now that the folios and quartos are consigned to their ancestral

shelves and dust, it may surprise some of our readers to hear, that a work, hitherto deemed indispensable to all students of Greek coins (that by M. Mionnet),—which, after all, is little more than a dry catalogue of some 20,000 such coins—thirty years ago the bulk of the French cabinet—with a vague addition of the probable money-value in France of the coins enumerated,—should rarely be obtainable under twenty guineas or upwards; and that many recent works (such as M. Cohen's on Roman, Col. Leake's on Greek, and Ruding's on English, money) fetch prices beyond the reach of ordinary students, while they are, at the same time, too heavy for easy transport from place to place by collectors. Hence the importance, in such a study, of the introduction of Handbooks devoted to the explanation of independent branches of the one great subject; arranged in such a manner as to exhaust what is known with regard to the especial branch of which the individual Handbook treats, and, at the same time, in a form so portable as to be carried, if needful, in the pocket of the collector. Such a Handbook is Mr. Madden's, comprising as it does in a condensed, yet not, therefore, in an unreadable form, all the student absolutely requires for a complete knowledge of Roman Coins, or to enable him to catalogue and arrange with accuracy a cabinet of such specimens. It is, in fact, a volume at once cheap and portable, and, at the same time, so well executed, that we speak advisedly when we say, that no Roman collector, unless he has the memory of a Niebuhr, can, in future, dispense with it.

Mr. Madden prefaces his work with an interesting Introduction, in which he gives a brief but accurate account of the Coinage of Ancient Rome, under its respective heads of Copper, Silver, Gold, and Bullion, and shows that, while each series came into use, in the order noticed above, there is no ground for the extravagant antiquity it has been the fashion of Italian antiquaries to assign to its commencement. In fact, it is certain that there was no coin in Rome earlier than the middle of the third century B.C., and that the earliest money was in the form of the As, or piece of one pound weight, with its subdivisions into the Triens, Quadrans, &c. Mr. Madden shows, as was, indeed, known before, that this weight of one Pound was of brief existence; that, in the time of Julius Cæsar, it had come to weigh only half-an-ounce; and that it was then supplanted by a new form of copper or brass money, in two sizes, called, respectively, the *Sestertius* and *Dupondius*, the former of which most probably represents what is now technically called the "large brass," and the latter the "second brass"; the name "*as*" having, however, been retained, whenever the so-called "second brass" happened to be made of pure copper. It must be remembered that "*sestertius*" and "*sestertium*" are not convertible terms, and that the second is not a piece of coined money, but the name for a sum of money, of a certain known value. In later times, we meet with a peculiar coin, smaller than the "second brass," but larger than the "third brass," bearing the peculiar title of "*Philippus Aureus*," and, in the time of Gallienus, though the *Sestertii* and *Dupondii* had altogether ceased as members of a regular series, there are still some small brass coins, which we may suppose to represent the *As*. Lastly, in the reign of Diocletian, we find a new copper coin called the *Follis*, which, curiously enough, gives the name for the copper money of some of the Mohammedan series even till recent times, together with a still smaller coin, bearing the title of *Assarius*,

a name which, slightly modified, occurs, as will be remembered, in the New Testament.

Mr. Madden goes on to describe the *Types* of the Denarii, whether Consular or Imperial, with some account of the portraits, titles, and surnames found upon them;—giving, at the same time, a valuable historical list of all the offices mentioned incidentally on Roman numismatic inscriptions, with some notice of the period when the Consuls ceased to be recorded on the coins, of the Proconsulate, Censorship, and of the curious title of *Princeps Juventutis*. Many of the types Mr. Madden mentions, afford, as might be expected, valuable illustrations and confirmations of history, such as the well-known one on the coin of Brutus, bearing the legend EID. MAR. (i.e. *Idus Martis*), (a type which, by the by, he maintains is genuine, against the judgment of a large majority of numismatists); and the denarii of Tituria, commemorating the Rape of the Sabines, and the crushing of Tarpeia under the shields. Thus, again, in the Æmilian family, we find a representation of M. Lepidus crowning Ptolemy Epiphanes, with the title TUTOR REGIS, while the successive conquests of England are recorded on the coin of Claudius with the legend DE BRITANNIS, on that of Commodus with BRITANIA, and on those of Severus and Caracalla with that of VICTORIE BRITANNICÆ; lastly, the overthrow of Jerusalem is commemorated on the JUDÆA CAPTA and JUDÆA DEVICTA of Titus and Vespasian. Some of the Imperial titles would provoke a smile were the subject less serious; thus, Didius Julianus, who was not on the throne a year, proclaims himself RECTOR ORBIS, and the two worst characters in the whole series, Caracalla and Elagabalus, call themselves PRINCES,—a legend about as true as that of the Royal House of Sardinia, which still appeared to claim Cyprus and Jerusalem as its fiefs.

Mr. Madden proceeds to give what many will consider the most useful portion of his book, very careful lists of the As and its multiples, and of the coins of the Roman families, and of the emperors, specifying under each name all the varieties struck by each ruler, with the degree of rarity, &c. attaching to each specimen. This portion of his work, which comprehends about 112 pages, offers a complete digest of all that a collector can want to know; as such, we cannot but esteem it a most useful contribution to our numismatic literature; and this, not so much because it exhibits many new views or much, indeed, that could not be found elsewhere, but because the student is spared the labour of individual research, often through large and cumbersome volumes, or dry and, it may be, unsatisfactory memoirs. Mr. Madden has, in these unpretending lists, done for the science of Roman Numismatics what on the far wider field of universal ancient history Fynes Clinton has performed in his admirable 'Fasti'; nor is his work the less creditable to him because the range of his subject is necessarily less wide.

Mr. Madden brings his useful volume to a close by a curious chapter upon the Mint-marks occurring on Roman coins. Our readers are doubtless aware that, in the range of numismatic science, no question has caused so much perplexity as the Roman mint-marks. It seemed impossible to reduce them to any consistent scheme, or to determine any reasonable proportion of the towns to which they are or might fairly be considered to be assignable. Much has, however, been done, in this direction, of recent years, especially on the Continent, and of these researches Mr. Madden has given us an excellent summary, with some new views

of his own. We must add, that the value of Mr. Madden's work is greatly increased by the addition of six plates of well-selected coins, of which he has given a separate description; and, in conclusion, we must express our hope that what he has done for Roman, he may, at some future time, be induced to perform for Greek, coins.

Results of a Scientific Mission to India and High Asia, undertaken between the years 1854 and 1858, by Order of the Court of Directors of the Honourable East India Company. By Hermann, Adolphe, and Robert de Schlagintweit. With an Atlas of Panoramas, Views, and Maps. Vol. I. (Leipzig, Brockhaus; London, Trübner & Co.)

It is well known in scientific circles that some years ago the Royal Society urged upon the East India Company the necessity of completing the Magnetic Survey of India: an undertaking which had for years been liberally promoted by the Court of Directors and engaged the closest attention of some of the most eminent of their officers. An outlay of a few hundred pounds, it was represented, would render available the result of the thousands spent ungrudgingly. However, this proposal, which would appear to have answered all the requirements of science, does not seem to have proved to the taste of those who at that time held the purse-strings in Leadenhall Street. Nothing more was heard of the affair until Alexander von Humboldt urged the late King of Prussia to exert his influence towards inducing the East India Company to reconsider the subject. Renewed communications now passed between the India House and Somerset House; and the Royal Society, delighted to see its wishes attended to at last, did not fail to send words of encouragement and approval. It appears that the Prussian proposal was accompanied by a request that M. Adolphe de Schlagintweit might be appointed to the task, and the Council of the Royal Society was asked to sanction this request; but that body, remembering that there were a number of competent and zealous Indian officers, some of whom had taken an active part in magnetic operations, wisely resolved not to recommend a foreigner when in doing so a slight would be offered to eminent men of their own nation. So far so good. But it ultimately came to pass, that Messrs. de Schlagintweit were charged with this scientific mission, "at the earnest recommendation of General Sabine and Sir Roderick Murchison, on the part of the Royal Society." This statement is one we have no wish to touch. The parties warned can do as they please—speak out or keep their counsel. There is, however, a suspicion abroad that the appointment was one of the most gigantic jobs that ever disgraced the annals of science.

Our readers are aware that in former years we have shown the injustice committed in appointing not one, but *all* the members of a foreign family to a duty which some of our Indian officers were both anxious and competent to perform,—the absurdity of sending Messrs. de Schlagintweit to report on climates, rivers and mountains, with which we were already perfectly familiar, and re-make collections of natural history, which were actually rotting in the cellars of Leadenhall Street. Our objections to this job,—we cannot call it by any other name,—were but ill understood in Germany; and the scientific men of that country, still irritated by the attacks made at the meetings of the Royal Geographical Society against Vogel and Barth, when far in the interior of Africa, were easily induced

to regard the disfavour with which Messrs. de Schlagintweit were treated by our press, as a continuation of those attacks originating in the same quarter and having its source in national prejudices. Even Humboldt began to despond, and tried to console his countrymen by bringing out a long-forgotten article in the *Quarterly Review* of 1816,—now a literary curiosity,—in which he is told that he has not mastered even the first rudiments of chemistry and mineralogy, quotes works he has never read, and is in fact little better than an impostor. It required the strongest assurances on the part of some of our most eminent men, that no national demonstration against German talent was intended before our Continental friends could be assured of the fact. After all, it was naively said, the Messrs. de Schlagintweit were not so much to blame for accepting a salary from both the King of Prussia and the East India Company,—nor were they;—abuse those who were simple enough to give them the money as much as you like, but wait for the results of the mission before you bring these travellers to trial. Well, the "results of the mission to India and High Asia" are now partly before the public, and the Germans have been amongst the first to perceive the disproportion between them and the lavish expenditure of money made to obtain them. What this expenditure may be we have no means of knowing positively; according to a well-grounded rumour, it is said to amount to 30,000*l.*, and looking at the magnitude of the operations, it can scarcely be less. We now learn from an authentic source that recently 7,000*l.* has been applied for in addition to this sum, in order to complete the publication which Messrs. de Schlagintweit have undertaken. The latter sum has not yet been granted; and we trust that before it is, scientific men will be consulted who have not received any Prussian decorations.

The three brothers, Hermann, Adolphe and Robert de Schlagintweit, reached Bombay in October, 1854, and till the end of the year kept mostly together, travelling across the country to Madras, whence they embarked for Calcutta. In order to scour a larger extent of territory they separated most of the time, which must have almost tripled the expenses, still further increased by different parties of their establishment being despatched in various directions to gather information or specimens of natural history. Were we to attempt to present even a faint outline of the various routes, the reader would be bewildered. The Itinerary furnished relates now to Adolphe, now to Robert or Hermann, now again to two of them conjointly, or to the whole party. The exploration of Sikkim fell to the lot of Hermann, who thus sums up:—

"My researches in Sikkim were made along the Singhalila ridge. The hostile disposition of the Sikkim Government since Dr. Hooker's and Dr. Campbell's travels utterly frustrated all attempts to obtain permission to travel in the lower parts of Sikkim. Even on the route which, at first, I thought it possible to follow unobserved, since it lay along a jungle and uninhabited ridge, I soon found that my kulis and workmen, of whom I had a great number for clearing paths and making tree sections for the collection, gradually disappeared. This seems to have been a device on the part of the Nepalese to make it impossible for me to continue my journey. But in spite of this and all other difficulties, I succeeded, partially at least, in effecting my purpose. Three weeks later a Nepalese guard presented itself, and, after allowing me to make a few marches forward, forced me to return."

We may remark, that since Hooker and Campbell's captivity several Indian officers have been more fortunate in obtaining permis-

sion to travel in Sikkim than M. H. de Schlagintweit. We single out Dr. Thomson, the celebrated Tibetan explorer, who is now again safely in England, and can, if he chooses, tell his own story.

The only really new territory visited was that entered after crossing the chains of the Karakorum:—

"Dr. Thomson had proceeded so far as to reach the Karakorum pass, but the Kuenlun, erroneously considered as the watershed between Central Asia and India, had hitherto remained a perfectly unknown and unvisited territory. Marco Polo, in the 13th century, only penetrated in these parts as far south as Káshgar. The success attained by ourselves, though scarcely anticipated, may be ascribed, in a great measure, to the precautions we took to keep all our arrangements for this journey as secret as possible. It was very important, for the purpose of avoiding immediate discovery, to follow a route not generally taken by caravans trading to Yárkand. Mohámmad Amin, our chief guide, therefore, proposed to us a direction, which we followed, and along which we travelled, without any trace of a road, from the Karakorum pass as far as Búshia. The countries we passed are certainly some of the highest of our globe. At these great elevations (14,800 to 17,600 feet, with passes above 18,000 feet) we very rarely found wood, and scarcely sufficient food for our horses; even water, though generally plentiful in summer, by reason of the melting of the snows, is occasionally obtainable only with great difficulty, when the days are more than usually cold. On leaving Ladák, we had nineteen horses with us, of which, however, we lost seven between Leh and Á Súmgal. On the 13th August, while crossing the Elchi pass, we were overtaken by a violent snow storm. The cold was intense during the night, and two of the horses, which were lying close to our very feet, died from the effects of it. Before our return from Khótan we succeeded in making purchases of fresh horses, together with six yaks and two Bactrian camels. As far as the southern foot of the Kuenlun the climate is always very dry, and, as must be expected from the great elevations, exceedingly cold and bleak. In these regions the rarefied air frequently became the cause of severe suffering for all our party, even the horses and our two Bactrian camels being decidedly affected by it."

The last journey of Adolphe in Turkistan terminated fatally at Kashgar, August, 1857. The various reports, all printed at full length in the volume before us, do not agree as to the immediate cause and particulars of his death. According to some versions, he perished through taking up the cause of some captive Bhot-Rajputs, and endeavouring to prevent their being put to death or sold as slaves; according to others, he was recognized, though in disguise, as a European by some fanatic Mussulmans, and murdered by them. Several months before this unhappy event took place, Hermann and Robert had returned to Europe; their "assistants had been allowed by the Government to continue their observations in the special branches of Physical Geography until March, 1858." To this date also extends the information received from their late brother's establishment, the members of which returned after his death from Turkistan.

There are people who believe that at least one of the nine large volumes of which the 'Results, &c.' are to consist may furnish convincing proofs that the authors really are what they profess to be—scientific travellers of the first order. Judging from the specimen before us, and what we glean from their previous publications, we do not share that belief. Dry technicalities will never pass off for the results of abstruse science. Always judging from what is already before the public, we hold the Brothers de Schlagintweit quite incapable of taking a comprehensive view of any given subject; and

we presume we are stating the general opinion of the scientific world correctly when we say that they can *take* observations, but not *make* observations. Place good instruments in their hands, and they will take astronomical, magnetic and meteorological observations with accuracy; but ask them to furnish a comprehensive account, founded upon their observation, or of what they may have seen with their naked eyes, and they will as thoroughly disappoint you as they did the King of Bavaria and those notables whom His Majesty had invited to listen to a plain account of what they had gone through. If there had been any necessity for employing them at all, Messrs. de Schlagintweit would have made good subordinates in a larger expedition, but they were remarkably ill-chosen for undertaking the lead of a great scientific mission.

It is rather embarrassing to find that the Royal Society has accepted the dedication of the *letter-press* of the work, whilst the Atlas, containing views and maps, has been inscribed to Her Majesty the Queen. By this act the Society has thrown, as it were, its protection around the authors, and sanctioned, in a measure, the attempt here made to palm off dry technicalities as the results of abstruse science. But this fact shall not deter us from pointing out the absolute worthlessness of much of the matter filling page after page. The book opens with General Introductory Reports, embracing an Address to Sir Charles Wood,—an Itinerary, with an Appendix about the Establishment,—Last Journeys and Death of Adolphe de Schlagintweit, and Transcriptions; the whole succeeded by Astronomical Determinations and Magnetic Observations.

In these introductory Reports one would have expected intelligible summaries of the different journeys; but one is greatly disappointed in finding the Itinerary, for instance, rendered perfectly bewildering by being broken up into so many sections and sub-sections, again disturbed by time-tables of the arrivals and departures of the different travellers. Nor is the matter communicated under this heading such as one would wish to meet in a brief summary, as the Itinerary professes to be. The authors constantly lose themselves in details with which every tourist, every guide-book to India, have made us as familiar as Bradshaw has with Europe. Mark the freshness of the following passage relating to that *unknown* region between Bombay and Madras:—

"During our journey through the southern parts of the Peninsula of India we had engaged a camel proprietor. The men keeping camels ready for hire are called *mokadams* in Bombay, *chāudris* in Bengal. This man supplied 20 camels (dromedaries) and six servants for the transport of our tents, collections, and our heavy luggage in general. All the delicate instruments were carried by *kūlis* on long bamboo sticks; the chronometers, throughout the journey, were carefully packed up in bags, thickly stuffed with cotton, as well to prevent the ill effects of unavoidable shaking, as to reduce as much as possible the variations of temperature. The *kūlis* were changed every three or four marches. Our mode of travelling was as follows:—In the evening the *mokadām*, with his *kūlis* and the greater part of the dromedaries, used to leave the encampment which had sheltered us during the day, and push forward in advance of us during the cool hours of the night. Early in the morning, between three and four o'clock, we ourselves set off on horseback, reaching the new halting place, already prepared by the party preceding us, at about ten o'clock. In the afternoon, when the sun's rays were somewhat tempered, we made our usual exploration of the immediate vicinity. In jungly districts we occasionally rode dromedaries, instead of horses."

Equally entertaining is the Appendix about

the Establishment, where there are actually biographical sketches, written in the most matter-of-fact style, of all the observers, interpreters, collectors and servants, filling seven quarto pages. Some of these sketches rather remind us of the contents of the dirty pieces of paper which on our arrival at the Indian ports natives force into our hands, recommending their services as washermen, valets, or something worse. Those bold-hand writers who are so accommodating in giving the poor natives a character when they have none might be glad of the following model!—

"Chéji, a Lépcha from Tassidingin, in the Sikkim Himalaya, afterwards a settler in British Sikkim, was originally engaged as a plant collector; but he soon distinguished himself so well that I (Hermann) made him my chief interpreter for Bhütia and Lépcha. He was with me a whole year, and from Assam accompanied me to Bhutan, where again he was most useful in my interview with the head Lāma of Nārigūn. When sent forward with two Bhütia companions towards Tāuung, however, he did not succeed in making more than a few marches."

We have purposely gone into these details to show how this volume is filled with a vast amount of absolutely useless matter. Exactly the same want of discretion is exhibited in placing the astronomical observations before the public. Not only have we here the latitude and longitude of many places as correctly laid down as Greenwich itself—for instance, Calcutta—but every sight taken is printed off,—so that what might have been condensed into one line, or even half a line, is spread over one or two pages, sumptuously printed. A midshipman's day's work stereotyped would be an almost exact fac-simile. Except in cases where the observations of the Brothers de Schlagintweit differed most materially from the results generally arrived at, none of these details need have been given; one-half of the volume might thus have been condensed into a few pages, without the slightest disadvantage to science. Thus geographers, whilst rejecting all these useless observations, will be glad to be able to go over the data furnished for the change proposed in our maps with respect to Western Tibet, which is stated by our authors to be considerably more to the west than has hitherto been shown.

The completion of the Magnetic Survey of India being the primary object of the mission, the most ample details are given. As an important fact may be mentioned the particular modification of the lines of intensity where they pass through the interior of India Proper, and all along the northern parts of the Himalayas. Three beautiful maps illustrate this part of the work.

We are glad to be able to speak with more satisfaction of the Atlas than of the letter-press. The different views of the higher districts of Asia are beautifully executed, and will be acknowledged to be faithful representations by those who have traversed these charming districts. One of the most characteristic pictures in the present fascicle is the Cane Suspension Bridge leading over the Temshang River in the Khassia Hills. Our readers may perhaps remember a graphic description of one of these curious contrivances in Dr. Hooker's 'Himalayan Journals.' The present is 312 feet long, and supported entirely by some fig-trees on the banks. It is certainly a singular fact, that whilst the natives of both America and Asia have built suspension bridges from time immemorial, Europeans should have only lately adopted them.

The ethnographical part of Messrs. de Schlagintweit's work will be illustrated by a series of 275 plastic facial casts, taken from living people. These casts have been already completed, and will give a fair idea of the physio-

gnomy of the different races; but we do not grant their possessing the high scientific importance claimed for them, being confined to the face and not taking in the skulls, to which a far greater share of attention belongs than to mere physiognomic differences. However, as far as they go, they are interesting and instructive.

From the few extracts given it will be seen that our authors make no attempt whatever to communicate their ideas and observations in any save commonplace language. The general public will find their work unreadable, and men of science will sigh when having to wade through innumerable pages before they can attempt to separate the little wheat from so much chaff.

NEW NOVELS.

A Family History. By the Author of 'The Queen's Pardon.' 3 vols. (Hurst & Blackett).—A dismal record of a dismal life—the autobiography of a morbid, sensitive, but unappreciated woman. Neglected and unhappy at home as a little child, persecuted and tormented at the house of some maiden aunt as a girl, Elizabeth Neville, in despair, "goes out as a governess," and never was any one less fitted to bear the many little roughnesses of life with fortitude and resignation. A governess in a novel is invariably a poor, miserable, nervous creature; given over to the scorn and contempt of her fellow mortals, and apparently created for no other purpose than to submit to the whims and caprices of her employers. Elizabeth Neville is one of the worst specimens of an ill-used governess we have ever yet had the misfortune to meet with in any work of fiction. Instead of taking any interest in the progress of her pupils, or trying to engage the good-will and confidence of their parents, she spends her time in watching who shakes hands with her and who does not—whether she has a fire in her room, and whether the servants treat her with respect. If she is asked to join the family circle in the evening, she is a victim because she does not engross the attention of the whole party, and is not expected to take the lead in conversation. If, on the other hand, the lady of the house kindly hints that Miss Neville may prefer to have her evenings to herself, she employs an hour in writing some verses, called 'The Cry of the Broken-Hearted,' and thinks "it is no wonder that so many governesses go mad!" Sometimes she complains because she is expected to visit some friend of the family with whom she resides, and is treated as a "poor dependent," while at others she is (very naturally) left at home to take care of the children, and in consequence broods over her wrongs and "the degradation of being a governess" till she is half crazed. Now, there can be no doubt, that a governess has what the maids call "a great deal to put up with": but who could not—in whatever station of life they may be placed—find something to complain of if they chose to set about it systematically and make a trade of it? Why don't the cooks of England rise in a body and write pamphlets, to prove that they are subjected to the constant heat of the kitchen fires and to the tyranny of hungry masters and mistresses? Would not the obvious answer to such a complaint be, "Then why on earth be a cook? Why not take a house-maid's place, or a parlour-maid's, or a dairy-maid's? but why profess to be a cook and then grumble because you are treated as a cook?" Where the ill-used governesses take their stand is, on being "lady-like and well-educated," or "lovely and delicate." They quite forget that they are human beings, whose work it is to do their duty in the state of life in which God has placed them. A merchant fails, a doctor dies, leaving a widow and a large family unprovided for: a clergyman in a small country parish has not the means of supporting his children in the comfort and luxury he could wish, and one of the daughters nobly sacrifices herself and takes the situation of a governess. However well-born she may be, however well-educated, she is for the time being a *governess*, and nothing but a *governess*. It is a very brave and a very praiseworthy thing to do, if done heartily, cheerfully

and thoroughly. She sells her time, her talents, her accomplishments to the parents of her pupils for a certain fixed sum, which it is presumed she considers an equivalent for her services or she would not have agreed to the bargain. She might, perhaps, be more comfortable at her own home, but in all probability not half so comfortable so far as food, clothing, firing and attendance may be reckoned as comforts. It is not likely her pupils will be as fond of her at the end of six months as her own little brothers and sisters were; and the friends and relations of her employers do not feel inclined to show her the same attention that the friends of her own father or mother might feel bound to do; but why make such a fuss about it? There is not the least occasion to have a nervous fever, or to go mad, or to write a novel, because life is not that perfect delirium of happiness we should like it to be, or because we are not beloved and caressed wherever we go and by everyone we chance to meet with on our road. If once a governess could make up her mind that there is nothing degrading in earning her own livelihood, but, on the contrary, that a love of honest independence and a life of toil is always an honourable and a dignified profession, perhaps she might be induced to take more interest in her work for its own sake, and to think rather less about herself and her own merits and her "wounded feelings." She might then be a useful, estimable, and even a happy and beloved woman, and her pupils would rise up and call her blessed, instead of regarding the governess with contempt and ridicule, as we cannot be surprised to hear is too often the case with those very ladylike, superfine, fretful persons of whom Miss Neville is scarcely an exaggerated portrait.

Adrift; or, the Rock on the South Atlantic. From the Diary of Harper Atherton. Edited by Frank Fowler. (Saunders, Otley & Co.)—This is a wild tale of adventure with pirates, hair-breadth 'escapes, with fatal incidents enough to keep the reader's pulse beating much faster than is usually the case over a novel; in fact, it is difficult to divest the mind of the impression that the earlier portion is quite true, and that the facts are narrated much as they actually occurred—the Rock of Tenerife is, we are assured, a grim reality. The adventures on dry land are very inferior to those on the ocean, and the final scene of the pirates' doom and the escape are blurred and not nearly so effective or true-looking as they ought to have been. 'Adrift' is, however, a story that will not give rise to any criticism until the reader has read it through, and its briefness will be one of its subjects of complaint;—it would have been better to have worked the story out at greater length, as the incidents needed a larger space: the canvas is not wide enough for them.

OUR LIBRARY TABLE.

The Climate of England. By G. Shepherd. (Longman & Co.)—Mr. Shepherd is a civil engineer, and author of a work on the application of sewage to agriculture. His work has two great subjects: the theory of the dependence of the weather on planets and comets, and the advantages of sewage manure. On the first point we need say nothing: Mr. Shepherd publishes his own meteorological almanac quarterly, and, if his theory be true, the public will soon find it out by the verification of his predictions. There is nobody who gains honour in his own country so soon as a weather prophet. Murphy did but foretell the coldest day of January, 1838, successfully, and a week had not elapsed before the police were at his publishers' door to teach the great maxims of "one at a time" and "first come, first served" to the crowd of eager purchasers. But, on the other hand, there is nothing so difficult to move as an agricultural or commercial interest, when distant evils only are in question. The filth of our towns not being yet unbearable, and the supplies of manure from other sources not wholly insufficient, our farmers care as little about the sewage question as the manufacturers did about the cotton question, so long as the slavery volcano was good enough to content itself with grumbling underground. But we must say for the farmers that they take a larger

view than the manufacturers. There is a little disposition to look a-head, and there will be more. We recommend Mr. Shepherd's sewage facts to attention.

A Naval Biographical Dictionary: comprising the Services of all Living Naval Officers, Admirals, Captains, Commanders, Lieutenants, Masters, Engineers, Mates, Second-Masters, Chaplains, Naval Instructors, Medical Officers, Paymasters and Assistant-Paymasters, together with those of the Officers of the Royal Marines. By William R. O'Byrne, Esq. A New and Enlarged Edition. Vol. I. (O'Byrne Brothers.)—Eleven years have elapsed since the appearance of the first edition of the 'Naval Biography,' during which time Mr. O'Byrne congratulates himself that, "however egotistic the assertion on his part may appear," he has caused "the services of every officer, from the admiral to the lieutenant, to become as 'household words.'" This is a little too much in the way of eulogy; and even had it been just, Mr. O'Byrne should have induced a friend to blow the trumpet for him. Still Mr. O'Byrne's is a serviceable collection of facts, and we recommend it to those who desire to obtain a complete view of the strength of the naval service, or the achievements of any individual officer. At the same time we would suggest to Mr. O'Byrne that greater care should be taken by his assistants to avoid trivial errors. For instance, we see Bergholt, in the county of Suffolk, figures as Bergtrott. The mistake manifestly arose from the illegible handwriting of the person who furnished the materials for the notice. Reference to a topographical dictionary would, however, have precluded the blunder. We could point to scores of such instances of carelessness. Of course, they are "mere trifles," but mere trifles may indicate the absence of the particular quality which is needed in a particular work. Mr. O'Byrne must stir up his "readers for the press."

The Economy of Cookery, for the Middle Class, the Tradesman and the Artizan. By Volant and Warren. (Diprose & Bateman.)—Having looked this book half-through, and experienced much pleasure and profit therefrom, we can safely recommend it to a dinner-eating public. It contains, as it professes to, the most easy, practical and economical preparations ever yet introduced to complete the domestic education of the English housewife and the cook. If Laura Matilda would read it with the interest she gives to sensation novels, that unsatisfactory dinner, with marital temper to match, of the other day, would not be likely to occur again.

Cassell's Popular Natural History. Mammalia. Vol. II. (Cassell, Petter & Galpin.)—We have already commended the first volume, and now willingly introduce to notice the second. With such amply illustrated books within popular apprehension and popular purchase, there can now be no excuse for ignorance respecting the common facts about the commoner animals. Some of the plates, as those of the sheep in particular, are remarkably good for the class of publication in which they appear. Others again are somewhat inferior, a difference to be expected, but which might probably be avoided.

Transactions of the North of England Institute of Mining Engineers. Vol. IX., Part VI. (Newcastle-on-Tyne, Reid.)—The present Part of this useful work to mining engineers contains an elaborate paper, 'On a Part of the Carboniferous Limestone Series in North Northumberland,' with large coloured sections, and concludes with a brief 'Memoir of the late Mr. Thomas John Taylor,' a remarkable man for his locality and line of life. He combined science and fair scholarship with the professional avocations of a mining engineer, and to him we have always looked as one of the best technical expounders of scientific topics connected with coal-mining. He died in the fifty-first year of his age, highly respected in the North of England coal-mining district. We have spent pleasant hours with him aboveground and profitable hours underground. He could superintend a mine, discuss science, quote Lucan, and kill a trout,—qualifications to respect rarely found combined in one man. As a flyfisher, he observed as well as sported,—for while the illusive fly played upon the waters of the River Coquet, the angler was taking note of the

action of streams and currents, and he gathered up many important facts relating to the forces of moving water. Altogether, he was one of the best specimens of the engineer, united with the well-informed gentleman, which the North of England has produced. Professionally, he was a "viewer,"—the name given, in and around Newcastle, to the chief officer of a coal-mine. Perhaps the most important project to which he directed his talents was one for the drainage of a large deposit of coal along the northern bank, and immediately under the bed of the River Tyne. This deposit is at present inundated, and therefore unavailable. Mr. Taylor's death has greatly impeded the prospect of the realization of this valuable measure.

Elementary Principles of Fortification. By John T. Hyde, M.A. (Allen & Co.)—It was the original intention of Mr. Hyde simply to revise Major Straith's 'Essay on Fortification'; but as his work progressed he found that a new work was growing under his pen, and he therefore re-cast his commentary in an original form. Straith's book, however, gave a basis to his dissertation, which has been amplified by citations from Sir Howard Douglas, Sir Charles Pasley, Col. Jebb and Col. Humphrey. The author's plan is to commence with notes on the powers of attack, mainly as represented by artillery, and thence to follow through the range of defensive appliances. Recent publications of this class have been so numerous, that it becomes unnecessary to say more than that Mr. Hyde has compiled a very simple and lucid manual, which will open up a long vista in the science of fortification to the most ordinary beginner, if his beginning be really in earnest.

England and Europe: a Discussion of National Policy. (Bentley.)—Mr. Louis, it appears to us, has elongated an article for a Quarterly Review into a superfluously ponderous volume. He attempts a stately argument to prove that England is hazardous, by her present foreign policy, the sacrifice of her ancient greatness. He assures his readers of that which, no doubt, they have, many a time and oft, heard from the political journals; and, in a Sidonian way, demands a race of statesmen with a "purpose." We are consoled to learn that, in accordance with the Shakspearian prophecy, the four quarters of the world may vainly assail England, if the "little" world do prove but true; yet how to be "true" is the question. The answer volunteered in these 400 pages of diluted "leading-article" is rather perplexing than satisfactory. Mr. Louis, we should say, admires Cromwell, but has not mastered the style of Cromwell's Secretary.

Wilfrid and Mary; or, Father and Daughter: A Domestic Comedy, illustrative of American Slave Life. By Theodore St. Bo'. (Edinburgh, Macphail.) There is nothing comic in this "comedy," except a passage or two into which the author has endeavoured to put pathos; the whole is not only silly, but coarse. Many of the expressions are disgusting. Mr. St. Bo' wishes to protest against the vices of slavery; and if the following is a picture of slave life, we forgive his imbecility for the sake of his good intentions. Swanston, the overseer, is the speaker:—

SWAN. I'll require another whip, you see; This one is worn to shreds—away to shreds. That blasted lubber, Kimbo—the lubber That he is!—I caught him, the other day, Helping to fill a black woman's basket. But I made him yell—I made the lubber yell: You'd think he was a demon out of hell!

MARY (aside). Which is the demon, I should like to know?—

Is't him of ebony, or him of snow?—

WILF. Well, Swanston, whatever you opine is best. And, look ye, in the store-room you will find Plenty more of these useful articles.

(Handling the old whip.)

But deal it sparingly on poor Kimbo: He is a fine-looking fellow; and, you know, He rather is a favourite of mine.

SWAN. (aside). That's the reason why I takes it out of him.

(To WILFRID.) Well, sir, we'll start to-morrow, if you please.

On the far-off plantation. (Aside). By jabbers,

If I don't play up with them! It's too far

Away from home for you to interfere;

And by the holy crucifix, if I

Don't make them smart, may I never die.

[Exit.]

—It is really too bad for our Scotch friends to send us such trash as the above. If they continue

to do so, they will supply their own postscript to Mr. Buehler's second volume.

The Rural Harp: Poems and Lyrics, National, Pathetic and Humorous. By Patrick Reilly. (Drogheda, Hughes).—The most we are able to say of Mr. Reilly is that, unlike so many of his poetical countrymen, he is quite harmless. He appears to be a country schoolmaster; but his verses do more honour to his heart than to his head.

Mr. Bohn has added to his "Scientific Library," *Elements of Experimental and Natural Philosophy*, by J. Hogg, and to his "Illustrated Library," Capt. Marryat's *Pirate, and the Three Cutters*.—Among other new editions, we have on our table, *Notes on the Management of Chronometers*, by Capt. Shadwell (Potter).—*Joyce's Scientific Dialogues*, revised by J. H. Pepper (Simpkin).—*The Semi-Attached Couple*, by the Author of 'The Semi-Detached House,' in Mr. Bentley's "Standard Novels," and *Amy Fairfax*, by S. R. T. Mayer, (Ward & Lock).—Our recent Reprints include, *The Golden Treasury of the Best Songs and Lyrical Poems in the English Language*, selected and arranged, with Notes, by F. T. Palgrave (Macmillan),—from "Good Words," *Memoirs of an Unknown Life* (Strahan & Co.),—*Social Science, being Selections from John Cassell's Prize Essays* (Cassell, Petter & Galpin),—*American Slavery and Colour*, by W. Chambers (Chambers),—*Tales in the Cabin; or, Nights on the Ocean*, by A Ship's Surgeon (Ward & Lock),—*Maid of Honour: a Tale of the Court of George the First*, by F. Williams (Kent),—*Essays on the Dwellings of the Poor and other Subjects*, by R. Usher (Longman),—*Three Letters to the Editor of 'The Cornhill Magazine,' on Public School Education*, by Paterfamilias (Smith, Elder & Co.),—*The Uprising of a Great People: the United States in 1861*, abridged from the French of Count de Gasparin (Low),—*Jest and Earnest; or, the Ludlum Papers*, by G. Turner (Kent),—*Discourses on the 'Essays and Reviews'*, by the Rev. R. Ainslie (Manwaring),—*The Autobiography of a Joint-Stock Company*, edited by E. P. Rowell (Ward & Lock),—*Guide to Country Lodgings in the Neighbourhood of Leicester, &c.*, by F. T. Mott (Allen),—*The Irish Convocation, should it be Revived?* by the Dean of Down (Hamilton),—*The Grammatical Analysis of Sentences*, by C. P. Mason (Walton & Maberly),—*The Turkish Bath*, by D. Urquhart (Wilson),—*Mr. Price on Venetia* (Ridgway),—*Mr. Mills's Speech on Colonial Military Expenditure* (Ridgway),—and Dr. Pridham's *Observations on the Treatment of Asthma* (Churchill).—A few more new translations may be handed over to the reader: Goethe's *Torquato Tasso*, translated into English Verse (Nutt),—*M. Arago's Treatise on Comets*, translated from the Original, and edited by Admiral Smyth and R. Grant (Longman),—and *Horace, The Art of Poetry*, literally translated into English Verse, with Notes, by H. G. Robinson (Westerton).—In Second Editions we have Dr. M'Nicoll's *Handbook for Southport* (Churchill),—*The Season: a Satire*, by A. Austin (Manwaring),—*English Grammar: including the Principles of Grammatical Analysis*, by C. P. Mason (Walton & Maberly),—*Shaving a Breach of the Sabbath, and a Hindrance to the Spread of the Gospel*, by Θεολογος (Saunders, Otley & Co.),—*Charities: Suggestions as to their Accounts*, by J. Waddell (Nisbet),—and Mr. Slater's *Reasons for an Alteration in the Legal Tender, and a Reform in the Currency* (Wilson);—a Third Edition of Dr. Brinton's *Medical Selection of Lives for Assurance* (Layton),—a Fourth Edition of M. le Chevalier de Chateilain's *Fables de Gay* (Rolandi),—a Fifth Edition of the Rev. E. Sidney's *Life of the Rev. Rowland Hill* (Wertheim),—a Sixth Edition of the *Practical Swiss Guide* (Simpkin),—a Fifteenth Edition of *Black's Pictureque Tourist of Scotland* (Black),—a Thirty-ninth Edition of the Rev. Dr. McCulloch's *Course of Reading* (Oliver & Boyd),—and a Forty-first Edition of Dr. McCulloch's *Series of Lessons* (Oliver & Boyd).—To these lists we must add, Vol. I. of *The Technologist*, edited by P. L. Simmonds (Kent),—*The Official Illustrated Guides to the Great Northern and North-Eastern; and North British Railways* (Griffin, Bohn & Co.).

LIST OF NEW BOOKS.

Aimard's *The Freebooters*, fcap. 8vo. 2s. bds.
Ancient Domestic Architecture, Dollman and Jobbins, 2ss. 6d.
Archbold's *Irremovability of Paupers from Unions*, 12mo. 1s. 6d.
Bowman's *Introduction to Practical Chemistry*, 4th edit. 6s. 6d.
Bunsen's *Painting in Oil Colours*, by Murray, 4ss. 12s.
Cobbold's *on the Book of Ecclesiastes*, by Glasgow, 8vo. 18s. cl.
Cayser's *1,000 Arithmetical Tests*, 12mo. 1s. cl. cloth; ANSWERS to, 12mo. 1s. 6d. cloth.
Christy's *Minstrel's Benjo Tutor*, 4to. 1s. 6d.
Conner's *Culverley Rise: a Tale*, 3 vols. cr. 8vo. 31s. 6d. cl.
Dickens's *Great Expectations*, 3rd edit. 3 vols. cr. 8vo. 31s. 6d. cl.
Fenwick's *Mechanics of Construction*, 8vo. 12s. cl.
Francis's *Beach Rambles*, cheap edit. 16mo. 2s. 6d. bds.
Gibson's *History of the County and City of Cork*, 2 vols. 8vo. 21s.
Gloriously Beautiful: a Tale, small 4to. 3s. 6d. cl.
Horry's *New Bankruptcy and Insolvency Act*, 12mo. 1s. 6d.
MacKenzie's *History of Scotland for the Young*, 12mo. 1s. 6d. cl.
M'Glechrist's *Roseallan's Daughter: a Tragedy*, 12mo. 2s. 6d. cl.
Mill's *Considerations on Representative Government*, 2nd ed. 9s.
Nuttall's *Diamond Dictionary of the English Language*, 1s. 6d. cl.
Parke's *Tracts and Addresses*, fcap. 8vo. 3s. 6d. cl.
Piedmont and Italy, illust.: Letter-press by Costello, 2 vols. 4ss.
Proceedings at Laying Foundation-Stones of Wallace Monument, 1s.
Procter's *Legends and Lyrics*, Vol. 2, 2nd edit. fcap. 8vo. 5s. cl.
Recollections of a Beloved Pastor, 8th edit. square, 3s. cl.
Russell's *Traffic Process*, fcap. 8vo. 2s. 6d. cl.
Secret History of Court of France under Louis XV., 2 vols. 21s. cl.
Shack's *Marvels of Pond Life*, cr. 8vo. 5s. cl.
Social Science, *Prize Essays by Working Men and Women*, 3s. 6d.
Spoonner and Humphreys's *Lectures on the Bible*, 8vo. 1s.
Stable Management, by Harry Hoorer, cheap edit. 12mo. 2s. 6d.
Swaine's *Objections to Doctrine of Israel's Restoration*, 3 ed. 2s. 6d.
Taylor's *Enquiry relative to the Climate of Pau*, 3rd edit. 7s. cl.
Trench's *Commentary on Revelation* ii. 111., 8vo. 6s. 6d. bds.
Who is to have it? cheap edit. 12mo. 2s. bds.
Williams's *Literary Women of England to the Year 1700*, 8vo. 18s.

[ADVERTISEMENT].—STATE OF THE CROPS.—THE GARDENERS' CHRONICLE AND AGRICULTURAL GAZETTE OF THIS DAY, contains a full Report of the State of the Crops throughout the Country.—Order of any News-vender. A single copy sent on receipt of six stamps. Office for Advertisements, 41, Wellington Street, Covent Garden, W.C.

THE SOCIAL SCIENCE CONGRESS.

Dublin, Aug. 15, 1861.

THIS week has been a busy and a brilliant time for Dublin. The city is full of strangers—among them many notorious and some illustrious—and society is more animated and talkative than it has been since the week of the Yelverton trial: the topic of general conversation running round from the badness of our August weather, and the sudden death of poor Catherine Hayes, to the progress of education, the condition of the Lifey, and the personal appearance of Lord Brougham. The personal interest is perhaps stronger than the scientific. We are all asking about the sunshine. We are all thinking of Madame Hayes, and wondering who will ever sing for us again 'O, breathe not his Name,' and 'The Harp that once in Tara's Halls.' Next to the dead singer, who enjoyed a popularity in Ireland which the Saxon can hardly understand, Lord Brougham has been the lion of the hour. Strange to say, the great orator and lawyer, traveller and philosopher, has now paid his maiden visit to Ireland, and he seems as anxious to see everything here, as everybody is unquestionably eager to see him. The streets are alive with gay and curious crowds; for the Irish love a sight as much as the French or any other Celtic race, and the streets are busy with the rattle of jaunting cars, and their wonderfully polite and inquisitive drivers. Breakfasts, dinners, evening receptions and excursions into the cheering country round the metropolis of Ireland, are on the lists for every day. Many, I fear, will find Malahide Castle pleasanter than the rooms of the Four Courts; and some visitors will probably be found in the Wicklow Mountains, when they ought, by their obligations to Social Science, to be warmly interested in the criminal population of Belfast or in the sewerage of Cork. There is abundant temptation, as well as abundant work, before the Congress.

Last night Lord Brougham delivered his annual Address. The King's Room, in the Mansion House, was filled with the best society of Dublin. The Lord Lieutenant and all the distinguished visitors were present. Lord Brougham was very warmly welcomed. His speech was very long and full of detail; useful as to statement rather than eloquent as to composition or utterance. The following paragraphs, which I take the liberty to characterize by headings, contain the substance of what his Lordship said:—

COMPLIMENTS TO IRELAND.

We are in the great capital of Ireland, renowned for having given to the world men illustrious in all the departments of science and art, as well as of arms. But it is to me individually a painful reflection that the most eminent of these, and whose

friendship was my comfort and my honour, I cannot meet in this my first visit to the country adorned by their transcendent genius—Grattan, Plunkett, Wellington, Wellesley—the great patriot, the consummate orator, the first of warriors, foremost, too, among statesmen, and the illustrious head of his house, the greatest of all who ever ruled over Ireland—all of these I have been doomed to outlive, and to the dispensations of Providence it is fit we should be resigned. But the loss of such men to their country is grievous, and more especially of one whom I have named. The others had accomplished the high work to which they were severally called, and left their bright example to guide us, and their success to cheer; but of the great Duke, whether in peace or in war, whether we look abroad or at home, while we cherish the immortal memory, we feel the loss not to be repaired.

SLOW PROGRESS OF TRUE SCIENCE.

We are met by the complaint that few of the plans proposed by us have been accomplished, and that, of the measures originating in our labours, many have failed to pass through the Legislature. But the progress of all the sciences and arts is slow. In the whole circle of science you find gradual progress to be the rule. Thus the vast changes which Newton made in the mathematics and in physical science were effected after others had made a near approach to the same point. The calculus, in itself so great an extension of analytical science, and in its consequences producing such a revolution in all the exacter sciences, had above a quarter of a century before its invention, been nearly discovered by Cavalieri and Roberval, and still more nearly by Barrow; while the doctrine of gravitation and its explanation of the heavenly motions had been approached—at any rate, had the way prepared for it—by Galileo, Kepler, Huyghens, Borelli; and even his optical discoveries had been partially anticipated by Krontaud of Prague, and Antonio, Bishop of Spalatro. The science of chemistry, from the dreams of the alchemist to the erroneous theory of Stahl, made slow progress, and by successive improvements was freed from those errors, and grew into the science which Black, Priestley, Lavoisier, and Davy brought to its present state. The great rule of gradual progress governs the moral sciences as well as the natural. Before the foundations of political economy were laid by Hume and Smith, the French economists had made a great step towards it, and Turgot had himself worked, and as a Minister had patronized the labours of others in the same direction.

SLOW PROGRESS OF POLITICAL TRUTH.

In constitutional policy, see by what slow degrees the great discovery of representative government has been made from its first rude elements—the attendance of feudal tenants at their lord's court, and the summons of burghers to grant supplies of money. Far from being impatient at this slow progress, we ought rather to reflect that the sure advance of all the sciences depends in a great measure upon its being gradual. But the common law of our nature, which forbids the sudden and rapid leaping forward, and decrees that each successive step prepared by the last shall facilitate the next, is in an especial manner of importance and of value in the social sciences, which so nearly affect the highest interests of mankind. Here our course, to be safe, must be guided by the result of experience, and must always be of a tentative kind. We must even be prepared to change our direction and our pace, and to retrace our steps when we find we have gone too far in a wrong direction. The skilful navigator, when steering on an unknown coast, after taking all precautions to obtain information respecting it, having no chart, or none that can be relied on, proceeds with the lead ever in his hand, and the glass at his eye, lies to, when he can, at night, or in a fog, and has his sail and his helm always ready to change his course on the least indication of peril. The safety of his ship and crew depends upon such precautions, and the safety of the community depends upon all proposed improvements, which are changes, being first most maturely considered, and, when adopted, being carried into execution by such advances as shall give time for correcting

errors, or stopping short, or altering the course pursued, when actual experience proves it to be wrong. Take an example from the great change in our jurisprudence which I had the satisfaction of bringing about in 1851, by the Act for the examination of parties in all civil suits. Above twenty years before I had strongly urged the change of the law of evidence in this and other respects. Various improvements had been effected rather by judicial decision than by state—by what Mr. Bentham used to call “judge-made law.” Then, in 1843, Lord Denman carried a Bill for removing the objection of interest to a witness’s competency, which I had in vain proposed fifteen years before. In 1842 the proposal was renewed that all objection of interest being proposed to be removed, the parties should themselves be made competent. But the Bill passed, confined to witnesses not being made parties. It was foretold by the objectors that perjury would be increased. The Act passed, and there was no increase of perjury. I then brought in the Bill for the examination of parties, and it passed without much opposition, though the Chancellor of the day resisted it, and had it referred to a Select Committee. But I never should have carried it had not the first step been taken by the Bill of 1843, and the experience under that Act shown how safely we might go further. The Law Amendment Society, the precursor and the ally of our National Association, examined minutely the working of the County Courts Act in the examination of parties. It circulated queries to all the Judges of those Courts, and their answers proved wholly favourable to the plan. I had thus for the Bill the powerful support of actual experience for several years; and I now have hopes of being able to complete the great change by a further step, extending it to criminal cases, at least so far as giving the defendant an option of being examined if he pleases, and, of course, submitting himself to the sifting of cross-examination. I conceive that the history of this great improvement in our jurisprudence throws a strong light upon the position that changes in measures of social improvement generally are best effected by degrees, and that the gradual progress of such improvement is not to be lamented, but rather in the bulk of instances to be deemed beneficial and safe.

SAFE PROGRESS TRUE PROGRESS.

He is no friend to the advance of social science in any of its branches who hastens forward with heedless, unreflecting speed, despising all that is gained because it is less than all that he desires, and looking down with contempt upon those whom he passes in his impatient course. This spirit, so inimical to real, solid improvement, sometimes is the fruit of zeal without knowledge, but not unfrequently arises from mere selfish desire of distinction, when a man, sacrificing a great cause to his personal ambition, becomes a public enemy—

Vain-glorious, who through infamy seeks fame.

For this is one of those occasions in which vanity, from being, as it commonly is, a harmless folly, only ridiculous, rises into a crime, becoming selfish, unprincipled, pernicious, and disgraceful. It is, however, fit that we now consider the progress that has been actually made since our last Congress; and here I would first of all mark the very gratifying change that has taken place of late years, and to which our labours have materially contributed—the change in the economy and management of their estates by the owners of property. The improvements in agriculture have obliged landlords to make a great outlay upon draining and farm buildings, highly beneficial, no doubt, to themselves, and therefore well bestowed; but in most instances so difficult as to require the help of loans. Yet, at the same time, they have generally contributed in a degree formerly unknown to what could afford no pecuniary benefit, the building and support of schools, improving the dwellings of the poor, and the building and repair of churches, thus spending most upon these excellent objects when they had least to spare. As a learned and reverend friend of mine, Mr. Elwyn, has observed:—“It is one of the happy effects of advancement in any path that it begets a zeal for advancement in other directions, and he who begins by improving his estate ends in

wishing to improve the people upon it and near it.” Nothing can be more delightful than to contemplate this progress in classes, generally speaking, the most reluctant to approve changes, because the slowest to believe in their expediency, or even safety; and it affords the strongest reason for extending to the agricultural labourers and their children the benefit of those wholesome restraints of late years imposed upon the improper employment of labour in other branches. It is a most consolatory circumstance to all friends of social improvement, and of the sound and liberal principles which insure its progress, that the reign of these principles seems to be established universally. We cannot, indeed, say with the great poet, when expressing his thanks for the Restoration,—

At home the hateful names of parties cease,
And factious souls are wearied into peace.

But at least they are tired of resisting the truth, and thus we find that upon the most important questions there is now little to distinguish conflicting parties, all being alike the professors of opinions which but a few years ago formed the main ground, or, it might be, the chief pretext of their differences. Thus, the stoutest adversaries of secret voting (perhaps well advised in their opposition) have lately insisted upon introducing it at one of our Universities, with an intimation that it ought to be generally applied; for the voting by signed papers, though its proposed object be to save the voter’s journey, of necessity insures his escape from observation.

REFORMS IN JURISPRUDENCE.

The most important of all our departments, unquestionably, is the first—that of Jurisprudence; and here we have not to report a great number of measures recommended at our former meeting and adopted by the Legislature, but those which happily have been approved and passed are of very great moment. An elaborate report, with suggestions on the Patent Law and the reports on Private Bill legislation, have as yet borne no fruit. But the important propositions respecting Charitable Trusts, made by our learned and distinguished colleague, Sir W. Page Wood, have to a great extent been adopted by the Education Commission, under the Duke of Newcastle; and the amendments of the Bankruptcy and Insolvency Laws, which, after the fullest investigations, are so strongly recommended, have almost all been introduced into the new Act, the careful framing of which reflects the greatest credit upon the Lord Chancellor. It has not passed through the ordeal of the Lords without material changes; but it is an important amendment of the law.

CONSOLIDATION OF LAWS.

The ancient tyrant who placed his laws at such a height that the people could not read them, hardly did a worse act than they who so wrap them up in vague language, and so mix and confound their provisions, that when read they are not understood. Happily, there is now an end to this grievous defect in our system—a certainty of having a Digest, which for many years was beyond my most sanguine expectations, when the labours of those to whom nearly thirty years ago I committed the consolidation, giving us most valuable reports, seemed doomed to disappointment by the course pursued in the House of Commons, and would have continued ineffectual but for the exertions and the influence of our National Association. Let us, however, hold in grateful remembrance the invaluable services of Messrs. B. Ker, Starkie, Greaves and Lonsdale towards the success of this great work. We may now hope to see the expectation of our learned colleague, Sir F. Kelly, fulfilled, who, in his repeated attempts at consolidation, and in presenting the ably-framed Bills which he successively brought in, calculated upon the number of statutes which they embraced, and saw good reason to believe that he would reduce the forty volumes now filled by the statute law to four. His services have not been confined to this branch of jurisprudence. In two succeeding Sessions he introduced a most important Bill for removing the defect of our law as to the Wills of British subjects executed abroad, and it passed the Commons both times, but fell through in the Lords. Lord Kingsdown’s Bill, now passed with the same object, though less exten-

sive than Sir Fitzroy’s, removes a great part of the defect complained of. Finally, a most important Act has been happily passed, and with less difficulty than our excellent colleague, Mr. Villiers, its author, expected, reducing the time of gaining settlement from five to three years, extending the required residence over the whole union, and distributing the payment of rates more justly and equally. We may congratulate our colleague on a measure which will, in all probability, be followed by others to remove the whole defects of the settlement law.

THE PAPER DUTY.

That gross and glaring anomaly in our legislative as well as administrative proceedings has now ceased. We can no longer be charged with, at one and the same time, paying for schools to teach and raising the price of the books taught—of encouraging the people to read, of patronizing authors and multiplying readers, while we make it unprofitable for the former to write and hard for the latter to read. The effect of this most salutary change has been immediate, and it has been great. Over what an ample field its operation extends may be seen by this,—that one daily penny paper has a circulation of 80,000, and a halfpenny weekly journal, with excellent cuts, has been established, and already issues above 8,000. My complaints made at the Liverpool meeting can therefore no longer be urged, and a prodigious benefit has been conferred upon all the departments of knowledge by the steady perseverance of Mr. Gladstone in carrying this great measure against the most formidable resistance both in Parliament and beyond its walls. Of that benefit we of the National Association have our full share, along with the gratifying reflection on the part we took in obtaining it. The good thus bestowed seems to be free from all admixture of evil; for the alarm felt by some, affected by more, at the cheap newspaper press is really groundless. The bulk of readers, always influenced by the more rational and better-informed part of the community, will entirely discountenance and prevent those outrages upon all taste as well as truth and decency which we have seen in the press of some countries—of one particularly, so gross as almost to pass belief. But the character of the people must not be judged as if they could approve of such things. We might as well charge the French countrymen of Lavoisier and Lafayette with being robbers and murderers because the daily papers of Marat and Hébert preached wholesale pillage and assassination, as hold the countrymen of Washington and Franklin answerable for the sins of their press—a compound of slander, fraud and bluster. So the incomparably lighter excesses with which our journals may be chargeable in the heat of factious controversy are never more than passing and temporary, giving way to the predominant good sense and good taste of the community. The solid benefit obtained by the multiplication of cheap papers, and works of all kinds, is real and permanent, and a subject of just congratulation, if it were for nothing more than their tendency to free the public from the monopoly of the established papers, and the domination which that monopoly has its wonted effect in producing.

POPULAR EDUCATION.

The progress of popular instruction had been grievously obstructed by the separate and oftentimes conflicting proceedings of its promoters, attached, and conscientiously attached, to different sects of religion, acting in opposition to each other, though if brought together, and to a clear understanding, they might from their honest zeal for a common object, have been led to co-operate, or, at least, not to conflict. This great step was made in the Congress at Glasgow. For the first time the leaders of the Established Church party, of the Free Church party, and of the united Presbyterians, met together and maintained their respective views before the members of the Association. The result was the formation of a representative committee (of the chief denominations), whose labours there was every reason to expect will lead to a reduction of the points of difference, and a removal of the main obstacles to progress. Both at that meeting and at Bradford the important advantage

was gained of bringing the ecclesiastical school-teachers in more full communication with the laity, and with the professors of sanitary science. It would be improper to leave the great subject of education in the country where we are now assembled, without mentioning a fact that has been reported to us on good authority, and even under the influence of prejudices which it rather thwarted. In Scotland it is found that the Irishmen educated at the larger national schools are, in consequence of their greater steadiness, sobriety, and general trustworthiness, preferred to ill-educated Scotchmen, for the places of foremen in the manufactories; and our good countrymen of Scotland have a similar complaint of the greater number of Irish educated at the colleges being successful candidates for Indian civil service appointments.

SANITARY REFORM.

In our sanitary department considerable progress has been made. The quarantine committee have brought their labours to a close, and presented an elaborate Report. It has been communicated to the Board of Trade, which had formerly directed to be laid before Parliament the answers to our queries; and it has laid this Report before Parliament, which has ordered it to be printed. The information collected, and the suggestions made, are admitted to have essentially improved the sanitary condition of our mercantile marine. The diffusion of sanitary knowledge is a most important part of the duties of this department; and as the Association has from the first desired and accepted the co-operation of women, the Council have no doubt in affiliating the Lady's Sanitary Society, which acts under the highest patronage, and spreads among the poor a knowledge of the laws of health, it being now admitted that much of debility, disease and premature mortality in this country results from ignorance and error, and might be prevented. The Society circulates many tracts upon the subject, has lectures delivered in the poorer districts of London, and engages in district visitings, besides instructing the parochial clergy in the work, and in many cases holding meetings in their vestries, where poor women are familiarly instructed on matters connected with health.

REFORMATORY MEASURES.

The Criminal and Reformatory Department presents very satisfactory results; and it may be fit at this meeting that we dwell more especially on the Irish branch of the subject. The number of reformatory schools is but small, and it is devoutly to be wished that they were multiplied. But the diminution of crime in this island, of late years, is most satisfactory; and allowing that the great migration, since the famine years, has had much influence, enough of the improvement remains to reflect the greatest credit upon the instructors of youth and the ministers of religion. The decrease in the number of the people makes any comparison of the commitments for offences inconclusive, unless we regard the proportion of these to population. They were in 1856, as 1 to 923 of the people; in 1859, as 1 to 1,117; and in 1860, as 1 to 1,217. The number of juvenile offenders decreased in a still greater proportion. Pre-eminence among the subjects engaging our attention must in some degree, be determined by local circumstances; and we this year assemble in a capital that affords the opportunity and imposes the duty of inspecting the operation of the Irish convict system, which has received the attentive consideration, not of Great Britain only, but of the Continent of Europe, and of the United States of America. In truth, it well deserves all the praise it receives wherever the public mind is awakened to the paramount duty of making such exertions as may render the punishment of the criminal the instrument of his reformation. Here the problem has been solved how to deal with convicts, and send them forth cured, instead of subject to relapse, infecting others—criminals and the teachers of crime. Of this system, under the Board of Directors, with Captain Crofton at their head, and his able colleagues, Messrs. Lentaigne and Whitty, the fundamental principle, simple and rational, long ago laid down by that experienced Judge and steady patron of the system, Mr. Hill, is to make the convict the agent of his own reformation by annexing the condition

of good conduct to every indulgence beyond the barest sustenance, to removal from cellular to social labour, and to shortening the period of his confinement. His fate is placed in his own hands. But he is not merely superintended and watched; he has constant intercourse with those in authority, as chaplain, teacher, director, whose treatment is considerate and kindly; he is treated as an individual, not as one of a mass; and this "individualization," as it is termed, has great advantages over our English mode of dealing with the whole convicts in the bulk—the same advantage that a school of many teachers and few pupils has over one where a large number are under a single master. Another superiority is in the rigour with which the conditions of liberation are enforced on the "ticket-of-leave" men—arrest being at once enforced on the least breach of the conditions. A third is the absolute prohibition of all fermented liquors, even to those who for their good conduct have earned a small advance out of the fund set apart from their gains kept till the time of their discharge. Mr. Clay, in the Memoirs of his father (many years chaplain of the Preston gaol, whom I well knew, and, in common with all who knew him, held in the highest esteem for his virtuous life and most useful services), in comparing the English and Irish returns, has remarked that the former take all ticket-of-leave men as unconvicted against whom nothing appears, whereas the latter more accurately give the result of the information taken by tracing the party ever since his liberation. This diversity prevents us from making any comparison between the numbers in the two cases; but the different results of the two systems may be gathered from the fact that at Lusk we see numerous convicts set to work, and only retained by moral restraint, without any sentinels, while at Portland we see the convicts quarrying stones for the breakwater under the guard of sentinels with muskets and bayonets; and on the breakwater itself, which is more difficult to guard, free labourers, and not convicts, are employed. Another test of the Irish system may be stated as decisive—the confidence of the public in the reality and the permanence of the reformation effected, inasmuch as discharged convicts at once find employers willing to receive them, experience proving that they may be relied upon as steady and trustworthy servants. The statement that has been put about, that the Irish plan is only adapted to the local circumstances of the country, has been entirely refuted by a reference to the adoption and support of the system abroad. Baron Holtzendorff, professor in the University of Baden, has published an excellent work upon it, and intends to honour this Congress with his presence. The celebrated jurist, Prof. Mittermaier, of Heidelberg, has given his ample and zealous testimony in Capt. Crofton's favour; and Count Cavour, in the midst of all his labours and anxieties, during the last two years of his life, applied himself to master the principles of the system, which he introduced, under Cavalier Peri, into the Tuscan territory.

CO-OPERATIVE SOCIETIES.

In the great department of Social Economy much attention was at the last Congress given to the important introduction into the manufacturing districts of the co-operative system—the establishment of unions by the working-classes, for the purposes of sharing in the profits on the goods consumed or used by them, as well as of preventing adulteration of those goods, and for the other purpose of carrying on branches of manufacture. In both these kinds of union the progress has been very great since last year, and in the latter those doubts which seemed to exist of the scheme's practicability have been almost altogether removed. Above fifty companies for manufacture have been established since last Congress, besides many of mere stores. In these last a capital of 500,000*l.* is invested; but in the former the manufacturing concerns represent a capital of nearly 2,000,000*l.*, exclusive of the Manchester Cotton Company (limited), whose capital is 1,000,000*l.* The returns of Mr. Tidd Pratt show the creation of above 250 co-operative societies within the last twelve months, all enrolled under the Friendly Society Act. As might be supposed the savings and the profits of

these good men are in part applied to public purposes and to charity. Thus at Rochdale they have given to the town a drinking fountain and contributed 50*l.* to the Indian Relief Fund, besides smaller yearly sums to the Dispensary and the Deaf and Dumb Institution. The effect of co-operation in preventing those Strikes, so pernicious to the working-classes and so dangerous to the peace of the community, has been everywhere felt. The late strikes at Colne may be ascribed to the want of co-operative unions in that district; but the mischiefs occasioned, and which left their deep traces behind, opened the people's eyes to their error, and the consequence has been the establishment in that district within the last three weeks of a shed with 700 looms upon the co-operative plan.

TEMPERANCE.

In no respect is it more gratifying than to observe the connexion of temperance with the diminution of crime. In France, it appears, from our colleague, M. Quetelet's statement, that no less than a fifth of all the murders, during the last four years, had their origin in tavern brawls. In six English counties having the fewest public-houses we find that, where they were as 1 to 109 of the population, the offences are as 1 to 591; but where the public-houses are as only 1 to 235, the offences are as 1 to 762. In Ireland the connexion of intemperance with crime is even more marked. Between the years 1838 and 1841 the consumption of whisky had fallen off above one-half, and we find in the latter year Judges congratulating the counties on the small number of prisoners to be tried, and ascribing this happy change to the growth of temperance. So, in 1839, there were in Richmond Bridewell 3,202 prisoners, in 1841 only 1,604. It is remarkable, though certainly not surprising, that the prudence which leads to economy kept pace with the prudence of sobriety. In the former year the Dublin Savings Bank had 7,264 contributors; in the latter 9,585. Source of disease, of poverty, of crime, how long shall that heavy curse be suffered to afflict us! How long shall we submit to a conqueror more cruel than the armed invader—to a tyrant the most inexorable of all, which has subdued rational men, and avenged the world of unreasoning creatures for the wrongs received at his hands!

Sevior armis

Luxuria incubit; victumque ulciscitur orbem.

The little we have done to shake his dominion has only been enough to let us know and feel how galling is the yoke, and how much the fault is ours who bear it. The people have but to will it and they at once are free. All honour to Father Matthew in Ireland, and to the Grand Alliance in England, its learned secretary, and his able coadjutors! Nor can I duly perform my office at the head of this Association if I did not enjoin it as a duty incumbent on all its members and on every well-wisher to the progress of social science to patronize Mr. Steele's most ably conducted quarterly Journal of all its branches. But why should I refer to other branches than this great and fundamental one of temperance? Recollect the memorable words of our learned colleague, that great philanthropist, the Recorder Hill, who, in all his various efforts to serve the people, providing for their comforts, and reclaiming them from vice, declares—"Into what path soever I strike, in whatever direction I go, the Drink demon starts up before my face and stops the way." I have said that the community have but to will it, and their chains fall off. The progress of the Grand Alliance since our last Congress has been my encouragement to say so. The permissive Bill, allowing every district, by a majority in number and value of rated inhabitants to prevent the opening of new public-houses or to continue licences for old, has, on a careful canvass of many great towns—Manchester, Liverpool, Birmingham, Plymouth, Leeds, Sheffield—been accepted by very great majorities of the inhabitants, and by the greater number of the voters. Let us hope that the public opinion, generally improved upon the most important question of social science which can occupy the country, may prepare the way for legislation, which, to be efficacious, must be cautiously introduced, and under appropriate guards.

EMPLOYMENT OF WOMEN.

Our attention was engaged at the last Congress to the employment of women, and papers were read by Miss B. Parkes and others upon this important subject. There has been no relaxation on the part of these ladies since that time, and the printing establishment opened by Miss Faithfull has gone on with increasing success. The volume of Transactions for last year was printed at the Victoria Press, and Miss Faithfull is now engaged in publishing a volume, under Her Majesty's sanction, containing original contributions from the leading writers of the day. Besides these exertions, Miss Parkes originated a scheme for encouraging the emigration of educated women who cannot find employment in this country. But for the inferior caste of women the exertions now making to reclaim the fallen and prevent the fall of others are above all praise. The loss of Lord Herbert's strenuous assistance is in this, as in other parts of his most useful services, deeply to be deplored. Who can move along the less-frequented streets of London, and not have his heart wrung by such accents, too often coming from female lips, "I have not had a morsel of food this day"?

NATIONAL BOOK UNION.

An important plan has been devised by my friend Mr. Layard, with the assistance of Mr. Jerrold and others, towards encouraging the humbler classes in acquiring books, it being always found that the step which a poor man makes to being the possessor of a little library has a most salutary influence upon his habits. This gave rise to Book Unions, and, though a Bill to facilitate these, and supported by part of the Government, was afterwards thrown out by other members of the Government, upon a groundless alarm that it tended to encourage gambling, because the books were to be raffled for, there is reason to hope that it may be more successful another year; and its promoters are, in the mean time, actively engaged in the support of these unions, of which there are many in the manufacturing towns. They are enabled to carry on their business by receiving 1l. in yearly sums or weekly payments, giving at once a book of about half the price, and allowing contributors to have the chance of 5l. worth of books at the end of the year in a raffle.

INTERNATIONAL AFFAIRS.

At our last Congress the important step was taken of adding a sixth department, mainly for international subjects. This was the suggestion of the distinguished foreigners who attended at Glasgow, the chief of whom were M. Garnier Pagès, of the Provisional Government, 1848, and M. Desmarest, of the French Bar. The same suggestion was likewise pressed upon us by Professor Kharktchowski, of Kherson, in Russia, who had intended to be present, but was prevented by his professional duties. He, however, sent a most instructive letter. But we had been anticipated by the happy plan of the Prince Consort for an international statistical congress, which had held its meeting in London a few weeks before ours, and had been attended with complete success. His Royal Highness's able, learned, and comprehensive Address in opening it deserves to be read with great attention, and is deserving of all praise. At Glasgow the subjects of general international averages and other kindred matters were discussed in a meeting attended by delegates from many parts of the Continent; and we have the confident expectation of others being present here. The new department is under the presidency of no less eminent a political economist than M. Michel Chevalier, who also attended our Bradford Congress two years ago. This department derives a peculiar interest at the present time from the negotiations of Mr. Cobden and the measures of Mr. Gladstone; but it commands at all times our great respect, from its direct tendency to maintain good relations between different countries, and to promote the sacred cause of blessed peace. At the two last Congresses we had the satisfaction of observing that Social Science was making considerable progress in other countries. This, indeed, was testified by the attendance of important persons from thence at our meetings; but it was peculiarly gratifying to see the adoption of enlightened and liberal views by

Governments which we should little have expected to find pursuing this course. The last year affords further evidence of their happy improvements, and in quarters we should least of all look for traces of it.

TURKEY.

The decease of the Sultan has brought upon the Ottoman throne a prince who begins his reign as a reformer both in his own practice and in the scheme of his administration—nay, even in the system which he is resolved to introduce. The dismissal of his predecessor's harem of scores of wives and hundreds of mistresses, the proclaiming his intention of being the husband of a single wife, and the avowed adoption of European principles to govern his policy and even to amend his laws, show plainly the progress which the manners and the usages of civilized nations and of modern times have made in the realms of a barbaric Power. Let it be further noted that a Social Science Committee has been established at Constantinople, and many lectures have been delivered.

RUSSIA AND POLAND.

In Russia the fixed determination of the Emperor to complete the great measure of serf emancipation met with powerful opposition, and even disturbed partially the peace of the country; but the chief mischief has arisen less from the obstinacy of the landowners than from the ignorance of the serfs, to inform whom upon the exact amount of the change in their condition sufficient pains had not been taken; and there is every reason to hope that the vast measure of bestowing independence upon the bulk of the community, the labouring classes, will be effected with little further obstruction. It must be confessed that, even if we lament some error in the mode of proceeding, the Emperor is entitled to the warmest sympathy in his great work, and to the highest admiration for the wisdom and the virtue of his conduct. If to such a Sovereign his own people may well be grateful, let us hope that his Polish dominions are destined to owe him equal thanks. It would be an act of magnanimity "beyond all Greek, all Roman fame," were he to re-establish a kingdom of Poland, with its admirable Constitution of 1793, under a prince of his own house. Even should he deem such constitutional principles dangerous, because so much at variance with those of his own empire, and should give the kingdom a more absolute government than that of 1793, it may safely be predicted that he would find in the grateful Poles the most trustworthy and devoted of all the nations under his widely extended rule. The interest which, in common with all the friends of national independence, I take in the fortunes of the Poles is not of yesterday. Forty-eight years ago, in common with my esteemed and now lamented friend the chief of the Polish patriots and counsellors, Prince Czartoryski, the man who made far greater sacrifices to his principles than any who ever lived,—in common with him, and urged by him, I addressed, through the press (being then out of Parliament) to my fellow countrymen, and to the allied Sovereigns, 'The Appeal for Poland,' which cannot be said to have had no effect, though far less than was desired, for it brought the subject of her wrongs so much into discussion, especially in England, that it occupied in no small degree the attention of the Powers at the Congress of Vienna.

AUSTRIAN EMPIRE.

If, from contemplating the very probable, though not immediate, prospect of Russian freedom, we turn to the Austrian empire, we have less reason to be surprised at the constitutional course taken, because the elements of a constitutional government have existed there in all times. They possess that especially which elsewhere is wanting, even in France since 1790, and which is absolutely necessary to the permanent existence of a free Government, an aristocratic body independent of the Sovereign and of the multitude,—a class of wealthy landowners, not like the Prussian proprietors, needy and looking to place and patronage. The agricultural class is also respectable and deserving. With elements of a really good Government, progress was making towards it, until the Emperor Francis checked it, perverting the traditions of the mon-

archy, centralizing all authority, and taking everything into his own hands. At present the plan is pursued of leaving their internal concerns to the Provincial Diets, but ruling the Monarchy from the capital, through the representatives of the Diets in the Reichsrath. In Hungary the ancient Constitution as it existed before 1848 is restored, and the establishment of that which was formed in a season of civil war is alone refused. It is most earnestly to be desired, for the sake of the general peace, so intimately connected with the integrity of the Austrian empire, that the discontent of Hungary may not be fermented by foreign intrigue and foreign agitators; for as yet the power of Austria has really not been materially impaired by her losses in Italy. But the Sovereign, yielding all that he can, must continue to be, as he always was, entitled when opening the Diet as King of Hungary, "His Sacred Majesty the Hereditary Emperor of Austria."

ITALY AND ROME.

The condition of Italy has in one practical respect been greatly improved by the general acknowledgment of the new kingdom; but the internal state of the southern portion is still most unsatisfactory, affording daily proofs of what all experience has proved in other countries, that there is no possibility, unless by main force, of establishing a government for which the people are not prepared. The execrable tyranny of the Bourbon princes had reduced their subjects to a condition that rendered them incapable of being governed except by constant recourse to violent measures; and these princes have, even in their exile, done all in their power to keep the people in a state of lawless anarchy, which may almost make them regret the loss of the worst of tyrants. In all other parts of the Italian kingdom great and solid progress has been made in popular improvement, and the blessings of a free constitution are already felt in its influence upon the institutions, and generally in the circumstances of the community. That kingdom is now left free from all foreign interference to manage its own affairs. The original action of Piedmont and her ally to obtain her extension can never be too severely reprobated, although we are entitled to rejoice in the result. The maxim, "*feri non debuit, factum valet*," may here be applied; and assuredly, if the French and Sardinian arms only interposed in helping the Italians, both in the north and elsewhere, to strike off a foreign yoke, and unite themselves with Piedmont, the interference is of a far less objectionable kind than a mere ordinary aggression and conquest. But, certainly, the government of a country, however bad, gives its neighbours not the very least right of interference; and to attack and seize the territory, under the pretext that it is ill-governed, is to repeat the most atrocious crime ever committed in modern times, and by civilized States—the partition of Poland. Take even the condition of Rome, under a priest, chosen by other priests, and so governed as justly to merit the reprobation of its own people, and the sympathy of all others; this affords not the shadow of an excuse for any foreign State to seize upon the Roman territory, any more than the Polish Government, the very worst in Europe—an elective monarchy, the choice in the hands of a mob, afforded for its partition. If, however, the Poles had risen against their rulers, and called in the neighbouring Powers to assist them, the case would have been very different as regards Poland, and even if after the partition these Powers had given it a good Government of its own, their conduct would have escaped the universal reprobation which has attended it. And so, if the Romans themselves choose a good Government, even with the help of foreign Powers, and give their territory up to those Powers, they will themselves be great gainers, and their foreign allies be blameless. In no other event can we expect social improvement to make any progress in Rome, as it is steadily doing in the northern and central parts of the Italian kingdom.

FRANCE.

France has not only persisted in the same course upon which she had entered before our late Congress, with regard to commercial policy, but has carried the principles there adopted further, in treaties

with Belgium, Holland and Turkey. In Belgium the most entire support is always given to sound views of agriculture and trade. There is a still further step made in France by the Imperial policy, and in a direction little expected when we last met. An important relaxation has been given to the restraints imposed upon political discussion. An absolute freedom in this respect is allowed to both Chambers of Legislature, and to publishing the reports of their debates through the press. There really is no difference whatever in this particular between the French Parliament and our own. All political topics are fully and freely discussed; so that the country receives, and receives immediately, whatever impression the Ministers, or the Opposition, or men belonging to no regular party, wish to make upon the public opinions or feelings on any subject whatever. The press, however, is still under the most absolute control of the Government, and except, to report the debates, it has no kind of liberty, not even to make a remark upon any proceeding of the Government, or, indeed, any subject whatever. The administration of justice, too, is still in a most unhappy state as regards political offences. The Judges are, no doubt, irremovable, but they are not *improvable*; and any one may receive the reward of his subserviency to the Government by advancement to a higher place. In England there is no law against such promotions, but they are universally discontenanced, and very rarely take place. In seventy years that I have known our courts I only remember two instances of a puisne made a chief; for the case of Sir Vicary Gibbs was that of an Attorney-General promoted after being, from accidental circumstances, a puisne Judge. Parliament would at once interpose were such advancements ever made except in very peculiar circumstances. The interference of the Government with elections is another great evil in the system of our neighbours, and impairs incalculably the salutary tendency of discussion in the Chambers to check the action of the Executive power, or to correct its errors. The deputies who at all oppose the Government are reduced to a very inconsiderable number, and the great majorities which support it in all contentions give such countenance to all its acts, that the influence of public opinion as testified by the representatives of the people is extremely small. The state of the judicature, the control over the press, and the interference of the prefects with elections, render the Government nearly absolute in fact as well as in the theory of the constitution. But after the important concessions to freedom of discussion which have so recently been made, we have reason to hope that further relaxation will follow. It is the unquestionable tendency of that portion of liberty which has been granted, both to stimulate the desire for a grant of more and to increase the difficulty of refusing it. Such must be the earnest wish of all friends of the great cause to which we are devoted, both out of the goodwill that we heartily bear to our justly-celebrated neighbours, and from the intimate conviction we must all have, that the great interests of peace cannot be more effectually served.

Lord Brougham, you will see, dwelt at considerable length on the social condition of Russia, Austria, Italy and France—treating the affairs of Poland and Rome with a wise discretion, suggested perhaps by the locality in which he spoke. He hoped the Emperor Alexander would restore to Poland the liberal constitution of 1793—he hoped the Magyars would submit to Francis Joseph—and he hoped the Emperor Napoleon would concede a larger measure of freedom to France. He reprimanded the Piedmontese for seizing the Roman territory, without waiting for the authority of a popular rebellion. Among the many sagacious hints which he threw out to Emperors and Kings, he forgot, you will have seen, to remind Napoleon the Third that it is his duty and his interest to recall his army from Rome. Perhaps the air of the King's Room is not favourable to frankness in Italian matters. Of course, the usual speeches of compliment were made—a very graceful one by Lord Carlisle.

Your readers will take the thanks for granted.—To-day the Sections commence their meetings in the Four Courts, which splendid pile of buildings has been recently repaired and decorated. Mr. Napier will be the orator of the day—his subject, the Progress of Jurisprudence. To-night there will be a reception by the Royal Dublin Society, in Kildare Street. M. Michel Chevalier, who appears in the lists as orator of Wednesday, the last day of Congress, will, by arrangement with the General Committee, make his speech on Saturday morning.

HAMILTONIAN LOGIC. (No. 2.)

August 3, 1861.

I now proceed to the second point: and I shall not resume the subject for two months, to give full time for reply on either or both points. This second matter is of general interest, as relating to a notable ambiguity of our language.

The word *some* was invented to be indefinite: and it has always respected the intentions of the founder; and this even to exaggeration, for it is of indefinite indefiniteness. There are three modes of interpretation in actual use: I shall call them non-partitive, singly partitive, and doubly partitive. The non-partitive "some" is "some-at-least-maybe-all." The singly partitive "some" is "some-not-all," but says nothing about the rest. The doubly partitive "some" is "some-only," and affirms of part, denying of the rest. If I ask—Were they there!—and am answered—Some were—the reply may be non-partitive—Some were there, and whether there be more or not in existence I do not know. Or it may be singly partitive—Some were there, as I saw, but I did not see all, though the rest might have been there too. Or it may be doubly partitive—Some were there, and the rest were not.

All the forms of syllogism make the conclusion a true consequence of the premises, so long as "some" is either non-partitive, or only singly partitive: not that the syllogisms of the two cases are of identical meanings; but all are valid. But the doubly partitive sense turns several syllogisms into Chimeras: which is fortunate, for otherwise they would be Gorgons.

For example, say that "All lawyers are men" and—speaking mineralogically, not metaphorically—say that "No lawyer is stone." Reminding the "general reader" that a conclusion is not illogical because it turns out that we knew it before—a maxim I have heard gravely doubted—it follows that "Some men are not stone." If any one should give us the above premises and conclusion as valid when "some" is doubly partitive, he concludes that some men (only) are not stone, that is, the rest are.

The logicians have always used the non-partitive sense: Hamilton contends for the joint introduction of the doubly partitive sense. He has given one and the same system of syllogism as deducible from both senses, without a single word from which it could be inferred that he is aware of any distinction between the results. If there be such a word, let those who can produce it.

He first ('Logic,' Vol. II. pp. 281-283) explains the doubly partitive sense as the view which he "would introduce" and which he thinks ought "to have been placed alongside of the other." A system of syllogism (pp. 285-289) is then presented as fashioned upon this sense. This system contains (IV. b.) the *Gorgon* syllogism.

I do not say that Hamilton himself would have admitted this syllogism. But I do say that those who will accept his writings as they stand must admit it. I wait to show how this confusion was obtained until I shall see whether it can be denied.

A. DE MORGAN.

OUR WEEKLY GOSSIP.

Her Majesty has done a good thing in announcing her intention to contribute largely to the English school of painting, in the Exhibition of next year. The royal collection is known to be a very good one. From it alone a very interesting series of the English school might be shown. Of Gainsborough, Her Majesty will contribute the Portraits of Dr. Fischer, and Bishop Hurd; of Hogarth, 'The Mall'; of Reynolds, 'The Duchess of Gloucester

and Dog,' 'The Nymph and Cupid, and the Portraits of Lord Rookingham and Lord Hastings; of Lawrence, Portraits of Sir William Curtis, Pias the Seventh, and Lord Liverpool; of West, Portrait of Queen Charlotte, Death of General Wolfe, 'Departure of Regulus,' and 'Oath of Hannibal'; of Beechey, 'George the Third reviewing the 10th Dragoons.' Besides these, Her Majesty will contribute a Portrait of Bishop North, by Dance; Portrait of Mrs. Elliott, by Riley; 'View on the Thames,' and another ditto, by James; 'The Tribune at Florence,' 'The Lapidaries,' Portrait of Queen Charlotte and Princes, and companion picture, by Zoffany; 'The Wild Huntsman,' by Westall; Her Royal Highness Princess Sophia, Her Royal Highness Princess Mary, and Earl of Eldon, by Hoppner; 'The Mock Election,' by Haydon; 'Coronation of Her Majesty,' by Leslie; 'The Shrimpers,' and 'The Coast of Norfolk,' by Collins; 'Penny Wedding,' 'Blind Man's Buff,' 'The Guerilla's Departure,' 'The Guerilla's Return,' 'Spanish Posada,' Pifferrari, Princess Doria, and 'Siege of Saragossa,' by Wilkie; Princess Amelia, by Hudson; Portraits of their Royal Highnesses the Princesses Amelia, Sophia, and Augusta (daughters of George the Third), by Copley; a Landscape, by De Loutherbourg; 'The Duenna,' by Stewart Newton; 'The Orphan Daughter of Sir Walter Scott,' by Sir W. Allan; and 'Saturday Night,' by Bird. The contributions thus announced, should put the possessors of fine English pictures on the alert. We shall need all our treasures, if we are to come well out of the splendid competition which we have invited.

The rank of English *soprani* was thinned on Sunday last by the death of Madame Catharine Hayes, after a week's unforeseen illness. She was a native of Limerick, where the original beauty of her voice excited attention in influential friends who promoted its cultivation. She was early introduced to English notice by a word or two in Mr. Thackeray's 'Irish Sketch-book,' referring to a farewell concert given by her, ere she went abroad to study. Not long after this, tourists from Italy told how she had been found, ankle-deep in garlands, on the stage of *La Scala*, where her peculiar voice, somewhat warmer in quality than most English voices, and her modest elegance and sensibility of manner gained her a foreign popularity such as only three English *soprani*, besides herself, have obtained in our time: these being, Miss Kemble, Miss Novello, and (far behind them) Madame Albertini. On the appearance of Miss Hayes in England either some of her vocal power was gone, or she was exposed to a more severe ordeal than any of Italian trial, as having to appear on the stage by the side of such artists as Mesdames Grisi, Viardot, Alboni. She pleased, but pleased moderately here. As a concert-singer she was enthusiastically received in Ireland, where her singing of national melodies was exquisitely relished by her countrymen. From Ireland she passed to America; and thence to corners of the globe in which few artists of her class had ever been heard. In America, it should be recorded, her success was great, real and lucrative: nor must it be forgotten that her American gains were gleaned immediately after the exhausting triumphs of Mdle. Jenny Lind. In that long, fatiguing tour, Miss Hayes realized a competence:—she married too, retaining, as is the usage, her maiden name for professional use. She was widowed soon after her marriage. If, on her return to England, she did not step into the place to which her foreign successes and the comparatively small number of her competitors might have been thought to entitle her, the reason is easily told. She was ill assured, not to say uncertain, as a musician;—and with difficulty bent herself to that exercise in all styles and all schools, which is indispensable in this country to any great success.—In society she was much respected, as one so quietly gracious in her manners,—with so kind and so sound a heart,—so devoted without pretence or parade to her own family—deserved to be. From her peculiar world of occupation the name of Madame Hayes adds another to the list of Irishwomen,—to the Tighes and the Lefanus and the Morgans,—who have done honour to their country.

Mrs. German Reed's pleasant drawing-room

entertainment, so long the delight of west-end audiences, will close for the season on the 30th instant. This season, we are told, has been good enough for the artists concerned, to enable them to dispense with their usual provincial tour. Thus, brain and voice may obtain a little rest, before the new season opens in October, with its novelties of character and song.

A testimonial to R. C. Lucas is announced, and public men are asked for subscriptions towards it. Who is Mr. Lucas? What has he done? Those who care to inquire in the right place, and know how to press their inquiries with due minuteness, may learn that Mr. Lucas is a sculptor, living at Southampton, and that he has made a statue of Dr. Isaac Watts for the town which he distinguishes by his residence. But why a testimonial? Has he not been paid for his work? If the work be honest and able—"appropriate, chaste and beautiful," the circular asking for subscriptions says it is—and the artist has been paid his price, as we presume he has,—why not rest content with the glory and the profit already won?

We place the following hints, from a well-informed resident in Yorkshire, at the service of Messrs. A. & C. Black:—

Malton, Aug. 13, 1861.

"It is a great pity that Messrs. Black do not aim at greater accuracy in the contents of their handy 'Guide Books for Tourists.' In my copy of the one for Yorkshire many important errors occur; and, for intending purchasers, it may perhaps be as well that I should particularize a few of those that have come under my own notice. St. Leonard's Church, Malton, is said to possess a 'tower and truncated spire.' The truncated spire was taken down before the year in which the 'Guide Book' came out; and its place is now occupied by one of octagonal form, covered with vari-coloured slates, and surmounted with a cross. Three gateways and the lodge of the ancient mansion at Malton remain; not only 'one' and the lodge. The west front, not the east front, of the church at Old Malton is 'late Norman.' The town of Filey is not 'divided into two parts by a deep glen—the one part comprising the old town, and the other the church and new town.' Only the old parish church and one or two houses are situated on the north side of the glen. It is not true of the old Priory Church at Bridlington, that 'the interior does not present very much to interest the tourist,' but quite the contrary, as all tourists will acknowledge who put my assertion to the test. The 'Guide Book' omits all notice of the four ancient chained books kept in desks behind the organ; of the unique ornaments on the jambs of two of the windows in the north aisle; of the fine inner doorway of the north porch; of the ancient 'church collar' attached to a pillar in the north wall of the south tower of the west front; and of the ancient stone offertory box, which projects from the north side of a pillar of the south aisle near the east end, and of which I believe there is only another remaining example in the kingdom. The market-place at Helmsley is not 'surrounded by quaint old wooden houses.' Only three or four at the most exist at the present time. The church also is not 'in the Perpendicular style' only, as we are led to infer; but is built in three different styles—the Norman, Early English, and Perpendicular. At Hull the tourist is told there are two colleges, 'Hull College and Kingston College,' and the former is described as being built in the 'Grecian style, &c.' It does not, however, exist, for it was pulled down, and a row of houses, named 'Minerva Terrace,' built upon its site, some time before the publication of the 'Guide Book.' Kingston College has also long since ceased to be used for educational purposes.

"I remain, &c., CANTAB."

The compiler of 'Black's Guides to the South of England' writes in explanation:—

"Gravesend, August 12, 1861.

"I do not think it right for authors to criticize their critics or pester editors with 'Notes of Admiration,' but in reference to a notice in last Saturday's *Athenæum* of 'Black's Guide to Sussex' you will, perhaps, permit me a word of explanation. Your reviewer in that notice quotes a sentence from the

'Guide to Sussex,' with reference to Old and New Shoreham Churches, in such a manner as to lead the reader to believe that nothing else is said respecting them. On the contrary, details are given which occupy (I speak from memory) nearly an octavo page, closely printed. As regards Stone Church (Kent), I may state that when I visited it, in the early part of the present year, it was undergoing an effective restoration under the direction of Mr. G. Street, the eminent architect; and I, therefore, thought it advisable to defer all particulars to a future edition. That restoration has since been completed, and I venture to recommend your antiquarian readers to take an early opportunity of examining this interesting edifice."

In the account given in the *Athenæum* last week of Mr. Street's church in Upper Garden Street, Westminster, we omitted to furnish any of its dimensions. For a solidly and genuinely constructed piece of workmanship to have cost, with the architect's charges and those for all its decorations, a sum less than 9,000*l.*, makes this edifice interesting in an economical point of view. The principal dimensions are as follows:—Nave, 59 feet long, 23 feet 3 inches wide; with the aisles, 51 feet wide; height to the plate from the floor, 31 feet 3 inches; ridge, 52 feet 6 inches; to the side of the clerestory, 24 feet 6 inches; chancel, length, 36 feet 6 inches; width, 20 feet; height, from the floor of the nave to the crown of the vaulting, 30 feet; to the ridge 50 feet. The transepts are 17 feet by 19 feet; height from floor of the nave to ridge, 27 feet 6 inches; to plate, 17 feet 6 inches; towers and spire, 12 feet by 12 feet; inside walls 4 feet thick; height, to underside of battlement, 84 feet; to top of spire, 134 feet. Our account gave no description of the exterior of the building; let it here suffice that this consists of a lofty four-square tower, wrought with narrow bands of stone into four stories, the third occupied with a magnificent louvre window, with very elegantly carved heads; above the fourth rises a spire, slated, with a smaller spire at each angle. These minor spires or pinnacles please us not at all; indeed, their introduction mars the aspect of repose and grave dignity which is characteristic of the work. The tower stands separated from the body of the church, to which access is gained by a portal under the tower, and through a boldly designed retro-porch.

Admirers of the Victoria Regia, or Royal Lily, should make a visit just now to Kew Gardens. The plant in the water garden of the original Tropical Aquarium is now to be seen in great perfection. Some further improvements have been made in these fine gardens. Among curiosities may be mentioned the fact that, in the *parterre* of the Geometrical garden, in front of the old Museum, the outer bed has been planted with variegated and mixed flowers, as a design and pattern for a Coventry Ribbon. The trees, shrubs, and flowers are now in their summer beauty. A Drinking Fountain has been erected near that venerable walnut-tree, which is said to be the oldest in England.

A "Wykehamist" sends the following information and inquiry:—"The foundation of the beautiful tower of Winchester College Chapel has been for some time exhibiting evidences of insecurity, a crack in the upper part of the structure having, it is said, widened somewhat of late. On investigation, it appears that the piles on which the tower is raised are more or less decayed, and Mr. Butterfield, the architect who has been consulted, advises the *entire rebuilding* of the latter from the ground. I do not pretend to have an opinion on a subject so purely professional, but before such a monument of grace and beauty, which has adorned our land for 430 years, is handed over to the wielders of lever and mallet, it would be well to consider whether, in this age of mechanical appliances, nothing can be done to arrest the further tendency to settlement which affects the building by some plan of underpinning, or the use of concrete, or otherwise. However happily the restoration of a work like this may be effected, there is, if the tower is to be completely rebuilt, (to say nothing of the expense,) a feeling of non-identity established in one's mind, of which it is impossible to divest it."

A preliminary meeting of soldiers and artists has been held at the Victoria Cross, Gallery, Egyptian

Hall, to consider the best means of establishing a national gallery of pictures, commemorative of the achievements of the British Army and Navy. General Windham presided; and in explaining the objects of the meeting, he adverted to the encouragement afforded by France and other Continental nations to that branch of the painter's art which hitherto been neglected in our country, and which, he said, might be utilized to the mutual advantage of the British soldier and our native artists. Letters were read from persons who were unable to attend the meeting, but who are interested in the proposal. The chairman stated that the lateness of the season would prevent any active steps being taken in the matter at present, but proposed that a memorial should be prepared, to receive the signatures of all who might be inclined to support the plan. Lieut.-Col. Sir F. Arthur, in seconding this proposition, suggested that Mr. Desanges' collection of Victoria Cross pictures would form an appropriate commencement of such a gallery as that in view. Ultimately, the meeting was adjourned until the opening of Parliament next year.

Florence offers to the tourist an autumn's season of unusual gaiety and splendour. The King of Italy will occupy the Pitti. The Prince of Carignano will reside on the Arno. An Exhibition of Italian Art, Industry and Produce will be held in a temporary Crystal Palace, and a great congress of learned men from every part of the Peninsula will crowd the city with distinguished visitors. An Italian Goodwood is to be got up for the occasion, and a national Rifle competition will complete the round of attractions. Goethe has said, "Take care of the Beautiful, for the Useful can take care of itself." Italy has never yet found that the "useful" would take care of itself. She has begun to take care of it,—and she has done very wisely. Of pictures, palaces and basilicas, she has plenty and to spare; but in looms and jennies, in steam-ploughs, in railways, and in electric telegraphs she is still singularly poor. With a finer climate, than France, her wines have no market. Her agriculture, except in portions of Lombardy, is four hundred years behind that of Kent and Surrey. Italy needs to be taught how the arts of her neighbours have advanced and the degrees of perfection to which they have attained. She acknowledges this need by inviting the scientific industry of all nations to Florence. In her own genius unapproachable, Italy will place the useful and the beautiful side by side,—and while she will have the profit of learning from her guests she will also enjoy the consciousness of being in her turn able to teach.

The second German meeting of musicians and musical composers has taken place at Weimar, from the 4th to the 8th of this month. The meeting was numerously attended, especially from Leipzig; we should think that not less than 1,000 persons were assembled on the occasion. The parliamentary debates of the meeting related mostly to the foundation of a general German Musikverein, the purpose and aim of which are to be the fostering of the art, and the supporting and promoting of the artists. The next meeting is to take place at Prague. The musical part of the festival, consisted on the first day of the performance of Beethoven's 'Missa solennis' in the town church; of Liszt's composition 'Prometheus and Faust' in the theatre on the second day; of various performances of manuscript works by living composers (Liszt, Damrosch, Bülow, Lassen, Dräseke, Cornelius and others), on the third day; and of a great musical *matinée* on the fourth day, where several *virtuosi* performed on different instruments. Herr Richard Wagner was present, and much distinguished by the assembly, who brought him the ovation of a torch-light procession. Perhaps this was meant as balsam on his Paris wounds. A concert-singer, Fräulein Genast, was much admired.

LAZARUS, COME FORTH! By DOWLING.—This work, pronounced by the best critics to be the finest Scripture Picture of the age, is NOW ON VIEW at Bejemann's, 38, Oxford Street, W.—Admission, 6*d.*; Fridays and Saturdays, 1*s.*

SCIENCE

Elements of Medical Zoology. By A. Moquin-Tandon. Translated and Edited by Robert T. Hulme. (Baillière.)

THE creatures which bite, pinch, sting, and poison man are naturally of very great interest to him. To this family of animals M. Moquin-Tandon gives a large amount of attention, and, perhaps, practically, there is no subject of more importance treated of in his book. We hardly know any book published before this to which we could refer an intelligent general reader for information on the curious phenomena of the development of the creatures belonging to the family Tæniadæ. The animals which live in other animals have very extraordinary habits, as well as habitations. They are travellers by necessity, and parasites by profession. Without change of locality, they cannot even live. Thus the eggs of creatures which inhabit the human body pass into the liver, muscles, brain, or other part, and there develop their larval condition. If they remained in this place they would never attain their mature state. They must move ere they live. But if they are now swallowed by a second animal they develop and become perfect creatures, producing more eggs, which, in order to become developed, must again pass into the first animal. Thus, the animal which matures itself in the human body passes its larval condition in the pig. This animal is constantly reared near the habitations of man, and thus has easy access to the eggs of the worm which pass from the human body. This would probably be prevented were the eggs of these creatures few in number, but their number is perfectly prodigious, and the whole life of the creatures contained in the body seems devoted to the production of these eggs. The common Tænia has been known sometimes to attain a length of eighty feet, and this consists of a chain of separate individuals each of which is not more, on an average, than a quarter of an inch in length. It is computed that each of these bodies contains about 20,000 eggs, so that a single chain of these Tænia may contain upwards of 6,000,000 of eggs. Any one of these falling in the way of a pig, either in his solid or liquid food, is carried into his stomach, and there becomes digested. The digestion in this case, however, does not destroy the vitality of the egg, as it does that of so many living things, but merely removes the shell of the egg, and allows of the development of an embryo Tænia. Not, however, a helpless fledgling, but a young warrior prepared to cut his way through flesh and blood in order to attain the ultimate object of his ambition. His body is furnished with six hooks, hooks backed like fish-hooks, which, having once been stuck into the sides of the stomach, never cease to progress till they have found themselves free to swim in the vital current of the pig's arteries. They are now carried with the blood to the minute capillaries in the muscles, where, by reason of their size, they are arrested. This they take in good part, for they now divest themselves of their six hooks, and begin to distend themselves into the form of a very minute Scotch bagpipe. In this state they form the cystic worm, the hydatids, the accephalocysts of the old doctors, and in the pig the creature got the name of *Cysticercus cellulosæ*. Wherever he is present the red muscular tissue of the pork disappears, and when there are many cysts, the flesh appears mottled,—“measled” the butchers call it,—hence the term “measly pork.” Now, as long as the creature remains in this position it grows no further: it is like a young salmon that cannot

get to the sea; it retains its present form, giving forth, however, buds like itself, which flourish in the pork around. If we take one of these little cysts, and turn it inside out, and put it under a microscope, a curious sight presents itself. At the small end there are four bell-shaped suckers and a circlet of sacks, into each of which is inserted a hook of the same nature as those which the creature had just shed from its outside. But these are all of no use, unless this creature is once more swallowed and digested by man, woman or child. Should an unfortunate human being, in the uncooked tip of a sausage made from measled pork, swallow one of these small cysts that has escaped its fiery ordeal, then the gastric juice dissolves the lower portion of the cyst, and gives the fearful circlet of suckers and hooks an opportunity of fixing themselves on the inside of his stomach. The result is the immediate growth of these little, square, egg-bearing individuals of which we spoke at first.

Such is the marvellous history of one of the numerous creatures designed to occupy a position in the bodies of other animals. Each of the higher animals has its own peculiar worm, which in the early stage lives in some animal that it eats. The cat when devouring the rat and the mouse takes in from their livers the *Cysticercus fasciolaris*, which becomes in its stomach the *Tænia crassicolis*. The dog and the wolf obtain their rightful tenants from the sheep and the deer. Man himself is subject to attacks of the cystic forms of worms, which would probably develop into regular Tænia in the stomachs of the lion and the tiger.

A question arises as to whether this occupancy is injurious. It does not appear to be unnatural. Amongst the Abyssinians, where the occurrence is common, it is regarded as a sign of health, whilst the lower animals do not appear to suffer. Man himself does not appear to suffer till he is conscious of not being alone in his body. At any rate, these discoveries point to the means of preventing the development of these strangers within us. There should be a special oversight of pork amongst us, and no morsel that is measled should be allowed to be sold as food. If this were done, the most effectual means would have been taken to prevent the spread of this form of parasitism amongst the human race.

Although Zoology is not recognized as a branch of medical education in this country, the knowledge of the numerous facts connected with the history and uses of animals to medical men are so obvious, that we are at a loss to understand how such an oversight has been permitted to continue. It may perhaps be a question as to whether the present system of requiring a certificate of attendance on lectures on certain branches of science to the exclusion of others in a medical education is not, on the whole, injurious. There can be no doubt that it would be better to encourage the medical student to master the first principles of all those sciences involved in the functions of the human body, and the nature of those substances which are used as food and medicines. Under such a system zoology would necessarily be studied, both as furnishing the means of comprehending the varied forms of animal life in relation to that of man. It is to zoology more particularly from this point of view that Prof. Moquin-Tandon directs attention in the work which Mr. Hulme has translated. We do not know that any similar work exists, and as medical men have found medical botany useful they may also find the present work of advantage. To the general reader this book will not be found uninteresting, as it deals with those

departments of zoology which are more or less familiar to all. M. Moquin-Tandon treats Medical Zoology as a distinct branch of science, and deems that it ought to include the Natural History of Man. He has therefore introduced the subject with a sketch of the various races of men and their distinguishing characteristics, as well as the results of the latest observations on vital statistics. To this part of the subject, Mr. Hulme has added several paragraphs in brackets, containing much information from British sources.

The second part of the work treats of Medical Zoology proper, and commences with an account of animal substances formerly used in medicine. Here we find a surprising account of monstrous remedies that were formerly employed in orthodox medicine. A list of them ought to be hung up in every doctor's consulting-room, to teach him to be charitable to those who differ from his own enlightened self at the present day. Amongst these precious remedies are, toads boiled in milk—worms, cockroaches and scorpions, infused in oil—the blood of the bat, tortoise, frog, snake and lizard—the hairs of the cat, fox, ass, elephant, goat and camel—the liver of the frog—the kidney of the ass—the claws of the crab—the dried tears of the stag—the webs of the spider—and the cocoons of the silkworm. These are only a few of the less disgusting remedies prescribed by the genuine disciple of Æsculapius in times gone by. But the author's account of things occasionally used in medicine at the present day is sufficiently alarming. Amongst these figure the scink, wood-lice, kite, musk, civet, and other unsavoury animal products.

We have only to add, in concluding our notice of this book, that Mr. Hulme has greatly improved the original by his additions, and that it is illustrated with above one hundred wood engravings.

FINE ARTS

ASSYRIAN SCULPTURES IN THE BRITISH MUSEUM.

IN July, 1856, there arrived a magnificent consignment of sculptures from the Ninevite excavations, exhumed under the direction of Mr. Loftus, since deceased, from the ruins of the Palace of Ashurbanipal the Third, grandson of Sennacherib, who lived in the seventh century before Christ. Mr. Hormuzd Rassam, who had accompanied Mr. Layard in his earlier labours, and succeeded him as conductor of the excavations in that part of the Assyrian capital called Kouyunjik, had sent a similar collection a few months before. These last were from a palace built by Sennacherib himself, or by the Ashurbanipal in question. Mr. Loftus's discoveries came from another part of the great mound, styled by him “The North-Western Palace.” They are of later date than those previously received, their style being more complete and artistic. They represent hunting-scenes, battles, sieges, processions of captives, &c., and are executed with astonishing spirit of design and fineness of execution,—so much so, indeed, that we have no hesitation in asserting that in many qualities of really fine Art, they are little inferior to the Panathenaic frieze itself, made under the eyes of Phidias.

On the arrival of these marbles they were deposited in a crypt at the British Museum, almost as much buried as they had been for two thousand four hundred years. Consequently they received little notice. The recent erection of the Assyrian Basement-Room affords ample space, and enables us to describe them. The most interesting portion of Mr. Loftus's importations is the Inscription of Sennacherib relating to his conquest of Palestine, and the submission of Hezekiah. This is already well known to the public. The sculptures themselves are not so; even now, few visitors descend the obscure staircase leading to the room which contains them. They are in flatter relief than the earlier received marbles, far more finished, and have been damaged

by fire in many places. Where this has been the case, the application of a silicious solution has been tried, apparently with little success, to reconvert the scorched gypseum into marble again. We shall take them in the order of their numbers. No official catalogue or account has been published, although these works have been in the hands of the Trustees nearly five years. By erecting a parallelogram of wall *within* the room double space is gained, and six wall-surfaces are available for the bas-reliefs, which arrangement affords some idea of their original position.

Slabs Nos. 1 to 14 came from Chamber 38, as described in the plan suspended in the room. These display "the collecting of prisoners, trophies and spoil, with scribes making notes." With characteristic disregard of perspective, we have three planes of action, one above another. There is a running background of date-palms through the whole; they feather at the root, have scaly bark and tall plummy heads and pendent clusters of fruit (the last indicates the time of year in which the events thus recorded took place); behind each man is a palm-tree. In slab 1, are sheep, horned goats, short-horned cattle, humped like the small Hindoo bull; a mule, with two children on its back, driven by a warrior; armed soldiers are driving captives, laden with spoil; one of the last has cast his burthen down in desperation, and is urged forward by the conqueror. In this part of the bas-relief the respective parties are distinguished by their head-dresses; the conquered wear a sort of turban bound round the head, leaving the hair uncovered; the victors have almost invariably helmets, crested with feathers. Some of the former are bound in couples by the hands; the latter carry the arms, quivers, &c. of the captives; two stalk along holding the heads of the slain. All proceed towards a heap of spoil, on which the last warrior stoops to deposit a quiver and a vessel, apparently metallic. The plunder consists of bows, chairs, couches, tripods, vessels, &c. The legs of the victors are covered with greaves, seemingly of embossed leather; and something beneath these suggests a kind of tegulated mail. In another place, several men wear something like *banded* mail, also a kind of mail with small plates intermixed, as still worn by the Sikh and Persian horsemen. The captives are bare-legged.

Behind the heap of spoil stands a man and a eunuch making notes, much the same as Botta found at Khorsabad, figured by him (pl. 146), and by Layard in the south-west palace, Nimrud,—a satisfied smile on the face of the last is admirably given; the first holds a scroll, the latter a tablet (diptych) and two styles; near these stand warriors fully armed, with lances about eight feet long, and great round shields covered with what we surmise to be hide; then others, with differently formed shields; next, the archers, each bearing his bow before him, and his right hand prone upon his left wrist,—an action highly suggestive of the attitude, "Attention!" of modern drill; from this, they are evidently standing still, guarding the spoil-heap. The bow-arms of the archers are bare to the elbow and extremely muscular. The quivers are richly ornamented. Approaching these come men holding entire horses. They are elaborately caparisoned, with headstalls tufted (or it may be with bells upon them), the collars carved with beautiful ornaments in the style ordinary on these sculptures, the reins tasselled; over the loins an embroidered saddle-cloth. Slung to the backs of the grooms are tall objects, which are doubtless bow-cases; on the apex of one is the head of a crowing cock; the ends of the bows in other slabs are carved in forms of this nature. In the row above this are people, bearing water-skins, going through a wood; one gives drink to a child, some are bound. Further on is a warrior, wearing the helmet of the defeated, upraising both hands for mercy to his captor—not without need, for just behind lies a heap of human heads. By this, stand another pair of scribes, man and eunuch. Next, is a group of men cooking or tending a fire, roasting various animals by it; then a regiment of spearmen, archers and mace-bearers, led by an armed eunuch, whose small, unmuscular frame is well marked; he bears a light bow. So much of the uppermost row is destroyed that the remains suffice

only to indicate herds of goats, oxen, sheep and rams. Thus far we have a sculptured record of one series of events. It must be borne in mind that there is no sequence in the groups of subjects. For some reason, probably religious, or, at least, connected with worship or glorification of the royal power, the themes were chosen.

The scale is broken for a larger in the next,—fragment of a slab (9),—showing an archer of the Assyrian guard. Nos. 10 and 11 are similar to this; the men bear quivers of feathered arrows and bows. All these bows—in the fashion still prevalent in the East—are short, the ends curved over to receive the string in a deep nook. The soldiers have ornamented cheek-pieces to their head-dresses, and boldly embossed baldrics slung across the chest. On No. 12, are four musicians, probably priests; one has a monstrously elevated head-dress, not unlike that remarked by Egyptian antiquaries as characteristic of the people of Upper Egypt, which, when combined with the mitre usual in Lower Egypt, constituted the peculiar crown seen in so many of the Egyptian portraits of monarchs after the union of the kingdoms. One of these men bears a sort of dulcimer, with eight or nine strings, suspended and projecting far in front; each of his hands holds a plectrum; at the foremost end of the horizontal bar, the strings, the tasselled ends of which hang down, are fastened to an upright piece terminating in an open human hand, not unlike the ancient sceptres of the Frankish kings—could it be to hold the written music?

With slab 14, the smaller scale is resumed. Some bearded men are traversing a mountainous country; there are fir-trees on the hill-tops and sides. On slab 15 are Assyrian warriors, an archer, and a javelin-bearer. No. 16,—a hilly forest country,—mounted warriors following men armed with bows, some of whom turn upon and discharge arrows at the pursuers, others are driven over a precipice; above, a train of laden people pass along. 17 and 18 contain each a "gigantic, mythological or sacerdotal figure engaged in religious rites;" one is lion-headed and vulture-footed, bearing a mace and a dagger. In 19 and 20, the scenes are in three rows, as before. The lowest represents dismounted horsemen leading their horses through a thicket. After this slab, the distinction can be no longer made between the victors and the vanquished, as before, by their helmets, the crested and the simply pointed being worn by two bodies engaged in a single service. The men in ambush, as presumably they are, wear the peaked helmets of the vanquished, and their horses are caparisoned as before. It is worth while to notice the indications of distinct climates in the arboreal forms as we proceed. On slab 14, are pine-trees, showing a hilly country,—the forms of the foliage and curvature of the boughs clearly marking this. Next, the trees have heavy boughs, as of a more temperate climate,—these suggest the character of oaks; in the last slabs, the foliage resembles that of willows. In the second row are a string of suppliants, a child amongst them, some bound, others burthened with spoil. The third row is similar, except that some cast human heads at the feet of scribes, backed by soldiery again.

Nos. 21, 22 show the Assyrians assaulting the walls of Lachish. In a thicket before the town archers are shooting from amongst the trees, and slingers alighting; the action of these last is given with extraordinary spirit, the jerk of the arm and out-flying of the thong itself could not be better shown, nor the way in which the motion comes from the shoulder. This is a vineyard, for grape-laden vines are trained upon the trees. The slingers cast over the heads of the archers, who draw the bow to the shoulder. Nearer still to the town, and more in the open, are soldiers with shields, apparently wicker, and lances; more archers shoot from under these shields; nearer still are men holding mantlets. In slab 23, which shows the taking of Lachish by assault, and torturing of the prisoners, the ladders are reared in numbers against the walls, which are higher; the country is evidently smoother; here the tortoise is at work against the top of a shield-hung tower; beneath the line of the rampart are three little barred windows; great stones and torches in scores are being tossed against the defenders, who reply

in kind by throwing over the broken ladders (even shields go down), shooting arrows and slinging stones. It is evident defence is hopeless, for below are people escaping with valuables by a little postern. In 24, are camels, chariots, men and oxen burthened with spoil.

On slabs 27, 28, 29, the vanquished are brought before Sennacherib, who is seated on his throne. It is noticeable that the king is (contrary to Egyptian usage) but little larger than the people; behind him stand two eunuchs holding feather fans and embroidered scarves. The king's dress is richly decorated and deeply fringed; his left hand holds a strung bow, the right a brace of arrows. The throne is splendidly carved all over; three rows of little figures of bearded men support the side rails. Guards approach with the captives, some of whom prostrate themselves; near this is an inscription in cuneiform characters. The countenance of the monarch has been defaced, evidently on purpose and of old. Behind is the great imperial pavilion, with its hooded top and ropes by which it is stayed, and square-headed door at one end. Next, a war-chariot, the fellows very broad, and carved naves; a bow-case is slung beside. A charioteer stands within:—this looks like a portrait of a veteran, one to be trusted in battle; he holds back the strong horses; at the head of each is a groom; the horses' tails are clubbed and bound; by the side an attendant holds an umbrella with its pendent screen or scarf behind; the carving of embossed work upon this umbrella is as clear and sharp as when it left the sculptor's hand so long ago. Next comes a warrior, with a bow-case slung over his back, holding a horse, and an archer bearing also a bow, besides a sling, mace and crooked sword by his side. In 31, are more dismounted horsemen, and a chariot (*biga*, as all the before-mentioned are). The upright yoke extends from the end of the pole, spreads itself out above the horses' heads in the form of a coxcomb-plant bloom, or fan,—that is, somewhat in the fashion of the *yugum* in use amongst the Persians (see the Persepolitan carving in bas-relief up-stairs here); it is tufted with short plumes or little bells,—it is difficult to say which. Nos. 31, 32, show a fortified camp with bastions at regular intervals, a road straight through it; two pavilions with hooded tops as before, and several tents are within. The last evidently consist of nothing better than canvas or skins cast over the trunks of small trees which have been denuded of their minor branches. In one, a man is cooking, with a pot placed over a fire between two large stones; behind him a table with something on it. In another, two men seem to be holding counsel. A third contains a couch, upon which, as we understand it, lies a man; another, tending him, at the head of the couch. Besides these, are priests offering sacrifice, several war-engines, a horse and an ox. This concludes an examination of one chamber, as here disposed.

MUSIC AND THE DRAMA

NEW PUBLICATIONS.

PART-MUSIC.

Three Part-Songs, composed, &c. by H. H. Pier-son, (Ewer & Co.), give us reason for continuing to hope that their writer's style is in progress of simplification. In the first, however, which is a setting of the beautiful ballad from Scott's 'Antiquary,' there is still more crudity than is acceptable; nor is the accentuation of the words altogether satisfactory. The second and third are better, because less ambitious.—Book 37 of '*Orpheus*' (same publishers) contains five vocal quartets for volunteers, derived from German sources. The first is merely a transcript of the theatrical chorus '*Bella Vita*,' from Mozart's '*Coel*.' It would seem more natural that an English offering to volunteers should consist of English music.—*Three Choral Songs*, by C. A. Macirone, (Novello & Co.), we fancy to be a reprint. Whether or not, they can be recommended as simple and spirited, without meagreness, and as nicely written for the voices;—the same may be said of Miss Macirone's *Good-morrow to my Lady bright* (same publishers).—*When Evening's Twilight falls*, by Francesco

Berger, Op. 22, (Addison & Co.), is a very elegant 'Ave Maria,' which depends for its effect, in part, on the pianoforte accompaniment; in this differing from the above.—The same may be said of the *trio* for soprano, 'Good-bye to Winter,' by Mrs. H. Ames. (Ashdown & Parry).—Four separate glees: *Highland War Song*, by Walter Macfarren, — *Around the May-pole tripping*, by Mr. J. L. Hatton, the successful part-writer, — *Night, lovely Night*, by Francesco Berger, (same publishers), — and *Far from the Din of Cities*, a six-part song, by G. B. Allen, (Leader & Cook), may be classed together as all above the average, though none rising to the highest merit.—Of Mr. Hullah's *Singing Library, Sacred and Secular* (Addison & Co.), Nos. 4 to 10 are before us, and both as regards research into music by composers too much forgotten (let us name Attwood and Storace), and the selection of new compositions, sustain the high character of the work.

A group of small books shows how universally the taste for part-singing is diffusing itself in this country. Here are *New Tunes to Choice Words, in Four Parts*, by T. Murby. (Groombridge & Sons.) The music is harmless, if not very good; the directions for declamation are commendable, as showing a disposition to consider a branch of musical education too universally neglected in this country.—*The Coaly Songster, and Brew a Storm for Reform, and Come Girls! Come Boys!* are by J. H. H., who has printed them in a character of his own, which we hand over gladly to the Tonic Sol-Fa Association for review.—*School Songs for Junior Classes*, by T. M. Hunter (Edinburgh, Gordon), is, of its kind, an excellent collection, and most cheap—sixty-one neatly printed songs for fourpence!—*A Garland of Songs*, edited by the Rev. C. S. Bere (Aylott & Son), is another collection, also not dear, for a shilling. It is called an English 'Liederkrantz'; we presume because largely fitted out from German part-books. Some of the tunes are pretty, few are worth naturalizing. The pages are encumbered with two notations. The words are nicely selected.

FOREIGN SONGS.

Three Songs, with German and English Words. "Ich denke dein," with Violoncello Accompaniment. By Charles Maclean. (Davison & Co.).—We need not name certain English writers whose delight in German literature has destroyed their style and led to the creation of a jargon, which is as superfluously foolish as it professes to be grand and choice. Mr. Maclean is in an analogous plight. His compositions combine all the defects of the style which he has adopted. The disdain of melody is as great with him as with the most complacent among the coxcombs who speak of Weber and Mendelssohn as trivial. His pianoforte accompaniments are superfluously difficult, with no compensation in the way of effect. In the song with *violoncello* (which, by the way, a person called Beethoven set "trivially," as the new Germans would phrase it), the accessory instrument is of no use.—*The Poet's Bridal Gift, (Dichter's Ausgabe), Eileen a roon*, by Bernhard Althaus (Ewer & Co.), are less repulsive than the above, though wanting in freshness.—*The Roaming Minstrel, Der wandernde Sänger*, by F. Weber (Ashdown & Parry), is a slight composition in the waltz style.—*Gute Nacht*, by Hermann Berens (same publishers), might have been signed Proch or Kucken: like the music of these writers, it has some elegance. The same may be said of "It is not always May," by Leo Kerbusch (D'Almaine & Co.).—*Love-breathing Music, Liebliche Töne*, by C. Keller, Op. 38, No. 1. (Lonsdale & Co.), is a tuneable and easy duett for female voices.

It is a relief to turn from this heap of songs, which are poor when not pretending, to some extracted pieces from *La Cirassienne* (Addison & Co.). Though the work cannot live among its writer's best operas, the Auber-touch is not altogether absent. No. 6. is a sprightly duett.—No. 9. a. is the simplest of melodies rescued from commonplace by a coquettish accidental note or two, with true French subtlety. The show-pieces for the *prima donna*, Nos. 14. and 16. are less acceptable to us; the phrases want novelty.—No. 18. a *rondo*, for the *Lover*, is sprightly, if, like them, not new.

Che chiedi, &c., Duetto, by S. Perugini (Lonsdale), is a pleasing *duettino* in the Blangini pattern, but the first four bars are repeated too frequently.—*Desire, Ariella* (same author and publisher), is more ambitious, the accompaniment having been more carefully studied than was the rule with Italian composers of chamber-music. It is a song worthy of being taken up by a *mezzo-soprano* with a limited voice, the melody being within the compass of an octave.—*Son bella e giovane, Ballata*, a gay trifle, and *Le Pastorelle amoroze, a Duetto*, with a piquant burthen, by L. Badia, complete the list of Italian music which is to be here noticed.

MUSICAL AND DRAMATIC GOSSIP.—Owing to the great size of the stage, Covent Garden Theatre makes a more splendid Promenade Concert Room than any we have hitherto had in London. In spite of the fervent heat of Monday evening, the promenade was well filled at the first of Mr. A. Mellon's *Concerts*. The public has confidence in this gentleman, and with ample reason. He is our best English conductor;—and has assembled an excellent orchestra. Mendelssohn's Italian Symphony, as it is called, could hardly have gone better. The more slight and showy music, of course, left nothing to desire in the way of execution. Mr. Mellon's singers were Mdle. Parepa and Miss Laura Baxter—also a robust and fresh-voiced chorus, some two hundred or more in number, conducted by Mr. Martin. How are times changed—we cannot but once again admire—since "the Lancashire Singers" were indispensable to a "full performance" in London! The very quality of our Southern voices seems improved;—and English, not Cockney language, is sung in the metropolis. Yet some of our near neighbours across the Channel cannot rid themselves of the charming idea that it was the *Orphéonistes* who showed us mute English the way to sing!—A "Mendelssohn Night" will be given next Monday.

A loss of an honourable and honoured musician is announced in the obituary of the week—the departure of the patriarch, Vincent Novello, which took place at Nice a few days since. He was aged eighty.—By descent an Italian, the larger part of his life and his professional career were passed in London; where his sound musical knowledge and his command over the organ (then not common in England) enabled him to do valuable service to his art. Especially was this rendered in the naturalization of sacred music of the great Italian and German writers belonging to the Roman Catholic Church. The Masses of Mozart, Haydn, Hummel, and many writers less known,—still meriting to be known,—owe the largest share of their introduction in a complete form to Mr. Novello's editorship, and to their performance in the Spanish chapel to which he was during many years attached. He was also an influential member of the Council of the Philharmonic Society, in the days when to belong to the same was a European distinction. He composed much; but what he produced was rather the work of an honest and temperate musician, perfectly trained, than the product of genius. That he was esteemed as a man,—that his society was cultivated beyond the verge of his own profession,—will be seen (to name but one instance) in the Letters of Elia. He had a numerous family; and to their distinction in his own art, and in the world of letters, it would be superfluous to advert. No common respect is implied in our farewell to one of the most sterling musicians of the old school whom this country has possessed as a resident.

Among the events of the past seven days has been the *Bisteddod* meeting, this year held at Conway.—Next week will be held in South Wales a similar musical meeting, at Aberdare, in the programme of which, besides the usual Bardic festivities, competitions, &c., figure selections from the music of Mendelssohn, &c., to be executed by a chorus of one hundred and fifty voices. Among the *solo* artists figure W. Lewis Thomas, W. John Thomas (harp), W. Brinley Richards (pianoforte).

M. Dulaurens, a new tenor, has been tried at the Grand Opéra of Paris, in 'Robert,' with doubtful

success. As matters stand—betwixt old traditions broken down, recent exactions of composers hard to satisfy, and newest fancies maintaining that persons are fit to sing who have never learnt to sing,—there is a chance of a "dead lock" in the matter of tenor singers, happening at the Grand Opéra.—It is now rumoured that M. Roger may appear (for three years to come), not at St. Petersburg, but at the Opéra Comique. This does not tell a tale of wealth or promise. A new tenor from the Conservatoire, M. Capoul, is to be tried there.

There is to be yet another new opera at Baden-Baden this year, with music by Herr Schwab. This is showy by way of prospect,—but the operas produced at Baden-Baden (no matter how liberally recompensed) have been, till now, valueless—'Le Mari Sylphe,' 'Le Faucon' by M. Gounod—and M. Vivier's Opera being three notorious examples.—What if there be poison in the patronage of such a place? What if those who consent to deck and dress out a haunt of gamblers, find the gold pieces paid to them for their compliance transformed to clipped palm-leaves when the question is one of fame in healthier quarters?

Italy is in a bad plight. The autumn *prima donna* at La Scala (Milan) is to be Madame Colson (!)—'Il Menestrello,' a new opera by M. de Ferrari, given at the Paganini Theatre, Genoa, has been accepted by the public.—The new opera by Signor Petrella, 'Virginia,' given at the Theatre San Carlo (Naples), has been received, apparently under protest.

Signor Verdi's new opera for St. Petersburg, 'La Forza del Destino,' is said to be founded on a subject by Senhor Martinez de la Rosa.

Our neighbours in Paris have wonderful devices for keeping their theatres empty in that hot weather which, as Mr. Buckstone told us not long ago, is the manager's worst foe. The Théâtre Français, by way of a temptation, has held out the 'Œdipus' of Sophocles, in the translation of M. Lacroix. The old Cirque is wiser, we think, in tempting Circus-goers by a "roaring" Chinese spectacle, 'The Taking of Peking.'

Herr Eckert has accepted the direction of music in Stuttgart.—Herr Ignaz Lachner has been invited to direct the theatrical orchestra at Frankfurt. The appointment is one of importance to German music.

M. Auber has just been named Grand Officer of the Legion of Honour by Imperial command: the decoration being one rarely bestowed on a musical artist.

MISCELLANEA

Cuneiform Flints.—Allow me to inquire if any of your numerous readers have ever known any considerable deposit of (so-called) Flint Implements which were not in contact with oxide of iron when found? HENRY OGDEN, M.D.

Sunderland, 18th August, 1861.

Caxton's House in Westminster.—In your critique on the 'Life of William Caxton' you say he spent fifteen years of his life within the precincts of the Abbey, "perhaps in a house known as 'The Red-pale' in the Almonry, the precise locality it is almost impossible to ascertain." I do not know whether it would be interesting to your readers to know that a house used to be pointed out by tradition as "Caxton's House" in the Almonry, until it fell down, about fifteen or sixteen years ago. It was a curious old-gabled and recessed house, with a gallery running along the upper story. Great part of it fell down some years ago, and the remainder was pulled down by some of Messrs. Grissell & Peto's bricklayers, and I have heard it several times stated that wooden types were found. In fact, I have heard a person say that he has possessed some. Be that as it may, I have often had the house pointed out to me when a boy.

WESTMINSTER.

TO CORRESPONDENTS.—A. G.—J. N. R.—A. J. D. O.—J. H. H.—W. E.—C. P. J.—J. J.—R. G. H.—Vocal—received.

EAGLE INSURANCE COMPANY.

THE ANNUAL GENERAL MEETING of this Company was held at Radley's Hotel, on Friday, August 9, 1861,

THOMAS BODDINGTON, Esq., in the Chair,

And the following Report for the Year ending 30th June, 1861, was read and unanimously adopted:—

The Directors have again to submit their Annual Report to the Proprietors, and they commence it with the following abstract from the Company's books of the Surplus Fund Account:—

SURPLUS FUND ACCOUNT.

<i>Income of the Year ending 30th June, 1861.</i>			<i>Charge of the Year.</i>		
Balance of Account, June 30, 1860	£19,799 5 7	£744,118 19 8	Dividend to Proprietors	£10,343 11 6	
Premiums on New Assurances	280,374 12 1		Claims on decease of Lives Assured	£232,781 10 3	
Do. on Renewed ditto			Additions to those under Participating Policies	22,654 13 6	
	300,173 17 8		Policies surrendered	13,100 5 10	
Interest from Investments	80,113 1 6	380,286 19 2	Re-assurances, new	3,763 1 9	
			Ditto, old	29,244 6 4	
				301,543 17 8	
			Commission	10,674 10 11	
			Medical Fees	920 7 4	
			Income-Tax	3,116 3 2	
			Expenses of Management	11,261 2 0	
				327,516 1 1	
			Balance of account, June 30, 1861	786,546 6 3	
				£1,124,405 18 10	

Examined and Approved, **THOMAS ALLEN,**
WILLIAM HENRY SMITH, Jun. } Auditors.

The total income is here shown to be 380,286*l.* 19*s.* 2*d.*, and the total outgoing to be 327,859*l.* 12*s.* 7*d.* The difference—viz., 42*l.* 427*s.* 6*d.*—goes in augmentation of the Surplus Fund, which now amounts to 786,546*l.* 6*s.* 3*d.*

The Premiums on New Assurances are 19,799*l.* 5*s.* 7*d.*—about 200*l.* in excess of those of the previous year; but the renewals are somewhat less than it was to be expected they would be, a greater number of assurances having run off during the year than usual. The payments on account of re-assurances newly effected amount to 3,763*l.* 1*s.* 9*d.*

The realized assets in June, 1860, productive and unproductive, were 1,816,900*l.*, after providing for all immediate demands; and this sum has produced in the year 80,113*l.* 1*s.* 6*d.*, the rate of interest thus realized being rather more than 4*l.* 8*s.* per cent. annum.

The amount claimed on decease of lives assured is less than that last reported, by about 4,300*l.*

The Assets and Liabilities on the 30th of June stood as follows:—

BALANCE SHEET.

<i>Liabilities.</i>		<i>Assets.</i>	
Interest due to Proprietors	£6,631 15 9	Amount invested in Fixed Mortgages	£1,133,772 17 6
Claims on decease of Lives Assured and additions thereto unpaid	66,608 4 9	Ditto Decreasing Mortgages	154,620 10 3
Cash Bonus due to Policy-holders	12,446 5 6	Ditto Reversions	77,577 15 3
Sundry Accounts	5,609 19 8	Ditto Funded Securities	329,443 5 10
Value (1857) of Sums Assured, &c.	4,377,392 16 10	Ditto Temporary Securities	35,435 7 7
Proprietors' Fund	£201,246 0 3	Current Interest on the above Investments	29,164 16 10
Surplus Fund, as above	786,546 6 3	Cash and Bills	31,111 17 0
	987,792 6 6	Advanced on Security of the Company's Policies, &c.	90,555 16 9
		Agent's Balances	27,878 19 2
		Sundry Accounts	14,536 8 7
		Value (1857) of Assurance Premiums	3,518,373 15 1
			£5,456,471 9 0

Examined and Approved, **THOMAS ALLEN,**
WILLIAM HENRY SMITH, Jun. } Auditors.

This account differs but little from that presented last year. The net assets are, of course, upwards of 42,000*l.* more than they were; and it will be observed that further investments have been made during the year in Government Funds.

As a very full Report, both financial and statistical, will have to be made at the next Annual Meeting, the Directors abstain from further observations now. Meanwhile, they are glad to be able to say, there is every indication that the laborious investigation about to be entered upon, will lead to results of a very satisfactory character.

Explanations were given, and complimentary Addresses made, by Mr. Boddington, Dr. Guy, Mr. Seymour Teulon, Mr. Nathaniel Gould, Mr. Cuthbert, Sir James B. East, Bart. M.P., Mr. Joshua Lockwood, and others, and the proceedings terminated.

The Trustees and Directors of the Company are now as follows:—

TRUSTEES.

LORD BATEMAN.
ROBERT CHEERE, Esq.
JOSEPH ESDAILE, Esq.
CHARLES THOMAS HOLCOMBE, Esq.

RICHARD HARMAN LLOYD, Esq.
WILLIAM JAMES MAXWELL, Esq.
RALPH CHARLES PRICE, Esq.

or stamped to go by post, 5d.

NOTES AND QUERIES:

A MEDIUM OF INTER-COMMUNICATION FOR
LITERARY MEN, ARTISTS, ANTIQUARIES,
GENEALOGISTS, &c.

NOTES AND QUERIES, which is now to be found in the Library of nearly every Club, College, and Literary Institution, and in the hands of nearly every book-loving man, in the United Kingdom, was established for the purpose of furnishing to all lovers of Literature a COMMONPLACE-BOOK, in which they might, on the one hand, record for their own use and the use of others those minute facts,—those elucidations of a doubtful phrase, or disputed passage,—those illustrations of an obsolete custom,—those scattered biographical anecdotes, or unrecorded dates,—which all who read occasionally stumble upon;—and, on the other, of supplying a medium through which they might address those Queries, by which the best informed are sometimes arrested in the midst of their labours, in the hope of receiving solutions of them from some of their brethren.

The Numbers already published have contained Articles by the following eminent Writers, besides many others equally distinguished, who have chosen to preserve their *incognito* :—

Lord Braybrooke
Rev. Thomas Boys
John Britton, Esq.
John Bruce, Esq.
J. Burtt, Esq.
W. D. Christie, Esq.

NOTES AND QUERIES may be procured by order of every Bookseller or Newsmen, or of the Publishers,

BELL & DALDY, 186, Fleet-street, E.C.

Just published, fcap. 8vo. with 6 Plates of rare and choice Examples, cloth, 5s.

A HAND-BOOK TO ROMAN COINS. By
FRED. W. MADDEN, of the Medal Room, British
Museum, Hon. Sec. of the Numismatic Society.
J. Russell Smith, 26, Soho-square, London.

HAVET'S GRAMMAR OF FRENCH GRAMMARS.
New Edition, 450 8vo. pages, 7s.

THE COMPLETE FRENCH CLASS-BOOK :
a Theoretical and Practical French Manual, prepared
expressly for the Use of English Learners, and based upon the
Works of the French Academy and the Standard Grammarians of
the present day.

"M. Havet's treatise is a complete exposition of the principles
and peculiarities of the French language."—*Athenæum*.

"No other book is so well calculated to make a complete
French scholar as M. Havet's admirable and comprehensive
work."—*English Journal of Education*.

"Havet's popular 'French Class-Book' is by far the most solid
and practical production of its kind. It contains the rudiments,
the usual practice, and the niceties of the language, all in one
volume, lucidly arranged, and set forth with an intimate know-
ledge of what is easy and what is difficult to English students of
French."—*Continent Review*.

London : W. Allan, 9, Stationers' Hall-court.

THE ADVANCEMENT OF SCIENCE.

With a fine Portrait of Lord Brougham, F.R.S., and a Vignette

Smith, Elder & Co. 65, Cornhill.

Second Edition, crown 8vo. price 5s. cloth,

OUR ENGLISH HOME: its Early History
and Progress. With Notes on the Introduction of Domestic
Inventions.

"It contains the annals of our English civilization, and all
about our progress in social and domestic matters, how we came
to be the family and people which we are. All this forms a book
as interesting as a novel, and our domestic history is written not
only with great research, but also with much spirit and live-
liness."—*Christian Remembrancer*.

Oxford and London. J. H. & Jas. Parker.

OXFORD UNIVERSITY PRESS.

Now ready, Fifth Edition, Revised and Augmented, 4to.
price 11s. 6d. cloth lettered.

A GREEK-ENGLISH LEXICON. Com-
piled by H. G. LIDDELL, D.D., Dean of Christ Church,
and ROBERT SCOTT, D.D., Master of Balliol.

This Fifth Edition has been thoroughly revised and corrected;
and very large additions have been made to it, from the materials
contained in Ross and Palm's Greek-German Lexicon, and other
Works.

Also,

A LEXICON for the USE of SCHOOLS,
Abridged from the GREEK-ENGLISH LEXICON of H. G. LID-
DELL, D.D., and ROBERT SCOTT, D.D. Ninth Edition.

"One of the most complete of modern publications in this department."—*Times*.

Edinburgh: A. & C. BLACK; and all Booksellers.

MR. MOTLEY'S NEW HISTORICAL WORK.

FOURTH THOUSAND, with Portraits, 2 vols. 8vo. 30s.

HISTORY OF THE UNITED NETHERLANDS:

FROM THE DEATH OF WILLIAM THE SILENT TO THE
SYNOD OF DORT;

With a FULL VIEW of the ENGLISH-DUTCH STRUGGLE against SPAIN; and of the ORIGIN and DESTRUCTION of the SPANISH ARMADA.

By J. LOTHROP MOTLEY,

Author of 'The Rise of the Dutch Republic.'

Edinburgh Review.—"We must especially commend the hearty English spirit in which the book is written; and fertile as the present age has been in historical works of the highest merit, none of them can be ranked above these volumes in the grand qualities of interest, accuracy and truth."

Quarterly Review.—"Mr. Motley's work must be read to appreciate the vast and conscientious industry which he has bestowed upon it. His delineations are true and life-like. Diligent and painstaking as the humblest chronicler, he has availed himself of many sources of information which have not been made use of by any previous historical writer."

JOHN MURRAY, Albemarle-street.

MR. DU CHAILLU'S TRAVELS.

TENTH THOUSAND, with Illustrations, 8vo. 91s.

ADVENTURES IN EQUATORIAL AFRICA;
WITH ACCOUNTS OF THE CANNIBALS AND OTHER
SAVAGE TRIBES;

And of the CHASE of the GORILLA, the NEST-BUILDING APE, &c.

By PAUL B. DU CHAILLU.

Times.—"This extraordinary production. We must go back to the voyages of La Pérouse and Captain Cook, and almost to the days of wonder which followed the track of Columbus, for novelties of equal significance to the age of their discovery. M. Du Chailly has struck into the very spine of Africa, and has lifted the veil of the torrid zone from its western rivers, swamps, and forests."

Saturday Review.—"M. Du Chailly's narrative will not disappoint the expectations which it has excited. Its literary merits are considerable, for it is clear, lively, and judiciously pruned of unimportant details. His explorations were in no degree exempt from the hardships and dangers which are the condition of African travel."

JOHN MURRAY, Albemarle-street.

NEW AND CHOICE BOOKS AT MUDIE'S

2 and 3, FEATHERSTONE-BUILDINGS,
HIGH HOLBORN, LONDON, W.C.

To MICROSCOPISTS and OTHERS.

To complete our system of Manufacture, and to
meet the demand for our Instruments, we have built an entirely
new Factory; and whilst we shall thus be enabled to continue our
improvements in Manufacture, we shall also concede to our Cus-
tomers every reduction that we can in Price.

ACHROMATIC MICROSCOPES.

We have carefully arranged our different forms of Stand with
various Object-Glasses and Apparatus, so as to offer Microscopes,
more or less complete, at certain amounts, in each instance con-
siderably less than the sum of the individual prices of the several
parts, and these we keep constantly in stock.

WENHAM'S BINOCULAR MICROSCOPE.

We are now manufacturing, under the immediate superintend-
ence of the Inventor, this valuable addition to the Microscope.
Mr. Wenham's arrangement not only gives the most perfect and
well-defined Stereoscopic vision with any Object-Glass or Eye-
Piece, but it can be applied to almost any Microscope, and when
adapted, it in no way whatever interferes with the ordinary use
of the Instrument.

MALTWOOD'S FINDER FOR THE MICROSCOPE.

This is the only method that has become universal for the pur-
pose of finding Objects.

MICROSCOPIC OBJECTS.

In the endeavour to make our Collection of Prepared Specimens
complete in every branch, we have lately secured the sole agency
for the sale of some most remarkable transparent injections.

IOELAND SPAR.

We have a number of Cabinet Specimens of this interesting
substance on Sale, the pieces having been selected from a large
quantity which we have purchased, and besides being of very fine
quality, we are enabled to offer them at prices considerably below
the ordinary value.

ACHROMATIC STEREOSCOPES.

GORHAM'S KALEIDOSCOPI COLOUR TOP, &c.

Catalogues, giving full particulars, may be had on application,
or sent post free.

SMITH, BECK & BECK,
6, Coleman-street, London, E.C.
and Glass Works, Holford.

J. H. DALLMEYER (Son-in-Law and Pupil
of the late ANDREW ROSS)
Respectfully begs to inform the Scientific Public that he exclu-
sively manufactures the ASTRONOMICAL TELESCOPE accord-
ing to A. R.'s processes, which he also bequeathed to him the
whole of that family.

For particulars of J. H. D.'s recent IMPROVEMENTS in
MICROSCOPIC OBJECT-GLASSES, PHOTOGRAPHIC
LENSES, &c. see Catalogue, which may be had on application at
19, BLOOMSBURY-STREET, Oxford-street, W.C.

HER MAJESTY'S VISIT TO IRELAND.—
CALLAGHAN'S OPERA, RACE and FIELD GLASSES,
matchless for power and portability, may be worn round the
neck as a double eyeglass. Invaluable to the Tourist, and for
viewing scenery at four to five miles distance, are preferred to the
telescope. Equally available at the Opera-House, Race-Course, or
Review. Price, 30s., 45s., 50s., 70s., and 80s., according to size and
power. May be had at Messrs. Smith & Son's Bookstalls, at the
principal Railway Stations; and in Ireland at Bray, The
Curragh, Killarney, Kingston, Limerick Junction, Malinbeg,
Newbridge and at No. 31, Lower Sackville-street, Dublin; and may be
sent free on remittance to William Callaghan, Optician, 23a,
New Bond-street, W., corner of Conduit-street, London.

ACCIDENTS OF ALL KINDS,
AND FROM ANY CAUSE,
may be provided against by an Annual Payment of 2s. to the
RAILWAY PASSENGERS' ASSURANCE COMPANY,
which secures 1,000l. at death by Accident, or 6s. weekly for Injury.

NO EXTRA PREMIUM FOR VOLUNTEERS.
ONE PERSON in every TWELVE insured is injured yearly
BY ACCIDENT.

75,000l. has been already PAID as COMPENSATION.
For further information apply to the Provincial Agents, the
Railway Stations, or at the Head Office, 64, Cornhill (late 2, Old
Broad-street).

ANNUAL INCOME, 40,000l.
CAPITAL, ONE MILLION.
WILLIAM J. VIAN, Secretary.

ANDREW FRANCIS, Secretary.

LONDON LIFE ASSOCIATION,
81, KING WILLIAM-STREET, E.C.

Instituted 1806.

President—CHARLES FRANKS, Esq.
Vice-President—JOHN BENJAMIN HEATH, Esq.

Trustees.
Francis Henry Mitchell, Esq. Robert Hanbury, Esq.
Alfred Head, Esq. Benjamin Dobree, Esq.

The London Life Association was established more than fifty
years ago, on the principle of Mutual Assurance, the whole of the
benefits being shared by the Members assured. The surplus is
accumulated each year, and appropriated solely to a reduction of
the premiums after seven yearly payments have been made.

If the present rate of reduction be maintained, persons now
effecting Assurances will be entitled, after seven years, to a
reduction of 75 per cent., whereby each 10l. of annual premium
will be reduced to 2l. 13s.

This Society has paid in claims more than £4,150,000.
And has policies now in force amounting to 6,450,000.
For the payment of which it possesses a capital exceed-
ing 3,750,000

And a gross income from premiums and interest of
more than 340,000
Assurances may be effected for any sum not exceeding 10,000l. on
the same life.

The Society has no agents and allows no commission, and never-
theless the new assurances effected in the last financial year
amounted to 267,340l., and the new annual premiums to 10,567l.

EDWARD DOCKEY, Secretary.

GENERAL LIFE AND FIRE
ASSURANCE COMPANY,

63, KING WILLIAM-STREET, LONDON, E.C.

Established 1837.

CAPITAL, 1,000,000l.

Directors.

THOMAS CHALLIS, Esq. Ald., Chairman.
THOMAS BRIDGE SIMPSON, Esq., Deputy-Chairman.

Jacob George Cope, Esq. George S. Freeman, Esq.
John Delf, Esq. Charles James Heath, Esq.
John Dixon, Esq. James Pilkington, Esq. M.P.
Benjamin Edgington, Esq. Right Hon. C. P. Villiers, M.P.
John T. Fletcher, Esq. Edward Wilson, Esq.

FIRE and LIFE INSURANCES effected on the most advan-
tageous terms. Apply to THOMAS PRICE, LL.D., Secretary,
or to the Local Agents of the Company.

The Fire Premiums of 1860 were upwards of 45 per cent. more
than those of 1859, whilst the losses were 15 per cent. less.

The New Life Business has more than trebled within the last
four years.
The Life Reserve Fund is more than six times the annual Life
Income.
The Assets are upwards of 300,000l.

VICTORIA LIFE ASSURANCE COMPANY,

18, KING WILLIAM-STREET, CITY. Established 1833.

Thomas Nesbitt, Esq., Chairman.

O. B. Woolsey, Esq., Deputy-Chairman.

Charles Baldwin, Esq. Sidney Gurney, Esq.
George Penny, Esq. W. K. Jameson, Esq.
J. C. Dinwiddie, Esq. J. C. Dinwiddie, Esq.
William Elliott, M.D. John Kitchin, Esq.
Robert Ellis, Esq. Meaburn Standish, Esq., M.P.
J. P. Gassiot, Esq., F.R.S. Daniel Sutton, Esq.
John Gladstone, Esq. Walter Charles Venning, Esq.
Aaron Goldsmid, Esq. William White, Esq.

Every description of Life Assurance business is transacted.
Advances are made on Mortgages of Freehold Property, Life and
Reversionary Interests, &c. and also to Assurers on Personal
Security. The Assets are 340,000l., and the Income is over 65,000l.
per annum. Four-fifths of the entire Profits are appropriated to
the Assured. Three divisions of considerable amount have already
taken place. WILLIAM BATRAY, Actuary.

THE SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY

is a purely Mutual Office, in which the whole Fund belongs to the
Members; and the Profits are divided among them alone. Since
it was founded, in 1816, its history has been one of constant and
increasing prosperity; and it is now, in point of Funds, Annual
Revenue and number of Members, one of the largest Life Offices
in the world. The Security provided by the Society to its Mem-
bers and their Representatives is of the most unquestionable char-
acter; while the Returns made in the form of Bonuses are, it is
believed, not exceeded by those of any other similar Institution.
The following is a

MEMORANDUM OF BUSINESS, BONUSES, FUNDS AND REVENUE,

Extracted from the Society's detailed Prospectus.

1. TOTAL ASSURANCES ISSUED	£14,621,781
2. TOTAL BONUSES DECLARED	3,083,049
3. SUMS ASSURED AND BONUSES EXISTING	10,806,601
4. TOTAL CLAIMS PAID EXCEEDED	2,800,000
5. INVESTED FUNDS	2,801,706
6. ANNUAL REVENUE	688,738

Forms of Proposal, detailed Prospectuses and Reports, and
every information, may be had at the Head Office, or any of the
Society's Agents.

SAMUEL RALEIGH, Manager.
J. J. P. ANDERSON, Secretary.
Edinburgh, 5, St. Andrew-square.

SPECIAL NOTICE.

Proposals dated and lodged at the Head Office, or with any of
the Society's Agents, during the current year, will secure One
Bonus more than those of later date.

LONDON HONORARY BOARD.

George Young, Esq., Mark-lane.
Charles Edward Feltwick, Esq., Barrister, Temple.
David Hill, Esq., Sunner-square.
John Murray, Esq., Publisher, Albemarle-street.
Samuel Laing, Esq., Indian Finance.

Control Agent.

Hugh M'Kean, 4, Royal Exchange-buildings, Cornhill.
District Agents.

Major R. S. Ridge, 40, Pall Mall, Agent for the West-End District.
Benton Sealey, Islington-green, Agent for Islington District.

ROBERTSON & WHITE, Accountants.
4, Princes-street, Bank, E.C.

ARGUS LIFE ASSURANCE COMPANY, 30, THEROMORTON-STREET, BANK.

Chairman—WILLIAM LEAF, Esq.

Deputy-Chairman—JOHN HUMPHREY, Esq. Ald.

Richard E. Arden, Esq. W. Ladler Leaf, Esq.
Edward Bates, Esq. Saffery Wm. Johnson, Esq.
Professor Hall, M.A. Jeremiah Pilcher, Esq.
Robert Ingley, Esq. Edw. Pocock, Esq.

Physician—Dr. Jefferson, 3, Finsbury-square.
Surgeon—W. Goulson, Esq., 2, Frederick's-place, Old Jewry.
Attorney—George Clark, Esq.

ADVANTAGES OF ASSURING WITH THIS COMPANY.

The Premiums are on the lowest scale consistent with security.
The Assured are protected by an ample subscribed capital—
an assurance fund of 500,000l., invested on mortgage, and in the
Government Stocks—and an income of 94,000l. a year.

Premiums to Assure £100.			Whole Term.	
Age.	One Year.	Seven Years.	With Profits.	Without Profits.
20	£0 17 8	£0 18 9	£2 15 10	£2 11 10
30	1 1 3	1 3 7	3 5 5	3 0 7
40	1 1 0	1 6 9	3 0 7	2 14 10
50	1 14 1	1 19 10	4 6 5	4 0 11
60	3 3 4	3 17 0	6 13 9	6 0 10

MUTUAL BRANCH.

Assurers on the Bonus system are entitled, after five years, to
participate in nine-tenths, or 90 per cent. out of the profits.
The profit assigned to each policy can be added to the sum
assured, applied in reduction of the annual premium, or be re-
ceived in cash.

At the first division a return of 20 per cent. in cash on the pre-
miums paid was declared; this will allow a reversionary increase,
varying, according to age, from 90 to 95 per cent. on the premiums,
or from 5 to 15 per cent. on the sum assured.

One-half of the "Whole Term" Premium may remain on credit
for seven years, or one-third of the premium may remain for life
as a debt upon the Policy at 5 per cent., or may be paid off at any
time without notice.

Claims paid one month after satisfactory proof of death.
Loans upon approved security.
No charge for Policy Stamps.

Medical Attendants paid for their reports.
Persons, in time of peace, proceed to or reside in any part
of Europe or British North America without extra charge.

No extra charge for the Militia, Volunteer Rifles, or Artillery
Corps on Home Service.
The Medical Officers attend every day, at a quarter before Two
o'clock. H. BATES, Resident Director.

GOVERNMENT SECURITY LIFE POLICIES. THE CONSOLS ASSOCIATION, 439, STRAND, LONDON.

1. Provides the Security of Consols for its Policies.
2. It lends or insures ON DEMAND at any time, about One-Half of full Premiums paid.
Undoubted Security for Money, with a liberal Rate of Interest.
The Association possesses a large Capital, subscribed by several hundreds of Shareholders.
Full information may be obtained on application to
THOMAS H. BAYLIS, Managing Director.

NORWICH UNION LIFE INSURANCE SOCIETY.—Instituted 1804.

Secretary.—Sir SAMUEL BIGNOLD.
The whole of the profits divided with the assured.
Ample security offered by an accumulated capital of £,000,000.
One-half of the first five annual premiums may remain as a permanent charge upon policies granted for the whole duration of life.
The income of the Society is upwards of £37,000.
The amount insured is upwards of £5,078,000.
Since its commencement £3,700 Policies have been issued, and £568,568 paid to the representatives of 6,854 deceased members.
The Bonuses may be applied at the option of the Assured as follows:—
As a Bonus added to the Policy, or the amount may be received at once, that is, its cash value, or it may be applied in reduction of the future annual premium.
The rates of premium are lower than those of some Offices by nearly 10 per cent., a benefit in itself equivalent to an annual bonus.
For Prospectuses apply at the Society's Office, Surrey-street, Norwich; and 6, Crescent, Blackfriars, London.

FREDERICK DENT, Chronometer, Watch and Clock Maker to the Queen and Prince Consort, and Maker of the Great Clock for the Houses of Parliament, 21, Strand, and 24, Royal Exchange.

**DENT'S CHRONOMETERS, WATCHES, and CLOCKS.—M. F. DENT, 33, Cockspur-street, Charing Cross, Watch, Clock and Chronometer Maker, by special appointment, to Her Majesty the Queen.

LONDON—SHOW-ROOMS, 45, OXFORD-STREET, W.
BIRMINGHAM—MANUFACTORY and SHOW-ROOMS,
Broad-street. Established 1807.

THE BEST and CHEAPEST TEAS and COFFEES in England are to be obtained of PHILLIPS & CO., Tea-Merchants, 8, King William-street, City. Good strong useful Tea, 2s. 6d., 3s. 10d., 4s. and 4s.; rich Souchong, 2s. 6d., 3s. 10d., and 4s. Pure Coffee, 1s., 1s. 6d., 1s. 8d., 1s. 10d., and 1s. 12d. Tea and Coffee to the value of 40s. sent carriage-free to any railway-station or market-town in England. A Price Current free. Sugars at market-prices. All goods carriage-free within eight miles of the City.

TEA.—DR. HASSALL'S ("The Chief Analyst
of the Sanitary Commission of the Lancet on Food") Report on the Teas and Coffees sold by Messrs. STRACHAN & CO. 36, Cornhill, London, E.C.—"Having purchased through my own agents, and in the ordinary way of business, a variety of samples of the several qualities of Teas and Coffees vendued by Messrs. Strachan & Co. I have subjected the whole of them to Microscopic Examination and Chemical Analysis. The result of the examinations obtained was in the highest degree satisfactory."
A full report of the above Analysis, also List of Prices, can be had on application to Messrs. STRACHAN & CO. 36, Cornhill, E.C. London. Cards to all parts of London daily.

MR. HOWARD, SURGEON-DENTIST, 52, FLEET-STREET, has introduced an ENTIRELY NEW DESCRIPTION OF ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth, as to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication. Decayed teeth rendered sound and useful in mastication.—At home from Ten till Five.

REFRESHING BALM for the HAIR.
Every one values and admires a beautiful head of hair; yet there are hundreds who desire to make their hair look well, keep it from turning grey and falling off, but are unacquainted with the means to do so. OLDREDGE'S BALM OF HOLUBELLA to them is a priceless treasure—it is the only certain remedy. Established upwards of 30 years, it has withstood every opposition and imitation, and by the increasing demand proves its true value. In producing whiskers or moustaches, aiding weak thin hair to become strong, it has no equal. Price 3s. 6d. and 11s. only.—Sole Wholesale and Retail by C. & A. OLDREDGE, 22, Wellington-street (seven doors from the Strand), W.C.

KEATING'S PERSIAN INSECT-DE-STROYING POWDER.—This powder is quite Harmless to Animals, but is unrivalled in destroying Fleas, Bugs, Embezzles, Flea Cockroaches, Beetles, Gnats, &c., in Furs, and every other species of Insects in all stages of metamorphosis.
An invaluable remedy for destroying Fleas in Ladies' Pet Dogs. It is perfectly harmless in its nature, and may be applied without apprehension, as it has no qualities deleterious to Animals.

Sold in Packets, 1s., 2s. 6d., and 4s. 6d. each, or post free for 14s. or treble size for 36 postage-stamps, by THOMAS KEATING, Chemist, 79, St. Paul's Churchyard, London, E.C.

DINNEFORD'S PURE FLUID MAGNESIA has been, during twenty-five years, emphatically sanctioned by the Medical Profession and universally accepted by the Public, as the Best Remedy for acidity of the stomach, heartburn, headache, gout and indigestion, and as a mild aperient for delicate constitutions, more especially for Ladies and Children. Combined with the Acidulated Lemon Syrup, it forms an agreeable Emmenagogue, in which its Astringent qualities are much increased. During Hot Seasons and in Hot Climates, the regular use of this simple and elegant remedy has been found highly beneficial. Manufactured (with the utmost attention to strength and purity) by DINNEFORD & CO. 179, New Bond-street, London; and sold by all respectable Chemists throughout the Empire.

IN HOT WEATHER
—Dr. HUGO'S MEDICAL ATOMS, taken at night, produce refreshing sleep, cool the whole system, and give lightness and energy to mind and body. They have a delightful taste, and may be eaten as sweets. Sold by all Druggists, at 1s. 14d. and 2s. 9d. per packet.

COCKLE'S ANTIBILIOUS PILLS for Indigestion, bile, sick headache, acidity, heartburn, flatulency, spasms, &c.—Prepared only by JAMES COCKLE, 18, New Ormond-street; and to be had of all Medicine Vendors, in boxes, at 1s. 14d., 2s. 9d., 4s. 6d. and 12s. each.

NO MORE PILLS NOR ANY OTHER MEDICINE.—"We find DR. BARRY'S HEALTH RESTORING REVALANT ARABICA FOOD the safest remedy for habitual constipation, indigestion (dyspepsia), palpitation, cough, colic, asthma, bronchitis, consumption, diarrhoea, nervousness, biliousness, torpidity of the liver, &c."—Andrew Ure, M.D. F.R.S., Dr. Harvey, Dr. Shorland, Dr. Campbell, Dr. Wurzer's FETTERIAL.—"Bonn, July 19, 1853. Dr. Barry's Food is particularly effective in effectually curing indigestion (dyspepsia), a confirmed habit of body, as also in diarrhoea, bowel and liver complaints, inflammatory irritation and cramp of the urethra, the kidneys and bladder, and hemorrhoids; also in cough, asthma, debility, bronchitis, and pulmonary and bronchial consumption."—Dr. Rud. Wurzer's Process of Medicine and Precision. Packaged to time, with full instructions, 11b., 2s. 9d.; 51b., 4s. 6d.; 51b., 11s.; 151b., 22s.; 341b., free of carriage, 40s.—Barry Du Barry & Co., 77, Regent-street, London; Fortnum & Mason; also at 60, Gracechurch-street; 4, Cheap-side; 63 and 150, Oxford-street; 229, 330, 430 and 481, Strand; and all Grocers.

HOLLOWAY'S OINTMENT and PILLS.
FOREWARNED, FOREARMED.—During the late autumn and early winter months these insectivorous remedies will prove themselves the best preventatives of disease, such diseases lie in neglecting even a common cold, every man's enemy is consequent on over-looking rheumatic pains. Both may be eradicated by rubbing this inflammation-quelling Ointment upon the skin, and taking Holloway's purifying Pills. The experience of 25 years has incontrovertibly proved these twin medications can never be wrongly used, or applied without advantage. The Pills and Ointment mutually assist each other. They purify the blood, regulate the circulation, and exercise the most beneficial influence over every external and internal organ, unlike deleterious drugs, or mercurial preparations, Holloway's medicines are innocuous.

THE HOME TUTOR;
Or, LIBRARY OF SELF-CULTURE.

A COMPLETE REPERTORY OF USEFUL KNOWLEDGE, embracing Plain and Practical Treatises on all Subjects that interest Youthful Enquirers as well as the partially-educated Student. The whole being designed to stimulate Self-Culture, expand the Mind, and assist Parents in the arduous Duties of Home Education. This compendious work is most carefully prepared for publication, by writers of the highest eminence in the different departments of knowledge within its scope.

EXTRACT from PREFACE:—There are branches of knowledge which we believe may be better acquired from a silent teacher in a pleasing book than in any more formal way. John Knox was of opinion that there ought to be a school in every parish, a grammar-school in every borough, a college "in every city"; so, we would add, there ought to be a 'HOME TUTOR' in every family. A book can be listened to or not, at will. Its instructions are not forced, therefore the more agreeable.

London: WARD & LOCK, 158, Fleet-street; and all Booksellers.

Price 5s. with 700 Descriptive Engravings, strongly bound, cloth gilt, crown 8vo. pp. 448,

THE ILLUSTRATED BOY'S OWN TREASURY.

This volume has been most carefully prepared, and is entirely free from idle and purposeless reading. It practically enters into the Marvels of Science, the Wonders of the Animal Kingdom, the Charms of Rural Affairs, the great Constructive Wonders of Past Ages; while the Physical Training of Boys is carefully studied in all healthy Out-door Sports and In-door Pastimes. This encyclopædia and pictorial volume carries out its own preface promise of being a complete repertory of home amusements and healthful recreations; and it contains more descriptive engravings than it does pages of letter-press—the latter, too, amounting to nearly five hundred. It is as complete a book of its class as any we have ever met with, and reflects credit on its various compilers. —*Athenæum*, Sept. 8, 1860.

London: WARD & LOCK, 158, Fleet-street.

In Monthly Volumes, price 2s. each, Ornamental Covers, printed in clear type and on good paper,

Uniform with the 'Boy's Own Treasury,' price 5s. pp. 496, full of Engravings,

THE ILLUSTRATED GIRL'S OWN TREASURY.

This volume has been especially prepared for the improvement and entertainment of the female mind. It is a thoroughly useful, amusing, and most instructive book, containing delightful moral stories and charming Poems, interesting Biographies of the Women of the Bible, suitable instructions in Fancy Needlework, Paper Modelling, Flowers, and Stove Ornaments: a complete Book of Birds and Garden Favourites, Callisthenics, Music, Papers on the Senses, History of the Months, Picnics and Country Rambles; Flights upon Fans, Veils, Purse, and Feather Screens. Beyond all question this work is the most complete ever produced for girls.

"There is scarcely a theme in this volume that is not treated, and well treated; scarcely a topic that is not illustrated, and well illustrated; the author and artist bearing always in view that their duty is to minister to the wants and wishes of girls." —*Art-Journal*, June, 1861.

London: WARD & LOCK, 158, Fleet-street.

In Monthly Volumes, neatly printed, on good paper, in large type, fcap. 8vo. price 2s. ornamental boards; or in cloth gilt, lettered, price 3s. 6d.

 Where all Communications for the Editor are requested to be addressed.

QUANTITY, QUALITY, AND CHEAPNESS.

NEW MAGAZINE, SIXPENNY MONTHLY.

THE SIXPENNY MAGAZINE.

PROFUSELY ILLUSTRATED.

The removal of the Duty on Paper creates a new era in Literature: it compels cheapness; and it enables the combination of quality with quantity. Hence, the new SIXPENNY MAGAZINE will be the cheapest Monthly Periodical ever attempted. It will be equal, in the quantity of its matter and in the quality of its contents, to any Magazine, however costly; while in purity of tone, vigour of expression, and general scope, the SIXPENNY MAGAZINE will be the very best Monthly Magazine of the day.

CONTENTS of No. I. JULY.

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

The NEXT MEETING will be held at MANCHESTER, commencing on WEDNESDAY, September 4, 1861, under the Presidency of

WILLIAM FAIRBAIRN, Esq. LL.D. C.E. F.R.S.

The Reception Room will be The Portico, in Mosley-street. Notices of Communications intended to be read to the Association, accompanied by a statement whether or not the author will be present at the Meeting, may be addressed to JOHN PHILLIPS, M.A. LL.D. F.R.S., Assistant General Secretary, University Museum, Oxford; or to R. D. DARMISHIRE, Esq. B.A. F.G.S., ALFRED NEILD, Esq., ARTHUR RANSOME, Esq. M.A., and Professor ROSCOE, B.A., Local Secretaries, Manchester. JOHN TAYLOR, F.R.S., General Treasurer, 6, Queen-street-place, Upper Thames-street, London.

UNIVERSITY COLLEGE, LONDON.— JUNIOR SCHOOL, under the Government of the Council of the College.

Head-Master—THOMAS HEWITT KEY, A.M.

The SCHOOL will RE-OPEN on TUESDAY, September 24, for New Pupils. All the Boys must appear in their places, without fail, on WEDNESDAY, the 25th, at a Quarter-past Nine o'clock. The Session is divided into Three Terms—viz., from the 24th of September to Christmas, from Christmas to Easter, and from Easter to the 1st of August. The yearly payment for each Pupil is 18*l.*, of which 6*l.* is paid in advance in each Term. The hours of attendance are from a Quarter-past Nine to Three-quarters-past Three o'clock. The Afternoons of Wednesdays and Saturdays are devoted exclusively to Drawing.

The subjects taught are, Reading, Writing, the English, Latin, Greek, French and German Languages, Ancient and English History, Geography, Physical and Political, Arithmetic and Book-keeping, the Elements of Mathematics, Chemistry, and Natural Philosophy, Social Science, Gymnastics, Fencing, and Drawing. Any Pupil may omit Greek, or Greek and Latin, and devote his whole attention to the other branches of Education.

There is a general Examination of the Pupils at the end of the Session, and the Prizes are then given. At the end of each of the first two Terms there are short examinations, which are taken into account in the general examination. No absence by a boy from any one of the examinations of his Classes is permitted except for reasons submitted to and approved by the Head-Master. The discipline of the School is maintained without corporal punishment. A Monthly Report of the conduct of each Pupil is sent to his parent or guardian.

Further particulars may be obtained at the Office of the College. CHAS. C. ATKINSON, Secretary to the Council.

The College Lectures in the Classes of the Faculty of Medicine will commence on Tuesday, the 1st of October; those of the Faculty of Arts on Tuesday, the 15th of October.

AUGUST, 1861.

KING'S COLLEGE, London.—The PRO- SPECTUS for 1861-2 of the different Departments is now ready, and will be sent, free of charge; also the Syllabus of the Evening Classes, price 3*d.* by post; and the Calendar for 1861-2, price 3*s.* by post. Apply to J. W. CUNNINGHAM, Esq., King's College, London, putting the word "Prospectus" in the envelope.

R. W. JELF, D.D., Principal.

GOVERNMENT SCHOOL OF MINES.

DIRECTOR.

Sir RODERICK IMPEY MURCHISON, D.C.L. M.A. F.R.S. &c.

During the Session 1861-2, which will commence on the 7th of October, the following COURSES OF LECTURES and PRACTICAL DEMONSTRATIONS will be given:—

1. Chemistry.—By A. W. Hofmann, LL.D. F.R.S. &c.
2. Metallurgy.—By John Percy, M.A. F.R.S.
3. Natural History.—By T. H. Huxley, F.R.S.
4. Mineralogy.—By Warrington W. Smyth, M.A. F.R.S.
5. Mining.—By A. C. Ramsay, F.R.S.
6. Geology.—By A. C. Ramsay, F.R.S.
7. Applied Mechanics.—By Robert Willis, M.A. F.R.S.
8. Physics.—By J. Tyndall, F.R.S.

Instruction in Mechanical Drawing, by Mr. Binnis.

The Fee for Students desirous of becoming Associates is 30*l.* in one sum, on entrance, or two annual payments of 30*l.*, exclusive of the Laboratories.

Pupils are received in the Royal College of Chemistry (the Laboratory of the School), under the direction of Dr. Hofmann, and in the Metallurgical Laboratory, under the direction of Dr. Percy.

Tickets to separate Courses of Lectures are issued at 1*l.* 10*s.* and 3*s.* each.

Officers in the Queen's Service, Her Majesty's Comd'rs, acting Mining Agents and Managers, may obtain Tickets at reduced prices.

Certificated Schoolmasters, Pupil-Teachers, and others engaged in Education, are also admitted to the Lectures at reduced rates. His Royal Highness the Prince of Wales has granted two Exhibitions, and others have also been established.

For a Prospectus and information, apply at the Museum of Practical Geology, Jernyn-street, London.

TRENHAM REEKS, Registrar.

RAY SOCIETY.

(Established 1844).

For the PUBLICATION OF WORKS ON NATURAL HISTORY. The ANNUAL GENERAL MEETING of the Ray Society will be held at MANCHESTER, during the Meeting of the British Association, on FRIDAY, September 6th, at 3 p.m.

UNIVERSITY COLLEGE, London.—Mr.

and Mrs. R. H. CLARKE, 30, Oakley-square, Hampstead-road, N.W., receive a FEW YOUNG GENTLEMEN, providing for them a comfortable home, and every facility for study. References.—Rev. J. C. able family, a thorough Linguist, who has travelled for many years on the Continent, desires to meet with AN ENGAGEMENT as TRAVELLING TUTOR or COMPANION. The highest references given.—Address F. B., 9, John-street, Adelphi.

ROYAL COLLEGES OF PHYSICIANS AND SURGEONS OF EDINBURGH.

The List of Subjects and Books for the Preliminary Examination in General Education required to be passed by Candidates for the Double Qualification in Medicine and in Surgery conferred jointly by the Royal Colleges of Physicians and Surgeons, and for the separate Diploma of each College—to be held on OCTOBER 25th, and on NOVEMBER 2nd, 9th, and 15th, 1861, and on FEBRUARY 1st, MAY 3rd, and AUGUST 2nd, 1862—is now ready, and may be obtained on application to the Officer of either College.

The New Regulations for PROFESSIONAL EDUCATION, and for the PROFESSIONAL EXAMINATIONS, are also now ready.

The attention of intending Students of Medicine is specially requested to the following New Regulations, in accordance with a resolution of the Medical Council, applicable to all the Royal Colleges, Universities, and Licensing Boards.—1. That all Students of Medicine must be registered. 2. That those commencing medical study after September 1861 cannot be registered until they have passed a Preliminary Examination in General Education. 3. That, except for those who have been detained by illness or other unavoidable cause, the Register at all Medical Schools must be closed within Fifteen days after the commencement of each Session.

ALEXANDER WOOD,

President, Royal College of Physicians.

DOUGLAS MACLAGAN,

President, Royal College of Surgeons.

Edinburgh, August, 1861.

TITORS for Sandhurst, Woolwich, or the Staff College, and Candidates for Direct Commissions or Staff Appointments, are PREPARED in all the Branches (compulsory and optional) of their Programmes, at the Practical Military College, Sunbury, S.W.—Apply for Prospectuses, &c. to Captain LENDY.

CIVIL SERVICE, WOOLWICH, &c.—

GENTLEMEN are efficiently PREPARED for the CIVIL and MILITARY EXAMINATIONS, or for the UNIVERSITY TIES, by an M. of long experience as a Private Tutor in Cambridge, assisted by competent Masters in the various branches required. For particulars, apply to the Rev. the PRINCIPAL, 8, York-terrace, Tunbridge Wells; or to Messrs. RELY BROTHERS, School Bookellers, 150, Aldersgate-street, London.

PRIVATE TUITION.—A Married Clergyman,

Gold Medallist and Hebrew Prize-man, residing in Surrey, six miles from London, RECEIVES a limited number of PUPILS. He is assisted by competent Tutors for the Modern Languages, &c.; and the Course of Instruction embraces all that is necessary to prepare for the Universities, the Public Schools, and the Military or Civil Service. His house is very healthily situated in its own grounds, of 30 acres.—For Terms, address Rev. N. W., Field's, Bookseller, Regent-street, London, W.

AN UNMARRIED MAN, aged 37, who has for fifteen years been accustomed to Tuition of a high character, wishes to obtain an appointment as SECRETARY, LIBRARIAN, AGENT to a Nobleman or Gentleman, or some other non-educational post, for which his education, habits and experience may qualify him. In addition to his Classical and Mathematical attainments, he is a skilful Accountant and Book-keeper, a ready Correspondent, speaks and writes French and German, and understands Italian and Spanish. Unexceptionable references.—Address L. L. Goddard's Library, 54, Great Portland-street, W.

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

MANCHESTER MEETING, 4th to 11th September, 1861.
Reception Room, The Portico, Manchester.

President.
WILLIAM FAIRBAIRN, Esq. LL.D. F.R.S. &c.

The objects of the Association are—“To give a stronger impulse and more systematic direction to scientific inquiry; to promote the intercourse of those who cultivate science in different parts of the British empire with one another and with foreign philosophers; to obtain a more general attention to the objects of science and a removal of disadvantages of a public kind which impede its progress.”

General Arrangements.

WEDNESDAY, 4th September.—OPENING MEETING and PRESIDENT'S ADDRESS, at 8 p.m., in the Free-Trade Hall. SECTIONAL MEETINGS daily, as usual, from the 5th to the 10th inclusive.

WEDNESDAY, 11th September.—CONCLUDING GENERAL MEETING, in the Free-Trade Hall.

THURSDAY, 5th September.—SOIRÉE (Microscopes), in the Free-Trade Hall.

FRIDAY, 6th September.—EVENING DISCOURSE.

SATURDAY, 7th September.—SOIRÉE (Telegraphs), in the Free-Trade Hall.

MONDAY, 9th September.—EVENING DISCOURSE.

TUESDAY, 10th September.—SOIRÉE (Field Naturalists' Society), in the Free-Trade Hall.

On THURSDAY, the 11th of September.—Important EXCURSIONS.

Gentlemen desirous of attending the meeting may make their choice of being proposed as Life Members, paying 10s. as a composition, or Annual Subscribers, paying an annual fee of 1s. and (additional) 1s. annually, or Associates for the meeting, paying 1s. Ladies may become members on the same terms as gentlemen; or ladies' tickets (transferable to ladies only) may be obtained in the Reception Room, by members, on payment of 1s.

Life members receive gratuitously the Reports of the Association which may be published after the date of payment.

Annual subscribers receive gratuitously the Report of the Association for the year of their subscription, and for every following year of subscription, without intermission. Associates for the meeting are entitled to the Report of the meeting, at two-thirds of the publication price.

In order to facilitate arrangements for the meeting, it is desirable that application for tickets should be made as early as possible.

Forms of proposal will be supplied in the Reception Room during the meeting; or the names of candidates for admission may be transmitted by letter addressed to any of the Local Secretaries.

As the funds which the Association has to expend for its scientific objects consist only of the payments made by its members and associates, it is particularly desirable that every opportunity should be taken of increasing their number.

Compositions and subscriptions of new members or associates will be received by the Local Secretaries until the commencement of the meeting; afterwards, as well as the subscriptions and arrears of former members, by the Local Treasurer.

For information respecting the local arrangements, application may be made by letter addressed to any of the Local Secretaries for the meeting, at “The Portico,” Manchester.

H. E. ROSCOE, }

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

MANCHESTER MEETING.

Notice to Exhibitors.

Gentlemen proposing to send specimens or apparatus for exhibition during the meeting, will please to address their contributions as follows:—

Zoological Specimens, to Dr. Alcock, Museum, Peter-street, Manchester.

Botanical Specimens, to Leo H. Grindon, Esq., Museum, Peter-street, Manchester.

Geological Specimens, to Rev. G. Perkins, Museum, Peter-street, Manchester.

Chemical Products, to Dr. Roscoe, Owens College, Manchester.

The above may be forwarded at once; the earlier the better.

Microscopes, to G. Mosley, Esq., Free-Trade Hall, Manchester.

These are to arrive on Tuesday, the 3rd, and Wednesday, the 4th of September.

The owners of private microscopes are expected to see to the delivery, unpacking, arranging, and removal themselves.

Philosophical Apparatus, to R. B. Clifton, Esq., care of John Pender, Esq., Mount-street, Manchester. These must arrive before Saturday, the 1st of August.

Mechanical Models, to John Robinson, Esq., care of John Pender, Esq., Mount-street, Manchester.

All contributions must be announced in letters addressed to the gentlemen named, at the British Association, Portico, Manchester. All contributions will be carefully unpacked by skilled persons, and afterwards re-packed. Carriage must be prepaid on all, except solicited contributions.

Manufacturers exhibiting their own apparatus are expected themselves to provide for the unpacking and arrangement (within the limits at the disposal of the Local Committee), and to attend for the purpose at the Free-Trade Hall, on Tuesday, the 3rd, and Wednesday, the 4th; on the latter day before 3 p.m. All this apparatus must be removed by the exhibitors on Thursday, the 12th of September.

The Local Committees intend to exhibit during Soirées only, on tables, in the Free-Trade Hall. The arrangements for special soirées (see general advertisement) will not interfere with the tables appropriated for general purposes, which will remain during the week of the meeting.

The articles in the Free-Trade Hall will be insured against risk by fire by the Local Committee, who will provide a general police supervision in the Hall.

Cabinet Specimens which are accepted for exhibition will be shown in locked glass cases, which, if desired, may be placed in charge of the exhibitors.

Inquiries to be addressed to the gentlemen named; or to the undersigned, at The Portico.

R. D. DARBISHIRE, } Local Secretaries
ALFRED NEILD, } for the Meeting.
ARTHUR RANSOME, }

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

MEETING IN MANCHESTER,
4th to 11th SEPTEMBER, 1861.

RAILWAY PASSES.

Reception Room, Portico, Manchester, August, 1861.
The Executive Committee have arranged with the undermentioned Railway and Steam-Packet Companies to issue to gentlemen and ladies attending the meeting in September, as members or associates, *PASSES* entitling the bearer to a ticket to Manchester and back for one fare, between the 2nd and 14th of September:—

Lancashire and Yorkshire Railway Company.
London and North-Western Railway Company.
Manchester, Sheffield, and Lincolnshire Railway Company.
Great Northern Railway Company.
North-Eastern Railway Company.
Midland Railway Company.
Caledonian Railway Company.
Great Western Railway Company.
City of Dublin Steam-Packet Company (old Holyhead).
North Lancashire Steam Navigation Company (to Fleetwood).
Belmont Steamship Company to Liverpool.
Glasgow and Liverpool Royal Mail Steam-Packet Company.

Application for these Passes must be made (the sooner the better) to Local Secretaries, R. A. Portico, Manchester, stating the names of those who will use them, and if any are not yet members or associates, their full names and addresses, and the particular class of membership desired.

The pass cards will have to be exchanged at the railway or packet office for the Company's special ticket.

R. D. DARBISHIRE, } Local Secretaries
ALFRED NEILD, } for the Meeting.
ARTHUR RANSOME, }
H. E. ROSCOE, }

See other Advertisements.

50, George-square, Edinburgh.
MISS BROWN'S PRIVATE ESTABLISHMENT for the BOARD and EDUCATION of a limited number of YOUNG LADIES. The next SESSION will BEGIN on TUESDAY, the 1st of October.—Prospectuses forwarded on application.

HARROW or RUGBY.—A Married M.A., of Trinity College, Cambridge, Senior Optime and First Classman in the Classical Tripos, Head-Exhibitor of his year at Rugby, who has been for some years in the service of a noble family, has VACANCIES for next Half-year. His house, recently enlarged for the purpose, is situate in a beautiful and healthy part of the country. Terms, 80 Guineas a year, with no extras.—Address M. L., 71, High-street, Birmingham.

BEDFORD COLLEGE (for Ladies),

47 and 48, BEDFORD-SQUARE.

THE CLASSES will BEGIN for the SESSION, 1861-62, on THURSDAY, October 10th.

THE SCHOOL for JUNIOR PUPILS above Eight Years of age will RE-OPEN on THURSDAY, September 26th.

A few Pupils for the College and School are received as Boarders within the College, under the superintendence of the Lady-Resident.

Prospectuses may be had at the College.

JANE MARTINEAU, Hon. Sec.

EDUCATION.—Banks of the Meuse, Belgium. A Married, Protestant GENTLEMAN, recently Professor in a Foreign University, and residing in a healthy, picturesque district, desires to RECEIVE two or three GENTLEMEN'S SONS, to whom he can offer every educational advantage. Unexceptionable references given and required.—For fuller Particulars, apply to T. W., 20, Rue Belliard, Brussels.

A LADY, educated in France, is desirous of an ENGAGEMENT as GOVERNESS or COMPANION at the end of September. Her acquirements are English, French, German, Music, Drawing and the rudiments of Latin. References kindly permitted to several Clergymen. Liberal Salary required.—Address M. A., Post-Office, Coventry.

EXAMINATIONS.—Mr. TRAVERS, B.A. Oxon, and a Master in University College School, RECEIVES to HIS HOUSE, 4, Fitzroy-square, PUPILS of the School and STUDENTS reading for the Examinations of the Universities and Civil Service.—Address to Sept. 30, Portland House, Andover, Hants.

HOME PARK HOUSE SCHOOL, adjoining the Station, KING'S LANGLEY, HERTS.—The number of Boarders is limited to 12. The Terms, 50 guineas per annum, include every charge except for Instrumental Music. The School will RE-OPEN on THURSDAY, 5th September. A Prospectus will be sent on application. J. T. V. HARDY, B.A.

GERMAN and FRENCH TUITION with BOARD and LODGING is offered by a Professor of Commercial Academy at DANZIG. Terms, 8s. per month, including all expenses, except wine.—F. GROSZ, Jopen Gasse, 3, Danzig.

THE GOVERNESSES' INSTITUTION, 34, SOHO-SQUARE.—MRS. WAGHORN, who has resided many years abroad, respectfully invites the attention of the Nobility, Gentry, and Principals of Schools, to her REGISTER of English and Foreign GOVERNESSES, TEACHERS, COMPANIONS, TUTORS, and PROFESSORS. School Property transferred, and Pupils introduced in England, France, and Germany. No charge to Principals.

CANDOVER SCHOOL.

Visitor—THE LORD BISHOP OF WINCHESTER.

A Senior Department for the Education of Ladies and for the Special Training of Governesses, has been opened under the sanction of the Bishop of London, the Bishop of Oxford, and other Members of the Council of Queen's College for Ladies.

The Board of Education consists of the Rev. F. V. Thornton, the Rev. T. Gwynn, the Rev. C. R. Conybeare, the Rev. C. Balston, the Rev. S. Wesley, Mus. Doc., and W. Dimes, Esq.

Lady Superintendent—MRS. GYNN.

Special Instruction in each subject of Lectures is given by Resident Governesses; and the Pupils are periodically examined by the Professors of Queen's College for Ladies.

Great advantages of Instruction and Training are thus combined with the benefits of a healthy country life; and special opportunities of learning their future work are afforded to those who wish to make Education their profession.

Terms for Pupils under 15 years of age, 4s. per annum.

Terms for Pupils about 15 years of age, 50s. per annum, if nominated by a Donor of 20s. 6d. per annum, if admitted without such nomination.

The next Term begins on September 5th.

For further particulars apply to Mrs. GYNN, Candover School, Micheldever Station, Hants.

A LADY wishes strongly to RECOMMEND, as GOVERNESS to Young Children, or as Useful Companion, a Lady, 30 years of age, who has had great experience in tuition, having resided in one family years. Is of ladylike manners, and most amiable disposition.—Address to A. T., 30, Avenue-road, New-road, Hammersmith, W.

THE QUEN: AN ILLUSTRATED JOURNAL AND REVIEW.

Men of all classes in England—the Clergyman, the Student, the Schoolmaster, the Man of Letters, the Artist, the Merchant, the Tradesman, each a Journal written especially for them; but for the whole mass of Educated Women not a single Paper of value exists. Under the title of 'THE QUEEN,' a Journal for English women is now in preparation. The first Number will appear on SATURDAY, September 7. 'THE QUEEN' is simply intended to be for Educated Women what certain high-class Journals are for men—recording and discussing from week to week whatever interests or amuses them. There will be a large number of original articles on the Daily Life of Society, its Manners and Morals—on Books, Music, and the Theatre. Considerable space will be devoted to the Amusements which Ladies most pursue, at home and abroad; while, as for the more serious, 'THE QUEEN' will be the earliest and most accurate chronicler of all its changes. The Engravings in 'THE QUEEN' will really illustrate the Events of the Day, and give point to whatever Topics happen to engage the public mind. No expense and no trouble will be spared in their preparation.

Interesting Supplements will appear every week. With the first Number will be given a PLATE OF THE FASHIONS (printed and painted in Paris), and a genuine PHOTOGRAPH OF HER MAJESTY QUEEN VICTORIA. These Photographs (not Engravings from Photographs) will be suitable for framing, being elegantly tinted card-paper. They will be executed by Mr. Mayall, of Regent-street—a sufficient guarantee of their excellence. Other interesting Supplements—already in preparation in Paris, Brussels, Berlin and Leipzig, as well as in London—will exhibit the most charming Specimens of Fine-Art Printing ever seen in this country. The first Number will appear on SATURDAY, September 7, price SIXPENCE.—To be had of all Booksellers and News-vendors; also on receipt of Six Stamps, from the Office,
245, STRAND, LONDON, W.C.

ARTISTIC CONGRESS IN ANTWERP.—THE BUILDER OF THIS DAY, price 4d., contains:—Fine View and Plan of two new Mansions in Northumberland—Artistic Congress in Antwerp—Residences and Industrial Classes, in Paris—Social Science Congress—Trades' Union Directory—French Essay on Painting and Architecture—A Voyage from Westminster to London Bridge—The Labour Question—London—Well-Fireproof Warehouses—The Builder's Law Notes—Scotland—School-building News—Church-building News—Provincial News—Stained Glass, &c.—Office, 1, York-street, Covent-garden; and all Booksellers.

GERALD MASSEY'S LAST VOLUME OF POEMS, HAVELOCK'S MARCH; and Other Poems.
(The major part now printed for the first time.) By GERALD MASSEY. 12mo. cloth, price 5s.
"All the sea-pieces have the dash and saltiness of the ocean in them. They deserve to be read, and if read are sure to be admired. The poet's love-lyrics will find many admirers. Readers who find this vein of feeling in their own humour—and there will be many such—will get the volume for themselves. The whole mass of song and celebration is inscribed to Lady Marian Alford in a poem of great beauty. One of the Elizabethans might have written these lines."—*Athenæum*.
London: Trübner & Co. 60, Paternoster-row.

Twenty-third Thousand, price 5s.

ROUILLON'S TEACHER'S FRENCH ASSISTANT; or, Grammatical Institutes of the French Language, containing a Series of Theoretic, Practical and Progressive Lessons, purposely written for the assistance of Parents, Governors or Tutors engaged in Teaching French. Twelfth Edition. Edited by ALFRED HAYET, Esq., Author of 'The Complete French Class-Books.'
London: W. Allan, Stationers' Hall-court.

2 richly bound vols. large 8vo. handsomely illustrated (1,100 pp.), price 11.

THE LIFE, TIMES, and CORRESPONDENCE OF DR. DOYLE (J. K. L.), Bishop of Kildare and Leighlin. By WILLIAM JOHN FITZPATRICK, J.P., Biographer of Lord Cloncurry and Lady Morgan. "Full of amusing and instructive matter."—*Spectator*. "A true portrait."—*Athenæum*. "Admirable. Perfectly Boswellian in effect."—*Press*.
London: Duffy, 22, Paternoster-row.

The SONG of SONGS, or Solomon's Song; with a Commentary, Historical and Critical.

London: Longman, Green & Co. Paternoster-row.

COMPLETION of DR. G. SMITH'S HISTORY OF METHODISM.

Now ready, in crown 8vo. price 10s. 6d. cloth,
HISTORY of WESLEYAN METHODISM: Vol. III. MODERN METHODISM, completing the work; with a full GENERAL INDEX. By GEORGE SMITH, LL.D. F.A.S., Author of 'Sacred Annals; or, Researches into the History and Religion of Mankind.'

Also, Vol. II. THE MIDDLE AGE of METHODISM, price 10s. 6d.; Volume the First, WESLEY and his TIMES, price 10s. 6d.; and the Work complete, in 3 vols. price 31s. 6d. cloth.
London: Longman, Green & Co. Paternoster-row.

In One thick Volume, post 8vo. price 12s. 6d.
EVERYBODY'S BOOK;

or, Gleanings, Serious and Entertaining, in Prose and Verse, from the Scrap-Book of a Septuagenarian. Edited by JOHN HENRY FREERE, Director of the Collegiate Institution at Novo Friburgo, Brazil; and dedicated by permission to Dom Pedro II.

"Mr. Freere has read much, thought much, and observed much." *Morning Chronicle.*

"Mr. Freere is in the Western what our friend Mr. Timbs is in the Eastern hemisphere; we wish him and his book every success." *Daily Telegraph.*

"Mr. Freere is evidently an earnest, man, conscientious and hopeful, and in his numerous selections has shown a considerable amount of good taste." *Manchester Examiner.*

"This work is the compilation of a man of clear, vigorous judgment, finely cultivated taste, reliable principle, strongly utilitarian views, and of all but universal reading." *Londonderry Standard.*

"Mr. Freere may then be congratulated upon having published a work that will at once entertain and edify, and while affording present relaxation for a dull half-hour, raise the reader's appreciation of the true and beautiful." *Morning Post.*

London: Longman, Green, Longman, and Roberts.

HAVET'S FRENCH METHOD.

"M. Havet's system obliges the pupil to learn almost in spite of himself, and to stock his memory with words and phrases belonging to our daily wants and avocations. The Conversations are most varied in matter, and range from the simplest construction to the most difficult idiom and the purest gallicism; yet the progress is so gradual, that a pupil with commonplace abilities must arrive at a good spoken knowledge of the French language." *Bristol Mirror.*

400 crown 8vo. pages, 5s. 6d.

HAVET'S FRENCH STUDIES: MODERN CONVERSATIONS on all the ordinary topics of life: EXERCISES to be done at sight; and READING LESSONS from Standard French Writers. New Edition, with a Dictionary of the Words and Idioms.

From M. DEXGROZ, Professor at the Sorbonne, Paris; Author of 'Histoire de la Littérature Française,' &c.

"Il faudrait qu'un gentleman fût bien obstiné à ne pas parler français, quand M. Alfred Havet lui glisse dans la main son joli petit livre d'Etudes françaises, où la conversation naît d'elle-même du sens de la lecture, et fait disparaître toutes les difficultés de la grammaire, sous l'usage d'une continue causerie."

"M. Havet a eu l'heureuse idée de joindre à chacune de ses leçons et de prendre pour sujet de ses Conversations les plus jolies maximes de la littérature française."

"Je ne connais pas de recueil plus varié, plus piquant, choisi avec plus de goût et d'habileté que celui des Etudes françaises. Vous y trouvez Molière avec M. Jourdain, Voltaire avec le joli conte de Jeanot et Colère, La Fontaine avec quelques unes de ses admirables fables; puis des contemporains, Nodier, Lamennais, Janin, Alphonse Karr; puis des noms nouveaux, mais toujours belles, que celles de méthode O. &c. Je vous félicite d'avoir réussi à donner une impulsion aussi heureuse à la partie pratique de l'enseignement du français."—Paris, le 11 Février 1861.

From DR. SPIEGEL, Professor at the Imperial College (Lyceé Bonaparte), Paris; Author of the French and English Dictionary, &c.

"J'approuve fort le plan et l'exécution de vos French Studies. Le français est en même temps familier et élégant, et prête bien à la conversation. Les élèves doivent par cette méthode arriver rapidement à parler et à comprendre une langue étrangère, sans être abrutis par des phrases plus sottes les unes que les autres, telles que celles de méthode O. &c. Je vous félicite d'avoir réussi à donner une impulsion aussi heureuse à la partie pratique de l'enseignement du français."—Paris, le 11 Février 1861.

London: W. Allan; Dulau & Co.; Simpkin, Marshall & Co.

MR. BENTLEY'S NEW PUBLICATIONS.

MEMOIRS of KING RICHARD the THIRD and SOME of his CONTEMPORARIES. By J. HENEAGE JESSE, Author of 'The Court of England under the Stuarts.' 8vo. with a Portrait, &c.

NEW WORK ON JAPAN.

A RESIDENCE at NAGASAKI and HAKODATI in 1859-60. With an Account of Japan generally. By C. PEMBERTON HODGSON, late Her Majesty's Consul. To which are added, a Series of Letters on Japan, by HIS WIFE. 8vo. with numerous Illustrations.

The 'COOK'S GUIDE and HOUSE-KEEPER and BUTLER'S ASSISTANT: A Practical Treatise on English and Foreign Cookery in all its Branches, and also Instructions for Pickling and Preserving Vegetables, Fruit, Game, &c.; the Curing of Hams and Bacon; the Art of Confectionery and Ice-making, and the Arrangement of Desserts. By CHARLES ELMÉ FRANCAELLI, Author of 'The Modern Cook.' Small 8vo. with numerous Illustrations. 5s.

M. GUIZOT'S PERSONAL MEMOIRS. Vol. IV. 8vo. 14s.

"The calmness of M. Guizot, in reviewing his own career, gives a peculiar grace and charm to his Memoirs."—*Examiner*.
These Memoirs deal with a brilliant and dramatic period in the constitutional history of France, and aim at something far higher than a passing popularity."—*Athenæum*.
"We have here sketches of M. Guizot's great contemporaries—Bismarck, Metternich, Wellington, Emperor Nicholas, Louis Napoleon, Palmerston, &c."—*Birmingham Journal*.

LORD DUNDONALD.—A REPLY to the OBSERVATIONS in THE QUARTERLY REVIEW on THE AUTOBIOGRAPHY of LORD DUNDONALD. By MARCUS. 8vo. with Charts.

NEW STORY OF SOCIAL LIFE.

EAST LYNNE. By Mrs. Wood. 3 vols. post 8vo.

The Hon. Mrs. YELVERTON'S 'MARTYRS to CIRCUMSTANCE.' Second and Concluding Part. price 2s.

MEMOIRS of MARSHALL HALL, M.D. F.R.S. Corresponding Member of the Institute of France, and Foreign Associate of the Academy of Medicine at Paris. By HIS WIDOW. 8vo. with a Portrait, 14s.
"In the world of physiological science Dr. Marshall Hall may fairly be ranked as the companion of Harvey and Bell."
"Will command respect and sympathy."—*Observer*.

Dr. CUMMING'S POPULAR ANSWERS to the 'ESSAYS and REVIEWS.' Small 8vo. 4s.

JOHN HUSS and JEROME OF PRAGUE.

The LIFE and TIMES of CARDINAL JULIAN. By the Rev. R. C. JENKINS. 8vo. 14s.
"Mr. Jenkins treats with candour and learning a life which bears the impress of greatness. He has succeeded in developing the high aims and profound statesmanship of Cardinal Julian."
"Sobriety and truthfully written. It has solid value, and deserves close attention."—*Examiner*.
"This work deserves a respectful reception."—*Spectator*.

With Four Charts and Portrait, price 5s.

LORD DUNDONALD'S AUTOBIOGRAPHY. A LIBRARY EDITION, in 2 vols. 8vo. with Plans, 28s.

"Ought to be a prize-book in every military and naval school." *London Review*.

NEW MODERN SEA STORY.

VONVED THE DANE, the ROVER of the BALTIC. 2 vols.

"This is a great book, both in conception and execution. The author possesses a rare faculty of exciting and arresting attention. In its own school this story has no rival. Victor Hugo might be proud to have written some of its chapters, than which he has never written anything more thrilling or more terrible; and Alexandre Dumas himself, so powerful in describing prison scenes, has not exceeded this writer in his account of the Rover of the Baltic."—*Morning Post*.

REDEMPTION DRAWETH NIGH. By the Rev. Dr. CUMMING. SIXTH THOUSAND. Crown 8vo. 7s. 6d.

"This volume deserves impartial investigation, its themes are of vast and varied grandeur, the subjects which the author brings within the horizon are unspeakably solemn."—*St. James's Chron.*

The GREAT TRIBULATION; or, Things Coming on the Earth. By the Rev. Dr. CUMMING. TWELFTH THOUSAND. Crown 8vo. 7s. 6d.

"Whether Dr. Cumming's interpretations be right or wrong, there is no doubt that the barometer of Europe singularly corresponds with his deductions from prophecy."—*Times*.

RICHARD BENTLEY, Publisher in Ordinary to Her Majesty.

13, Great Marlborough-street.

HURST & BLACKETT'S NEW PUBLICATIONS.

THE OKAVANGO RIVER. A Nar-

ative of Travel, Exploration, and Adventure. By CHARLES JOHN ANDERSON, Author of 'Lake Ngami.' 8vo. with Portrait of the Author, and numerous Illustrations. 2s.

"Mr. Anderson's book, illustrated with many animated pictures of adventures connected with the wild sports of the journey it describes, is one that will be popular as a budget of trustworthy traveller's tales, besides being valued for the information it gives to geographers."—*Examiner*.

"This volume, prettily and splendidly illustrated, will take a high rank among works of adventure and exploration. There can be no question of the great service Mr. Anderson has rendered to geographical science."—*Herald*.

"Mr. Anderson's adventures stamp him as one of the most enterprising travellers of modern times, and well worthy to take rank by the side of the Livingstones and others, who have attempted to penetrate the interior of the great African continent. Every page of his present work is full of interest."—*Observer*.

"This work is a valuable addition to geographical knowledge, and a stirring record of adventurous achievement for the delight of stay-at-home travellers. It is profusely illustrated with striking scenes from African life and sporting adventure."—*John Bull*.

The SECRET HISTORY of the COURT of FRANCE under LOUIS XV. Edited, from rare and unpublished Documents, by Dr. CHALLICE. 2 vols. with Portraits, 21s.

HENRY IV. and MARIE de MEDICI.

From Original and Authentic Sources. By Miss FREER, Author of 'The Lives of Marguerite d'Angoulême, Jeanne d'Albret,' &c. 3 vols. with Portraits, 21s.

A SAUNTER THROUGH the WEST

END. By LEIGH HUNT. 1 vol. 10s. 6d. bound.

"Few men felt, as Leigh Hunt did, the human poetry of the old memories that crowd upon the lettered and thoughtful rambler about London streets. His gentle, genial humour shines in a book like this, a worthy companion to his 'Town' and 'Old Court Suburb.'"
—*Examiner*.

NOTHING NEW. By the Author of

'JOHN HALIFAX.' Illustrated by J. E. MILLAIS, A.R.A. Forming the New Volume of HURST & BLACKETT'S STANDARD LIBRARY of ORIGINATORS of POPULAR MODERN WORKS. 5s. each bound. Now also comprising

1. Sam Slick's Nature & Human Nature.
2. John Halifax, Gentleman.
3. The Crescent and the Cross.
4. Nathalie. By Julia Kavanagh.
5. A Woman's Thoughts about Women.
6. Adam Graeme of Mossgray.
7. Sam Slick's Wise Saws.
8. Wiseman's Popes.
9. A Life for a Life.
10. Leigh Hunt's Old Court Suburb.
11. Margaret and her Bridesmaids.
12. Sam Slick's Old Judge.
13. Darien. By Eliot Warburton.
14. Sir B. Burke's Family Romance.
15. The Laird of Norlaw.

THE NEW NOVELS.

A HERO in SPIKE of HIMSELF.

By Captain MAYNE REID. From the French of Luis de Bellemare. 3 vols. (This day.)

ALONE in the WORLD. By the

Author of 'COUSIN GEORGE,' &c. 3 vols.

"This new tale by Mrs. Gordon Smythies (whom Thomas Campbell, the poet, decided to be the queen of the domestic novel) unites the pathos and high morals of her 'Married for Love,' with the wit of her 'Cousin George' and the humour of her 'Marrying Man.'"
—*Chronicle*.

PAUL FOSTER'S DAUGHTER. By

DUTTON COOK. 3 vols.

"This novel has the rare merit of growing more and more interesting as it proceeds. It is not often that a novel so witty, wise, and healthful in spirit offers itself for perusal. It is a thoroughly right-minded book. The characters are most of them artists. Paul Foster himself is an excellent character, and his daughter Sylvia is a young lady who will find an adorer in every man who reads the book. We recommend our readers to get the book for themselves."—*Athenæum*.

A FAMILY HISTORY. By the

Author of 'THE QUEEN'S PARDON,' 3 vols.

"A very good novel, well imagined and well told."—*Post*.

LONDON, SATURDAY, AUGUST 24, 1861.

LITERATURE

The Life and Letters of Captain John Brown, who was executed at Charlestown, Virginia, Dec. 2, 1859, for an Armed Attack upon American Slavery; with Notices of some of his Confederates. Edited by Richard D. Webb. (Smith, Elder & Co.)

John Brown has the melancholy distinction of being the only person executed for treason during the eighty-three years since the Declaration of Independence. It is not for us to decide whether the sentence was right, or whether justice might not have been safely tempered by mercy. The highest authorities of the government in America condemned Brown, and he was legally executed for his crime. England could afford, in her greatness, to pardon a Smith O'Brien; we are doubtful whether mercy to John Brown might not have led to the renewal of his insane attempt. It can scarcely be doubted that the attempt at Harper's Ferry,—with the subsequent trial and execution of the criminal,—helped to hurry on the conflict which has already made thousands of widows and orphans in America. Those who would free the slave at any cost to the white man state the fact and rejoice in it. With them John Brown is first of the martyrs, and from his grave, they say, has gathered this awful storm. As some persons in England are supposed to entertain this view, it may be well for the sane and intellectual public to consider what kind of man this martyr was. We take the portrait painted by his friends.

The earliest reminiscence of John Brown found worthy of record is taken from his own confessions. "At an early age he was tempted by three large brass pins belonging to a girl who lived in the family, and stole them. In this he was detected by his mother; and, after having a full day to think of the wrong, received from her a thorough whipping." We find that John "had a very bad and foolish habit of telling lies, though he was never quarrelsome [saving clause]; but was excessively fond of the hardest and roughest kind of plays, and could never get enough of them." In the warm weather John might generally be seen barefooted and bareheaded, with buckskin breeches, suspended often with one leather strap over his shoulders, but sometimes with two. All this twaddle about himself and his early years John Brown coolly sat down to write to a young friend in 1857, or about two years before his death.

John, who was not strong in grammar, goes on to say: "When the war broke out with England, his father commenced furnishing the troops with beef-cattle, the collecting and driving of which afforded him some opportunity for the chase on foot of wild steers and other cattle through the woods." We charitably assume that the son achieved these exploits, though, by the strict rules of grammar, they are referable to the father. Heroes are not bound by rules. We bear in mind the old cry from the Victoria Gallery, "We ain't particular about grammar, but you might close your scenes." If John assumed the right to misuse the Queen's English, he might have been honest in the matter of names. Why Captain John Brown? Who made him a Captain? He confesses that "the effect of what he saw during the war was to so far disgust him with military affairs that he would neither train nor drill; but paid fines, and got along like a Quaker, until his age finally has cleared him of military duty." We fear that many a runaway from Manassas, with as much right as

Brown to the name of Captain, had carried out the same plan.

Next we learn from John Brown how it was that he became an abolitionist "on the rampage," even in his tender years. He was staying for a short time with a "very gentlemanly landlord," who held a slave boy near his (we assume John Brown's) age, very active, intelligent and feeling, to whom John was indebted for many kindnesses. But the coloured Pip, whom John acknowledges to have been more than his equal, was badly clothed, poorly fed, and beaten with iron shovels, or anything else that came to hand, whenever the person who "brought him up by hand" felt dissatisfied. "This brought John [rising ten and goading cattle] to reflect on the wretched, hopeless condition of fatherless and motherless slavechildren, for such children have neither fathers nor mothers to protect or provide for them. He sometimes would raise the question: Is God their Father?" And this nonsense John Brown wrote down, at the mature age of fifty-seven, as advice for a young friend. But he is good enough to tell us, through the medium of his correspondent, whom we cannot refrain from regarding as an American Mrs. Harris, that "he never attempted to dance in his life, nor did he ever learn to know one of a pack of cards from another. He learned nothing of grammar [a fact superfluous to record], nor did he get at school so much knowledge of general arithmetic as the four ground rules." Among the misfortunes of his early youth he does not neglect to mention that he became the owner of a little ewe lamb, which did finely till it was about two-thirds grown, and then sickened and died. This caused him a lengthened period of mourning—"not that he regretted the pecuniary loss, for that was never his disposition, but so strong and earnest were his attachments." Remembering that it is a Yankee who writes, we can hardly accept that reference to the pecuniary loss without a grain of salt. But the next passage, which is quite beyond our comprehension, we leave to our readers, the italics being our own:

"John had been taught from earliest childhood to 'fear God and keep His commandments,' and, though quite sceptical, he had always, by turns, much serious doubt as to his future well-being, and about this time became, to some extent, a convert to Christianity, and ever after was a firm believer in the divine authenticity of the Bible. With this book he became very familiar, and possessed a most unusual memory of its entire contents."

Of what nature this familiarity was, we are not the judge; we trust, however, it was not of the sort which breeds contempt, though we confess, to our sorrow, that we have met more than one American in whom a most unusual memory of the contents of the Bible had led to a very lamentable result. The next passage of John Brown's *mémoires pour servir* is astounding for its cynicism; among other modes which he had of acquiring pelf, was "trading with other persons for something his father had never owned." But, as John Brown philosophically adds, "older persons have sometimes found difficulty with titles." We only hope that these sad events, which strongly evidence the tendency for annexation, took place during the period when John Brown was only "to some extent" a convert.

We do not desire to inflict absurdities on our readers, but we are compelled to follow our author, because he holds up John Brown as an example to be admired, and it is our duty to prove his claims to that title. In fact, we feel as if we ought to offer an apology for every sentence we write; but we throw the responsibility on Mr.

R. D. Webb. In 1820, then, John Brown married of course, carried on the reputable though unsavoury trade of tanner at Hudson, Ohio, and displayed his honesty by refusing to sell his leather while it retained a particle of moisture, lest his customers should be cheated in value or weight. After a while he engaged in the wool business, which brought him to England in 1848 with an enormous investment of wool, by which he lost heavily, although he was very smart, as the following anecdote will show:—

"He was noted for his skill in testing and recognizing different qualities of wool. Give him two samples of wool, one grown in Ohio and the other in Vermont, and he would distinguish each of them, in the dark. I heard the following story told of him while in England, where he went to consult wool merchants and wool growers. One evening, in company with several of these persons, each of whom had brought samples of wool in his pocket, Captain Brown was giving his opinion as to the best use to be made of certain varieties, when one of the party, wishing to play a trick on the Yankee farmer, handed him a sample, and asked him what he would do with such wool as that. His eyes and fingers were then so good, that he had only to touch it to know that it had not the minute hooks by which the fibres of wool are attached to each other. 'Gentlemen,' said he, 'if you have any machinery that will work up dog's hair, I would advise you to put this into it.' The jocosse Briton had sheared a poodle, and brought the hair in his pocket; but the laugh went against him; for Captain Brown, in spite of some peculiarities of dress and manner, soon won the respect of all whom he met."

Whether it was the effect of the shearing process he underwent in England or not, we cannot say; but one of his ardent biographers states that while he was among ourselves he ventilated his plan for liberating the slaves; for he declared that "he held a commission direct from God to act against slavery." But finding no encouragement among sober-minded Englishmen, who only thought of the cotton crops, he returned to America, and applied to an ardent abolitionist for a grant of land in the Arondirack Mountains, to found a runaway slave colony, which land he obtained. At this time Brown had a high opinion of slaves, and in his playful way remarked, that "they were so much like folks, he almost thought they were so." Still, we must not be unjust to the man, however mistaken he might have been: hence we will quote the testimony of his lawyer, a man who would only speak on strictly mercantile principles, we may feel assured, although the last paragraph may evidence a regret.

"Mr. Otis writes:—'I became acquainted with John Brown about the year 1836. Soon after my removal to Akron, he became a client of mine; subsequently, a resident of the township in which the town of Akron is situated; and, during a portion of the latter time, a member of a Bible class taught by me. In these relations which I sustained to Mr. Brown, I had a good opportunity to become acquainted with his mental, moral and religious character. I always regarded him as a man of more than ordinary mental capacity, of very ardent and excitable temperament, of unblemished moral character; a kind neighbour, a good Christian, deeply imbued with religious feelings and sympathies. In a business point of view his ardent and excitable temperament led him into pecuniary difficulties; but I never knew his integrity questioned by any person whatever.'"

It is important to learn that John Brown "never used tobacco, wine, or spirits, cheese or butter; nor did he take tea or coffee till a few years before his death." He was extremely fond of music; and "he sat listening with the most rapt attention to Schubert's Serenade, played by a mutual friend, and when the music ceased, tears were in his eyes."

When the Kansas business broke out, four

sons of John Brown proceeded to the debate-able land, probably in the hope of a row, for they appear to have been a terribly belligerent family. Of course, John Brown, with his fixed idea, which had by this time degenerated into a mania, soon sold up and followed them, like the war-horse scenting the fray afar. In 1855, he reached Kansas, amply supplied with all sorts of warlike arguments in the shape of Derringers and six-shooters; and, peaceful man though he was by nature, it is plain, from his biographer's confessions, that he went there much after the fashion of the Irishman who trailed his coat through the Arcadia of Donnybrook fair, politely inviting any body to "thread on the tail of it." For an account of his conduct we are indebted to one of his biographers, whose name, however, is legion:

"I shall not soon forget the scene that here opened to my view. Near the edge of the creek a dozen horses were tied, all ready saddled for a ride for life, or a hunt after southern invaders. A dozen rifles and sabres were stacked against the trees. In an open space, amid the shady and lofty woods, there was a great blazing fire with a pot on it; a woman, bare-headed, with an honest, sun-burnt face, was picking blackberries from the bushes; three or four armed men were lying on red and blue blankets on the grass; and two fine-looking youths were standing, leaning on their arms, on guard, near by. One of them was the youngest son of Brown, and the other was 'Charley', a brave Hungarian, who was subsequently murdered at Ossawatimie. Brown himself stood near the fire, with his shirt-sleeves rolled up, and a large piece of pork in his hand. He was cooking a pig. He was poorly clad, and his toes protruded from his boots. He received me with great cordiality, and the little band gathered about me. But it was for a moment only, for the captain ordered them to renew their work. * * In this camp no manner of profane language was permitted; no man of immoral character was allowed to stay, except as a prisoner of war. He made prayers, in which all the company united, every morning and evening; and no food was ever tasted by his men until the divine blessing had been asked on it. After every meal, thanks were returned to the bountiful Giver. Often, I was told, he returned to the densest solitudes to wrestle with his God in secret prayer. One of his company subsequently informed me that after these retirings, he would say that the Lord had directed him in visions what to do; that, for himself, he did not love warfare, but peace,—only acting in obedience to the will of the Lord, and fighting God's battles for his children's sake. It was at this time that he said to me:—'I would rather have the small-pox, yellow fever, and cholera all together in my camp, than a man without principles. It's a mistake, sir,' he continued, 'that our people make, when they think that bullies are the best fighters, or that they are the men fit to oppose these southerners. Give me God-fearing men—men who respect themselves—and, with a dozen of them, I will oppose any hundred such men as those Burford ruffians.' I remained in the camp about an hour. Never before had I met such a band of earnest men. Six of them were John Brown's sons. I left the spot with a far higher respect for the great struggle than ever I had felt before, and with a renewed and increased faith in the noble and disinterested champions of the right."

Such a man we cannot help admiring, even though we may ask what he was going to do in that gallery, for he reminds us of the Old Obadiah Bind-the-evil-one-in-chains; and we doubt not that the blood of the Puritan Fathers was actively at work among the defenders of Kansas. Still, we must not be led away by sentiment;—whatever we know of the "difficulty" is derived from Northern sources and from bitter opponents of President Pierce. The title "Border-ruffians" is very telling, and has been tremendously banded; but the South has not spoken out. If any chivalry, however, exist

in America, it is notoriously in the South, and we, therefore, are disposed to believe that the free fight that took place at Leavenworth and elsewhere in Kansas, if analyzed, would prove very much like the battle outside Manassas Junction, of which the South had enough and the North had too much. Brown, at any rate, "concluded" to quit Kansas, to find fresh fields and pastures new for his Abolitionist propensities. For this purpose he proceeded north, in the hope of inducing the Legislature of Massachusetts to vote 10,000 dollars, to defend the interests of the North in Kansas. The speech he delivered is a fair subject of quotation, for it proves the earnestness of the man.

"I saw, while in Missouri, in the fall of 1855, large numbers of men going to Kansas to vote, and also returning, after they had so done, as they said. Later in the year, I, with four of my sons, was called out, and travelled, mostly on foot and during the night, to help to defend Lawrence, a distance of thirty-five miles, where we were detained, with some five hundred others, or thereabouts, from five to ten days—say an average of ten days—at a cost of not less than a dollar-and-a-half per day as wages; to say nothing of the actual loss and suffering occasioned to many of them by leaving their families sick, their crops not secured, their houses unprepared for winter, and many without houses at all. This was the case with myself and sons, who could not get houses built after returning. Wages alone would amount to seven thousand five hundred dollars; loss and suffering cannot be estimated. I saw, at that time, the body of the murdered Barber, and was present to witness his wife and other friends brought in to see him with his clothes on, just as he was when killed. I, with six sons and a son-in-law, was called out, and travelled most of the way on foot, to try and save Lawrence, May 20th and 21st, and much of the way in the night. From that date, neither I nor my sons, nor my son-in-law, could do any work about our homes, but lost our whole time until we left, in October; except one of my sons, who had a few weeks to devote to the care of his own and his brother's family, who were then without a home. From about the 20th of May, hundreds of men, like ourselves, lost their whole time, and entirely failed of securing any kind of crop whatever. I believe it safe to say that five hundred free-state men lost each one hundred and twenty days, which, at one dollar-and-a-half per day, would be—to say nothing of attendant losses—ninety thousand dollars. On or about the 30th of May, two of my sons, with several others, were imprisoned without other crime than opposition to bogus legislation, and most barbarously treated for a time, one being held about one month, and the other about four months. Both had their families on the ground. After this, both of them had their houses burned, and all their goods consumed by the Missourians. In this burning all the eight suffered. One had his oxen stolen, in addition."

John Brown travelled about the North, attaining very cheap popularity, and displaying the chains his son had worn in Kansas. He excited a tremendous enthusiasm among the sensationalists; and Mr. Emerson said of him that "he was the most extraordinary man of his age and nation." Unfortunately, the same thing had been told Martin Chuzzlewit, several years previously, of his new Yankee friend, Mr. Jefferson Brick; and hence Mr. Emerson's admiration flashes in the pan. Still, we will let a Northerner speak about John Brown:—

"Mr. Stearns, an active and generous friend of Kansas, who made Brown's acquaintance at this time, said to him one day, half jestingly, 'I suppose, Captain Brown, that if Judge Leconte had fallen into your hands, he would have fared rather hard.' Brown turned round in his chair, and, in the most earnest tones, said, 'If the Lord had delivered Judge Leconte into my hands, I think it would have required the Lord to have taken him out again.' A meeting of prominent friends of

freedom in Kansas was to be held on Sunday, as on no other day could a full attendance be obtained. Mr. Stearns, not knowing how the old puritan might regard this use of the day of rest, inquired if it would be consistent with his religious convictions to give his attendance. 'Mr. Stearns,' said he, 'I have a poor little ewe that has fallen into the ditch, and I think the Sabbath is as good a day as any to help her out. I will come.'

At the same time it must be confessed, that further-sighted Northerners regarded John Brown as a harmless maniac, and here and there offers were made him to attempt a "stampede" of slaves, as the better plan. We doubt whether any American out of Boston, the headquarters of abolitionism, where Garrison had produced a row by his constant reiteration of the wrongs of the negroes, earnestly desired an appeal to arms, to settle a question which, after all, is strictly personal: for the North and South, it must never be forgotten, are not fighting on the abstract question of Slavery, but on that of Free Trade and Protectionism. The Morrill tariff has far more to do with the stampede at Bull's Run, than the sentimentalism which 'Uncle Tom's Cabin' evoked.

But John Brown, believing himself the Gideon of the age, ran head on at the South. It does not appear, from the present apology that he was acting so entirely on his own account as has been supposed; on the contrary, he anticipated that a large force of negroes would march down from Canada to the rescue, for the sake of emancipating their brothers. Such an idea proves how utterly mistaken John Brown must have been as to his resources; for to fancy that a negro, once free, would voluntarily run his head into the noose again, is one of those notions which would evidence a man's insanity in any court of law, save that which tried John Brown. Necessarily, the rule with the Southerners must be, woe to the conquered! and while they treat their slaves with kindness, in spite of all that may be alleged to the contrary, they claim the right to punish those persons who attempt to raise an insurrection. We need not dwell here on the issue of John Brown's attack at Harper's Ferry, or on the trial, though it produces many salient points, for they are already known to our readers; but we may safely indorse Mr. Emerson's assertion that "as for Capt. Brown himself, he is so transparent that all men can see through him."

The present volume is adorned, more or less, by a photograph of John Brown, which, after all, offers the best apology of his character. Everything about it evidences a dogged, unreasonable obstinacy,—a determination to be a martyr; in fact, the portrait gives a better idea of the Hero of Harper's Ferry than the four hundred and fifty pages of the text.

Tannhäuser; or, the Battle of the Bards: a Poem. By Neville Temple and Edward Trevor. (Chapman & Hall.)

WE have seen too many and too brilliant imitators of Tennyson to become dithyrambic over the latest and most successful.

The writers of this poem are evidently old hands. They have attained to great mastery in the art of Tennysonian verse. Only we are not inclined to place that art in so lofty a rank as some of its admirers have done. We have said it before, and it will be none the worse for repetition, that in all creative work the great difficulty is in beginning. After the beginning, it is so easy to continue. It makes all the difference in the value of the work done, whether the inspiration originate with the writer's self or he gets his prompting from some one else.

If he have any the least germ of creative life in him, that will grow and enrich the world. But mere imitation, though never so successful, cannot enrich the world. The utmost that it can do is to cheat for awhile. Great imitators—men whose essential motive has been imitation—never yet made poets. All who have become true poets have shown from the first a marked originality and personality. Each was himself, and possessed a style of his own. Each possibly had some model that he looked up to with emulous admiration: some have had many models. But when the poet-life kindled within him and the thought took shape, its image was not in the likeness of any model. It came forth fresh, original, from the poet's own soul. The great model of most verse-writers in our time is the Laureate. We wrong many of them, however, to use the word "model,"—for it is incentive enough if they read him and admire his poetry. They sit down forthwith to do something in that style. His muse and his music are alike irresistible. Some may stop their ears, and bind themselves, Ulysses like, to the mast of their own vessel: it is all in vain. The Syrens draw them ashore, vessel and all; and they are wrecked. Shakspeare did not tyrannize over the Elizabethans half so much as Tennyson does over the young mind of the present. We fancy that an individuality robust as that of Burns would hardly have resisted. He who called the poems of Shensstone "divine," and was again and again tempted to enter the pretty pagoda of Pope, would have got intoxicated with Tennyson, and gone reeling off his own solid earth to follow this new Ariel and his enchantment. But for all this the names that will live on as the poets of our time will not be those of the writers who were great imitators of Tennyson. The followers of Shakspeare stood some chance, because he dealt so much with human actions and human life. He led his readers and lovers into so close a contact with these as to strike out thoughts and feelings almost at first hand. His rich objectivity is capable of a thousand other blossomings in other minds. It is very different with the great subjective poet. His is the modern method of reaping his narrower fields,—not the bountiful way of old, that dropped almost a harvest for the gleaners. He exhausts where he goes. One had far better go back to the old ballad-writers and try something in their way, than think to become a poet by imitating Tennyson. You only say over again much worse what he had said exquisitely. If you could get out perfectly what you want to say, you would find that it was just what he had said, only your impression was dim, it went but half-way to the bottom of his deeper mind. With the greatest success you can only become Interpreters in the Laureate's own House Beautiful. Not unto you, but to him is the honour and the glory. Nor will it avail, although half the critics may swear that the House belongs to you.

The art of imitating Tennyson, then, is the fatal facility of our time; and in this book it culminates. No blame be awarded to the singer for introducing so many mocking-birds. It is something to be grateful for, that his song is so pure, his influence so free from harm. It is something to rejoice over, that he has taken the place of Byron with our verse-writers. It is curious to notice how the imitations rise in the scale of excellence, as the Laureate's own works ripen towards perfection. Mr. Smith's latest book would not have been half so good, but for the stern chastity of verse in the opening "Idyll." And the "moral" of 'Tannhäuser' is undoubtedly thrown in because of the success of the last of the four famous "Idylls." The

partnership in this poem is apparently adopted for the purpose that one may luxuriate in a Southern voluptuousness, and the other may come in with a timely touch of restraint. The one has—

A dangerous skill
Caught from the custom of those troubadours
That roam the wanton South, too near the homes
Of the lost gods, that crept in careless use
Among our Northern bards: to play the thief
Upon the poets of a pagan time,
And steal, to purify their embroidered lays,
Voluptuous trappings of lascivious lore.

—He, we imagine, contributed the lines of this sort:—

"Hearst thou not the happy songs they sing me?
Seest thou not the lovely floating forms?
O fair, and fairer far than fancy fashioned!
O sweet the sweetness of the songs they sing!
For thee," they sing, "the goddess waits, for thee
With braided blooms the balmy couch is strewn,
And loosed for thee" . . . they sing . . . "the golden zone.
Fragrant for thee the lighted spices fume
With streaming incense sweet, and sweet for thee
The scattered rose, the myrtle crown, the cup,
The nectar-cup for thee!" . . . they sing, "Return
Thou' late, too long desired," . . . I hear them sing,
"Delay no more delights too long delayed:
Turn to thy rest;" they sing, "the married doves
Murmur; the Fays soft-sparkling tapers tend;
The odours burn the purple bowers among;
And Love for thee, and Beauty waits."

This writer plays Tannhäuser very well; the other plays "Wolfram of the Willow-brook" rather weakly.

The best part of the poem is that relating to the Princess. Of course there is a "Princess." When Tannhäuser has insulted the whole assembly at the Battle of the Bards with his song in praise of sensuality, the Princess perceives that her love is lost for ever, and the wrath of the Knights breaks out in the sudden flash of many swords:—

Uprose on every side and rustled down
The affrighted dames; and, like the shuddering crowd
Of parti-coloured leaves that flits before
The gust of mid October,—all at once
A hundred jewelled shoulders, huddling swept
The hall, and slanted to the doors, and fled
Before the storm, which now from shaggy brows
'Gan dart indignant lightning: one alone
Of all that awe-struck womanhood remained,
The Princess. She a purple harebell frill,
That, swathed with whirlwind, to the bleak rock clings
When half a forest falls before the blast,
Rooted in utter wretchedness, and robed
In mockery of splendid state, still sat:
Still watched the waste that widened in her life;
And look'd as one that in a nightmare hangs
Upon an edge of horror, while from beneath
The creeping billow of calamity
Sprays all his hair with cold: but hand or foot
He may not move, because the formless Fear
Gapes vast behind him. Grief within the void
Of her stark eyes stood tearless: terror blanch'd
Her countenance; and, over cloudy brows,
The shaken diamond made a restless light.

There are some good lines in the Princess's pleadings for the life of Tannhäuser, amongst others, these:—

Shall Hell
Triumph through you, that triumph in the shame
Of this eclipse that blots your brightness out,
And leaves you dark in his extinguished light?
Oh, who that lives but hath within his heart
Some cause to dread the suddenness of death?
And God is merciful: and suffers us,
Even for our sins' sake; and doth spare us time,
Time to grow ready, time to take farewell:
And sends us monitors and ministers.
Old age, that steals the fulness from the veins;
And griefs, that take the glory from the eyes;
And pains, that bring us timely news of death;
And tears, that teach us to be glad of him.
For who can take farewell of all his sins
On such a sudden summons to the grave?

It will be seen that the measure is of the same kind as certain speeches. There is no reason why it should ever end, any more than there is any why it should ever have begun. We might point out many splendid flashes of fancy; but the worst of it is they so often strike us as being second-hand. For example, we are pleased with the image of the "last snow" melting at the coming spring-tide, and being "changed to snowy clouds"; but we soon recollect that Tennyson has it, in 'The Princess,' "an iceberg molten on the waste becomes a cloud." We might pursue this process of resti-

tution; but it has been somewhat overdone; and our remarks apply more to Imitation than Plagiarism.

Gazida, par Xavier Marmier. (Paris, Hachette & Co.)

'GAZIDA' gained the Monthyon Prize this year, and our readers may be glad to know what sort of story our lively neighbours have crowned with the prize of virtue. 'Fanny' has had her forty editions, but 'Gazida' has been crowned by the sages of the Institute. Very few Frenchmen, we should think, ever heard of the tale of M. Xavier Marmier until they found it come from the voting urn of virtue. We confess that we were innocent of the sweet contagion. But as we like to know what our allies are about—and as we know their ways are strange and not as our ways—we forthwith sent to Paris for 'Gazida.' We have now read it. 'Gazida' is a "good" French novel;—unexceptionably moral and intolerably dull. When a Frenchman is proper, he is dreadfully proper. All original sin has been bleached out of 'Gazida,' and the human nature has been destroyed in the process. Never, since the days of little Jack Horner, was there seen so good a boy as the hero.

We have sometimes wondered if there was any human embodiment of the ideal schoolboy shadowed forth in those old-fashioned letters which were formerly written at the close of the half-year to "Dear and honoured parents"! In the novel of 'Gazida' we find him! That excellent young man M. de Vercel is the very personification and "presentment" of that half-yearly letter, with its fine upstrokes and steady copper-plate downstrokes, the joy and pride of the writing-master's heart. Let all who doubt whether in art or nature ever existed such a boy, read 'Gazida,' and they will find him there, at least. Talk of Telemachus, forsooth! Telemachus was a wild young man, who if left to himself would have developed a taste for Cremona, would have fallen in love with the lady who, Ariel-like, springs through paper hoops and alights gracefully on the back of her bounding steed. Telemachus indeed! whom Mentor himself could scarcely deliver from the wiles of Calypso, and who behaved so ill to that poor young nymph Calypso's lady-in-waiting—he is not worthy to be named on the same day with Henri de Vercel, the hero of 'Gazida.' Henri de Vercel has no sin of omission or of commission upon his conscience. Left an orphan, with a good fortune unincumbered by debts, Henri de Vercel has sought to assuage his sorrow for the death of his parents by loving a certain young lady named Marguerite, whom he had imagined to be endowed with perfections beyond the lot of even female humanity, and he had expected she would behave accordingly. But she had shamefully jilted him for the sake of diamonds, a house in Paris, and the title of Baroness. We could find in our heart to forgive her if she had had no other temptation than that of getting rid of M. Henri de Vercel. Quite unable to rally from the disappointment and the shock caused by the perfidy of his fiancée—M. de Vercel sets out to see foreign countries, to try if he can obtain forgetfulness and a little amusement. For six months he had been trying this remedy, when this book begins; and it is in the opening letter that he gives a friend the brief recital of all his woes. His friend having so often heard them at length and at large, must have been charmed to see them reduced to so compendious a proportion. Having found no comfort in the Old World, Henri de Vercel sets out for the New, with the intention of making a tour in Upper

Canada. On his road thither he performs an act of humanity towards a young Swedish orphan, who had been a steerage passenger in the vessel which brought him over to America, but before making up his mind to take the child and train him for his servant, he moralizes and records his moralizing in the following words, which may serve at once as a specimen of the style of the author and the style of the hero of this book:—

Thinking of the day on which I had seen Eric for the first time languishing upon his hammock, the native recital he had given me of his unhappy childhood recalled the lessons of charity so often inculcated upon me by my mother. I said to myself, that here there was a good action for me to perform, a duty to accomplish, and that, possibly, Providence itself had placed this child in my way, that I might come to his assistance. Besides, was there not an analogy betwixt his situation and mine, which ought to draw out my interest in him? Is he not an orphan, like myself, and even more unhappy than myself, for he has never known the holy joys of family love, nor the sweet caresses of a mother? and in memory of my mother, I will take charge of him. "Well, Eric," said I to him; "since your cousin is gone away, and there is no one else here of whom you can ask shelter, I will keep you with me; and we will travel together." At these words, the humble child made a movement, as though to seize my hand. Respect checked this impulse, but I saw a tear in his eye, and it seemed to me that this emotion of gratitude, this tear of the poor, won for me the benediction of Heaven.

Not at all a bad person was M. Henri de Vercel,—quite the reverse, indeed,—but the reader will agree with us, that a young man so prone to make moral reflections, and to record them in all their minuteness, is a hero likely to become rather heavy than dangerous before the story is done. M. de Vercel pursues his way no longer solitary, but accompanied by the faithful Eric, who, for the rest, if as faithful, is also as silent as a dog; but, indeed, nobody in the book ever speaks to the reader, except through the medium of M. Henri de Vercel. He goes on to Canada, where he is received by a French settler, who has a daughter "passing fair," and M. de Vercel again describes his meditations on his own emotions:—

I seek to explain to myself the unexpected emotions which the sight of Mdlle. Berthe has produced in me, and I cannot succeed. Figure to yourself a peaceful lake sleeping in its solitary basin, far from the movement of men and from dusty thoroughfares—alone—apart, like the silent retreat of a dreaming nymph; a child by chance approaches and throws into it the branch of a tree; no more is needed to agitate this placid water—to break its transparent mirror and to stir up the sand that lies beneath the surface. I offer this comparison, to give you, if possible, an idea of the confused emotion I experienced at the first sight of Mdlle. Berthe.

Of course, M. de Vercel imagines it impossible, if not improper, for a man to love twice in his life; however, this "jeune et candide enfant," with her eyes "d'un bleu limpide et doux qui sourient, qui rayonnent et regardent innocemment, comme les yeux d'un enfant," is his fate, his good angel, sent to heal the sorrows caused by the false Marguerite, to restore him to his faith in women, to rescue him from misanthropy, and to reward him for his virtue in general; but she has nothing to do or to say in the story, till quite the end, when she makes a little speech testifying to her sense of his excellence. M. de Vercel does not stop to make his court to Mdlle. Berthe; he proceeds to make a journey towards the Hudson Bay Company's territories, writing letters to his friend about the Indians, and giving an account of all he sees and hears. To those who have read Cooper's novels, and some of the numberless narratives of "adventures," "journeys," and

"residences" in the regions of Upper Canada, the letters of M. Henri de Vercel will seem more like compilations from other sources than descriptions of adventures on the spot. There is little story or personality in the descriptions in 'Gazida' to take it out of the category of a book of geography. The party are supposed to be in search of an Indian girl, named Gazida, with whom the brother of Mdlle. Berthe is in love, and whom he wishes to marry; but Gazida has a ferocious uncle, a truly wild Indian, who wants to bestow her as a squaw upon a friend very like himself. Gazida only appears once upon the scene, that she may be described, but hers is an entirely dumb part, for she has not one word set down for her throughout the book.

To French people, the account of the North American Indians, the Canadian trappers, and the native forests may be greater novelties than they are to English readers, but to us the account given in this book seems tame and flat. The style is clumsy and stiff, more like an English work translated into French than an original work. The whole grace and spirit of the language seem to have evaporated in the effort to write an instructive book; some of the observations remind us of Madame de Genlis in their sentimental morality. When the French take to writing moral stories, they are ruthlessly indifferent to the difficulties of virtue and ignorant of the general probabilities of human nature. If we might venture to say so, they seem to be writing about a state of things they do not understand, and amongst which they do not find themselves at home. They are not amused themselves, and it is not wonderful that they should not amuse their readers. In reading 'Gazida,' one feels as though in the attempt to give a purer atmosphere all the vitality had been taken out of life. Perfumes, as chemists tell us, can be extracted from wonderfully ill-scented objects, but pure fresh air is the breath of heaven, and exists in its own right; people feel themselves more alive for breathing it, and they can give no other account of it. When either air or morality is so obtrusively palpable as to need to be analyzed, decomposed, and reported upon, it must be very far gone from its original purity. There is nothing to be said against 'Gazida,' except that it is dull. Perhaps it was written with a direct view to the sages of the Institute. It has, at all events, been crowned and neglected. The favourite heroes and heroines of the French public have not been virtuous. But they honestly apply the principle of compensation. They read 'Rigol-boche' and 'Fanny,' and they reward 'Gazida.'

The Okavango River: a Narrative of Travel, Exploration, and Adventure. By Charles John Andersson. (Hurst & Blackett.)

To the north of the British possessions in Southern Africa there is a belt of country, extending over more than ten degrees of latitude, which still offers a wide field of exploration to the geographer, naturalist, and ethnologist. The physical condition of this vast region is on the whole a repulsive one. Excessively warm days are succeeded by extremely chilly nights, torrents of rain and abundance of water by months of absolute drought and a total want of the fluid most essential to our existence. The scenery is far from pretty, and exhibits a sameness which wearies the eye and disgusts the mind. The mountains, which here and there intersect the extensive plains, seem to be just high enough to impede the progress of the travellers' waggon, but too low to offer much relief to the monotony of the scene. Endless plains,—during the rainy season overgrown with juicy herbs and abounding in freshwater pools and periodi-

cal streams, during the dry months of the year a barren-looking country, in which springs are few and far between,—make up the greater part of this singular territory. When woods or any woody vegetation are encountered, they are generally so full of spines and thorns that they seriously impede progress; and one of the most common of these plants has characteristically been termed "wait-a-bit" by the colonists. The natives scattered over this broad region are neither handsome nor intelligent; they are a roving set, often hostile towards the European, unwilling to give information which could help him on, and still more unwilling to serve as guides to travelling and exploring parties. If these touches completed the outline of the South African portion it would have little attraction indeed. But the finish has yet to come. The whole of this uninteresting groundwork is enlivened by a vast number of animals, making a great zoological garden, where the lion is still an absolute monarch, where elephants move about in herds, giraffes show their long necks over stunted acacia-trees, gigantic boars with huge tusks, and fat hippopotami, are objects of the chase, and leopards and hyenas find a never-failing source of prey in numerous species of antelopes. Of late years this well-stocked shooting ground has been frequently visited; and those who, like our author, have brought with them a stout heart, a steady aim, and a good rifle, have found travelling in this region a continued series of incident, excitement, and adventure. They have gladly put up with all the inconveniences they had to encounter: the occasional want of water, the torment of noxious insects, the treachery of the natives, the chills, the heat, and the monotonous scenery; they have breakfasted on an elephant's foot, and made their dinner off locusts and wild honey, as John the Baptist did of yore and the Hotentots do to this day. They have gone to this, and a great deal more "roughing," in order to get a chance of sending a well-directed bullet through the heart of the royal lion or the gigantic elephant of Africa. Returned to their isolated camp, tired and worn-out by the day's excitement, their slumber has often been disturbed by the dreadful howls of their attendants, and the piercing cries of an unhappy native. A lion, cat-like, pushing his way through the cattle without disturbing them, and unperceived by the dogs, is carrying off one of the travelling party. Imagine the scene!—

"Last night I was startled out of my sleep by a dreadful shriek, such as I had never heard uttered by any human being before. The thought at once struck me that the two lions which had given us such trouble on a former occasion were again prowling about, and had perhaps seized some of the Bushmen lately come to pay me a visit, who were encamped at the back of my kraal. Snatching up my rifle and pistol, I bounded out of bed, and soon found my suspicions confirmed by the dismal howls and wailings of several terrified Bushmen, whom I met hastening towards my waggon for protection. A poor lad whom we had captured the day before was giving vent to his distress in piteous lamentations for the loss of his father, whom one of the lions had destroyed. Calling to some of my people to follow, I hurried away in the direction pointed out by this poor fellow. The night, in itself intensely dark, received an additional deep gloom from the shadow of a cluster of thick-boughed trees under which we were encamped. In order, therefore, to throw some light on surrounding objects, we set fire to our temporary huts and commenced our search. Mr. Hahn also came to our assistance with a lantern: the dogs meantime kept up a furious barking; yet, with the certain knowledge that the brute was only a few paces distant from us, we could not obtain a glimpse of the cowardly murderer. At length, to the horror of us all, we stumbled on the

mangled remains of the unfortunate Bushman who had fallen a victim to the monster. One of his arms was bitten short off at the shoulder, whilst his hand still convulsively clutched a portion of his 'dress.' This, and some portion of his intestines, was all that remained of a man alive and quite unconscious of the fate that awaited him only a few minutes before! The sight was both shocking and sickening in the extreme, and as it was now useless to continue a further search in the dark, we returned to our respective bivouacs. Sleep was, of course, out of the question. The dreadful scene haunted my imagination unceasingly, and I resolved, as soon as the day should dawn, to pursue the horrible man-eater, and terminate, if possible, his existence."

Although this chase proved unsuccessful, the man-eater and several others of his kind were shortly afterwards encountered:—

"One of the lions was some distance in the rear of the other, and I set the laggard, of course, down for the brute I had wounded. Being closely pursued by two of the dogs, he was brought speedily to bay. Now was my time; and, stepping smartly out, I was soon within fifty paces of my mark, when, stooping down, I took a deliberate aim with the elephant rifle, and fired. The bullet passed through both the animal's shoulders, and he fell, managing nevertheless to raise himself on his haunches, in which position, growling hideously, he lashed alternately his sides and the ground furiously with his tail. I, therefore, followed by Bonfield, advanced further towards him, and was about to put an end to his struggles, when the other lion, who had stationed himself in the rear, in a thick bush a hundred yards or so off, came bounding along with a ferocity of purpose in his royal countenance such as I never saw matched in one of his species. I was then in a kneeling posture, in a perfectly exposed situation, about twenty yards distant from his wounded companion. Charging past his crippled mate, this infuriated brute made directly at me. It was an awful moment, one that required all my self-possession; but having implicit confidence in my revolver rifle, I did not budge an inch. Levelling at the full broad chest of my assailant, I pulled the trigger, when—imagine the horror and consternation of the moment—my rifle missed fire! and missed again, and again! His next bound or two would, it seemed inevitable, bring me within the monster's gripe; but, whether terror-stricken at my defiant attitude, or at the click of my weapon, he turned abruptly off to the right, and was in a few seconds back in his former hiding-place, the bush, where he was lost completely to view."

Our author had often heard the natives say, on being questioned about the haunts of elephants, that in such or such a locality "they walked about as thick as cattle," and he had repeated occasion to verify this apparently exaggerated statement; and if, instead of exploring, he had turned his attention exclusively to elephant hunting, he might have had magnificent sport and a handsome profit from the sale of ivory. The scene must have been an interesting one, when our author, perched on a large ant-hill, as an ambush, watched the elephants approaching a little rivulet:—

"I had returned but a short time to my ambush, when a large herd of female elephants with their calves came on, perfectly heedless of the firing which had previously taken place. With a rush they gained the water, exactly opposite to where I was perched on my ant-hill. Soon afterwards they were joined by several other troops pouring in from different directions, consisting of cows and bulls intermixed. It was quite remarkable to observe how they ranged themselves closely side by side, like a line of infantry. They drew themselves up in single file, occupying the entire width of the water (which at that point was 300 yards broad). I estimated their numbers at between 100 and 150. The moon was just then nearly at its zenith, and shed a glorious and dazzling light on the huge creatures below. I felt no inclination to disturb as striking a picture; and, indeed, if I had been so

disposed, it would little have availed me, as the vley in the direction occupied by the elephants was totally destitute of cover. So all I could do, and did, was to look on, sigh and admire. When the elephants had ceased drinking and were about moving away, I hurried forward to intercept their retreat, and, as the very last of them was disappearing, I succeeded, with some difficulty, in shouldering my rifle and firing. The rush and the trumpeting which followed this discharge were truly appalling. The herds actually seemed to yell with rage. They were, indeed, an unusually savage lot, as I shortly afterwards discovered in an encounter which very nearly cost me my life. My last shot, though a hurried and uncertain one, took effect; a fine cow was killed by it, but her carcass was not discovered till two days afterwards. I thus brought down three elephants that night, besides wounding two others."

Though the book abounds in spirited descriptions and illustrations of such and similar scenes, our author's chief object was not the chase, but the discovery of the Nourse or Cunene, a river which is known to fall into the sea on the west coast of Africa, about lat. 17° S., and has never yet been traced further than a few miles from its mouth. When, in 1856, Mr. Andersson found himself once more at the Cape of Good Hope, after paying a visit to Europe to see his friends and publish his 'Lake 'Ngami,' he was rather disappointed in not meeting his friend Mr. Green, with whom he had intended to make an exploring expedition into the unknown interior. As he could ill afford wasting his time, he accepted the management of some mines on the borders of Great Namaqua and Damara Land. Scarcely, however, had he accepted this office than Mr. Green suddenly made his appearance at the Cape. He had undertaken an exploring expedition on his own account, penetrated from the Lake regions to Libèbe, up to that time an unknown country. Mr. Green subsequently joined the late Prof. Wahlberg in an excursion to the eastward of Lake 'Ngami, chiefly with a view of hunting—an expedition which ended in the Professor being killed by an enraged and wounded elephant. Nothing daunted by the numerous hardships he had already undergone, and the untimely death of his friend, Mr. Green determined to take the field once more, this time in a direction totally different from his former wanderings, viz. in search of the river Cunene or Nourse. Two German missionaries, Messrs. Hahn and Rath, who were penetrating in the same direction, overtook the explorer on the road, and all three, forming one party, now pushed forward. They arrived in safety in the Ovambo country, and were at first exceedingly well received by King Nangoro; but they soon found that treachery was intended, and in the encounter with the bands of natives sent to murder them, they had the misfortune to lose one of their attendants, whilst the Ovambo tribe had many killed and wounded, and the king himself, alarmed at the repeated discharge of fire-arms, became so terrified that his bowels burst asunder, and he fell down dead on the spot. After such a serious impediment to their progress, the party gave up all hopes of reaching the Cunene, and forthwith returned to their respective homes. The discovery of a fresh-water lake, called Onondova, situate in about lat. 21°, and long. 19°, and supposed to be about 25 to 30 miles in circumference, in some measure redeemed the credit of this expedition. Mr. Galton and our author had, in 1850, actually passed within one day's march of this superb lake, without having the slightest suspicion of its existence, the natives, though perfectly well acquainted with it, being most reserved in communicating any information.

Mr. Andersson was disappointed at his

friend's failure in not reaching the Cunene, to which enterprise he had devoted, it would seem, considerable pecuniary assistance; and he determined to solve the problem in person. Starting from Otjimbingue, on the 22nd of March, he endeavoured to carry this resolution into effect; and the work now before us contains "a plain narrative of his adventures, accompanied by the remarks they have suggested, so to mingle information with amusement as to make a pleasant and somewhat instructive book." We have no hesitation in stating that he has fully succeeded in the literary portion of his labours, and that his production will be found an entertaining story of adventure and exploration, the interest of which never flags for a moment. A number of spirited illustrations greatly add to the value of the publication; they are drawn evidently by a skilful hand, and display wonderful boldness of outline. Of course, few will be so simple as to suppose that they were taken on the spot. The moments when an enraged elephant or a furious lion is making a charge on his destroyers are not those best suited for drawing sketches for publication. They must have been drawn from memory and description, and, regarded in this light, they are often admirable. We should have been glad if a map could have been added. Imperfect as it naturally would have been, it would have materially assisted those ignorant of the rapid progress of South African discovery during the last few years to track their way to those points our author visited, especially as most of the published atlases are still without these new additions to our geographical knowledge.

Numerous were the hardships Mr. Andersson had to undergo in his attempt to reach the Cunene; now the guides run away or lose their way; now the waggon is broken almost to atoms by falling down steep declivities; now again the cattle are 160 hours without a single drop of water. To make matters worse, the country is frequently on fire, and the flames, spreading fast and wide, threaten to consume the wayworn travellers:—

"The whole country before us was one huge lake of flames. Turning to Mortar, I exclaimed, 'Good God, our return is cut off!' I had seen many wood and grass fires, but nothing to equal this. Immediately in front of us lay stretched out like a sea a vast pasture prairie, dotted with occasional trees, bounded in the distance by groves of huge giraffe thorns—all in a blaze! Through the very midst of this lay our path. By delaying a few hours the danger would have been considerably diminished, if not altogether over; but delay in our case seemed almost more dangerous than going forward: and so on we pushed, trusting to some favourable accident to bring us through the perils we had to face. As we advanced we heard distinctly the sputtering and hissing of the inflamed grasses and brushwood, the cracking of the trees as they reluctantly yielded their massive forms to the unrelenting and all-devouring element, the screams of startled birds and other commingling sounds of terror and devastation. There was a great angle in our road, running parallel, as it were, to the raging fire, but afterwards turning abruptly into a burning savannah. By the time we had reached this point the conflagration, still in its glory on our right, was fast receding on our left, thus opening a passage, into which we darted without hesitation, although the ground was still smouldering and reeking, and in some places quite alive with flickering sparks from the recent besom of hot flames that had swept over it. Tired as our cattle were, this heated state of the ground made the poor brutes step out pretty smartly. At times we ran great risk of being crushed by the falling timbers. Once a huge trunk, in flames from top to bottom, fell athwart our path, sending up millions of sparks, and scattering innumerable splinters of lighted wood all around us, whilst the

numerous nests of the social crossbeaks—the *Tector erythrorhynchus*—in the ignited trees looked like so many lamps suspended in designs at once natural, pleasing and splendid. It was altogether a glorious illumination, worthy of Nature's palace, with its innumerable windows and stately vaulted canopy. But the danger associated with the grand spectacle was too great and too imminent for us thoroughly to appreciate its magnificence. Indeed, we were really thankful when once our backs were turned on the awful scene."

Notwithstanding every effort, all hopes of reaching the Cunene or any of its supposed branches had to be relinquished. Passing onwards, the difficulties of finding way and water increased; the guides decamp, two Bushmen, caught and tied together like prisoners, are compelled to show the way. At last a distant dark blue line is perceived on the horizon. Joy fills every breast, all hasten on, and before their eyes rolls in majestic grandeur a large river,—not the Cunene,—but the totally unknown "Okavango!"—

"This was then, in all probability, the Mukuru Mukovanja of the Ovambo, which these people had given us to understand flowed westward. Taking it for granted that their statement was in this respect correct, I had stood some time by the water before I became aware of my mistake. 'By heavens!' I suddenly exclaimed, 'the water flows towards the heart of the continent, instead of emptying itself into the Atlantic!' For a moment I felt amazed at the discovery. 'East!' I continued to soliloquize; 'why, what stream can this then be, in this latitude and longitude? Tioughe? No; that channel alone is much too insignificant to form the outlet for such a mighty flow of water. Well, then, it must be one of the chief branches of that magnificent river, the Chobe.' This was my first impression, which was to some extent corroborated by the natives, who described this river, called by the Ovaquangari 'Okavango,' as forking off in two directions in the neighbourhood of Libebe, one branch forming the said Tioughe, the other finding its way to the Chobe. But on more mature consideration, I strongly question the correctness both of my own impression and of the account of the natives. It is true Dr. Livingstone, in one of his early maps, lays down a river as coming from Libebe's towards Sekeletu's town; and I myself, when at Lake Ngami, heard of a water communication existing between these two places. But as the Tioughe is known to send out a branch towards Chobe considerably below Libebe, i. e. south of it, called Dzo, it is just possible that this is the stream alluded to by the natives. Furthermore, the country, for a great distance about Libebe, is known to abound in immense marshes; it is probable, therefore, that the Okavango, though of such large dimensions, is more or less swallowed up in these extensive swamps, leaving merely sufficient water for the formation of the Tioughe and its inundations. Unquestionably, Dr. Livingstone, if he succeeds in revisiting Sekeletu's town, will be able to settle this question."

All the villagers fled on the approach of the strangers, and it required long explanations, offered in broken language, ere they could be assured of the peaceful intention of the visitors. The great chief of this nation resided at a considerable distance to the southward of the point where the river was first struck. To this chief our author paid a visit, and found him well disposed. The canoe in which he made his way thither was conducted by "a stout, sturdy fellow, but a great blackguard," who stopped at every spot where he had a friend or acquaintance, and calling out at the top of his voice to the inhabitants, far and near, to come and have a look at the white man. Thus, very frequently, twenty or thirty people might be seen issuing from a single homestead to have a stare at the stranger and grin in his face.

It was Mr. Andersson's intention to push yet further northward, and as provisions and

water were now plentiful, and the chief whom he had visited friendly, nothing would have prevented his carrying out this intention, had not he and nearly his whole party been suddenly taken ill of fever. It cost our author a severe struggle before he could renounce his scheme; yet there was no alternative but to retreat from a district, which already began to yield such rich results of information:—

"After such toils! such hardships! such sacrifices! and with the prospect of a final crowning success just dawning upon me, it may well be imagined that I turned my back on the land of promise with drooping spirits and a heavy heart. Thus ended my short but memorable visit to the Okavango river. I sincerely trust that future explorers of these parts may meet with better success. An excursion up this stream towards its source would undoubtedly prove very interesting, for it is, I believe, perfectly unknown to Europeans; I doubt even whether the native Portuguese are aware of its very existence; they are certainly quite insensible to its importance in a commercial point of view. Navigable it must be throughout a great (if not the greater) portion of its course, even to vessels of some pretension. Numerous tribes, more or less intelligent, more or less traders and acquainted with the art of agriculture, possess permanent habitations along its banks. The unhealthiness of the climate may, it is true, be considered as prohibitive of any frequent or constant intercourse with this country. I strongly suspect, however, that this objection would only apply to a certain season, i. e. to the time when, the annual flow of the river ceasing, exhalations from the surrounding swamps and marshes poison the atmosphere. In the months of June, July and August, one might, I firmly believe, visit the Okavango with comparative safety. It is only, I think, in the spring, when I was unfortunately in its neighbourhood, that the malaria from the Lagoons is so fatal."

On retreating, a scheme for the destruction of the exploring party had been laid by a treacherous tribe of natives, which by some accident became known to Mr. Green, who, to his honour, at once determined to save his friend and party, and ultimately succeeded in effecting a meeting with them:—

"Most deeply was I affected by this noble deed. Indeed, this single act of devotion was to me infinitely more gratifying than would be all the wealth the world has to bestow. It was heart-warming to know that at least one human bosom beat genuinely for the solitary wanderer. Dear Green! an approving conscience must be your greatest reward; but should these lines ever reach you,—and God grant they may ere long!—I beg you will here accept my poor but warm and sincere thanks for your spirited resolve to come to my rescue when dangers so great, of which I was unaware, encompassed me. Believe me, this one act of heroic friendship has, in my own estimation, much more than outweighed any trifling service it has been in my power to render you. Whatever may be our future fate, when life itself shall no longer possess the charms and illusions of youth, 'hæc olim meminisse juvabit';—it will be pleasant to recall to remembrance the days of yore, and gratefully to dwell on the recollection of your humane and brotherly conduct. God speed you in your present interesting but hazardous pursuit!"

The remaining chapters are full of interesting matter, descriptive of the south-west coast and islands of Africa, which the author, it appears, repeatedly visited. True, much of the information here furnished is not new, and has been selected from various publications, but it has been put together by a critical hand, who could balance the various statements offered, and confer the weight of his own authority upon those here selected. The account given of Ichaboe, its history and its guano trade, will be perused with interest; whilst the injustice committed by a Liverpool firm against poor Mr. Livingstone (not the great traveller of the

same name), who opened this rich trade, will call up feelings of indignation in the breast of all those fond of seeing justice and fair play.

Mr. Andersson's book, from the number of well-told adventures, its unpretending style, its rich fund of information, and spirited illustrations, will command a wide circle of readers, and become a favourite with all those who can appreciate daring perseverance and a buoyant spirit under overwhelming difficulties.

Collectanea Archaeologia: Communications made to the British Archaeological Association.
Vol. I. (Longman & Co.)

THE metaphor of the lamb reposing peacefully by the side of the lion offers but a faint image of what has come to pass in respect to the temperaments of the two Archaeological Societies—the Institute and the Association. If, a few years ago, any one had ventured to hold out the anticipation that the members of either body would by-and-by solve their differences, and speak charitably of those belonging to the rival body, the prophecy would have been received with incredulity; but if, in addition, it had been presaged that some of the leading members of the Institute would not only shake hands with the Association, but even become contributors of important papers to the *Transactions* of the last-named society, the utterer of so extravagant an expectation would have been condemned as a trifler or a lunatic. Yet so it is; and this reconciliation is, in our opinion, one of the most cheering symptoms of a return to something like Christian unity in the ranks of antiquaries in general. Our archaeologists have lost in recent years much of the public estimation that would otherwise have accrued from their labours by the unseemly quarrels in which so many have taken a more or less active part. The outside public—that large body of men who do not care to enter into what have generally been the frivolous objects of dispute—conclude, naturally enough, that there are faults on both sides; and many, to our knowledge, who would otherwise have been zealous supporters of archaeology, have joined neither body, unwilling to be involved in an unnecessary partizanship.

We welcome the symptoms of approaching unity. It is not to be tolerated that two societies of this description should encourage ill feeling and personalities; and that society will rise in public esteem which shows a disposition to work for the benefit of science, discarding any feelings of jealous rivalry. There is ample room for both societies: the Institute attaching itself chiefly to the architectural and more technical branches of archaeology, whilst the Association devotes itself rather to what may be termed the miscellaneous business. Each body is now nearly equal in point of income, and neither of them gives serious symptoms of decay. On the contrary, it seems that the Association finds its *Journal* too limited for the extent of its communications, and hence is the present handsome commencement of a series which bids fair to become an important contribution to our stores of antiquarian knowledge.

The volume commences with a summary of the History and Antiquities of Shropshire, by Mr. Botfield, being the address read by him at Shrewsbury last August, when he so ably presided over the meeting of the society held in that town. It is a useful paper, although its author does not pretend to offer any additions of moment to our previous knowledge. It may, however, be new to some of our readers to be informed that Owen Glendower's Oak, whence that Welsh chieftain is said to have witnessed

the discomfiture of his English allies at the Battle of Shrewsbury in 1403, still stands at Shelton, in a garden on the right of the road from Shrewsbury to Oswestry, where the Welsh army lay. Wroxeter is dismissed with a brief account of the excavations made there previously to its disinterment under the directions of Mr. Wright. The earliest antiquarian report of this interesting spot will be found in the *Philosophical Transactions* for the year 1701, where Lyster has described a Roman sudatory, or hypocaustum, discovered at Wroxeter in that year. It is strange that so important a locality should have remained unexplored during a century and a half of antiquarian research.

The Rev. R. W. Eyton follows with an accurate but concise account of the Ancient Castles of Shropshire and its borders. Few of these edifices will be familiar by name even to the advanced student of English history. The enumerations add something to our idea of the military strength of the county in mediæval times—and that is all. Mr. Wright has a more interesting essay: an ably-written paper on the Local Legends of Shropshire, many of which, we may observe, are current in Wales under different versions. We have heard traditions like the following related by the Welsh peasantry to account for the position of large blocks of stones on the mountains which are situated between the valleys of the Conway and the Ogwen:—

"The giants are frequently associated with ruins and ancient relics in the legends of this county. In the history of the Fitzwarines we are given to understand that the ruined Roman city of Uriconium, which we are now exploring at Wroxeter, had been taken possession of by the giants. Sometimes, in these legends, the very names of the Teutonic mythic personages are preserved. Thus, a legend in Berkshire has preserved the name of the Northern and Teutonic smith-hero, Weland, the representative of the classical Vulcan. The name of Weland's father, Wade, is preserved in the legend of Mulgrave Castle, in Yorkshire, which is pretended to have been built by a giant of that name. A Roman road, which passes by it, is called Wade's Causeway, and a large tumulus, or cairn of stones, in the vicinity is popularly called Wade's Grave. According to the legend, while the giant Wade was building his castle, he and his wife lived upon the milk of an enormous cow, which she was obliged to leave at pasture on the distant moors. Wade made the causeway for her convenience, and she assisted him in building the castle by bringing him quantities of large stones in her apron. One day, as she was carrying her bundle of stones, her apron-string broke, and they all fell to the ground, a great heap of about twenty cart-loads,—and there they still remain as a memorial of her industry. Another castle in Yorkshire, occupying an early site, was said, according to a legend mentioned by Leland in the sixteenth century, to have been built by a giant named Ettin. It is hardly necessary to remark, that this is a mere corruption of the name of the *etenas*, or giants of Teutonic mythology."

The name of Wade, introduced into this legend, shows how popular that hero was; and, perhaps, the story of his boat, which was so well known in the sixteenth century, may be recovered through the medium of local tradition. Mr. Wright gives some other instances of similar legends, one of which, respecting the origin of the Wrekin, is extremely curious, if really authentic; but local correspondents have sometimes an unfortunate propensity to exercise their ingenuity at the expense of the credulous and much-enduring antiquary.

Mr. Planché supplies a learned paper on the Norman Earls of Shrewsbury, and the Hon. Mr. Bridgeman another of local interest on the Princes of Upper Powys. Then follows an elaborate and admirable description of Shifnal

Church, by the Rev. J. L. Petit, profusely illustrated with carefully-executed drawings of the church and its architectural details. Mr. Gordon Hills industriously describes Buildwas Abbey, the ruins of which, when we last saw them, glittered in the sun as if the columns had been built on the previous day, so remarkable is the state of preservation in which the stone remains. Our legislators, who have blundered so admirably in their investigations respecting the durability of stone, need but ascertain the locality whence were procured those which were used in the erection of Buildwas.

The volume concludes with an Itinerary of Edward the Second, compiled with prodigious labour by the Rev. C. H. Hartshorne. On the whole, this work is creditable both to the Association and to the several contributors to its pages.

The Days of the Fathers in Ross-shire. By the Rev. John Kennedy. (Edinburgh, Maclaren; London, Hamilton, Adams & Co.)

By the tone of this book the author would seem to insist that among Scottish counties that of Ross was once as conspicuous for its good gifts as the little city of Zoar among the five cities of the plain of Siddim. There were "righteous fathers" there of old, and Mr. Kennedy fears that they are already being forgotten, and that a lifeless formality is taking the place of the ancient godliness. The minister of Dingwall ought to be acquainted with the facts and statistics referring to this matter; but it may be, in Ross-shire as elsewhere, that religion is acknowledged as such only where there is an austere, though not a lifeless, formality. We remember having heard of a Scottish minister, who, after years of absence from his native hills and valleys, returned to the locality where he had once been a shepherd of the people, and was exceedingly mortified by the change for the worse which had come over the old sheep and the younger lambs of his pasture. "In the good old days, Sir," he remarked, "with an accent we will not attempt to imitate, "when the folks quitted kirk on the Sabbath-day, they passed along the street silent, moody, frowning, sunk in the deepest thought and melancholy; you'd ha' supposed some dreadful calamity had fallen upon 'em; but now all that is changed, and you behold them going homeward speaking affably to each other, smiling, walking cheerfully on, and looking just as happy as if it were any other day o' the week. Ech, Sirs, this is a grievous back-sliding!"

Here were a perverted sense and estimation of religion. So also has there been, not in Scotland only, but there perhaps more prominently than elsewhere, a superabundant and too officious zeal; as when the Lowland Elders horsewhipped a Highlander on the Sunday for walking about the street instead of attending kirk, disregarding altogether his defence, that he understood no language but that of the Gael, and could not, therefore, comprehend either their prayers or their preaching. So again was the sanctity of the Lord's Day ill-cared for by those too zealous leaders of a Scottish congregation who, falling in with an irreverent fellow who happened to be whistling as they came up, attacked him with sticks, stones, and fists more effective than either, and left him with but scant breath and few whole bones in him, an example and a terror to the ne'er-do-weels who went "whustling in the streets on the Sawbboth Day!"

What are the good old times? What are so accounted by some are repudiated by others; and no doubt there are Romish priests in Scotland whose calendar of these matters is differ-

ently constructed from Mr. Kennedy's. Some of those gentlemen may discover their halcyon days in those by-gone times when the priest of the clan felt bound to subordinate the claims of his (church) chief at Rome to the wishes of his (clan) chief at home. Priest Mackenzie could be persuaded to gather the Macleods or the Munros to mass at an appointed time that his chieftain might find it convenient to butcher or to burn them. For this little service the churchman was rewarded by a levy from the clan. Such was one of the phases of the so-called "good" old days!

The Scots, who certainly proclaim themselves an exemplary people in religious matters, were very slow at reaching perfection. Long after John Knox had preached, and Calvinism had established itself among them, there were heathens in their valleys who sacrificed beasts and made oblations of milk on the hill-sides. This was bad enough; but Mr. Kennedy does not, if we construe him rightly, account this so bad as the practice of Popery or the settlement of black Prelacy! Prelatic ministers are with him baneful meddlers and "gadflies." When they were nearly got rid of, the good time promised appeared, and "after the first quarter of the eighteenth century had passed, the best days of Ross-shire began." They continued for awhile, and men,—so he assures us, with a quaintness which savours of joking,—"had as much of the comforting presence of the Lord as they were able to endure."

The decline of the Gospel era in Ross-shire is dated from the time when evictions commenced, and whole territories were depopulated, in order that the red deer might be preserved, and the gentry of the nineteenth century might be able to partake of the amusements of the savages of three centuries earlier. Since then, matters have gone from bad to worse, till the people have got for their poor comfort 'The Religion of Common Life' and 'The Gospel in Ezekiel,' which Mr. Kennedy looks upon as very naughty books.

The author, accordingly, looks back upon the ancient days and the well-girded men who illustrated godliness in an orthodox way. One of these was James Fraser, the author of a work on sanctification, a minister of great repute in the first half of the last century, and a man cursed in a fiery helpmate. Here was a woman to try a poor husband's patience:—

"A cold, unfeeling, bold, unheeding, worldly woman was his wife. Never did her godly husband sit down to a comfortable meal in his own house, and often would he have fainted from sheer want of needful sustenance, but for the considerate kindness of some of his parishioners. She was too insensate to try to hide her treatment of him, and well was it for him, on one account, that she was. His friends thus knew of his ill-treatment, and were moved to do what they could for his comfort. A godly acquaintance arranged with him, to leave a supply of food in a certain place, beside his usual walk, of which he might avail himself when starved at home. Even light and fire in his study were denied him on the long, cold winter evenings; and as his study was his only place of refuge from the cruel scourge of his wife's tongue and temper, there, shivering and in the dark, he used to spend his winter evenings at home. Compelled to walk in order to keep himself warm, and accustomed to do so when preparing for the pulpit, he always kept his hands before him as feelers in the dark, to warn him of his approaching the wall at either side of the room. In this way, he actually wore a hole through the plaster, at each end of his accustomed beat, on which some eyes have looked that glistened with light from other fire than that of love, at the remembrance of his cruel wife. But the godly husband had learned to thank the Lord for the discipline of this trial. Being once at a Presbytery dinner, alone, amidst a group of

moderates, one of them proposed as a toast, the health of their wives, and, turning to Mr. Fraser, said, as he winked at his companions, 'You of course, will cordially join in drinking to this toast.'—'So I will, and so I ought,' Mr. Fraser said, 'for mine has been a better wife to me than any one of yours has been to you.'—'How so?' they all exclaimed.—'She has sent me,' was his reply, 'seven times a day to my knees, when I would not otherwise have gone, and that is more than any of you can say of yours.' On the day on which her godly husband entered into his eternal rest, and a very few hours after his death, some of the elders, on learning the sad tidings, hurried with stricken hearts and in tears to the manse. To their horror, they found Mrs. Fraser outside feeding her poultry. Approaching her, one of them said, sobbing as he spoke, 'So Mr. Fraser has gone to his rest.' 'Oh yes, the poor man died this morning,' she said as she scattered the corn among the fowls; 'if you want to see the body, you may go in—chick, chick, chick.'"

Probably to some such a wife is owing a minister like to the one here sketched:—

"Mr. William Mackenzie, the minister of Aasynt, was almost all a minister ought not to be, yet he continued to occupy his charge till his death. Always accustomed to regard his pastoral work as an unpleasant condition of his drawing his stipend, he reduced it to the smallest possible dimensions, and would not unfrequently be absent, without reason and without leave, for many weeks from his charge. This was the usual practice, in these days, of the moderate stipend-lifters of Sutherland. The visit of one of them to Ross-shire would be an affair of a month's length, at the least, and the people never clamoured for his return. The beadle, who was also the parson's gillie, invariably accompanied the minister on these excursions. In one case the beadle was also the piper of the district, and during his absence with the minister, on one of his jaunts, a parishioner was asked when he expected the minister to return. 'I don't know, and I don't care,' was the reply; 'if he had only left the piper, he might stop away as long as he pleased.' During the latter part of his life, 'Parson William' was much addicted to drink. This was known to the Presbytery, but could not easily be proved. The people were unwilling to complain, and to give evidence against him. The awe of his office was on them in spite of all the irregularity of his life, and as a man and a neighbour he was rather a favourite. Such of them as might have been expected to act differently, cherished the hope of his yet seeing the error of his ways; and while they enjoyed the privileges of the gospel under the ministry of his assistant, they let 'Parson William' alone."

The best sketches in this volume are those of lay individuals. Here is a smith, of whom the novelists might make something:—

"A few from Dingwall regularly attended at Killearnan on Sabbath. One of these was Kenneth Mackenzie, commonly called 'the Penny Smith.' He was one of the few who succeed in keeping their original shape under all the pressure of conventional usage, refusing to take the form and fashion of those who surround them. In his dress, manner, habits and modes of thinking, he retained his own peculiarity, and would be neighbour-like in nothing. In his kilt and antique coat, he seemed to have just stepped out of the midst of the generation of the fathers. While his neighbours were engaged in idle gossip, or lounging idly by the fire, he was poring over an old Latin book, spelling through a Hebrew grammar, or writing in characters of his own devising some of his strange thoughts in a record. On the Saturday afternoon, his smithy was cleared of its iron and its tools, and seated with benches, on which, for an hour in the evening, sat the young men of the neighbourhood, while the smith gave them lessons in psalmody. Not fearing the face of man, it cost him no effort to administer a reproof, whatever the character, rank and influence of the transgressor might be. Meeting the Sheriff on his Sabbath evening walk, 'Law-makers should not be law-breakers,' the smith said to him, as he looked him

boldly in the face.—'My health requires that I should take a walk, Kenneth,' the Sheriff said by way of excuse.—'Keep your God's commandment, and you can trust Him with the keeping of your health,' was the smith's reply; 'accursed must be the health that is preserved by trampling on the law of God.'"

When Dr. Parr rebuked the country housewife for not being at church, he only was met by the query, Why was he not there himself? The doctor's rebuke, however, was made in the exercise of his vocation: that of the smith seems to us simply an impertinence; but it is nationally characteristic.

Had Mr. Kennedy only allowed his volume to be sweetened a little by the savour of charity, he would have made a more favourable impression on his readers. Of that sweet grace, however, that most potential and most tender gift, there is not a trace. As conveying some idea of old scenes and old ways of life in a remote district of Scotland, the book is readable, but nothing beyond that. It too often degenerates into the unpleasantness of the "tract." The dogmatism of the author is constantly and disagreeably exhibiting itself; and his self-complacency is, if occasionally more amusing, hardly less offensive than his bigotry. He has had the chance afforded him of writing a book that should have been, for Scotland and Scottish men, an increase of such esteem as is ordinarily awarded to both. As it is, however, he has marred the fair precedent, and his country's reputation suffers for it.

The Sliding Scale of Life; or, Thirty Years' Observations of Falling Men and Women in Edinburgh. By James M'Levy. (Edinburgh, Nimmo; London, Houlston & Wright.)

THE present volume of criminal revelations is a less honest but more amusing book than Mr. M'Levy's 'Curiosities of Crime in Edinburgh,' published some months since, against which we could urge no graver objection than that it was a confession on the part of a famous detective officer of his inability to deal with any but vulgar rascals, and was consequently an encouragement to the shrewder and more educated rogues to persevere in their evil courses. 'The Sliding Scale of Life' invites the same criticism, and also challenges on certain other points a by no means flattering comparison with its precursor. Greater care has been taken in the selection and preparation of the stories; and the detective is made to display more sagacity and cunning and less ignorance of law and precipitancy of judgment than he exhibited at the beginning of the year. But all the advantage thus gained by one-sided caution has been lost through anxiety to tickle the taste of the public. To please the religious and humanitarian coteries, passages are introduced, eulogizing Dr. Guthrie and preaching up Ragged Schools; and to gratify those who merely seek excitement in the details of crime, recourse has been had to those tricks of grouping and colour by which the artists of melo-drama create sensations. The result is, that the sketches lack that genuineness which was the merit of the 'Curiosities.' Indeed, it is not difficult to detect in them the work of three different hands,—the writer of the confused and scarcely intelligible Preface, whose province it is to pour in the piety; Mr. M'Levy, who, besides supplying the raw material of the "Observations," philosophizes with triumphant self-consciousness on things in general; and the melo-dramatic hack, who has pointed out the entire bulk of the manuscript, introduced the epigrammatic conversations, and worked up the parts of the narratives which appeared to demand more pathos and delicacy of touch than it would be

fair to look for in a policeman. It is needless to say that of the three artists Mr. M'Levy, as a man of real experience, is by far the best. Some of his stories are very painful, and some so coarse that they are unfit for the drawing-room table; but many of them are very amusing. The reader is compelled to laugh at the coolness and daring of a fair wanderer of the Edinburgh streets who, on the irruption of a constable into her lodgings, charging her with picking a five-pound note out of a gentleman's pocket, requested that she might be searched and at once be proved innocent of so terrible a crime. As the girl spoke, she put a candle into the officer's hand, and after submitting her dress to his examination, accompanied him through the house on his fruitless investigation. When the man departed, convinced that he had been on a wrong scent, the guileless creature took up the candle he had used in the search, removed it from its stick, and unfolded the secreted note with which half-an-hour before she had fixed the bougie in the socket. On another but similar occasion the same girl secreted a five-pound note in the cuff of a constable's coat, from which place of concealment her adroit fingers had the pleasure of picking it a few nights afterwards. Such stories are good in their way. Piquant also is Mr. M'Levy when he moralizes on "the calosity" of criminals, and concludes an affecting picture of a penitent thief with the following remarkable statement:—"Were a thousand such cases sent up to the Privy Council, I doubt if their obduracy in endowing ragged and industrial schools would be in the slightest degree modified."

The best, and at the same time most unpleasant, sketch in the book is the one entitled, "The Club Newspaper." For a considerable time thefts of such magnitude had been perpetrated at the Queen Street Club, that the manager of the institution called on Mr. M'Levy to discover the offender. Suspicion fell on a waiter who slept out of the club. Proceeding straight to the man's house, M'Levy searched it, discovering no valuables nor any of the club property, save a few old newspapers. The papers were stolen; but they were of so slight a value that even an honest man might think there was little sin in taking them, as their owners no longer had need of them. Finding the manager would not prosecute for so trifling a theft, M'Levy returned to the waiter's house, to see if he could not extort by artifice from the man's wife further proofs of her husband's guilt. Whilst, therefore, Donald M'Leod was detained at the club, the detective thus practised on Mrs. M'Leod's fears:—

" 'Mrs. M'Leod,' said I, as the honest Gael opened the door and shut it, 'I am a little vexed.'—'What's the matter? I hope naething's wrang wi' Donald?'—'Why, not much,' said I; 'I am only troubled about these old useless newspapers. The authorities up the way—dangerous creatures these authorities—have taken it into their wise heads that Donald stole the papers from the Club; nay, they have locked him up in a cell as dark as pitch, with bread and water for fare, and, I fear, no hope of anything but judgment and punishment.'—'Fearfu' news!' said the woman. 'Oh, terrible news! condemn a man for an auld newspaper!' and hiding her face in her hands, she burst into tears. I need not say I pitied her, for in reality I did; for at that time I had not the slightest reason to suppose that she could know that the papers were not given to Donald, or allowed to be taken, as having served their purpose, and being consequently useless.—'But there's hope,' said I.—'Hope!' she cried, 'Hope!' as she took away her hands. 'Whaur!—how!—speak, for God's sake!'—'The charge is a small one,' said I, 'and I have no doubt it would be scored off, provided the missing money were got. I'm sure you don't have it;

I have searched the house; but perhaps'—'What!' she broke in, 'what?'—'Perhaps you may know through Donald where it is?' I watched her face, which was now pale. She began to think, and she did think; for if ever thought came out of a face, it might have been read in the point of her nose, sharpened by the collapse of the muscles through fear. If in this agony she sat a minute, she sat fully five; but I was patient. I turned my face from her, and looked at nothing, perhaps because my mind was directed to something. She was under a struggle; I heard the signs,—the quick breath, the heaving chest, the sobs, the efforts to suppress them,—still I was patient and pitiful. Sad duties ours! Yes, we must steel ourselves against human woes; nay, we must turn nature's yearnings to the advantage of official selfishness. At length,—'Are you sure the newspapers will be scored off?'—'Sure.' And then another sinking into the battle of her thoughts,—the lips quivering, the desultory movements of the hands, the jerking from one position to the other,—at length calmness—the calmness of one whose agony is over,—a rest of many minutes.—'And you're sure,' she said again, as she fixed her eyes upon me, with such speech in them that my soul revolted at its very wickedness. Must I admit it? Yes, it is put upon us. A lie is one thing, the keeping deep down in our hearts the truth another. The one I abhor, the other is a duty. *I knew that the money, if produced, would form a charge in place of the newspapers.* I knew she didn't think this; but I knew also I was not bound to tell her that she was wrong in not thinking it. Nay, there are worse cases than mine, that may be and are justified every day. When robbers are at the window, and you cry, 'Bring me the gun,' when there is no gun in the house, you lie; but you are not bound to tell men whose hands are at your throat that you lie. *There are necessities that go beyond all moral codes, and laugh at them.* If this woman knew where that stolen money was, she was, by her own doing, under the sharp consequences of that necessity, and must abide the result as an atonement for an act not perpetrated under that necessity. Behold my logic! I am at the mercy of the public."

Overcome by terror and the falsehood of M'Levy's lips, the poor woman gave the policeman a roll of stolen notes. The officer, however, was not yet satisfied. He took the notes, and, after leaving the house, he returned a second time, and, by another base equivocation (a stronger word may not be used), induced the miserable creature to write on each note her name,—as evidence of her husband's guilt:

"I took the parcel and placed it in my pocket. We mounted the stair, and Mrs. M'Leod left me. It is needless to say that I could not restrain my curiosity; nor did I try. I went down towards Princess Street Gardens, and seating myself on the parapet, proceeded to undo the red handkerchief. I found within a large bundle of bank-notes, composed of tens and fives, and upon counting them found the amount to be 180*l*. Now I fairly admit I was not satisfied. I wanted something more; and tying up my bundle I repaired again to Rose Street. 'Mrs. M'Leod,' said I, as I entered, 'it will be necessary that you mark these notes for me. My masters, the authorities, will not believe I got them from you unless I get your name to them. Have you pen and ink?'—'Ay,' said she, 'but I daurna mark them, Donald would be angry.'—'But you forget the authorities,' said I.—'The authorities!' she repeated, with a kind of a tremble at the very sound of the word.—'Yes, they may be angry, and you know the anger of the authorities is very different from that of Donald M'Leod.'—'Very true,' replied she. And bringing the pen and ink I got her name to every note. *I was now satisfied, and taking the direction of Queen Street, arrived at the Club, where I saw Mr. Ellis.*"

The story concludes with M'Leod being sentenced to seven years' transportation.

We do not care here to raise the question whether M'Levy did no more than his duty in thus perfidiously misleading a terror-stricken wife. We are willing to make every allowance

for his sense of duty. Let it be granted, out of charity, and for his case only, that he was right in doing what he did. Nothing, however, can be advanced in palliation of his offence against common decency in thus boasting of it. The law is a mistress who has need of many servants, and from some of them she exacts revolting services, of which it is best to speak as little as possible. She still employs hangmen and spies; but their offices are such that to dwell upon them with exultation is to offer insult to public delicacy, and to do injury to public morality.

Of course, the foregoing extracts, as likewise the entire narrative of "The Club Newspaper," have been written up by the melo-dramatic artist already alluded to. The philosophic detective, who enlarges on "the calosity" of criminals, and the "obduracy of the Privy Council in endowing ragged and industrial schools," troubles his head little about "necessities that go beyond all moral codes, and laugh at them."

Recollections of a Five Years' Residence in Norway. By H. T. Newton Chesshyre. (Newby.)

Mr. Chesshyre is a modest man. For, while your fast tourist will manufacture a goodly volume of some four hundred pages out of the very raw materials of a fortnight's rush through foreign lands, our author's five years' residence in Norway has produced but a slender duodecimo. An old aunt having died, and left him a legacy, he thought that he could not do greater honour to her memory than by making a tour in Norway; and so well did he like the country and people that the tour grew into a residence of five years, during which he mixed largely with the inhabitants, and made good use of his opportunities for acquiring information. The hospitality of the Norwegians is proverbial, all travellers have experienced it; but, as will be seen by the following curious account of "drinking tankards," it sometimes assumes an inconvenient form:—

"Almost every large farmer in Guldbrandsdalen owns a great silver beer-tankard, or a wooden one with a silver top, in the lid of which is inserted a British coin, taken from Sinclair and his Scotchmen, when they were slaughtered in the most barbarous manner at Kringelen, between Frøen and Laungaard. The road formerly crossed the scene of this horrid butchery: a board with a very bombastic inscription, erected by one of the peasants, marks the spot. The new road passes under the hill, and to the left of it. The Norwegians are very proud of this deed, and brag of it with as much gusto as they do of some of the chief battles of the old Norse kings. To say the best of it, it was a well-concerted and cunningly executed plan, whereby all Sinclair's men were entrapped and killed, with the exception of forty or fifty, who were tortured for a day or two, and then delivered over to the ladies, to be made 'hakke kied' (mince meat) of. When the people in the neighbourhood meet with a Scotchman, their first conversation is about the battle of Kringelen; and ten to one but they volunteer to sing one of the most celebrated songs of this part, commencing,

Sinclair kam over saltan hav,

'Sinclair came over the salt sea.' It describes his reasons for coming; how the Scotchmen murdered the Norwegians, and burned their homesteads; and how bravely the latter repulsed, and how magnificently they conquered them; but it says nought of the butchery. Some of the Norwegians who visited Mrs. D., delighted in singing to her a verse or two of this song, which considerably raised her ire; and she vented her feelings by muttering wishes in Scotch, that, if fulfilled, would have hurled her tormentors, together with all their countrymen, to the other side of Mount Etna. It was done chiefly for mischief, and for the 'moro' (fun) of seeing

'Madame sindt' (the lady angry). The drinking tankards are rather formidable affairs, containing two quarts or more: within are small projecting knobs, an inch or so apart; the tankard is passed round like the loving cup, and each man ought to drink until the liquor has decreased to the level of the centre of one of these knobs; if, however, he has exceeded, or come short, in the least degree, his next companion insists on his drinking it all, and passing it to him refilled, when a fresh start is commenced. I believe this custom is never carried into force at the present day; formerly it was very general. Ale was the liquor in common use; and if it was as potent then as some they brew now, the old Norsemens must have had strong heads, and capacious stomachs, to support many of these jugs full. Some of the tankards have been in the families for centuries, and are good specimens of ancient Norwegian workmanship. I can hardly fancy the impoverished Scotchmen, who crossed to Norway to fight for money nearly 150 years ago, could have had so many silver coins as I have seen let into the lids of these cups; they are about the size of a half-crown. Some of the farmers, who were badly off, have offered them to me for their weight in silver. No doubt many Englishmen would be glad to purchase them as curiosities."

To any one contemplating prolonged residence in Norway, Mr. Chesshyre's little book will be useful; and the economist who has not yet come in for his legacy may be pleased to learn that Mr. Chesshyre was boarded, lodged and waited on for nine shillings weekly, and two pence a day for his dog, at the house of a widow who had a large farm and great agricultural possessions.

NEW NOVELS.

Great Catches, or Grand Matches. 2 vols. (Saunders, Otley & Co.)—The Author of these volumes begins his introduction in so modest and humble a strain, that what he terms "a lenient and charitable censure" is almost inevitable. He wishes, he honestly confesses, to prove that it is simply and truly only "the want of money that makes him write," but failing in this primary object, he declares, with his hand upon his heart, that he shall feel more than repaid for all his labour and disappointed prospects, if, by his unpretending story, he "can furnish one single individual with an hour's amusement, or beguile an unfortunate Benedick into forgetting that his spouse has taken an hour longer than usual to dress and that the horses are standing out in the rain." With such unostentatious and disinterested views as these, the Author of 'Great Catches, or Grand Matches' cannot, of course, expect to establish a great reputation for anything but good-nature and self-denial. We even fear he may be subject to night-mares and is in the habit of passing—

Miserable nights,
So full of fearful dreams—of ugly sights
That, as I am a Christian, faithful man,
I would not pass another such a night
Though I were to buy a world of happy days.

—The book is evidently the result of a series of bad nights, consequent upon heavy and unwholesome suppers. Popish plots, priests, shipwrecks, turn up in every direction. No one can look round without seeing a pair or two of frightfully bright, glaring eyes peering at him, from out of every bush and from every crack and cranny of his house. No one hires a footman or a ladies' maid, but, under this disguise, we find a Jesuit priest or a nun. The young ladies cannot go out to pick a few ferns, but they are seized and gagged and thrown recklessly into ditches, even under the very shadow of their paternal roofs, or are carried off to sea in mysterious sailing vessels, and go through such fearful hardships, by sea and land, that it makes one's blood run cold to think of them. Jesuits dress up as fascinating young men, as rich old uncles, as valets, as tutors, as sea-faring men, as old gipsy women. Nobody can stir hand or foot without stepping into some hidden snare or some "diabolical Popish plot." If a quarter of the adventures happening to the luckless hero and heroine of this romance could, by

any possibility, occur in real life existence would be a burden to us. Fortunately, however, we may feel tolerably secure from any such fate in these days of gas-lamps, policemen and common-sense. Without too much strain therefore upon our nervous systems, there is something actually fascinating in the constant succession of horrors related in this novel, and the most irritable and impatient of husbands might be soothed and disarmed by a timely application of 'Great Catches,' &c. We must honestly own, that the more rational and probable parts of the story therein related are by no means without merit. There is much truth and some talent in the description of the society of the little country town of Staunton Bridge. The Hon. Mrs. Plantagenet is depicted much in the style of Mrs. Trollope's Widow Barnaby, and if the author will only condescend to drop the horrible and mysterious, and stick to the probable and the common-place, he may, one of these days, produce a very creditable work.

OUR LIBRARY TABLE.

A Manual of Botany. By Prof. Bentley. (Churchill.)—Prof. Bentley has prepared, in the form of a thick duodecimo of 811 pages, a work "illustrated by nearly 1,200 woodcuts," that is to say, by so many representations of the smaller organs of plants. The work is divided into three parts: the first part gives an account of the various organs of plants and of their minute anatomy; in the second, we have a brief history of the classifications in use among modern botanists; the third treats of vegetable physiology, or of the functions of the organs described in the first part. We have failed to discover much originality in these pages, which can only be regarded as a compilation from other works. The author states that his volume is intended as a practical guide to the properties and uses of plants, "a part of botany which, in the majority of manuals, is but very briefly alluded to," rather a startling announcement when we recollect what has been done by the elder De Candolle, Endlicher, and Lindley, to whose 'Vegetable Kingdom' recourse has been had with no sparing hand. We must also remark that in this portion of the work as much care has scarcely been taken as was to be expected in a manual for students; thus the leaves of *Chloranthus inconspicuus* are said to be employed in perfuming tea in China, which is certainly not the case, the flowers alone being used for that purpose. The Spanish chestnut-tree (*Castanea vesca*) is stated to be much cultivated for its timber; a strange error, considering that its timber is almost valueless; its only use here is for hop-poles. Barcelona nuts are set down as a peculiar kind of hazel; does not Mr. Bentley know that they are merely the common Spanish nut kiln-dried? Then our two British oaks are called *Quercus pedunculata* and *sessiflora*, a rather unusual mode of spelling common words. The North American maple sugar is described as being the produce of *Acer saccharinum*; but sugar is also, and in some places equally, obtained from *Acer negundo*. We must also take exception to such explanations of structure in the organographical division of the work, as that relating to what is called septical dehiscence. In the first place, the act of dehiscence is mixed up with the manner in which carpels are placed with respect to the placenta, two circumstances having no relation to each other; in the next place, the fruit of Umbellifers is given as an example of that form of dehiscence, an extravagant and wholly unauthorized interpretation. Blemishes like these seriously affect the value of the work to students.

The Family Save-All, a System of Secondary Cookery, supplying Excellent Dishes for Breakfast, Luncheon, Dinner, and Supper, from Cold and other Fragments, with Invaluable Hints for Economy in the use of every Article of Household Consumption. By the Editor of 'Enquire Within,' &c. (Kent & Co.)—We commend this work for keeping the promise of its title-page. The demon of cold mutton is effectually exorcized from the domestic table; and if the wife has only the genius for following good advice, no husband can henceforth have any excuse for dining at his club—nor will the

wife, even on washing day, have any plea for not producing a good dinner. The family receipts are garnished with sippets of wise apothegms or seasoned with the salt of lively anecdote, and there is an appendix of instructions how to repair or obviate every damage that may attain the perfectness of the household gods, from chipped mantel-pieces to broken china or faded curtains; whilst there is abundant comfort prepared for sunburn, stings, cuts, bruises, and other small evils. Some of the information is so easy of application, that it is a pity it should not be generally known and practically tested by all whom it may concern:—we are told, for instance, that "coffee-grounds are a disinfectant and deodorizer, being burnt upon a hot fire-shovel and borne through any apartment;" also, that "hay sprinkled with a little chloride of lime, and left for one hour in a closed room, will remove the smell of new paint." 'The Family Save-All,' will be an invaluable work, if it meets with a skilful and intelligent reader; but good advice has always been more abundant than practical disciples of the same. The editor in the preface declares, "that the book ought to be studied because its hints are realities and its receipts worthy of universal acceptance. We do not hesitate to say," continues he, "that if the hints found in this work are generally acted upon in any household, the expenditure upon the total consumption of that household will be reduced *one-fourth*!" This may be very true, but the secret depends on whether the owner of the book has the gift to make intelligent use of it. The mystery of hashes, stews, and savoury fragments turned into respectable and entire dishes, is one of the most erudite branches of cookery, and the "neat-handed Phyllis" more frequently fails in them than in the simpler processes of boiling and roasting. Although 'The Family Save-All' is a treasury of receipt for making something out of nothing, or next to nothing, it cannot confer the gift of realizing the "excellent savoury pudding of cold potatoes and cold meat," or to make "nourishing brown soup without meat," or to perform any of the other economical and savoury *tours de force* herein set forth.

How should we encourage the Arts!—[Comment faut-il, &c., par Louis Viardot]. (Paris, Renouard.)—If there be nothing very new in this small volume—the idea of Republican institutions being more serviceable than Royal ones to the fostering of genius having been broached before—the argument is well reasoned out, the instances are liberally assembled, and the writing is that of a temperate and cultivated thinker, who deals with a subject familiar to him in all its points and bearings. With such ample materials as lie close under his hand, M. Viardot would do the world good service if he would undertake the history of French Art on a scale larger, and admitting of greater minuteness of detail, than has been possible in any of his former works devoted to the Galleries of Europe.—Too little is known of some of its best men in England; and curiosity is beginning to stir on the subject.

Love Legends of Italy—[*Legendes Amoureuses*, &c., par Paul Perret]. (Paris, Jung-Treutzel.)—Fancy the stories of 'Romeo and Juliet' and 'Othello' told over again in dry, deliberate French prose, and the exhausted state of the treasury of M. Perret's fancy will present itself as an object of universal compassion.—*Abeille*, par Alphonse Dequet (same publisher), is the thousand-and-second tale of love, intrigue, the Bourse, the play-houses of Paris—which a weary pen has written for wise people not to read.

Small Romances—[*Petits Romans*, par A. de Brehat]. (Paris, Jung-Treutzel.)—These belong to a time of fiction somewhat by-past,—to a period of history and taste when Kings were always seven feet high, and could keep their own palace gates against the whole world of rascaldom by the "right divine" of their prowess,—when restless individuals (especially if they had been murdered) broke their tombs and walked abroad in armour,—when pursued beauties, rode across kingdoms on horseback without tasting food or drawing bridle,—when the noblest sentiments or the most blood-thirsty execrations made up the entire conversation of men and women:

—in short, when heroines and heroes lived in a strange, waxwork, Bartholomew-Fair world which now even schoolboys and school-girls disdain to enter, and of which the tinsel is known to enlightened ladies-maids and romantic grooms of the chamber.—It requires some strength of mind, after offering such a definition, to say that we have a corner of kindness for these old monstrosities,—preferring them to the hard, knowing caricatures of modern life and fashion which load our tables so heavily in these latter days. There is many a *Robert* as utterly impossible as the blackest of *Rugantinos*, and not half so delightfully terrific to look upon; and we could name gentlewomen (to be found in novels signed with high female names) whose minute and fatiguing virtue is essentially as miraculous as the equestrian acts of the golden-haired *Lady Angelica* to which we have alluded.—M. de Brehat's romances, which belong to Brittany, Normandy, the *Pays Basque*, and the *Pays Chartrain*, are by no means the worst of their class. They are full of wonders, and when opened will not be easily laid by.

The Indian Mail—[*La Malle de l'Inde*, par E. de Valbezen]. (Paris, Lévy.)—The subject of this book—Anglo-Indian life—is not a bad one. How is it that the East cannot be made amusing in fiction? Scott tried; but his 'Surgeon's Daughter' is the greatest, save one, of his failures.—A thoughtful tale, by the brother of the Oxford Professor of Poetry (it was said), recurs to us; but though full of talent, it was dull.—Capt. Taylor's 'Thug' was not dull, but very shocking.—There seem to be picturesque districts doomed to yield nothing. Where is the Welsh novel? Why has Sicily had never an "Anastasia"?—But the English in India fare worse than usual on the present occasion. The most felicitous of French novelists is unlucky when he takes in hand as characters *Sir Bull* and the "delicious Miss," his daughter. M. de Valbezen is only one among the million, and when he means to be sprightly and ironical is only puerile and weak. On other ground than the East he might succeed better, as he writes with ease.

A few books are lying on our table, which, on account of their limited interest, or their technical character, need no particular review at our hands, and should be at once handed over to such readers as they may find. A first volume of *The Chinese Classics: with a Translation, Critical and Exegetical Notes, Prolegomena and Copious Indexes*, by James Legge, D.D., of the London Missionary Society, has been issued at Hong Kong. The whole work is to consist of seven volumes. The first volume contains the 'Confucian Analects,' 'The Great Learning' and the 'Doctrine of the Mean,' the Chinese text in Chinese characters and the translation in English. The work will be of importance to Chinese scholars, and not without interest to all who visit or read about the Celestial Empire.—M. Léon Pagès has translated from the Dutch an *Essay on Japanese Grammar* [*Essai de Grammaire Japonaise*], by Donker Curtius. The work in French is enriched with the elucidations and additions by Dr. J. Hoffmann, and with notes extracted from the writings of other grammarians. Messrs. Williams & Norgate are the London agents for this work.—In the title of *The Armenian Origin of the Etruscans* (Parker), Mr. Robert Ellis has stated a proposition, which in the body of his book he has worked at with great ingenuity and learning, if not with complete success. The dozen or twenty persons who may be interested in such a discussion will be warmly attracted by the arguments of Mr. Ellis.—Capt. H. G. Raverty has published two volumes on the language and literature of the Afghans, under the titles, *A Dictionary of the Pukhto, Pushto, or Language of the Afghans and the Gulshan-i-roh*: the latter being selections, in prose and verse, from pieces in the same tongue. These two works are published by half-a-dozen houses in London and elsewhere, including the Messrs. Longman, and are dedicated by special permission to Sir Charles Wood, as Secretary of State for India. Of the learning and ability with which the first is compiled and the second selected the name of Capt. Raverty is a sufficient guarantee.—From Mr. Franz Thimm we have received a copy in two volumes of M. Poitevin's *Nouveau*

Dictionnaire Universel de la Langue Française. The book is somewhat like 'Richardson's Dictionary' in form and arrangement, and professes, as all French Dictionaries must, to have been based on the labours of the Académie. While it has been lying on our desk, we have found it useful, and especially for consulting the use of words by the French poets.—Mr. Sotheby's *Ramblings in the Elucidation of the Autograph of Milton*, and Sir Alexander Malet's Translation of that part of Wace's 'Roman de Rou' which relates the *Conquest of England*, may be announced in this honourable connexion. Mr. Sotheby was a genuine gossip and collector, and, if his gossips be not always gospel and his collections not always precious, every one who knew the author will be glad to possess this record of a pleasant, humorous man. The book is very beautifully got up. The illustrations are very numerous and are uncommonly good. To the genuine lover of Milton, the copious facsimiles of his writings are beyond price. Sir Alexander Malet's translation, published by Messrs. Bell & Daldy, is illustrated by a running copy of the Bayeux Tapestry, and accompanied, page by page, with the original text. We cannot say very much for the literary merit of the English rendering. The volume is dedicated, by permission, to the Queen.

LIST OF NEW BOOKS.

Bellemare's A Hero in Spite of Himself, by Reid, 3 vols. 11. 11s. 6d.
 Bennett's Mentone and the Riviera as a Winter Climate, 3s. 6d. cl.
 Blondin's Astonishing Exploits, Movable, 4to. 2s. bds.
 Bowman's How to Make the Best of It, 8vo. 3s. 6d. cl.
 Brown (Capt. John), Life and Letters of, ed. by Webb, 8vo. 4s. 6d.
 Brown's Peter the Apostle never at Rome, 8vo. 2s. 6d. cl. limp.
 Buckland's The Little Warringtons, 8vo. 2s. 6d. cl.
 Chavasse's Advice to a Mother, 6th edit. 8vo. 2s. 6d. swd.
 Christian Retirement, 19th edit. 12mo. 5s. cl.
 Cowslip: or more Cautionary Stories, 3rd edit. 12mo. 1s. swd.
 Daily Steps towards Heaven, 11th edit. 32mo. 2s. 6d. cl.
 Davis's Tablet of Shadows, and other Poems, post 8vo. 5s. cl.
 De Gasparin's Near and Heavenly Horizons, cheap edit. 3s. 6d. cl.
 De Porquet's New French-Eng. Eng.-French Dict., 11th ed. 4s. 6d.
 Devotional Helps for each Day, Trinity to Advent, n. ed. 8v. 5s. 6d.
 Dickens's Barnaby Rudge, 2 vols. vol. 1, cr. 8vo. illust. 7s. 6d. cl.
 Drury's Mispresentation, a Novel, 2nd edit. cr. 8vo. 6s. bds.
 Dunbar's From London to Nice, post 8vo. 3s. cl.
 Elm Grange: or, a Summer in the Country, by E. A. M., 2s. cl.
 Ferrer's Elementary Treatise on Trilinear Co-ordinates, 2s. 6d.
 Floyd's Reading, Writing, and Arithmetic, 8vo. 2s. 6d. cl.
 Fontblanque's Hector, a Novel, 2nd edit. cr. 8vo. 6s. bds.
 Frieswell's Sham: a Novel, new edit. cr. 8vo. 3s. cl.
 Furse's Sermons preached at Richmond, Surrey, cr. 8vo. 6s. cl.
 Graglia's Italian and English Dictionary, new edit. 12mo. 4s. 6d.
 Hamner on Cast & Wrought Iron Bridge Construction, 2 v. 6s. 12s. 6d.
 Huxtable's The Merchant Record of Great Britain, 12mo. 2s. 6d. cl.
 Kerr's The Rule of Life, cr. 8vo. 1s. swd.
 Lady Falkland (The), Her Life, &c., 8vo. 3s. 6d. cl.
 Letters, &c. illustrative of Reigns of Rich. 3. and Henry 7. 8s. 6d.
 Lushington's Ames Selby, a Story for Children, 8vo. 2s. cl.
 Mammell's Life, &c., 8vo. 3s. 6d. cl.
 Messages (The) of the Prince, and how they were Received, 2s. 6d.
 Montgomery's Poetical Works, new edit. 12mo. 3s. 6d. cl. gilt.
 Murchison & Geikie's Geological Map of Scotland, with Notes, 2s.

SOCIAL SCIENCE CONGRESS.

Dublin, Aug. 22, 1861.

THE Social Science Congress is at an end. The philosophers are gone to Malahide, to Bray, to Glencree, and the Vale of Avoca. Those who yesterday wrangled over the limits of religious freedom are to-day humming in pleasant places the songs of Moore and sniffing the sea breezes. Joy to them after their many labours! The whip has been heavy upon them, and they have kept in harness pretty well. The attendance in Section has been good—not so good as to be "good for nothing"; and at dinner and evening parties better. On the whole, the sages of Social Science have done their work well and have earned their rest.

It was very proper for a body of practical philosophers, concerned, like Lord Brougham and M. Michel Chevalier, with Popular Education, with Law Reform, and the Treatment of Crime, to pay Ireland a visit. Ireland is often treated by foreign writers as if it were the pariah member of the British Isles—of no account in the family of nations, and of no interest to the observer, save for the picturesque poverty—the rude and blind devotion—the love of old traditions and of old associations

—which lend to it the tinge of melancholy poetry that pervades 'The Wild Irish Girl.' This poverty, this devotion and this love remain as when the brilliant pen of Lady Morgan first drew eager eyes to the island; but they are found side by side with things which startle your philosophers. Here is the great question of Popular Education. In England you have not settled, and, apparently, you cannot settle, that Hodge and Lobb ought to be taught reading and ciphering, lest the religious principles of the country should be shocked. Your prelates and your presbyters alike declare by their acts that Hodge shall not be taught to read the Ten Commandments and sum up his weekly bills. But in Ireland we have the very best of education freely placed at the disposition of the poorest people. No man need to be left in ignorance; and though the Anglican and the Roman, the Methodist and the Presbyterian, wrangle and growl at each other, and would gladly leave Paddy and Sandy as much in the dark intellectually as Hodge and Lobb, they have not been able to have their way. Every Irish boy can learn to read and write if his parents please. It is an astonishing, but incontestable, fact—one which the philosophers have discovered—that Ireland is now a better-educated country than England; and that Irish pupils, as Lord Brougham announces, are gradually pushing the Scotch from many of those places of trust and emolument which they have long regarded as theirs in right of their superior intelligence. Should Ireland remain exceptionally favoured as regards her secular schools and colleges, we may live to see this substitution carried still further—from business into the professions, and from the professions into journalism and Parliament. Irish genius is apt and plastic. When highly trained, that genius is capable of any flight; and the zealots who oppose the secular education of the English masses, while the Government allows full play to the Irish system, may find when too late that they have been helping to transfer the intellectual rule of England from Saxon into Celtic hands.

In Ireland, too, the Law Reformer finds some of his theories outstripped. Look at the Encumbered Estates Act. Who that has to buy a field or a cottage, a mill or a fishery, does not sigh for so rapid and inexpensive a mode of transferring property as he sees in Ireland? And in this land of Donnybrook, whisky and poteen—where the landlords are believed to be eternally abducting their neighbours' daughters, and the tenants are supposed to pay their rent with a couple of slugs from a blunderbuss, we find the system of prison treatment which all other nations have to come and learn. Surely these are wonders great as anything found in Egyptian fable.

I shall not ask your readers to go with me into every Section, and to listen to every word there spoken. Some of the orators are a little dry. Enough, if we drop in here and there; just time enough to hear the best things spoken by the best men.

On Monday, Mr. Napier occupied the Congress with his discourse on Jurisprudence. He made a very long speech, from which the general reader will be glad to have these morsels, and especially the remarks on the marriage law which arose out of the Yelverton trial:—

LAW REFORM.

Two centuries and a half have elapsed since the amendment of the law engaged the attention of Lord Bacon; and in succeeding times Hale and Prynne, Bentham and Mackintosh, Romilly and Brougham, have kept on foot a standing protest against the complexity, the incoherence, the still graver defects of a system of laws which ought to be a model of jurisprudence for the civilized world. Lord Bacon's elevated and comprehensive mind sketched the outline of a great reform: the statute law to be expurgated, classified and consolidated; the common law to be digested and methodized; a standing commission to be set up in aid of current legislation. In later times commissions for the occasion have been impulsively appointed, and have been used rather (as I may say) to stop some troublesome leak than for sufficient repair. This palliative policy has but postponed the demand for an adequate remedy. The remedy which has been

approved by our President, and which he has so often and so ably advocated,—which the late Lord Langdale pressed upon the attention of Parliament,—which in 1846 was brought under the notice of the late Sir Robert Peel, and was afterwards adopted by that able and provident statesman as a part of the comprehensive plan which he suggested for reconstructing the Executive Government of Ireland,—this remedy was ultimately approved by the House of Commons.

A PROPOSED MINISTRY OF JUSTICE.

In the session of 1857 an address to the Queen was presented by the House, to which a gracious answer was promptly sent by Her Majesty, which led us to expect that a department of administration for the affairs of public justice would soon be constituted. The importance of such a department has grown into a necessity; and after the repeated conferences which I have had with statesmen and jurists, and the suggestions which I have received from those who have given to the subject the thought which it deserves, I feel myself warranted in saying that such a department might be constructed at any time, in complete consistency with the prerogative of the Crown, the precedence of the Lord Chancellor, the independence of the Judges, and the privileges of Parliament. It is competent to the Crown to appoint a Committee of Council for the affairs of public justice. There is a Committee for Trade, another for Education, and a Judicial Committee. Over the new committee, the Lord Chancellor, as the great minister of justice, would properly preside, in the absence of the President of the Council. The Chancellorship of the Duchy of Lancaster might remunerate a Vice President of the Committee, whose undivided attention might be given to jurisprudence and the amendment of the law. By an Order in Council, business relating to the affairs of public justice might be referred to this Committee. It is now generally allowed that it is useful to collect, register and digest the results of experience as to the working of the law,—and, therefore, judicial statistics should be periodically collected by and recorded in this department. These would be obtained from the several courts of justice, and might be accompanied by such remedial or other suggestions as the Judges or officers of these courts might think fit to add. Defects in the law would thus be disclosed, remedies would be discovered, obscurities arising from imperfect legislation (which, under the present system, rather provoke satirical exposure than induce remedial comment) might hereafter be noticed for the plain purpose of prompt amendment. The course of judicial decision might be followed, and when its authority might seem questionable, either from a conflict of judicial opinion or the disapproval of the profession, or when it would be found at variance with the known intention of the Legislature, or the current opinions of some class whose interests were specially involved,—in these and like cases the attention of the committee would be directed to the subject. It would also, from time to time, be directed to the digested results of the statistics obtained from the Courts, and would be enabled at stated intervals to make a report to the Crown on the state of the law, as administered by the Courts, and lay the foundation for such remedial measures as the Government would then feel it to be their duty to submit to Parliament. I feel myself justified, on the present occasion, in pressing on your attention the importance of having such a department as I have suggested. I have had the cordial and consistent support of Earl Russell, both in the House of Commons and in this Association; and the very eminent jurist, the present Lord Chancellor of England, in the address which he delivered on vacating the office of President of the Judicial Society, on the 21st of February, 1859, has pronounced the establishment of a Department of Justice to be the very foundation of an improved system of jurisprudence. If, indeed, jurisprudence have a moral aspect, if it be an inductive science, we must have recourse to the method by which other branches of inductive science have been advanced since the time of Lord Bacon.

THE MARRIAGE LAW.

Look at what we call our marriage law. You

may search for it in the lumber room amongst the rubbish of Acts of Parliament—Irish, English and Imperial. Thoughtful men ask themselves at last—Is marriage, indeed, to remain an institution of God, or has it become the creature and convention of human law? It is, doubtless, of divine appointment; as Lord Stowell has said, in language eloquent as it is exact,—“It is the parent, not the child, of civil society.” The relation of husband and wife is constituted—completely and irrevocably constituted—by the free consent of parties competent to contract, and intending by such consent to constitute the relation. The positive law of a man cannot make more or less perfect the appointment and institution of God. It has been said, but loosely said, by great authority, that society is a party to the contract; it would be more accurate to say, that society may have an interest in its completion. In this day of religious liberty, parties competent to contract and constitute a marriage ought to have the free choice of having that marriage solemnized by such religious sanction as they may think fit to select and superadd. Marriage is *publici quia Divini juris*—it is valid everywhere, if valid anywhere. Why is this? Because it depends not on the positive or local law of man, but on the appointment of God for the whole human family. In a Christian State it is acknowledged to be the symbol of a great mystery—the union that is at once indissoluble and divine. It was reasonable to require publicity in the title to dower or to the inheritance of landed property, and in other like cases the interference of positive law is at least intelligible, and, when rightly understood, is found to belong to the law of property—not to the law of marriage. If, indeed, our laws of property were cleared of all obsolete feudalism, simplified and consolidated, then what is called the marriage question would solve itself. The State may regulate the enjoyment of property in whatever way and upon whatever condition the general interests of the community may reasonably require; but when it proceeds to annul a marriage because some conventional rule has not been observed, I am bound to declare that it exceeds its jurisdiction. Irregular and clandestine marriages, as they are called, deserve to be denounced, and ought to be discouraged by every branch of the Christian Church, and the more so as human law cannot directly deal with them. We must look to a moral remedy for moral evils: to the preventive influence of parental and pastoral care, religious training, and the restraint of improved public opinion. Where the State moulds the laws of property for the convenience of the community, it may justly require—as a matter of sound policy—that every marriage which can claim to be recognized for proprietary or other civil privileges shall have had such sanctions superadded, and been publicly recorded in such form as the interest of society may demand for its common convenience. Nothing more than this should be required. But this, be it observed, would be a part of the law of property; it leaves the law of marriage as God has left it—sacred and universal. This view is, I think, in harmony with the spirit of our ancient law. The Saxon laws of England, which have been exhumed by antiquarian research, and from which has been extracted the law which is said to require the intervention of a minister in holy orders, episcopally ordained, as necessary to the validity of marriage,—this has been extended to Ireland as a part of our ancient common law, not in a question of property, but in a case of bigamy. It has given a shock to our social system, which has not yet been quieted by any rational legislation. It is the opinion of the younger generation of the Judges, and of all the civilians and jurists with whom I have spoken on the subject, that this decision can only be supported by its own authority as a decision of the House of Lords. The direction of the Saxon law that a Mass priest should be present at the nuptials, to pronounce the benediction, may have been very proper at that time; but how can this necessarily imply that marriage then as a sacrament, which the parties could minister to each other, would be null and void without such benediction? Indeed, in the same volume of the Saxon laws will be found a canon

(p. 443), to which my attention has been referred by Dr. Anster, which directs that a priest should not be present at a marriage where a man marries a second wife or a woman marries a second husband. He is forbidden in such a case to give the benediction. There is a penance prescribed for the party who so marries; the intervention of the priest is prohibited, but the marriage is left with the inherent validity which is irrevocably conferred by the sacramental completion. If it can be inferred from the one Saxon law which enjoys the intervention of “the Mass priest,” that a deacon who has not received priests’ orders may celebrate a valid marriage, the inference from the other laws is at least not less obvious, that their injunction was but directory, and the intervention enjoined was not essential to the validity of the marriage.

On the Section moving into its proper room, Mr. WEBSTER read the Resolutions of the Patent Law Committee as follows:—1. That all applications for grants of letters patent should be subjected to a preliminary investigation before a special tribunal. 2. That such tribunal should have power to decide on the granting of patents, but it should be open to inventors to renew their application notwithstanding previous refusals. 3. That the said tribunal should be formed by a permanent and salaried Judge, assisted, when necessary, by the advice of scientific assessors, and that its sittings should be public. 4. That the same tribunal should have exclusive jurisdiction to try patent causes, subject to a right of appeal. 5. That the jurisdiction of such a tribunal should be extended to the trial of all questions of copyright and registrations of design. 6. That the scientific assessors for the trial of patent causes should be five in number, to be chosen from a panel to be nominated by the Commissioners of Patents, for the adjudication upon facts, when deemed necessary by the Judge, or demanded by either of the parties. 7. That the right of appeal should be to either of the Courts of Exchequer Chamber, with a final appeal to the House of Lords. 8. That, for the preliminary examination, the assessors, if the Judge require their assistance, should be two in number, named by the Commissioners of Patents, from the existing panel; the decision to rest with the Judge. 9. That the committee approve of the principle of compelling patentees to grant licences on terms to be fixed by arbitration, or, in case the parties should not agree to such arbitration, then by the proposed tribunal, or by an arbitrator or arbitrators appointed by the said tribunal. 10. That a report be drawn up in conformity with the resolutions passed by this committee, and that the Council, if such report be approved by them, be requested to allow it to be read at the meeting of the British Association, to be held at Manchester this year.

Mr. D. C. HERON, Q.C., in the absence of Mr. Arthur Symonds, read a paper ‘On the Constitution of Tribunals.’

Mr. WHITESIDE read a paper ‘On the Progress of Legislation in Criminal Law.’

The Department of EDUCATION met in the Court of Exchequer; Sir JOHN G. SHAW LEFEVRE, President, in the chair.

Miss CARPENTER read a paper ‘On the Application of the Principles of Education in Schools for the Lower Classes of Society.’

The Rev. NASH STEPHENSON, Incumbent of Shirley, near Birmingham, Educational Secretary of the Association, and Secretary to the Educational Board for the Archdeaconry of Coventry, read a paper ‘On the Education Commissioners’ Plan for rendering Assistance to the Schools of the Independent Poor.’

The Rev. A. M. POLLOCK read a paper ‘On the Educational Position of the Established Church in Ireland.’ This paper gave rise to a discussion that would have done no dishonour to the fiercest of your English zealots. The sooner this discussion is forgotten, the better it will be for all parties.

The Department of REFORMATION and PUNISHMENT met in the Court of Common Pleas; the ATTORNEY GENERAL presided.

The Rev. J. H. MONAHAN read a paper ‘On Irish Protestant Reformatory Schools.’

The Rev. J. FISH read a paper ‘On the Disposal of Boys from Reformatories.’

Mr. HILL, Recorder of Birmingham, read a paper, by his daughter, Miss Hill, ‘On the present Position of Mettray.’

A paper by the Rev. Mr. LYNCH, ‘On the Spirit of the Reformatory Acts in force,’ was read by the Secretary.

In the Department of PUBLIC HEALTH, Lord TALBOT DE MALAHIDE presided.

Dr. MOORE read a paper ‘On the more Prominent Causes of an Excessive Mortality in Early Life.’

Dr. A. HARKIN read a paper ‘On Births, Deaths, and Diseases.’

Dr. LANKESTER read a paper by John Beddoe, M.D., ‘On the Physical Degeneration of Town Populations.’

Dr. LYONS read a paper, written by Miss Florence Nightingale, ‘On Hospital Statistics.’ In this paper Miss Nightingale recommended that sites which should be chosen for hospitals should be those enjoying a sheltered position, that the buildings should not be erected too high, but that each apartment should be lofty, airy, and spacious, and on no account to be overcrowded. She strongly advocated the necessity of having well-trained nurses—those who had been regularly educated in hospitals—to take charge of the sick.

Over the department of SOCIAL ECONOMY, Judge LONGFIELD presided.

The SECRETARY read a paper by Mr. H. G. REID, ‘On the Building Strike of the Present Year at Edinburgh,’ and a paper by Mr. F. HARRISON, M.A., ‘On the Building Strike of the Present Year in London.’

Dr. W. N. HANCOCK read a paper ‘On the Journeyman Bakers’ Case.’

Mr. W. NEWTON read a paper ‘On the Origin, Progress, and Recent Position of the Amalgamated Society of Engineers.’

Mr. M. O’SHAUGHNESSY, as Secretary of the Department, read a paper ‘On the general Aversion of Employers to treat with the Representatives of their Workers on Matters in dispute,’ sent in by the Council of United Trades; and Mr. J. SCOTT, a paper ‘On the Logic of the Labour Problem; or, the Production, Distribution, and Exchange of Wealth upon Equitable Principles.’

Mr. WRIGHT, in reference to the second of these three papers, dealing with an almost similar subject, said that, so far as he knew, there was no unwillingness on the part of employers to meet and discuss matters with their workmen.—Mr. LEFEVRE, in reference to trades’ unions, said it would be better for employers to accept trades’ unions as a fact, and treat with them accordingly.—Mr. LUSHINGTON said his experience was, that trades’ unions *bona fide* represented the interests and wishes of the working man, and that the refusal of the employers to recognize them only had the effect of rendering impossible an amicable understanding between employer and employed.

The department of TRADE and INTERNATIONAL LAW was presided over by M. CHEVALIER.

Mr. MARSH, in the absence of Mr. WESTGARTH, read a paper ‘On the Australian Gold Discovery, and its Effects on Australia.’

The PRESIDENT introduced the subject of the right of aliens to hold real estate, and advocated the justice and policy of admitting them to that right.

The PRESIDENT introduced ‘The Necessity of an Universal System of Weights, Measures and Coinage.’

Mr. LOWNES read a paper ‘On the English Practice with regard to Intermediate Port Charges.’

Mr. BAILEY read a paper ‘On General Averages.’

The second day of Sectional work was opened by the discourse of Sir J. G. SHAW LEFEVRE ‘On Popular Education.’ The chair was occupied by Lord BROUGHAM, and there was an extremely large and distinguished assemblage.

After Sir John’s discourse, the Rev. W. A. WILLOCK, D.D., read a paper, entitled ‘Suggestions on the Failure of Education in the Junior Classes of Elementary Schools.’

DAVID ROSS, Esq., read a paper 'On the Value and Advantages of the Non-vested System under the National Board.'

The wearisome and mischievous discussion of the previous morning was renewed—so much the worse for Ireland and for Popular Education.

In the Section of JURISPRUDENCE, Baron HOLTZENDORFF read a paper 'On Public Prosecutors in Prussia.'

Mr. H. T. DIX read a paper 'On the Registration of Deeds in Ireland.'

The SOLICITOR GENERAL read a paper 'On the Landed Estates Court, its History and Prospects.'

Mr. WHITESIDE read a paper on the same subject.

The ATTORNEY GENERAL presided in the Department of REFORMATION AND PUNISHMENT.

Mr. T. B. L. BAKER read a paper 'On Sentences with a view to Reformation or Deterrence.'

The Rev. T. R. SHORE read a paper 'On the Treatment of Adult Offenders, and the Effects of the System in Ireland.'

Baron HOLTZENDORFF read a paper 'On Police Supervision.'

The Department of PUBLIC HEALTH had for its President Lord TALBOT DE MALAHIDE.

Dr. P. W. MACKESY, of Waterford, read a paper 'On Dipomania (Uncontrollable Drunkenness).'

Dr. HENRY KENNEDY read a paper, entitled 'The Influence of the Food on the Intellect.'

Dr. MILBOY read a paper, written by J. O. M. William, M.D., 'On the Health of Merchant Seamen.'

Dr. FITZPATRICK read a paper 'On the Social and Sanitary Condition of the Labouring Classes in Ireland.'

In the Department of SOCIAL ECONOMY, Miss BESSIE PARKES read a paper 'On the Condition of the Working Women of England and France.'

Miss EMILY FAITHFULL read a paper, entitled 'Women Compositors.'

Miss PARKES read a 'Report of the Societies for the Employment of Women, communicated by Miss Jane Crowe, who is the Secretary to the Societies.'

Mrs. OVEREND read a paper 'On Remunerative Employment for Educated Women.'

Miss PARKES read a paper, communicated by Maria S. Rye, 'On the Emigration of Educated Women; its Necessity, Respectability and Advantages.'

Mr. M. O'SHAUGHNESSY, Secretary of the Department, read a paper, communicated by Mr. Jellicoe, 'On the Condition and Prospects of Girls employed in Manufactories in Dublin.'

Mr. D. SHERIFF, of Larne, read a paper 'On a General Statement of the Advantages derived from Embroidery or Sewed Muslin in the North of Ireland.'

In the Department of TRADE and INTERNATIONAL LAW, Mr. J. HERDMAN read a paper 'On the Linen Trade of Ireland,'—and Mr. J. O'HAGAN read a paper 'On Belligerent Rights at Sea,'—and so ended our second day, except, I am bound to say, the renewed squabble on the National System of Education.

In the Department of JURISPRUDENCE, Mr. B. C. LLOYD read a paper 'On the Admiralty Court.'

The Hon. Judge LYNCH read a paper 'On a Short Inquiry into the Principle of the existing Bankrupt Court, and an Exposition of its Principles in Administering the Trusts between Debtors and Creditors.'

In the Department of EDUCATION, Mr. J. BENTLEY read a paper entitled 'The Strong Claims of the Middle Classes for Justice in the matter of Education.'

The Rev. JOHN HALL read a paper 'On Intermediate Education in Ireland,' which roused that fiend of controversy which all moderate men wished to see laid, for one Congress at least.

Saturday morning, as I told you in my letter last week, was set apart for our French visitor, M. Michel Chevalier. The Congress met in the Solicitors' Room, and the chair was filled by Lord BROUGHAM. M. CHEVALIER, who spoke in

French, gave an admirable address, of which I shall give you the substance, marked, as before, in paragraphs, to which I ask leave to supply simple head-lines:—

INTERNATIONAL TRADE.

It is an opinion which in these times has passed into the condition of an accepted rule, that international commerce ought to be encouraged because it augments the wealth and prosperity not of one only of the two contracting parties, but of both equally—as well of the party who buys as of the one who sells. This opinion, which has acquired so much authority to-day, which is about to introduce itself into the practice of States after having remained so long buried in books as a lucubration of theory destined for the amusement of learned men—this opinion, I say, has not raised itself and become powerful, but in consequence of the circumstance that the nations are changing their mutual sentiments, are abjuring their ancient animosities and the jealousy of other ages; and are preparing themselves to become sincere friends of each other. Free trade would have remained in the recesses of philosophical treatises as a Utopia, if the influential classes of different nations had not actually begun to think that which our philosopher Voltaire used frequently to say, that every European war is a civil war. It is thus that the thought of mutual approximation, of harmony, between the most civilized peoples has been the origin of the recent progress of free trade. But in its turn free trade, in proportion as it is itself established, tends to draw the peoples more closely together; for it shows them in the most visible and the most tangible manner that they are mutually necessary, that every one of them contributes to the happiness and prosperity of its neighbours, and receives from its neighbours part of its own prosperity and of its own happiness. Thus, there is happily manifested that general law of action and reaction in virtue of which the same fact is in its turn first an effect and then a cause. Thus there reveals itself the other still more important law, which forms a part of the moral condition of the human race—the law of the universal solidarity of nations.

THE COMMERCIAL TREATY.

In this point of view we have cause to rejoice; for the Treaty of Commerce between the two great nations of the West which are divided by the English Channel—England and France—will do much more than benefit France and the United Kingdom. It will be advantageous to a very great number of States, for it is destined to metamorphose the custom-houses of the whole world. Thus the treaty of commerce between the United Kingdom and France has already given occasion to a treaty of commerce between Belgium and France. In a few weeks probably it will have determined the signature of a treaty of commerce between France and the Zollverein, or at least between France and Prussia; for that treaty has already been for several months under negotiation. In a short time, I think I can assure you of it, we shall see concluded a treaty between France and that young kingdom, called to so glorious a future, which the noble and intelligent sword of the Emperor Napoleon the Third and the patriotic perseverance of Cavour have raised from the tomb in Italy. Each one of the States which has thus signed a treaty of commerce with France in consequence of the English treaty, or which will sign one, becomes a focus of propagation for free trade; and in treating itself with other States it determines them to propagate it around themselves. It is thus that the number of labourers in the vineyard of the Lord is continually increasing.

THE MORRILL TARIFF.

As you are all here practical men, seeing with pleasure and thankfulness the good which appears, but not shutting your eyes to avoid perceiving the evil, by the side of those happy changes which are under accomplishment or in preparation, you will not fail to observe the facts which are taking place in the opposite direction. It is thus that by the side of the treaty of commerce between France and England your glance is arrested with pain by the Morrill tariff, which the Northern United States have recently adopted. But the Morrill tariff is born of the war. It is the child of discord. It will

not live. The atmosphere of the nineteenth century will stifle it; for the atmosphere of the nineteenth century only suits products of another nature, of a more regular character, more conformable to the laws of harmony, and to the unconquerable want which the nations feel to interchange the fruits of their labour. One of the finest sciences that man has formed; Geology, teaches and proves to us that in proportion as during the series of the ages of the earth the atmosphere purified itself and was tempered; there were seen to appear more perfect creatures. The animals of the first times, those monstrous and hideous beings of which the forms, recovered and described by learned men, astonish and terrify us, gave place to animals less strange and more beautiful, of an organization more elegant and more refined. The Morrill tariff is like one of those ugly beasts, such as the Anoplotherium, or the Plesiosaurus, which one should attempt to rear upon the earth such as it is to-day. Vain attempt! Powerless effort! The Morrill tariff is destined soon to perish in the midst of the confusion of its authors.

TRADE ASSOCIATIONS.

In order that commerce may be really free between the different peoples, it is not sufficient that the tariffs and Customs duties should be remodelled in a liberal spirit. To substitute a liberal tariff for a restrictive one is, without doubt, an excellent work. It is not I who would wish to diminish the share of honour and glory which belongs to the Government of the United Kingdom, as also to that of France, for the Treaty of Commerce which has marked the year 1860. In the United Kingdom a Cobden and a Gladstone; in France his Majesty the Emperor, and after him the able and courageous ministers who signed the treaty, or who facilitated it, M. Rouher, M. Baroche, M. Fould,—have the right to a tribute of praise which posterity will not fail to decree to them, and which already the present generation offers them with eagerness. But after such praises well merited, there yet remains glory to be reaped, for there are new services to be rendered to the cause of facility of commerce and liberty of exchange. There are new efforts to make, in order that the different productions of the various parts of the planet may at all times reach easily the hands of their consumers in all countries and of all races, and subserve their happiness in the most efficacious manner possible. In order that commerce shall be really easy and free between the different peoples, there are changes to make in the laws, regulations, and usages which each people adopted in other times; for in many circumstances those laws, regulations, and usages are obstacles to commercial transactions. They are like walls which separate men, or, better still, like ditches sown with pitfalls and with caltrops. Thus, for example, it is very plain that international transactions would be freed from serious difficulties if associations formed for commerce were planned upon models differing less from one another; if the associations recognized and authorized in one State possessed a legal existence in other States, with the faculty of enforcing their rights and supporting their interests before the tribunals of foreign countries; if the legislation upon bankruptcies was more uniform; if the regulations relating to trade-marks and the copyright of designs were in better agreement, and if the protection which they assure was extended to all the world, without distinction of nationality—in other words, in order that international commerce should be really and positively free and easy, it would be necessary that the character of foreigner should cease to carry with it a sort of interdiction which belongs no longer to our time, and from which each people suffers in its turn, with the consolation, little Christian or gainful though it be, of making its neighbour suffer afterwards from the same interdiction.

LAW OF NATIONS.

The legislation of the different nations ought to be subjected to a calm and conscientious examination, setting out with the principle that the foreigner ceases to be an enemy. It is, for example, not doubtful but that the *droit d'asile*, in virtue of which the property of a man who died in a foreign country after having

acquired possessions there was torn from his children, is now everywhere renounced. But in the same manner we must cease to refuse to the subjects of a foreign State the right of possessing land: we have in respect of real property to make a complete assimilation between foreigners and members of the nation, always with the reservation of political rights. In the same manner we shall simplify the law of naturalization, which in many instances still bristles with difficulties, and fixes an excessive duration for the preliminary residence and for the apprenticeship to the new nationality. In the same series of ideas we shall come to adopt uniform regulations for those affairs in which variety has no utility, and where no explanation can be given for its continuance, but by attributing it either to the ignorance in which people were formerly steeped on the subject of what other nations had done, or to the prevalence of a puerile spirit of contradiction. Under this head we must class the necessity of establishing harmony between the different laws and customs concerning assurances, and especially marine assurances, and also the needful uniformity in the regulations which must be made to prevent the accidental collision of ships on the high seas.

UNIFORMITY OF WEIGHTS AND MEASURES.

There is a question which the different States are about to be brought to the discussion of by the force of circumstances, and for the solution of which one is entitled to say that everything is already ripe. I allude to the uniformity of weights and measures, with which one ought to connect the uniformity of coins, for a coin is a measure. To name this question is sufficient to make you understand in what degree it interests international commerce; what facility it is capable of giving to it; what loss of time, without speaking of various other charges, as, for example, the cost of exchange, it must save it. You remember the story which has been often told of the traveller who entered Italy or Germany by one extremity, and who, getting his money changed at each frontier he passed, had not yet made his escape at the opposite extremity when already the whole value of his money had been devoured by the exchanges. The uniformity of weights and measures is a corollary of free trade. It follows from it by the most natural and the most direct process of deduction. On this subject there is this happy circumstance, that if one leave out of consideration an ill-founded self-love, and the spirit of routine, which is often infinitely less commendable, one does not see what motive most nations can have for remaining attached to their old systems of weights and measures. Almost everywhere, in fact, the old system is complicated, inconvenient and absurd. It would appear to have been invented in order to oblige men to make long and tedious calculations—so much so that it seems one ought everywhere to desire the adoption of a system which should be simple and logical, founded on the decimal proportion for its divisions, its subdivisions, and its multiples, and which should derive all its units of measure alike, whether of length, area, volume, solidity or weight, from a single standard by means of decimal relations. Nay, more, to this day, most States are afflicted with the scourge of a diversity of systems of weights and measures, not only in their relations with other States, but just as much in their relations with themselves; for their measures change from province to province, sometimes from district to district. If I am not deceived, this case is presented in each of the three kingdoms which compose the British Empire. Such a state of things is too inconvenient to be prolonged indefinitely. Then, consequently, the larger part, say, for example, of the British public must necessarily renounce the measures in the use of which it has been brought up. But when one must in any case change, it is better to adopt a system the convenience of which is perfect, than to take another quite as complicated and troublesome as that which one quits, and of which the only title to preference would consist in its having been employed in neighbouring provinces. When such new habits have in any case to be contracted, it is better to contract them in order to ally oneself to a system which shall be uniform for

the civilized world, than to another which shall serve for the exclusive use of a nation and suffer a troublesome diversity still to subsist for the purposes of international commerce. I will not raise here the question whether the system to which it is better that the whole world should ally itself has already been discovered, and whether the metrical system actually in use in France, and among a certain number of other peoples, and which there produces complete satisfaction, does not re-unite in a sufficient degree all the conditions which are desirable for becoming universal. Different reasons prohibit me from taking the initiative in such a proposition, and above all others my character of a Frenchman. We are in an age of free examination and free inquiry. The question of a uniform system of weights and measures for the civilized world must, if it is to be well resolved, be voted upon in its widest possible extent, and consequently in terms which shall not imply any preference already formed for the metrical system, but which, however, shall leave to that system all the chances of adoption which may belong to it in virtue of its own merit. On this occasion one may raise a question which appears to be only one of detail, but which has a considerable practical bearing. I allude to the convenience of reckoning from the same meridian in geographical maps and nautical books. In this manner the maps and nautical tables of one nation would be easily used throughout the world. For navigation this would be a veritable benefit. Formerly there had, up to a certain point, been an agreement upon one meridian. They took that of the Isle of Ferro: afterwards by national pride each State wished to have its own. There is then the meridian of Greenwich, that of the Observatory of Paris, that of Washington, and many others. I do not see what each State has gained thereby. I only see distinctly what it has lost—the power of using the maps and tables of its neighbours.

BELLIGERENT RIGHTS AT SEA.

How many other questions would still present themselves if one tried to exhaust the subject! There are some which are not only opportune at present, but which are even pressing. I will cite as an example the question of the rights of belligerents at sea. Up to what point ought the right of seizing or destroying merchandise belonging to private persons at sea to be any longer recognized in time of war, even when those private persons belong to the enemy nation? Can the respect for private property which is admitted in war by land remain without security in the case of a maritime war? Why should there be this contradiction? The Treaty of Paris in 1856 sought to establish in this respect a doctrine more respectful to the right of property than that which had up to that time been admitted; but the question has remained in suspense. Has the Treaty of Paris gone too far, or did it not stop short of its object? Upon this point, if the war which an incredible fatality has caused to break out in North America should continue, it will be necessary that the great governments shall deliberate. The confusion of ideas, which exists at present on the subject of the rights of belligerents, cannot be permitted to remain longer without compromising even the peace of the world. Another aspect of the subject which presents itself to the mind, and which deserves to captivate the intelligent and generous men who are devoted to the cause of progress, as are all the members of the Association, is this. By the force of circumstances there has been formed outside the sovereignty of particular States a sort of public domain of civilization, which the most solemn treaties have recognized. It is thus that the free navigation of certain rivers has been proclaimed, such as the Rhine and the Danube. It is thus that conventions between the most powerful governments have declared neutral the ways of communication which are being or to be constructed across certain great isthmuses of universal interest, such as the Isthmus of Panama; the effect of which will be to place every railway or canal constructed on so important a line of passage on the footing of a universal property, of which the whole world shall at all times have the use upon conditions the same for all. It is thus that the payment established formerly by

feudalism at very frequented passes, as the strait called the Sound, has been redeemed at their common charge by the combined action of all commercial peoples, through the payment, once for all, of a certain sum. The character of these pieces of property of a new class, placed under the ægis of universal good faith, and even, at need, of the military forces of all nations, calls for a peculiar legislation. What extent ought this common domain of civilized nations to acquire?

The other business of the day excited little interest.

On Monday morning, we began business, in the Department of PUNISHMENT and REFORMATION, with a long address by our Irish ATTORNEY GENERAL.—This address, rather Irish in tone, was well received. The usual practical work was done in the other Sections.

In that of JURISPRUDENCE, Mr. A. RYLAND read a 'Report of the Mercantile Legislation Committee on the Bankruptcy Law Amendment Act'; and Mr. D. C. HERON read a paper on Joint-Stock Frauds, 'Should the Accounts of Joint-Stock Companies be audited by a Public Officer?'

In the Department of PUBLIC HEALTH, Dr. D. PHELAN read a paper, entitled 'Suggestions for the Prevention of Small-pox'; and Mr. N. ROBINSON, an Essay entitled, 'A Glance at the Dwellings of the Poor in Dublin, including Lodging-houses, Model and Otherwise.'

In the Department of SOCIAL ECONOMY, Mr. H. HENNESSY read a paper 'On the Law of Fluctuation in Wages.'—Dr. R. ELLIOTT read a paper 'On Working Men's Reading-rooms as an important Modification of Mechanics' Institutes.'—The Rev. J. B. ROBINSON read a paper, 'On the Condition of the Working Classes and their Dwellings.'—A paper was also read, on the part of Miss CORBETT, 'On the Homes of Female Servants.'—The Rev. Mr. BROUGHAM read a paper 'On Woman's Work among the Female Peasantry,' by Mrs. C. A. BROUGHAM.—The Rev. J. B. ROBINSON read a paper 'On the Condition of the Working Classes,' contributed by the Rev. W. HICKEY.—Miss S. P. REMOND read a paper 'On American Slavery, and its Influence in Great Britain.'

In the obnoxious and noisy Department of EDUCATION, Miss TWINING read a paper 'On Workhouse Education.'—Miss CORBETT read a paper 'On the Advisability of introducing District Pauper Schools into Ireland.'—Mr. RAKHOL DAS HALDAR, native of Bengal, read a paper entitled 'Education in Bengal and its Results.'—The Rev. Prof. GIBSON, of Belfast, read a paper 'On the Foundation created by Erasmus Smith for Educational Objects.'

On Tuesday, Lord TALBOT DE MALAHIDE, as President of the Department of PUBLIC HEALTH, delivered his address in the Solicitors' Buildings. There was a large attendance, and his lordship was very well received.—Dr. MILROY read a report 'On Quarantine.'—Dr. LANKESTER read a paper, by Mr. E. CHADWICK, 'On the Application of Sanitary Science to Public Works of Irrigation.'—Mr. P. NEVILLE read a paper 'On the Sewerage of Dublin.'

In the Department of SOCIAL ECONOMY, Miss M. CARPENTER read a paper, 'What shall we do with our Pauper Children?'—Mrs. ATKINSON read a paper by herself and Mrs. WOODLOCK, 'On the Irish Poor in Workhouses.'—Mr. MARK S. O'SHAUGHNESSY read a paper 'On the Rearing of Pauper Children out of Workhouses.'—The Rev. T. O'MALLEY read a paper 'On Irish Poor Law Reform.'—Miss F. P. COBBE read a paper 'On the Sick in Workhouses.'—Major MYLES O'REILLY read a paper 'On the Superior Economy of Administration of Voluntary as distinguished from Legal Charity.'

In the Department of PUNISHMENT and REFORMATION, Mr. CHARLES H. FOOTE read a paper 'On Punishment—its Effect by way of Example.'

In the Department of PUBLIC HEALTH, Mrs. FISON read a paper 'On Practical Sanitary Work in Town and Country.'

In the Department of JURISPRUDENCE, Mr. P.

J. M'KENNA read 'Observations on the Proposal of admitting the Evidence of Accused Persons on their Trial.'—Mr. MARK S. O'SHAUGHNESSY read a paper 'On the Changes in the Marriage Laws required, so as to ensure a complete Registration of Marriages in Ireland.'—Mr. J. C. SMITH read a paper 'On the Scotch Marriage Law.'—Dr. WADDILOVE, Q.C., read a paper entitled, 'The Law of Marriage and Divorce as at present existing in England, Ireland, and Scotland'; and Mr. W. O'CONNOR MORRIS read a paper on 'The Marriage Law of the Empire.'

On Wednesday, Judge LONGFIELD delivered the discourse of the year, 'On Social Economy.'

In the Department of TRADE and INTERNATIONAL LAW the Solicitor General presided.—Dr. MACGOWAN, of New York, read a paper 'On Consular Jurisdiction in China and Japan, and the necessity of a Joint Tribunal to counteract the Evils of Extra-territoriality.'

In the Department of EDUCATION, Sir R. KANE read a paper 'On the Disadvantages of Denominational Education as applied to Ireland'; and Prof. KAVANAGH read a paper 'On the present Educational Position of Roman Catholics, in relation to the State in Ireland.'

A sub-section of this Department was held under the presidency of Prof. HENNESSY. The following papers were submitted:—'A Scheme for the Adult Education of the Working Classes in Dublin,' by JAMES P. ORGAN.—'Paper Hangings, Auxiliaries to Education,'—'On the Influence of Newspapers on Popular Education,' by Mr. G. W. BLANCHARD JERROLD;—and 'On Art Education considered in its Utilitarian and Social Aspect,' by Mr. M. A. HAYES.

At a concluding meeting held yesterday, the General Secretary, Mr. Hastings, reviewed and recapitulated the business done during the week.

The lists of our proceedings will sufficiently inform you of our energy and industry. The debates on Education and on the Law of Marriage have been the most noisy and the most popular. The legends of the Yelverton trial have revived themselves from day to day. The Court has been thronged with ladies, who, on one or two occasions, have been rather shocked by the naked illustrations of the evils of our marriage laws adduced by our legal sages.

One result of the Congress, which, I hope, may lead to permanent good in Ireland, is the foundation here of a Ladies' Sanitary Association, at the head of which are Lady Charlemont and Lady Talbot de Malahide. The establishment of this branch of an important London Society is mainly due to the exertions of Mrs. Fison and Dr. Lankester. I ought not to close these reports of the meetings of the Social Science Congress in Dublin without alluding to a point which has caused more talk here than all other topics—including the wet weather, the death of Madame Hayes, and the approaching Royal visit—put together—the attack of Dr. Cullen on Lord Brougham.

You may remember that in my letter of last week I referred to the neutral and emasculated language, due to the locality no doubt, in which the noble President of the Congress spoke of Rome. But the language, mild as it was, called down upon the noble Lord and this scientific body the wrath of Dr. Cullen. Some of us were rather startled. In the programme of the proceedings, Sunday was set down for religious service; and the various churches, Anglican, Presbyterian, and Roman Catholic, open to the members, were duly pointed out, with the consent, or by the invitation, of the religious authorities. Among them was Dr. Cullen's church. Some members, who are not Roman Catholics, were conceding enough to accept what they considered a polite invitation to their neighbours' service; when, to their amazement, in the place of finding an expression of welcome and goodwill, they heard a violent personal attack delivered from the pulpit against Lord Brougham. I do not like to say that this incident caused a good deal of laughter out of church; but it is a positive fact, that the archbishop's denunciation has been a subject of conversation in all circles ever since Sunday.

FOREIGN CORRESPONDENCE.

Near Munich, August, 1861.

The *villeggiatura* is as much an established custom in Munich as it is now in Italy, or as it was when Goldoni consecrated a series of comedies to the desire for the country and the subsequent results. The writer of an amusing paper in the well-known Viennese weekly, the *Stimmen der Zeit*, on the *Alibayer*, the regular Bavarian, says that some years ago the inhabitants of Munich were content to spend their summer in a cool beer cellar, drinking the refreshing beverage from great cold mugs of stone. But this was before the discovery of the green lakes and breezy Alps of the Bavarian highlands. Now every one considers it right to get away from the town, at least for a short fresher; and those who can afford two residences, or have no pressing occupation in Munich, spend the whole summer in the country: and they do well. The newer part of Munich was built more for winter than summer; the narrow lanes and high-roofed houses of the old town, which almost vie with Florence and Genoa in coolness, have been changed to broad glaring streets and shutterless windows, and the air of the town is like the air of a limekiln, close and stifling. From its southern situation and the proximity of the Alps, Munich enjoys the extremes of heat and cold; and the more the houses are adapted for the extreme severity of winter, the less are they adapted for the extreme warmth of summer.

Although the immediate neighbourhood of Munich is dull and flat, there is much very fine scenery, and many excellently adapted retreats within thirty or forty miles. The Lake of Starnberg is a common summer residence; and though the lower end, which is most familiar to passing visitors, is not enticing, I believe there are beautiful spots further up the lake. But the chief resort of fashionable Munich—of the only Munich recognized by Baron Thiébauld's volume—is the Lake of Tegernsee, about forty miles from the city, and on the high road to a most beautiful part of the Tyrol. The scenery of the lake is certainly very fine, and the houses are better adapted, both in their arrangements and in the neighbourhood of markets, for residence than many out-of-the-way villages. But the absence of all social enjoyment combined with great social requirements, the crowded state of the village, and the rainy climate, render the place very tedious to all but its regular residents. Although Prince Charles, uncle of the present King, spends the summer there, and although many of the chief families in Munich, and a perfect colony of more miscellaneous guests, follow his example, there are no public amusements, no casino, no reading-room; the supply of baths and boats is small and inferior, and the number of walks close at hand extremely limited. These wants would suffice to separate Tegernsee from fashionable watering places, such as Ischl or Kissingen; yet the same strictness of *ténué* is required, and the same stiffness of demeanour is observed. But for the natural advantages, you might still be in Munich, for you meet in your country walk the very same faces you would meet when strolling in the town; and the same exaggerated salute of the whole hat, which the French author I have already alluded to considers superfluous, is as necessary on the larch-wood as down the Maximilian's Strasse.

These are some of the reasons which induced me not to follow the world to Tegernsee; and I write this from a small cottage in the neighbourhood of Rosenheim, on the side of a range of small hills, and with the high mountains at easy distance. The air is excellent, almost superior to that among the actual mountains, while we are not sufficiently near those breeders of bad weather to partake of all their influence. A stream, which was once celebrated for its fishing, runs along the valley below; but at present the common complaint of 1848 and the independence of the peasants after that year is the only answer given to questions about the noble art. "The peasants are the lords of the manor," is the invariable excuse for every deficiency; and I must own, from the tales I have heard of the way in which the peasants exercise their rights, that they yield to no known English squires in independence. It is often impossible to get work

done in the country here if you have accidentally given offence; cases in which carpenters refused to do work because a job had been given to others than themselves, in which butchers refused to sell meat because some meat had been bought from Munich, are by no means unusual. As far as I can learn, the peasants are generally rich for their station: their wants are so few—their food is so cheap—they have scarcely any expenses of good clothing, neatness or comfort in their houses. Their general food consists of the national dish of Bavaria, *Nudeln*,—balls of flour cooked in fat, varied by meat once a week. They grow scarcely any fruit or vegetables, though they have often a good piece of ground, which is left quite fallow. None of the neat wooden houses which exist in the mountains proper are found here. The houses are generally half for the family, half for the cows and the hayloft, which explains their great length,—and the hinder part being made of wood with large jalousies, somewhat like a great English brewhouse. The smell of the hay is fortunately a purifier.

If this simplicity of life had any connexion with Arcadia and the Golden Age, one would not be tempted to dwell on its inconveniences. But, unhappily, the simplicity is only in externals. The moral character of the people in their dealings with others is as low as can be imagined: they have all the cheating instincts of dwellers in towns, and when their clumsiness causes detection they feel no shame and show none. Stealing from strangers is not considered a crime, yet the uncommonness of bolts and bars would seem to show that they have not yet arrived at the further stage of mutual thieving.

I was present the other night at a village festival, the annual celebration of the dedication of the church. Two days are given up to this festivity; during the days the people sit at home and offer beer and *Nudeln* to all comers; the evenings are devoted to dancing. Here I saw the national dancing for the first time, as practised by the peasants. At first they dealt only in waltzes, which they dance with an ease and a correctness which might be envied in many aristocratic circles. This was the dancing alluded to by Alfred de Musset, in his poem on the *Mi-carême*, where he expresses a desire that a French duchess might dance "*aussi bien qu'un bourgeois Allemand*." After a few of these ordinary dances came the national peasant's dance, which began by a few turns together, then the men left the women to revolve by themselves outside, while they kept time to the music with violent slapping of their thighs, hopping all the time on one leg, and ending the measure either by a stamp which shook the floor, or by a yell that would like a ghostly cry through the long low passages of the house. In the ordinary dances, too, a little of the national character appeared. Each man gave his partner a twirl, like that of the ballet, when he set her down; and whenever a man had occasion to pass by the dancers, he followed in the wake of some couple, hopping in time, and slapping his thighs vehemently. Of course, beer is not stinted, and all strangers who look on are expected to contribute towards the music. Perhaps the most enjoyable part to the people are the preparations. The owner of the house I write in is even now busy papering and whitewashing her room for an approaching festival; and the cooking which immediately precedes is formidable in a country where the only cooking apparatus is an open hearth more worthy of a gipsy's camp than a forester's cottage.

E. W.

OUR WEEKLY GOSSIP.

Manchester, we find, is stirring heartily in defence of that freedom of inquiry which is menaced by the proceedings of the Bishop of Salisbury. A committee to collect funds to assist Dr. Williams in his lawsuit has been formed, and is already in communication with the London Committee. In this connexion it may be well to quote from a letter written by Dr. Williams to a gentleman proffering his support, the following passage:—"The point of difference between myself and an eminent Reviewer, who has thought it worthy of him to pay compliments to a Bishop at my expense, and at that of truth, is not that the Reviewer considers

any of my literary positions unfounded; but he wishes them to wear 'a becoming veil of German or of Latin notes.' Whereas, with myself it is no part of Christ's faith that we should misrepresent history or criticism, nor do I yet believe that the people of England, whose national conscience is the living imponent of our Articles, pay their clergy to deceive them. If a religious theory requires correction, the clergy are the men most bound to correct it. The application of such general principles to details would, I humbly conceive, be best left to literary discussion. There must be a possibility that attempts to stifle research by penalties, without first inquiring whether the results of research have been correctly given, may turn out to be an ignorant trampling in the dust not only of the general rights of conscience, but of our special Ordination Law. Thus, if it be only conceived possible that my own deliberate Report of Hebrew prophecy, after many years of thoughtful study, should turn out both true and the most conservative view consistent with truth, it will follow upon that hypothesis that the evasive contumely heaped upon me by Bishops, and the ill-advised suit against me in the Court of Arches, tend, in effect, to force a gigantic misrepresentation of Holy Writ upon the clergy by violence, and upon the laity by disguise. I do not expect that words or deeds of such tendency will approve themselves to the judgment of the nation, or of the Church, so soon as the cloud of misrepresentation is cleared away."

—We do not prejudge the case. We object to the principle involved in the action taken by the Bishop, as likely, if successful, to prevent investigation and discussion. That cannot be of service to the nation or to the Church. What is our sacred right of private judgment worth, if we are to be intellectually bound in the chains of a past age? Science will not stand still, or silence all its voices at the bidding of the Court of Arches; and what chance will religious truth have of sustaining itself in the midst of scientific discovery, if it is to be denied beforehand all the advantages to be derived from enlarged learning and the establishment of new facts? If reverential and honest criticism is not to be applied to theological articles, the world must fall back on infallible authority,—England cease to assert its personality among nations,—and the Anglican church prostrate itself in Rome.

The Archaeological Association is holding its Eighteenth Congress at Exeter, under the Presidency of Sir Stafford Northcote. Mr. Planché, Mr. Wright, Mr. Gordon Mills, and Mr. Pettigrew, have had the lion's share of the work. Next week we may give some account of the proceedings:—the papers read, the objects collected, and the excursions made.

An agreeable meeting of the Midland Scientific Association was held at Rolleston Hall, the seat of Sir Oswald Mosley, a few days ago. This society is a new one. The four counties of Stafford, Leicester, Derby, and Nottingham, if less famous than some others for scientific enterprise, are known to contain a good many clergymen and gentlemen, who as naturalists, as writers, and as observers, may be all the better able to carry on their studies by association and communication with each other. Dining and hospitality form a part of the programme, after which come the reading of papers on general and local subjects. Thus, the counties are brought together; if the scientific profit is not at first very great, and it may improve with time, an agreeable interchange of ideas and of social courtesies takes place. At the meeting just held, under the presidency of Sir Oswald Mosley, the Rev. Gerard Smith contributed a paper on Comets; Mr. E. Brown gave some details on a house struck by lightning at Linton; Mr. H. W. Bates exhibited two boxes of ants collected by himself on the River Amazon; and Mr. Brown read a paper on the Post-tertiary Geology of the neighbourhood of Burton-on-Trent. The meeting was an extremely pleasant one; and the result of it will probably be a new crop of observers of nature in a district not much worked by the regular scientific world.

Messrs. A. & C. Black have issued a separate Map of Virginia, Maryland, and Delaware, showing the division of those States into counties, and laying down the lines of rail. The map is num-

bered to take its place in the General Atlas issued by the same firm.

A noticeable man has passed away in our Siberian illustrator and explorer, Thomas W. Atkinson. His death took place at Lower Walmer, Kent, on Tuesday, last week. For about a year, the great traveller had been ailing; never having quite recovered from the waste of his long and arduous journeys in the wild country of the Amoor; but no immediate danger had been feared by his physician. Little or no suffering had accompanied his decline, and his most intimate friends had scarcely dreamt that his life was in peril. He tried the country air; he rode; he walked; he handled his familiar gun. In the early summer he had a fall which shook and injured him. But he bore up well, and went down to Walmer, as every one goes down in August to the sea. At length he passed away as into a tranquil sleep. Atkinson was born in Yorkshire, on the 6th of March, 1799, and he was consequently in his sixty-second year when he died. He was in the truest and best sense a self-made man. Left an orphan when a child, he began life for himself at the early age of eight; from which time he gained his own living, while training himself into a good scholar and a well-mannered gentleman. Those who met him in his later years in the drawing-room or the country-house, were struck by the undefinable grace and bearing which are sometimes thought to be the monopoly of ancient race. He educated himself as an architect, and a church built by him in Manchester testified to his skill as a builder; but his instrument was the pencil, and his vocation that of a traveller. Owing to an accidental remark of Alexander Humboldt, he turned his eyes to the picturesque land of Oriental Russia. His pictures, which have been much exhibited at evening parties, and have been reduced for his books, are exceedingly clever, and he wrote with as much power and freshness as he drew. In person, he was the type of an artistic traveller, thin, lithe, and sinewy, with a wrist like rock, and an eye like a poet's; manner singularly gentle, and an air which mingled entreaty with command. The two great works which he produced on Siberia and on the Amoor have made the whole world familiar with his name, and with his extraordinary assemblage of qualities and accomplishments. These books were not only great books, but great deeds. Like Livingstone's 'Travels,' the 'Amoor' is not so much a successful piece of writing as a series of accomplished facts, and it represents, with the usual amount of midnight oil, preliminary years of hard riding, scant fare, nervous watching, desert fever, hunger, thirst, and cold,—the privation of a tent,—and the fag of a savage life. Out of that misery and adventure has come to us a most precious treasury of knowledge. By pen and pencil Atkinson opened to Western Europe, and even to the Russians of St. Petersburg and Moscow, the vast regions of the Amoor. Before his day, those regions were a mystery and a blank; they are now as well known to us as the country of the Orange River, and better than the shores of Carpentaria. If it be a noble thing to add to the stock of human knowledge, Atkinson had gained a high degree of glory.

Another loss of the week is that of James Bruce, author of 'Classic and Historic Portraits.' Mr. Bruce died on Sunday last, at Mount Charles, near Belfast, in which town he had been lately residing, as editor of *The Northern Whig*,—the paper which Edward Whitby had ruled before his fatal voyage to Australia. The deceased was a good scholar and an excellent writer; he had seen much of the world, and was well acquainted with the languages and literatures of modern Europe. Besides his 'Classic and Historic Portraits,' he wrote a valuable work on India, 'Scenes and Sights in the East.'

John Thomas Quekett, who died last Tuesday, began his career as a medical student at the London Hospital, and obtained by successful competition a Studentship in Anatomy for three years in the College of Surgeons; at the close of which his superior attainments as an anatomist, especially in minute dissections and microscopical investigations, led to a permanent appointment in the Hunterian Museum. He was there principally occupied in extending and arranging the series of microscopical

preparations; and the work on which his great reputation as a Histologist is chiefly based is the 'Illustrated Catalogue' of the specimens, showing the minute structure of tissues, in the College Museum in Lincoln's Inn Fields. Mr. Quekett was appointed Professor of Histology; and on the retirement of Professor Owen in 1856, became principal Conservator of that museum. But his health, rapidly failed, and after successive severe and debilitating attacks, he expired at Pangbourne, on Tuesday the 20th of August. Professor Quekett's published works on the Microscope and Microscopical Anatomy have a high and deserved reputation; his great experience and vast extent of information made his opinion of peculiar value, and in much request on obscure diseases and morbid alterations of structure; and the uniform readiness and urbanity with which he imparted his knowledge to all who visited for that purpose the Museum of the Surgeons' College, will make the memory of this most worthy and valuable officer gratefully cherished. Physiological science and the medical profession have sustained a great loss in this excellent and, whilst health and strength were spared him, indefatigable man. Professor Quekett was selected by the Council of the Royal Society from the candidates for Fellowship, and was elected in 1860.

We are asked to state, that the sale given by Lord Brougham, in his speech at the Social Science Congress at Dublin, to the *Halfpenny Journal*, 8,000, was an error. The true figure, it is said, is 180,000. The mistake was Lord Brougham's, not ours.

The sale of the late Rev. Dr. Bandinel's Library has gone off well under the hammer of Messrs. Sotheby & Wilkinson. The following are examples worthy of note:—Bale's First Examination of Anne Askew, the rare first edition, with the Balade which she made and sang when she was in Newgate, 1547, 11l.—Bodenham's Belvedere, a fine copy of the first edition, 13l.—Images of the Old Testament, containing 94 cuts, designed by Holbein, Lyons, 1549, 11l. 11s.—Sir Dudley Carleton's Letters, privately printed at the expense of the Earl of Hardwicke, 4l. 12s.—Æmylii de Rebus Gestis Francorum, libri x, Grolier's copy, Paris, 1589, 16l. 10s.—Ammonii Hermias in Porphyrii Institutionem, Romæ, 1499, a large copy, 4l.—Daniel's Hymen's Triumph, a Masque performed at Somerset House at the marriage of Sir Robert Ker, London, 1615, believed to be unique, 18l. 5s.—Frith's Disputacion of Purgatorye, 3l. 6s.—Granvilliana Bibliotheca, 3 vols., 6l. 10s.—De Echave, Discursos de la Antiquedad de la Lengua Cantabra Bascongada, en Mexico, 1607, 17l. 15s.—Cranford's Teares of Ireland, a very fine copy, 16l.—Historia Septem Sapientum Romæ, 6l. 7s. 6d.—Dugdale's Monasticon Anglicanum, by Caley, Ellis & Bandinel, the editor's own copy, on large paper, 81l.—Hatton's Ovid's Walnut Tree, 1627, believed to be unique, 12l.—Heyden's English Physician's Tutor, 1665, 6l. 15s.—Knox's Confession, very rare, 5l. 2s. 6d.—Jesus Prafigured, an almost unique poem, 5l. 15s.—Relation of Maryland, together with a Map of the country, one of the earliest pieces relative to the settlements of the English in this part of the American Continent, Sept. 8, 1635, 16l. 10s.—The Cony-catching Bride, 1643, 7l.—Panzeri Annales Typographici, 11 vols. 13l. 5s.—Horsey's Britannia Romana, 10l. 15s.—Lucani Pharsalia, a fine copy, circa 1470, 13l.—The Prymer of Sarysbury Use, imperfect, 11l.—Processionale Completum pertotum Anni circulum ad Usus Celebris Ecclesie Eboracensis, 1530, 86l.—A treatise called Pervilla, 11l. 5s.—Prymer in Englyshe and in Latyn, 1538, 10l. 5s.—Workes of the most Famous and Reverend Divine Mr. Thomas Scot, printed at Utrick, 1624, 7l.—Two very interesting Letters, entirely in the autograph of Oliver Cromwell, 59l.—Ormerod's History of Cheshire, 3 vols. 33l. 10s.—A Memorial of all the English Monarchs, by Taylor the Water Poet, with the rare portrait of Charles the First, 19l. 5s.—The Sculler, by the Same, 11l. 15s.—All the Workes of John Taylor the Water Poet, 11l. 15s.—Tofte's Laura, a collection of Sonnets of the highest rarity, London, 1597, 29l. 10s.—Tragedy of Hamlet, quarto, 1611, 31l.—Some pieces by Whittinton, 28l. 8s.—A curious Broadside respecting the Spanish Armada, 8l. 10s.—Names of all the

Maiors, Sheriffs and Belives of the Cittie of York, a neatly-written manuscript, about 40 feet long, 26l. —Yorkshire Genealogies, an important manuscript of nearly 800 leaves, 27l. 10s.—Total, 1,916l. 11s.

The second great German Turner-festival was held at Berlin in the course of last week; it celebrated the fifty years' jubilee of the foundation of the German art of "Turnen,"—the technical expression for these gymnastical exercises. Friedrich Ludwig Jahn was the inventor or founder of the art in its present shape (quite different from the gymnastic exercises of the ancients); wherefore the name by which he generally goes, "Turnvater Jahn." The impulse which instigated Jahn to teach German youth to use and strengthen their limbs and muscles, in a manner hitherto unexampled, is similar to the feeling which gave birth to the rifle movement in this country: it was the hatred and fear of the French Emperor; it was the wish to be strong, and a match for his armies. Who could doubt that the great muscular strength imparted in this way, the hardening of nerve, sinew, and the whole system, did its part well when it was put to the test, when the battles were fought? Jahn's memory, therefore, will always be held in honour, as that of a true patriot who had helped not a little to liberate his country. His reward comes somewhat late; he has rested in his grave these last ten years, and did not live to see the art of "Turnen" come into honour again: it was considered criminal for many years; it was looked upon as high treason. When the German youth had learnt, by the help of Jahn, to harden their frames, they were graciously permitted to spill their blood, and to drive the usurper out of the country; but when the princes all sat safely on their different thrones again, when the Congress of Vienna made a division of Europe, such as is still the curse of Italy and Austria, when every promise to the German nation was broken, and Metternich, Gentz, and others like them, ruled over Germany; then Jahn and Arndt, and all the good patriots who had been spared in battle (unlike Theodor Körner, whom Fate had bedded softly in his youth and glory) were banished and stigmatized as traitors, the art of "Turnen" was forbidden and prohibited as dangerous to the State. The exiled art has returned now to its country; thousands of its disciples from all parts of Germany, and even America, were received at Berlin by the authorities of the town and cheering multitudes, festival arches, music, and flowers. The first day, with the procession of the "Turners" and their reception, brought the whole town into commotion; but we hear so often now of these processions, of floral showers, the ceremony of the consecration of banners, and all the usual appurtenances of such *fêtes*, that they seem like every-day occurrences. Moreover, the speeches were weak and flat. Historical reminiscences could not be well avoided, and these were so little flattering to Prussia, with regard to Jahn, that it was deemed courteous, probably, to dwell on them as little as possible. What distinguished this festival from others of the sort, was the performance of the "Turners" on the Hasenheide, near Moabit, which took place on the second day: this is a large plain in the vicinity of Berlin, famous because Jahn made his first attempts and experiments there. Here, with multitudes of people for delighted spectators, among which were the Minister Count Schwerin, with his daughters, and the Police-director, Von Winter, the "Turners," in their Turner costume—grey jacket and trousers, 5 or 6,000 in number, and placed in lines, went through the movements of the school. It was a peculiar and highly interesting sight; the precision and alacrity with which the different evolutions and manœuvres were executed by the strong-limbed, tall and well-shaped young men, excited real and general admiration. At one time, when all the arms, by word of command, were stretched up high and straight, it reminded us of a field of Indian corn, suddenly sprung up; then the bending of the thousands of human forms to the right and to the left, with an accuracy which made them appear like one body, might be compared again to the waves of a field, its corn-ears moved by the wind. This lasted about an hour and a half, and certainly formed the most interesting feature of

the festival. After this the foundation-stone was laid (it was taken from the house in which Jahn was born) of a monument to the memory of Jahn, which is to stand in the centre of the Hasenheide. We hear that a "Turnverein" with 150 members, has been formed by the Germans in London.

LAZARUS, COME FORTH! By DOWLING.—This work, pronounced by the first critics to be the finest Scripture Picture of the age, is NOW ON VIEW at Setlemann's, 28, Oxford Street. W.—Admission, 6d.; Fridays and Saturdays, 1s.

SCIENCE

Lectures on the Science of Language, delivered at the Royal Institution of Great Britain, in April, May and June, 1861. By Max Müller, M.A. (Longman & Co.)

AMONG the difficulties of which Prof. Müller says he first became aware when he began to write his Lectures, he mentions the dryness of his subject in many parts. This, we think, was a false alarm. That there is nothing repulsive in the study of language, if rightly treated, even to the general reader, is sufficiently proved by the demand for such a book as Trench's 'Study of Words,' which reached a third edition, we believe, within a year of its first appearance, and is often asked for at public libraries. In fact, the subject is only too fascinating to many minds. The continual discovery of startling relationships between words that were never supposed to have any connexion with each other, is a never-failing source of interest, which begets a thirst for novel results and an eagerness of speculation by no means favourable to the acquisition of sound views. We cannot for a moment imagine that those who enjoyed the privilege of listening to these Lectures found them at all tedious or uninteresting. If there be any dryness in the problems discussed, the lecturer has, by skilful treatment, concealed it from observation.

The subject which Prof. Müller has undertaken to expound is not any particular language, nor any number of languages; but language itself, as an expression of thought—its origin, nature and laws, to ascertain which the inquirer must resort to the same processes of collecting, comparing, analyzing and classifying phenomena, and thence deducing general principles, as are employed by the inductive philosopher in every branch of science. He is at great pains to vindicate the honour of the study, which he does not hesitate to rank with the physical sciences. It appears to us that he is not always successful in refuting the objections to this view, which he puts into the mouth of an opponent. Nor is it always easy to reconcile his statements with one another at first sight. Thus, at one time we are told that language has no independent existence apart from man, its reduction to writing being a mere accident; and, on the other, that the changes which take place in it are beyond the reach or control of man. It is emphatically asserted that, "although there is a continuous change in language, it is not in the power of man either to produce or to prevent it. We might think as well of changing the laws which control the circulation of our blood, or of adding an inch to our height, as of altering the laws of speech or inventing new words according to our own pleasure."

This is contrary to the well-known remark of Horace, which ascribes the disappearance of some words and the creation of others to usage, as the chief authority in language. We are at a loss to perceive why men's words should be beyond their control, any more than their actions. If the changes which are admitted to have taken place and to be going on in lan-

guage are independent of man, upon what are they dependent? Prof. Müller seems to ascribe them to the laws of language, which, he says, "were not made by man; on the contrary, man had to obey them without knowing of their existence." We wish he had been a little more explicit with regard to these inexorable laws of language which, we are told, it is a physical impossibility to alter in the smallest degree. We should like, if possible, to know something more than is here communicated about the nature and origin of these laws. The following extract, though interesting in an etymological point of view, does not satisfy our want:—

"In the growth of the modern Romance languages out of Latin, we can perceive not only a general tendency to simplification, not only a natural disposition to avoid the exertion which the pronunciation of certain consonants, and still more, of groups of consonants, entails on the speaker: but we can see distinct laws for each of the Romance dialects, which enable us to say, that in French the Latin *patrem* would naturally grow into the modern *père*. The final *m* is always dropped in the Romance dialects, and it was dropped even in Latin. Thus we get *patre* instead of *patrem*. Now, a Latin *t* between two vowels in such words as *pater* is invariably suppressed in French. This is a law, and by means of it we can discover at once that *catena* must become *chêne*; *fata*, a later feminine representation of the old neuter *fatum*, *féc*; *pratium*, a meadow, *pré*. From *pratium* we derive *prataria*, which in French becomes *prairie*; from *fatum*, *fataria*, the English *fairy*. Thus every Latin participle in *atus*, like *amatus*, loved, must end in French in *é*. The same law then changed *patre* (pronounced *patere*) into *paere*, or *père*; it changed *matrem* into *mère*, *fratrem* into *frère*. These changes take place gradually but irresistibly, and, what is most important, they are completely beyond the reach or control of the free will of man."

We are tempted to ask how the final *m* came to be always dropped in the Romance dialects, and a Latin *t* between two vowels to be invariably suppressed in French? Prof. Müller does not shrink from attempting the solution of other problems which present quite as formidable an aspect; as, for instance, why *rex* should have been used to denote the subject, and *regem* the object; why the transition from present to past time should be denoted by the change of *o* to *avi* in the Latin *amo*, and the addition of the letter *d* to *love* in English; why the plural of *bruder* in German should be *brüder*, and of *brother* in English *brethren*; and what is the origin of those roots which are the constituent elements of various families of languages. Indeed, he even goes so far as to stake the very existence of a science of language upon its capability of answering these questions. He thus concludes an elaborate discussion of the second of the above questions:—

"The *d* of the preterite, therefore, which changes *I love* into *I loved* is originally the auxiliary verb *to do*, and *I loved* is the same as *I love did*, or *I did love*. In English dialects, as, for instance, in the Dorset dialect, every preterite, if it expresses a lasting or repeated action, is formed by *I did*, and a distinction is thus established between 'he died easterday,' and 'the yoké did die by scores'; though originally *died* is the same as *die did*. It might be asked, however, very properly, how *did* itself, or the Anglo-Saxon *dide*, was formed, and how it received the meaning of a preterite. In *dide* the final *de* is not termination, but it is the root, and the first syllable *dí* is a reduplication of the root, the fact being that all preterites of old, or, as they are *tithēmi* called, strong verbs, were formed as in Greek and Sanskrit by means of reduplication. The root *do* in Anglo-Saxon is the same as the root *tithē* in Greek, and the Sanskrit root *dhd* in *dadhāmi*. Anglo-Saxon *dide* would therefore correspond to Sanskrit *dadhāmi*, I placed."

We repeat the expression of the pleasure we

have derived from the perusal of these interesting Lectures, the delivery and publication of which will have an important bearing upon philological inquiry.

SOCIETIES.

ENTOMOLOGICAL.—Aug. 5.—S. W. Douglas, Esq., President, in the chair.—Mr. Bowring exhibited some extraordinary Cetonidæ, Cassididæ and other Coleoptera, from Penang.—Mr. Stainton exhibited two examples of a Noctua, taken in the fens of Norfolk, in June last, by Messrs. Winter and Crotch, which he believed to be *Nonagria Elymi*, a species hitherto only found on the shores of the Baltic.—Mr. Fereday exhibited a singular Polyommatus, considered to be a hybrid produced from *P. Alexis* and *P. Egon*.—The President exhibited a Spilonota, allied to *S. dealbana*, but distinct from any described species, which he had lately found near Mickleham; and some interesting species of Hemiptera and Coleoptera.—Mr. Stevens exhibited a beautiful series of Buprestidæ, from the neighbourhood of Adelaide, containing upwards of fifty species.—Mr. Bond exhibited both sexes of a new species of Gelechia, allied to *G. pietella*, found by Mr. Barrett on the sandhills near Dublin, and remarkable for the abbreviated posterior wings of the female.—Dr. Knaggs exhibited a series, including both sexes, of *Nonagria Bondii*, and *Acentropus niveus*, and made some observations in support of the claims of the latter species to be considered Lepidopterous.—The Secretary read a note from Mr. King, on the occurrence of *Leucania putrescens* near Torquay; and a communication from Lord Dunsany, respecting the ravages committed by the larvæ of *Biston hirtarius* in the neighbourhood of Navan, Ireland, during the past three years, and especially the present summer.—Prof. Westwood exhibited two larvæ of a species of Cestrus, or gadfly, received from Honduras, where it is said to attack the human species, as the *C. bovis* does the cattle in Europe.

FINE ARTS

THE ARUNDEL SOCIETY.

THE Arundel Society, which has already published chromolithographs from Pinturicchio's frescoes at Spello, namely, 'The Nativity' and 'Christ among the Doctors,' as its annual issue to subscribers in 1857 and 1858, now concludes the series with 'The Annunciation,' by the same master, from the same cathedral. This is an extra publication, accessible to the members and the public. Together with these are three of the heads in outline, on a large scale, from the picture itself: those of the Virgin, the angel who brings the intelligence, and the portrait of the painter, which, after a not unfrequent fashion in his day, Pinturicchio has represented hanging upon the wall of the splendid apartment wherein he placed the incident itself. Some anecdotes of the painter of this extraordinary work may add interest to the admirable reproduction the Arundel Society has put forth. A Memoir, by Mr. Layard, accompanying the series, furnishes the following:—Trojolo dei Baglioni, prior of the Collegiate Church of Sta. Maria Maggiore, Spello, invited Pinturicchio to decorate a chapel of the Virgin with frescoes. Bernardino Pinturicchio was the son of Benedetto di Biagio, and was born at Perugia in 1454. He was called Pinturicchio, or the "little painter," from the lowness of his stature. He was a great friend of P. Perugino, and accompanied him to Rome to paint the Vatican and other great buildings for Pope Sixtus the Fourth, and lived there more as a companion than as an assistant in the society of Luca Signorelli, Bramante, and others of the distinguished artists of the time. Before he was thirty he painted for Cardinal Rovere a part of his palace, and the fine frescoes in the Church of Sta. Maria del Popolo. At Orvieto he wrought on the completion of the Cathedral; all his frescoes there have perished, except eight figures of the Evangelists and the doctors of the church. At Rome he again worked for four years, with slight interruptions, in the new halls of

the Vatican, upon the still existing frescoes, and in St. Angelo, where none remain.

Until the end of the sixteenth century Pinturicchio worked at Rome, when he removed to Spello and commenced, in 1500, the series the Arundel Society has reproduced for us. These, says Mr. Layard, have escaped restoration, but suffered neglect; the rain, penetrating the roof, has trickled down their faces, so that the plaster is peeling off and the colours have lost their original brilliancy. Those on the roof are fast disappearing, so rapidly, indeed, that Mr. Layard's observation from year to year has enabled him to note the changes that have taken place in them. How many a valiant heart has done its best before the walls that are now almost desecrated, pouring out its most earnest love in Art, exercising its subtlety of handicraft,—the artist's craft that has been intrusted to so few to exercise duly! It is hard such things should fade and fail utterly from the earth: something might surely be done by England to preserve them as they stand, or, next best, at least to get good copies of them, which can be had for a small price, so that the glories of Art be not wholly lost. Let us remember that

Wherever a fresco peels and drops,
Wherever an outline weakens and wanes
Till the latest life in the painting stops,
Stands One whom each fainter pulse-tick pains!—
One, wishful each scrap should clutch its brick,
Each tinge not wholly escape the plaster:
A lion who dies of an ass's kick,
The wronged great soul of an ancient Master.

To aid in this work of transcript and preservation the Arundel Society was instituted; and it has spread a knowledge of early Italian Art amongst our countrymen. Now is the time when more than ever some consistent and potent effort should be made to preserve as well as to copy these immortal works. The pictures of Pinturicchio are interesting independent of their own merits, because they mark the transition, as Mr. Layard justly remarks, "between the Umbrian school and the Roman founded by Raphael, showing the first decay of that spiritualism which especially distinguishes the former. A less brilliant and subtle colourist than Pietro, less tender, and less deeply religious in sentiment, he displays greater dramatic vigour and dramatic unity in his works. He attempts to portray with truth, and with a more exact imitation of nature, the various emotions and feelings of the actors in the scene he depicts, and endeavours to depart from a mere conventional treatment. In this attempt he is far behind the great historical painters of the Umbrian school who had immediately preceded him, or were his contemporaries, Masolino, Masaccio, Benozzo Gozzoli and Ghirlandajo. They were superior to him in the representation of true dignity and in elevated conception of character. Pinturicchio, in comparison with them, is frequently weak and even common-place, as well as inferior in variety of action, showing the influence of that conventional spirit of the Umbrian school from which Raphael alone entirely freed himself." This is Mr. Layard's opinion. He might have said with greater justice that Pinturicchio was altogether an inferior painter to those great artists whose names he has quoted, who were inferior to none, except in the technical development of the art they helped to perfect. Essentially a painter of transition, he developed neither of the great points which made his predecessors and those who followed him in time. Still his work is admirable, and in the history of Art important. The chromolithograph before us may be reported to be amongst the best, if not the best, of those published by the Society. We do not care very much about the outlines of the heads which accompany this transcript; believing, as we do, that tracing is one of the most fallacious methods of attempting to render the true characteristic aspect of a picture or portion of a picture, because not once in a thousand times does the expression lie wholly in the form or as much of it as an outline can render, even supposing that the true form of the original is always attained, which is too often a thing impracticable, owing to the tender gradations of shadow which mark the delicate features, only to be rendered, in a tracing, by lines. The examples before us are certainly carefully done.

FINE-ART GOSSIP.—A private view of the Exhibition of the Liverpool Society of Fine Arts is to be opened on Saturday next. These Liverpool gentlemen are quick with their work. The *Soirée* of the Royal Academy, on the close of their season, was held on the 31st of July, and the Liverpool Society will be ready to open their Exhibition on the 31st of August. We hear that fourteen members of the Royal Academy are represented by their works, namely, Messrs. Mulready, Ward, MacIise, Roberts, Creswick, Lee, Hart, Foley, Faed, Frost, Goodall, Cooke, Sant, and Boxall; outside of the Academy are Messrs. Solomon, Morgan, Hall, Herrick, Craig, and others. In addition, there is the usual complement of selected pictures from Paris, Belgium, Holland, Düsseldorf, and other parts of the Continent. The water-colour department, which is said to be stronger this year than in former seasons, includes specimens of Messrs. Lance, Dodgson, Penley, Mrs. E. Murray, and other favourites. The English school is better represented than on any previous occasion; and the Exhibition promises to be attractive and successful. In the evening the Council propose to hold a *conversazione*, at which several artists and literary persons are expected to be present.

It is probable that a Winter Exhibition will be opened at the French Gallery in October next, for the display, we believe, of drawings and sketches by English artists.

Mr. Holman Hunt's picture of 'The Finding of Our Saviour in the Temple' has been temporarily withdrawn from the German Gallery, in order that the draughtsman may finish in the artist's studio, and under his supervision, the chalk drawing from which the engraver (M. Blanchard) will reproduce the work. As the process of reproducing a picture by the engraver is not well known to the public, a few words on the present occasion may not be unacceptable. The drawing, above referred to, has been in the draughtsman's (Mr. Morelli's) hands about fifteen months, and it will require about two months' more work to complete it. This translation of the picture into black and white will render the engraver's work more easy, and the process has always been adopted by the French and Italian school of engravers in the pure line manner. Raphael Morghen was especially partial to it, as were Longhi, Anderloni, Foster, Henriquet Dupont, A. L. Desnoyers, when working from the pictures of Raphael, Titian, and other old masters. When the merit of the picture, as in many modern works, rests upon the touch and dextrous manipulation of the artist, as is the case with the productions of Wilkie, Sir E. Landseer, Mr. Frith, Mlle. R. Bonheur, it would be impossible to make a copy good enough to engrave from, and the benefit of having a translation in black and white would be more than counterbalanced by the disadvantage of not having as a guide the very touch of the painter, when an expression often depends on the most skilful application of the brush; but when, as is the case with Mr. Holman Hunt's great work, the whole production is carried out with as much completeness and purity as any work ever painted, the task of the translator is rendered comparatively easy, and he has but to be scrupulously attentive to the original for drawing and expression, and to the chalk drawing for the effects translated therein of colour and tone; without this translation into black and white it would be a very difficult matter to render these qualities at once on to the copper, any attempt to do which might lead to endless corrections, and result in the loss of all appearance of freshness and clearness of execution.

Mr. Woolner is engaged upon busts of Archdeacon Hare and Professor Henslow, and upon a group of the children of Mr. T. Fairbairn.

The Report of the Select Committee appointed to consider the conditions of the gift of Turner's pictures to the nation has been made, and is in substance as follows. It will be remembered that we stated a few weeks ago that the deceased artist's will had been printed for presentation to the House of Lords on the motion of Lord St. Leonards, and that the Trustees of the National Gallery had moved the Government to consider if the legal right given to them by the decision of Vice Chancellor

Kindersley, under which they hold Turner's pictures, did not also imply the duty of providing a safer place of deposit than had been found for them at South Kensington; also, if they were not morally, not legally, bound to fulfil the conditions imposed by the testator. The Trustees consider themselves bound by both a moral and a legal duty; and the committee of the House seem to take a similar view of the case. The instructions to the committee were to consider in what manner the conditions annexed by the will of Turner to the bequest of his pictures to the trustees of the National Gallery can best be carried out; and, having done so, to consider and report the measures proper to be taken with respect to the Vernon Gallery, and the prospective measures to be adopted on future occasions of the like kind. The committee report that conditions imposed with regard to the 'Dido building Carthage,' and the De Tabley pictures, that they should be placed between two Claudes, have been complied with. After recapitulating the conditions of the first three codicils to the will in question, the latter two of which state the gift to the Trustees of the National Gallery to be conditional on their erecting a gallery for the preservation of the pictures added to the National Gallery, to be entitled "Turner's Gallery,"—a condition which was required by the third codicil to be fulfilled within five years, on or before the expiration of the lease of the house in Queen Anne Street. Thus recapitulating, the report quotes further the fourth codicil, which extends the time for offering the finished pictures to ten years, after which they were to be exhibited gratuitously in Queen Anne Street during the remainder of the lease, except the last two years, and then the pictures were to be sold; and states that the Chancery decree declared that all the works, finished or unfinished, were given to the public, and were to be retained by the Trustees of the National Gallery. The committee consider that, having the possession of these works, the nation ought to carry out the conditions annexed to the gift, that, for want of a room to receive them, the pictures are now at Kensington, but the power of the trustees of the National Gallery has been preserved over them, and it is publicly announced that they are there only temporarily. That Turner died in December, 1851, and, in the opinion of the House, no further delay should take place in providing a room or rooms for the reception and exhibition of the works, now the property of the nation, in connexion with the National Gallery, to be called "Turner's Gallery." That it is expedient that the finished pictures by Turner should be forthwith deposited and properly hung in one of the rooms of the present National Gallery, according to the plan which Mr. Wornum, the keeper, has stated in his evidence before the committee that he is prepared to carry out. But this arrangement, which will cause considerable inconvenience in the exhibition of the pictures now in the National Gallery, must be considered as of a strictly temporary character, pending the execution of a more enlarged and comprehensive plan. That, to provide such accommodation, Mr. Pennethorne has stated in his evidence that he can undertake to erect rooms fully sufficient for the reception of the Turner pictures at the back of the present National Gallery within twelve months, costing not more than 25,000*l*. That, unless some reasonable prospect of a grand gallery, befitting the national collection, being erected exists, the committee recommends the adoption of Mr. Pennethorne's plan. As to the Vernon Gallery, and future gifts of the like kind, the committee leave the subject to be dealt with early in the ensuing session.

MUSIC AND THE DRAMA

ALFRED MELLON'S PROMENADE CONCERTS, THEATRE ROYAL, COVENT GARDEN. Every Evening, 7—Doors Open at Half-past Seven; Commence at Eight. Grand Orchestra. Solo Pianoforte, Miss Julia Woolf, King's Scholar, Royal Academy of Music. Vocalists: Mdle. Parpe, Mr. George Perrin and Mr. Weiss. Admission: Promenade, 1*s*; Amphitheatre Stalls, 1*s* 6*d*; Boxes, 2*s* 6*d*; Private Boxes, 1*l* 1*s* and 1*l* 6*d*.—Conductor Mr. Alfred Mellon.

MDLLE. WHITTY will appear at the THEATRE ROYAL, DUBLIN, on September 17th, in "PUERITANI," on the 18th, in "NORMA"; and on the 19th, in "IL BARBIERE," with Tilden, Giuglini, Swift, Lemaire, Della Sedie and Ciampi.

NEW PUBLICATIONS.

Newton's Anglo-Italian Elements of Singing. (Novello).—There have been many worse books of instruction than this. Some of the exercises are good;—and Mr. Newton has paid more attention than is customary to phrasing and accent to all that concerns what we have so much at heart, a better declamation among our English singers. There remains something to be dwelt on, which we do not recollect to have seen touched even—the identity of musical and poetical rhythms, coexistent with the licence permitted in certain forms and metres. For instance, the line

§ In the | days of | old,
may be set as above, or as under—

‡ In the | days — of | old.

It is the want of due advertence to permissible freedoms like this which makes foreigners—nay, and too many of our countrymen—set the English language so stiffly. Mr. Newton's treatise winds up with a section on the "Passions," which is as singular a piece of reading as we are often favoured with; his list of "Passions" outnumbers those put into his Ode by Collins. They are (according to our author) Tranquillity, Cheerfulness, Rallery, Mirth, Joy, Delight, Pride, Surprise, Courage, Jealousy, Despair, Anger, Fear, Hatred, Pity, Perplexity, Hope, Love, Modesty, Melancholy, Reproving, Admiration, Shame and Remorse, Wonder, Exhorting, Distraction, Promising, Veneration, Sorrow, Malice, Revenge, Affectation, Complaining—in all, three-and-thirty Passions. Mr. Newton gives three-and-thirty receipts to the singer, how he is to look and behave under the influences catalogued. Till now we had been used to regard a certain manner of dancing before us, in which that valuable art was taught by diagrams, as the *ne plus ultra* of instruction in print; but Mr. Newton outdoes the Professors who concocted that memorable treatise.

LYCEUM.—Mr. Falconer, having again speculated in a brief season at this theatre, produced on Monday a new comedy in four acts, entitled 'Woman; or, Love against the World.' Combining in this manner the interests of manager and author, Mr. Falconer has the chance of securing to himself the full profits of his production. Should he be as fortunate with this drama as Mr. Boucicault with 'The Colleen Bawn,' he might realize a position in both capacities; but he also runs the risk of losses in case of failure. His play on the first night was greeted by a crowded audience; with constant applause and for four hours. This was a favourable beginning;—but the season and the weather, we fear, are against a prolonged success; and the experiment, therefore, is more likely to lead to an extension of the author's reputation than his immediate profit. The merits of Mr. Falconer's new comedy are not small. Though bearing a strong resemblance in story, subject and character-grouping to his previous productions, it is original; that is, it is the proper growth of the author's own mind and experience, and not dependent on a foreign stage for either its material or form. It is, therefore, worthy of welcome. The plot, of which only the situations are permitted to occupy the foreground, turns on the point of the Irish marriage law which prohibits a legal union between persons of different religious persuasions. The *Hon. Mr. Arden* (Mr. H. Vezin) is the hero, and during a brief sojourn in Ireland finds himself fascinated by the wild native charms of *Geraldine D'Arcy*, (Mrs. Charles Young),—who is portrayed by the author as an impulsive intelligent girl, fond of the sea-shore, and solitary rambles with her faithful dog, whose instincts answer to her volitions. His mother and aristocratic friends in town, hearing of the danger from a domestic, send the *Hon. Mr. Lumley Jones* (Mr. W. Lacy) to bring back the truant with all speed. His interference, however, only adds to the peril; for it determines Arden to hurry on a secret marriage previous to his return to London. Lumley Jones sees not much objection to this course; as, knowing the marriage to be illegal, he thinks that by means of it his friend may indulge a passing caprice with perfect safety in regard to

his future prospects. The illegality of the contract, however, he does not communicate to any of the parties concerned; and the marriage is accordingly celebrated by a Catholic priest, with the sanction of the Bishop, in a district chapel. In the second act, another lady appears on the scene, *Lady Harriet Wilmington* (Miss Murray), who arrives just after the marriage, owing to her anxiety for Arden, whom she has long regarded as her own destined husband. On being acquainted by Lumley Jones with the circumstances, she at once sees her course, and forces an interview on the new-made bride, and informs her of the illegality of the contract. Immediate counsel is held with Geraldine's uncle (Mr. Addison), a shrewd, but eccentric book-worm, who has the habit of thinking aloud those private convictions which are in general the *asides* of stage-dialogue; and it is resolved that Geraldine shall be immediately taken to her mother, who, after a neglect of seventeen years, has at length reclaimed her. Arden, who has been got out of the way by Lumley Jones, returns to the spot, and feels outraged by a proceeding which is to him inexplicable, though a hasty note from Geraldine morally assures him that she is in no way to be blamed for it.

Thus ends the second act of the drama, which so far is replete with interest and character. The remaining two acts are not worked out with equal vigour or ingenuity. Three years have elapsed: Geraldine, by one of those old stage convolutions which defy the logic of Garter King, and the possibilities of actual life, has become *Lady Letitia Mountjoy*; *Lady Harriet Wilmington* has also become the heiress of the property which Arden had expected from his uncle; and Arden has become *Lord Lindengrove*. The last has returned from India, and is tempted to forget his first love and find refuge in that of Lady Harriet. It happens, however, that the new heiress, Lady Letitia Mountjoy, is about to visit the mansion of *Lady Clowerton* (Mrs. Weston), and actually arrives in the gardens of the estate without being recognized. Here, lying *perdue*, she overhears Arden confess that his long absence from Geraldine, and his supposed wrongs, have made an alteration in the state of his feelings. The sensitive woman determines to counteract this danger; and, by means of the instruction she receives from an eminent actress, she so disguises her mien and manner that she escapes being identified by either Lord Lindengrove or Lady Harriet, though both are painfully perplexed by the resemblance. In her new character, Lindengrove becomes again enamoured of her; but, to secure his love, she feels that his recognition is necessary. She accordingly resumes her peasant costume of Geraldine; and then, by explaining all the circumstances of the case in her own favour, rekindles the old affection in the heart of her wavering lover. There is an underplot, between a footman, *Stubbs* (Mr. Joseph Robins), and *Norah*, an Irish waiting-maid (Miss Lydia Thompson), which was well supported. The main action owed much to the excellent acting of Mr. Walter Lacy, Mr. Addison, and Mrs. Charles Young. The repartees which the lady had to deliver were effectively pronounced; and her disguise as the new-made peeress was so complete as for awhile to deceive the audience, though effected only by the colour of the wig and the fashion of the dress, carried off by the affectation of stately, aristocratic manner. We wish Mr. Falconer complete success in his experiment.

MUSICAL AND DRAMATIC GOSSIP.—It is said anew,—and this time, we fancy, with some show of probability,—that Her Majesty's Theatre will be re-opened for Italian Opera under its old management, next year.—We understand that an opera, by Mr. Wallace, 'The Rose of Zurich,' earlier in date than 'Lurline' and 'The Amber Witch,' will be among the novelties of the winter season. Its composer is said to be engaged on another opera, with Mr. Planché as collaborator.

The Baroness Vigier (in her maiden days Mdle. Cruvelli) has just appeared as an amateur composer by publishing some vocal variations on a Tyrolean theme. No one conversant with the restlessness of retired singers will be surprised if this

should be a first step in the return of the lady to the stage.

There has been a rare critical performance of 'Much Ado about Nothing,' in Germany,—on the occasion of certain late attempts made to give purity and common sense to the German text of Mozart's operas. The pedants have accepted the bad language, put into these works by incompetent translators, as part of their Mozart religion;—and in the highest style of solemn nonsense have been denouncing those who dare propose anything more grammatical and picturesque than the original perversion, as so many wicked people who lay hands on the ark.—Such folly can only be fitly dealt with by ridicule. It must be obvious to everyone conversant with the subject, that too frequently, when words are to be adapted to music, artificers have been called in who, provided a rhyme be a rhyme, will, for the sake of the chime, despise reason and abandon grace. Think of the original English version of 'The Creation,' which even now has to be fought with by English singers!—"On mighty pens"—for example.—Think of a more recent and professedly amended version of 'The Seasons,' in which an *adagio* concludes with the following euphonious line:—

Shrinks beneath the scorching touch!

—Think of the British translation of 'La Sonnambula'!—think of the wonders wrought by the late Mr. Bunn, doing his own poetry for his own theatre, and upsetting all manner of French operabooks, into pantomime English!—When, the other day, Gluck's 'Orphée' was revived at Paris,—some of the most absurd platitudes of the text by M. Molènes, translated from the original Italian of Calzabigi, were amended, to the great aid and cherishing of the singers,—but Gluck's Ghost has not walked, to strike terror into those who dared the deed. One word more: the angry people who denounce every idea of rectification overlook the simplest of truths—that the originally impure text is not destroyed by the amended one. Those who will drink muddy in place of clear water may still do so at their preference. What has been said formerly, in regard to the music of Bach, whether glossed by Mendelssohn, by Herren Molique and Moscheles, or M. Gounod,—applies to this case yet more strongly,—that which is original, thanks to print, remains.—No one need sing any amended words, who prefers the original vulgarities. The last remain, as remains also the great music.

MISCELLANEA

Ecclésiastical Statistics of Prussia.—During the nine years from 1849-58, churches and clergymen in the Evangelical and in the Roman Catholic churches of Prussia have increased in the following proportions. Not including the dissenters, and exclusive of the little Principality of Hohenzollern and the Jahde-district, the Evangelical population numbered, in 1849, 10,006,798 souls, who congregated in 5,208 mother-churches, 2,956 filial-churches, and 806 other buildings, devoted to divine service; on the whole, 8,976 places of worship. Divine service was held by 6,139 ordained clergymen. Up to the year 1858 the number of places of worship had increased by 330; and the number of ministers of the church by 281; this increase, however, stands in no proportion with the growth of the Evangelical population, which, during the indicated period, had augmented from every 1,000 to 1,084. In the Roman Catholic church, the number of places for Divine worship had also grown by 320 during the same time, and the number of the clergy by 561; the increase of the Catholic population, however, was not the same as that of the Protestant: it grew only from every 1,000 to 1,078. In the year 1849, there was one church to every 1,114 souls, in the Protestant provinces, and one clergyman to every 1,628 souls; while with the Catholics, there was one church to every 840 souls, and one priest to every 1,082 souls. In the year 1858, there was one church for 1,164 Evangelical inhabitants, and one clergyman for 1,689; with the Catholics, in 1858, there was one church for every 867 persons, and for every 1,065 souls one priest.

TO CORRESPONDENTS.—J. H. H.—W. M. C.—M. E.—H. H.—R. H. B.—E. O.—A. G.—H. K.—received.

NEW BOOKS ON AMERICA.

I.

A Handbook of Reference on all Matters connected with the War.

Now ready.

SLAVERY AND SECESSION:

HISTORICAL AND ECONOMICAL.

By THOMAS ELLISON, Esq. P.S.S., of Liverpool; Author of 'A Handbook of the Cotton Trade.'

With Coloured Map, and numerous Appendices of State Papers, Population Returns, New and Old Tariffs, &c.

1 vol. post 8vo. cloth, 8s. 6d.

"A succinct history of the American quarrel, with an estimate of its probable cause and proximate issue. To the information Mr. Ellison has already acquired, he has added a faculty of inference equal to the occasion, and such a rational estimate of the work required of him, that he has compiled a convenient book of reference, available in some other respects to the journalist and politician."—*Times*, August 16.

"Abounds with impartial and amply authenticated information. It is a volume that was much wanted, and one which we can highly recommend."—*Daily News*, July 22.

"Whilst little of importance has been omitted, the facts and dates and party evolutions, which it is so difficult to recall in their true sequence, are all recorded in a fashion which refreshes the memory without encumbering it with verbiage or irrelevant special pleading."—*Spectator*, July 13.

"Meanwhile, we can recommend to all Mr. Ellison's carefully prepared work... it is a model of typography, and its tabular estimates of comparative areas, population, commerce, &c., in the Northern and Southern States, worthy of a Fellow of the Statistical Society."—*Literary Gazette*.

"A book that fulfils the desire of all who wish to obtain correct information on the state of things in America."—*Liverpool Daily Post*.

II.

Nearly ready.

For the Proprietor, Kent & Co. Paternoster-row.

This day is published, crown 8vo. cloth, price 6s. 6d.

CAVOUR: A MEMOIR.

By EDWARD DICEY,
 Author of 'Rome in 1860.'

WITH AN AUTHENTIC PORTRAIT.

Cambridge: MACMILLAN & Co.; and 28, Henrietta-street, Covent-garden, London.

May be had at all Libraries and Booksellers.

THE REV. F. METCALFE'S WORK ON ICELAND.

In 1 vol. post 8vo. with Map and 4 Illustrations, price 12s. 6d.

THE OXONIAN IN ICELAND;
 Or, NOTES of TRAVEL in that ISLAND in the SUMMER of 1860;

With GLANCES at ICELANDIC FOLK-LORE and SAGAS.

By the Rev. FREDERICK METCALFE, M.A.

Fellow of Lincoln College, Oxford; Author of 'The Oxonian in Norway,' &c.

"Mr. Metcalfe has brought home a capital budget from Iceland. The work as a whole is fresh and very entertaining. The concluding chapter, on the way and cost of travelling in Iceland, is minute and practical enough to be of great value to any member of the Alpine Club or other adventurer who wishes to understand the relations of the

ground to his purse before he starts from England. . . . Some of the sketches of character, too, are admirably done. But the great interest of the book lies in the impression it gives of the story-telling spirit of the Icelanders, and of the Northern gloom that hangs over his superstition."

EXAMINER.

London: LONGMAN, GREEN, LONGMAN, and ROBERTS.

MR. DU CHAILLU'S TRAVELS.

TENTH THOUSAND, with Illustrations, 8vo. 21s.

ADVENTURES IN EQUATORIAL AFRICA;
 WITH ACCOUNTS OF THE CANNIBALS AND OTHER SAVAGE TRIBES;

And of the CHASE of the GORILLA, the NEST-BUILDING APE, &c.

By PAUL B. DU CHAILLU.

Times.—"This extraordinary production. We must go back to the voyages of La Pérouse and Captain Cook, and almost to the days of wonder which followed the track of Columbus, for novelties of equal significance to the age of their discovery. M. Du Chailly has struck into the very spine of Africa, and has lifted the veil of the torrid zone from its western rivers, swamps, and forests."

Saturday Review.—"M. Du Chailly's narrative will not disappoint the expectations which it has excited. Its literary merits are considerable, for it is clear, lively, and judiciously pruned of unimportant details. His explorations were in no degree exempt from the hardships and dangers which are the condition of African travel."

JOHN MURRAY, Albemarle-street.

MR. MOTLEY'S NEW HISTORICAL WORK.

FOURTH THOUSAND, with Portraits, 2 vols. 8vo. 38s.

HISTORY OF THE UNITED NETHERLANDS:

FROM THE DEATH OF WILLIAM THE SILENT TO THE
 SYNOD OF DORT;

With a FULL VIEW of the ENGLISH-DUTCH STRUGGLE against SPAIN; and of the ORIGIN and DESTRUCTION of the SPANISH ARMADA.

By J. LOTHROP MOTLEY,

Author of 'The Rise of the Dutch Republic.'

Edinburgh Review.—"We must especially commend the hearty English spirit in which the book is written; and fertile as the present age has been in historical works of the highest merit, none of them can be ranked above these volumes in the grand qualities of interest, accuracy and truth."

Quarterly Review.—"Mr. Motley's work must be read to appreciate the vast and conscientious industry which he has bestowed upon it. His delineations are true and lifelike. Diligent and painstaking as the humblest chronicler, he has availed himself of many sources of information which have not been made use of by any previous historical writer."

JOHN MURRAY, Albemarle-street.

Just published, price 1s.

BISHOPS and BEGGARS of the 19TH CENTURY.

Stimpkin, Marshall & Co.; and Hamilton, Adams & Co. London.

Sixth Edition, price 4s. 6d., counters adapted to the same.

SYLLABIC SPELLING and READING.
 By Mrs. WILLIAMS, Author of the 'Conversations on Grammar.' With Copper-plate Engravings. Revised and corrected by her Daughter LADY LEIGHTON.

Whittaker & Co. Ave Maria-lane, London.

New and Cheaper Edition (the 20th, 6s. 6d.) of

OLIVER & BOYD'S SCOTTISH TOURIST:

A Hand-Book to the Picturesque Scenery, Cities and Towns, Historical Places, Works of Art, and Antiquities of Scotland, thoroughly Revised, in great part re-written, and the whole plan remodelled.

With Travelling Maps, Plans, and 27 Engravings on Steel.

Edinburgh: Oliver & Boyd. London: Stimpkin, Marshall & Co.

LEBAHN'S WORKS

ON THE

GERMAN LANGUAGE.

Just published, Second Edition, price 2s. 6d.

Lebahn's First German Course.

"It is hardly possible to have a simpler or better book for beginners in German."—*Athenæum*.

"It is really what it professes to be, a simple, clear and concise introduction to the German language; one, too, which will be equally useful to the self-instructing student and the member of a German class."—*Critic*.

"This is German made easy. Nothing can exceed the clearness and simplicity of the work."—*Christian Witness*.

Fourth Edition, price 4s. 6d.

Lebahn's First German Reader.

"An excellent elementary work."—*Sunday Times*.

"Like all Lebahn's works, most thoroughly practical."—*Britannia*.

"An admirable book for beginners, which indeed may be used without a master."—*Leader*.

Sixth Edition, price 5s. 6d.

Lebahn's Eichenfels and Dialogues.

"A charming production.—The Dialogues are as perfectly adapted to render the student a speaker of the interesting language, as is the Vocabulary for making him a reader."—*Educational Times*.

"Equally with Mr. Lebahn's previous publications, excellently adapted to assist self-exercise in the German language."—*Spectator*.

"Mr. Lebahn has done his work in his usual clever, painstaking, and to the student's profitable style."—*Church and State Gazette*.

Sixth Edition, price 8s.; with KEY, 10s. 6d.

Lebahn's German in One Volume.

"This is the best German Grammar that has yet been published."—*Morning Post*.

"The exercises are very good, well graduated, and well designed to illustrate the rules. The 4,000 words, synonymous in German and English, is a very advantageous feature."—*Spectator*.

"Had we to re-commence the study of German, of all the German grammars which we have examined, and they are not a few—we should unhesitatingly say—Falek Lebahn's is the book for us."—*Educational Times*.

"To those who would attain a practical use of the language, with a moderate expenditure of time and labour, this work will be a welcome help."—*Illustrated London News*.

Price 6s.

Lebahn's Practice in German: adapted for Self-Instruction.

"Whoever fails to learn the German language with this help, must have an intellect irredeemably dull and obtuse."—*Sun*.

"A work perfect of its kind."—*Leigh's Newspaper*.

"It will be found invaluable—indeed absolutely necessary to all students of German, who wish with little labour and great certainty to attain a knowledge of this magnificent language. The plan of the book is original, its execution is admirable."—*Sharpe's Magazine*.

Price 3s. 6d.

Lebahn's Exercises in German.

"A volume of 'Exercises in German,' including in itself all the vocabularies they require. The book is well planned; the selections for translation from German into English, or from English into German, being sometimes curiously well suited to the purpose for which they are taken."—*Examiner*.

"As an educational writer in the German tongue, Dr. Lebahn stands alone; none other has made even a distant approach to him. The magnitude and value of his services have been acknowledged by the Public Press to an extent, and with a unanimity of which there is no example. . . . The present volume is compiled with all the clearness and fineness which the other works of the writer are so happily characterised."—*British Standard*.

Price 4s. 6d.

Lebahn's Self-Instructor in German.

"One of the most amusing elementary reading-books that ever passed under our hands."—*John Bull*.

"The student could have no guide superior to Mr. Lebahn."—*Literary Gazette*.

Price 3s. 6d. each.

Lebahn's German Classics: with Notes and Complete Vocabularies.

PETER SCHLEMIHL, the Shadowless Man. By Chamisso.

EGMONT. A Tragedy, in Five Acts, by Goethe.

WILHELM TELL. A Drama, in Five Acts, by Schiller.

GOETZ VON BERLICHINGEN. A Drama, by Goethe.

PAGENSTREICHE. A Page's Frolics. A Comedy, by Kotzebue.

EMILIA GALOTTI. A Tragedy, in Five Acts, by Lessing.

UNDINE. A Tale, by Fouqué.

SELECTIONS FROM THE GERMAN POETS.

"These editions are prepared for the use of learners who read without a master; and they will be found convenient for that purpose. In each, the text is followed by a glossary, wherein not only the sense of every particular phrase, but also the dictionary meaning of most of the several words, is given in good English. With such aids, a student will find no difficulty in these masterpieces."—*Athenæum*.

Price 2s. 6d.

Lebahn's German Copy-Book: being a Series of Exercises in German Penmanship, beautifully engraved on Steel.

"* About Seven Hundred Commandatory Notices of Lebahn's Works have appeared."

UNITED KINGDOM LIFE ASSURANCE COMPANY,

8, WATERLOO-PLACE, PALL MALL, S.W.

The HON. FRANCIS SCOTT, Chairman.
CHARLES BERWICK CURTIS, Esq., Deputy-Chairman.**FOURTH DIVISION OF PROFITS.**

SPECIAL NOTICE.—Parties desirous of participating in the Fourth Division of Profits to be declared on Policies effected prior to the 31st of December, 1861, should make immediate application. There have already been Three Divisions of Profits, and the Bonuses divided have averaged nearly 2 per cent. per annum on the sums assured, or from 30 to 100 per cent. on the premiums paid, without the risk of copartnership.

To show more clearly what these Bonuses amount to, the three following cases are given as examples:—

Sums Insured.	Bonuses added.	Amount payable up to Dec. 1854.
£5,000	£1,987 10	£6,987 10
1,000	397 10	1,397 10
100	39 15	139 15

Notwithstanding these large additions, the Premiums are on the lowest scale compatible with security; in addition to which advantages, one-half of the premiums may, if desired, for the term of five years, remain unpaid at 5 per cent. interest, without security or deposit of the Policy.

The Assets of the Company at the 31st of December, 1860, amounted to £730,665 7s. 10d., all of which has been invested in Government and other approved securities.

No charge for Volunteer Military Corps whilst serving in the United Kingdom.

Policy stamps paid by the office.

For Prospectuses, &c. apply to the Resident Director, No. 8, Waterloo-place, Pall Mall.

By order,

E. L. BOYD, Resident Director.

To MICROSCOPISTS and OTHERS.

To complete our system of Manufacture, and to meet the demand for our Instruments, we have built an entirely new Factory; and whilst we shall thus be enabled to continue our improvements in Manufacture, we shall also concede to our Customers every reduction that we can in Price.

ACHROMATIC MICROSCOPES.

We have carefully arranged our different forms of Stand with various Object-Glasses and Apparatus, so as to offer Microscopes, more or less complete, at certain amounts, in each instance considerably less than the sum of the individual prices of the several parts, and these we keep constantly in stock.

WENHAM'S BINOCULAR MICROSCOPE.

We are now manufacturing, under the immediate superintendence of the Inventor, this valuable addition to the Microscope. Mr. Wenham's arrangement not only gives the most perfect and well-defined Stereoscopic vision with any Object-Glass or Eye-Piece, but it can be applied to almost any Microscope, and when adapted, it in no way whatever interferes with the ordinary use of the Instrument.

MALTWOOD'S FINDER FOR THE MICROSCOPE.

This is the only method that has become universal for the purpose of finding Objects.

MICROSCOPIC OBJECTS.

In the endeavour to make our Collection of Prepared Specimens complete in every branch, we have lately secured the sole agency for the sale of some most remarkable transparent injections.

ICELAND SPAR.

We have a number of Cabinet Specimens of this interesting substance on Sale, the pieces having been selected from a large quantity which we have purchased, and besides being of very fine quality, we are enabled to offer them at prices considerably below the ordinary value.

ACHROMATIC STEREOSCOPES.**GORHAM'S KALEIDOSCOPI COLOUR TOP, &c.**

Catalogues, giving full particulars, may be had on application, or sent post free.

Messrs. Horsfall & Addison, Liverpool.
Messrs. A. Greenland & Son, Manchester.
Edward Speakman, Esq. Manchester.
Temporary Office: 34, Gracechurch-street, E.C.

PROSPECTUS.

The Committee of Merchants, Brokers and others appointed at a Public Meeting, held at the Mansion House, on the 25th of July 1861, do hereby certify that the Provisional Directors of the Commercial Union Fire Insurance Company, relative to the re-adjustment of their greatly increased rates of insurance, have decided upon the establishment of an independent Company.

Powerful support has been already obtained from the various interests represented at that Meeting, and a Provisional Board has been formed from leading commercial houses and others, who, by their influence and extensive connections, at once secure to this Company a large amount of profitable business.

The first principles of the Company will be the establishment of an equitable classification of risks, as regards both merchandise and warehouses, and more liberal arrangements than are now obtainable upon floating and short-time policies. A scale of rates will be adopted which, while fully remunerative, shall be sufficiently moderate to encourage a universal habit of insurance. It is intended to reserve a percentage of profits for periodical division amongst insurers.

The Company will undertake the insurance of houses and their contents at equitable rates, this class of business having long proved a large source of profit to the existing offices. The Company will be strictly independent in its operations, and, in pursuance of the comprehensive principle on which the Board has been constituted, will address itself to every class of insurers.

The principle of limited liability will be extended to all insurance effected with the Company, by the introduction of the usual clause limiting the amount of each Shareholder's responsibility.

Power will be taken in the deed of settlement (with the consent of a meeting of shareholders) to extend the operations of the Company to life and marine business, should it hereafter be thought desirable to do so.

It is intended to call up 5s. per share only, of which a deposit of 1s. will be paid on application, 1s. on allotment, and 1s. at intervals of three, six and nine months.

Prospectuses and forms of application for shares may be obtained of George E. Seymour, Esq., 38, Throgmorton-street, London; Messrs. Horsfall & Addison, Liverpool; Messrs. A. Greenland & Son, Leeds; and Edward Speakman, Esq., Manchester, the Brokers of the Company; or of the Solicitors; or at the temporary offices of the Company, at 34, Gracechurch-street.

A deposit of 1s. upon each share applied for must be paid to the Company's Bankers previously to the application being sent in; this sum will be returned if no allotment is made to the applicant.

J. H. DALLMEYER (Son-in-Law and Pupil of the late ANDREW MOSS).

Respectfully begs to inform the Scientific Public that he exclusively manufactures the ASTRONOMICAL TELESCOPE according to A. R.'s processes, who has also bequeathed to him the whole of that faculty.

For particulars of J. H. D.'s recent IMPROVEMENTS in MICROSCOPIC OBJECT-GLASSES, PHOTOGRAPHIC LENSES, &c. see Catalogue, which may be had on application at 25, BLOOMSBURY-STREET, Oxford-street, W.C.

HER MAJESTY'S VISIT TO IRELAND.—

CALLAGHAN'S OPERA, RAGE and FIELD GLASSES, matchless for power and portability, may be worn round the neck as a double eyeglass. Invaluable to the Tourist, and for viewing scenery at four to five miles' distance, are preferred to the telescope. Equally available at the Opera House, Race Course, or Review. Price, 30s., 45s., 50s., 70s., and 80s., according to size and power. May be had at Messrs. Smith & Son's Bookstalls, at the principal Railway Stations; and in Ireland at Bray, The Curragh, Killarney, Kingstown, Limerick Junction, Mallow, Newbridge and at No. 31, Lower Castle-street, Dublin; or will be sent free on application to William Callaghan, Optician, 25A, New Bond-street, W., corner of Conduit-street, London.

ACCIDENTS OF ALL KINDS, AND FROM ANY CAUSE, may be provided against by an Annual Payment of 2s. to the RAILWAY PASSENGERS' ASSURANCE COMPANY, which secures 1,000s. at death by Accident, or 5s. weekly for Injury.

NO EXTRA PREMIUM FOR VOLUNTEERS. ONE PERSON in every TWELVE insured is injured yearly by ACCIDENT.

75,000s. has been already PAID as COMPENSATION. For further information apply to the Provisional Agents, the Railway Stations, or at the Head Office, 64, Cornhill (late 3, Old Broad-street).

ANNUAL INCOME, 40,000s. CAPITAL, ONE MILLION. WILLIAM J. VIAN, Secretary.

64, Cornhill, E.C., January, 1861.

ROYAL INSURANCE COMPANY.

Head Office:—29, Lombard-street, LONDON, and Royal Insurance Buildings, LIVERPOOL.

Branch Offices:—Manchester, Birmingham, Bristol, Leeds, Dublin, Glasgow and Edinburgh.

EXTRACTS FROM THE REPORT FOR THE YEAR 1860.

"The success of the Company, even in its earliest years, received the marked attention, and elicited the surprised comments of writers best acquainted with the history of Insurance Companies."

"Fire Premiums for 1860 EQUAL the Total Fire Premiums for the SEVEN YEARS 1854 to 1860."

"Life Premiums for 1860 EXCEED the Entire Life Premiums for the EIGHT YEARS ending 1853."

"Purchase of Annuities in 1860 LARGELY EXCEEDED the similar receipts for the first TEN YEARS, 1848 to 1857."

"This progress, it is believed, is unsurpassed, considering that it applies to each of the three branches of the business."

FIRE BRANCH.

"The Fire Branch has certainly shown no exhaustion during the year 1860 of that impetus which had previously brought it to a position of the first magnitude among the Insurance Companies of the United Kingdom. The Fire Premiums in 1860 had advanced to the sum of 233,314. 7s. 3d. In 1850, the amount of Fire Premiums had arrived at a sum of 223,377. 12s. 1d., showing an increase of 9,936. 12s. 3d., exceeding the large advance of the preceding year, so that in two years the Fire Revenue of the Company has been enhanced by the enormous sum of 66,937. 12s. 3d."

"The Parliamentary Report of Returns of Duty paid to business in a more prominent way, it affords the means of comparison with other Companies. The Proprietors will be gratified to learn that the increase of Duty paid by the Royal in the last year is more than double that of any other Company, either London or Provincial, whilst only one of those Companies approaches to 50 per cent. of the advance of this Company. Our increase actually equals 30 per cent. of the entire increase of the whole of the Metropolitan Offices combined, whilst of the Provincial Offices its forms upwards of 30 per cent. of the total advance of the other 23 offices established out of London."

LIFE BRANCH.

"The Reports of the Company for several years have had invariably to announce a constant periodical expansion of Life Business, the new Policies of each succeeding year showing an advance over the last that had immediately preceded it. A similar result is shown in the year 1860, the Premiums on New Policies, after deducting Guarantees, being 15,979s. 17s. 10d., which is an increase in that item of 1,934s. 17s. 5d., above the amount received for the year 1859."

"But even this advance is small when compared with the sudden and remarkable momentum which has been given to this branch of the business in the present year (1861)."

"It was not until the commencement of the year that the public seemed to have become fully acquainted with the fact that the Royal Insurance Company had published late in the last year an account of the investigation into the assets and liabilities of its Life Department, under a novel form, and in as plain and intelligible a manner as the abstruseness of the subject admitted, together with the entire statements and valuations necessary for that purpose."

"It is conjectured from the extensive notices of this Pamphlet, and its accompanying Diagrams, which have appeared in the Periodicals of the day, that it has largely attracted the attention of vast numbers of persons in all parts of the United Kingdom, as well as in other parts of the world. Indeed, a most satisfactory and conclusive evidence that such is the case is afforded by the fact that the Sum Assured on new Policies in the six months to the 3rd June of the present year, is actually fifty per cent. in excess of the Sum Assured in the corresponding months of the year 1860, although the latter amount in itself exceeded the Sum Assured in any like previous period of time."

"If this success be continued, the Royal Insurance Company would, with respect to the amount of its new business, be at once placed at least with one or two exceptions at the head of all the Insurance Companies doing business in this country, and the anticipations of the last Report, to the effect that the details of the Life Business then to be published would form an epoch of the Establishment, will have a speedy and very happy realization."

SPECIAL ADVANTAGES OF THE LIFE BRANCH.

PROFITS.—Large Proportion returned every Five Years to Policies then in existence. Two entire years.

Expenses chiefly borne by the Fire Branch, in order to increase the Bonus to be returned.

LIFE BONUSES DECLARED. Two per Cent. per Annum on the Sum Assured; the greatest Bonus ever continuously declared by any Company.

SECURITY FOR BOTH FIRE AND LIFE BRANCHES. Capital TWO MILLIONS Sterling.

Accumulated Funds in hand exceed 800,000s.

PERCY M. DODD, Manager and Attorney.

JOHN B. JOHNSTON, Secretary.

GOVERNMENT SECURITY LIFE POLICIES.

THE CONSOLS ASSOCIATION, 49, STRAND, LONDON.

1. Provides the Security of Consols for its Policies.

2. It lends, or returns to Insurers ON DEMAND at any time, about One-Half of all Premiums paid.

Undoubted Security for Money, with a liberal Rate of Interest. The Association possesses a large Capital, subscribed by several hundreds of Shareholders.

Every description of Life Assurance business is transacted. Advances are made on Mortgage of Freehold Property, Life and Reversionary Interests, &c., and also to Assurers on Personal Security. The Assets are 240,000s., and the Income is over 63,000s. per annum. Four-fifths of the entire Profits are appropriated to the Assured. Three divisions of considerable amount have already taken place.

WILLIAM BATHAY, Actuary.

THE SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY

is a purely Mutual Office, in which the whole Funds belong to the Members; and the Profits are divided among them alone. Since it was founded, in 1815, its history has been one of constant and increasing prosperity; and it is now, in point of Funds, Annual Revenue and number of Members, one of the largest Life Offices in the world. The Society is represented by the Society to its Members and their Representatives is of the most unquestionable character; while the Returns made in the form of Bonuses are, it is believed, not exceeded by those of any other similar Institution. The following is a

MEMORANDUM OF BUSINESS, BONUSES, FUNDS AND REVENUE.

Extracted from the Society's detailed Prospectus.

1. TOTAL ASSURANCES ISSUED £14,632,734

2. TOTAL BONUSES DECLARED 3,623,949

3. SUMS ASSURED AND BONUSES EXISTING 10,386,581

4. TOTAL CLAIMS PAID EXCEEDED 3,600,000

5. INVESTED FUNDS 3,601,764

6. ANNUAL REVENUE 425,738

Forms of Proposal, detailed Prospectus, and Reports, and every information, may be had at the Head Office, or any of the Society's Agents.

SAMUEL RALEIGH, Manager.
J. J. P. ANDERSON, Secretary.

TEA.—DR. HASSALL'S ("The Chief Analyst of the Sanitary Commission of the Lancet on Food") Report on the Teas and Coffees sold by Messrs. STRACHAN & CO., 26, Cornhill, London. "Having purchased through my own agents, and in the ordinary way of business, a variety of samples of the several qualities of Tea and Coffee vended by Messrs. Strachan & Co., I have subjected the whole of them to Microscopical Examination and Chemical Analysis. The result of the examination obtained was in the highest degree satisfactory." A full Report of the above Analysis, also List of Prices, can be had on application to Messrs. STRACHAN & CO., 26, Cornhill, E.C. London. Carts to all parts of London daily.

Shower Baths, from 8s. 6d. to 25 0s. each.
Lamps (Moderate), from 2s. 6d. to 25 10s. each.
(All other kinds at the same rate.)
Pure Colza Oil 4s. per gallon.

THE PERFECT SUBSTITUTE for SILVER.
—THE REAL NICKEL SILVER, introduced more than 25 years ago by WILLIAM S. BURTON, when PLATED by the patent process of Messrs. Elkington & Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test it is distinguished from real silver.
A small useful Set, guaranteed of first quality for finish and durability, as follows:—

2561, 2563, 2565, 2567, 2569, 2571, 2573, 2575, 2577, 2579, 2581, 2583, 2585, 2587, 2589, 2591, 2593, 2595, 2597, 2599, 2601, 2603, 2605, 2607, 2609, 2611, 2613, 2615, 2617, 2619, 2621, 2623, 2625, 2627, 2629, 2631, 2633, 2635, 2637, 2639, 2641, 2643, 2645, 2647, 2649, 2651, 2653, 2655, 2657, 2659, 2661, 2663, 2665, 2667, 2669, 2671, 2673, 2675, 2677, 2679, 2681, 2683, 2685, 2687, 2689, 2691, 2693, 2695, 2697, 2699, 2701, 2703, 2705, 2707, 2709, 2711, 2713, 2715, 2717, 2719, 2721, 2723, 2725, 2727, 2729, 2731, 2733, 2735, 2737, 2739, 2741, 2743, 2745, 2747, 2749, 2751, 2753, 2755, 2757, 2759, 2761, 2763, 2765, 2767, 2769, 2771, 2773, 2775, 2777, 2779, 2781, 2783, 2785, 2787, 2789, 2791, 2793, 2795, 2797, 2799, 2801, 2803, 2805, 2807, 2809, 2811, 2813, 2815, 2817, 2819, 2821, 2823, 2825, 2827, 2829, 2831, 2833, 2835, 2837, 2839, 2841, 2843, 2845, 2847, 2849, 2851, 2853, 2855, 2857, 2859, 2861, 2863, 2865, 2867, 2869, 2871, 2873, 2875, 2877, 2879, 2881, 2883, 2885, 2887, 2889, 2891, 2893, 2895, 2897, 2899, 2901, 2903, 2905, 2907, 2909, 2911, 2913, 2915, 2917, 2919, 2921, 2923, 2925, 2927, 2929, 2931, 2933, 2935, 2937, 2939, 2941, 2943, 2945, 2947, 2949, 2951, 2953, 2955, 2957, 2959, 2961, 2963, 2965, 2967, 2969, 2971, 2973, 2975, 2977, 2979, 2981, 2983, 2985, 2987, 2989, 2991, 2993, 2995, 2997, 2999, 3001, 3003, 3005, 3007, 3009, 3011, 3013, 3015, 3017, 3019, 3021, 3023, 3025, 3027, 3029, 3031, 3033, 3035, 3037, 3039, 3041, 3043, 3045, 3047, 3049, 3051, 3053, 3055, 3057, 3059, 3061, 3063, 3065, 3067, 3069, 3071, 3073, 3075, 3077, 3079, 3081, 3083, 3085, 3087, 3089, 3091, 3093, 3095, 3097, 3099, 3101, 3103, 3105, 3107, 3109, 3111, 3113, 3115, 3117, 3119, 3121, 3123, 3125, 3127, 3129, 3131, 3133, 3135, 3137, 3139, 3141, 3143, 3145, 3147, 3149, 3151, 3153, 3155, 3157, 3159, 3161, 3163, 3165, 3167, 3169, 3171, 3173, 3175, 3177, 3179, 3181, 3183, 3185, 3187, 3189, 3191, 3193, 3195, 3197, 3199, 3201, 3203, 3205, 3207, 3209, 3211, 3213, 3215, 3217, 3219, 3221, 3223, 3225, 3227, 3229, 3231, 3233, 3235, 3237, 3239, 3241, 3243, 3245, 3247, 3249, 3251, 3253, 3255, 3257, 3259, 3261, 3263, 3265, 3267, 3269, 3271, 3273, 3275, 3277, 3279, 3281, 328

GROOMBRIDGE & SONS' PUBLICATIONS.

NEW BOOK FOR THE MICROSCOPE.

This day is published, post 8vo. illustrated with Seven Full-Page Plates, in Tints, and 65 Engravings on Wood, price 5s.

MARVELS of POND LIFE; or, a Year's Microscopic
Recreations among the Polype, Infusoria, Rotifers, Water Bears, and Polyzoa. By HENRY SLACK, F.G.S.

PRINCIPAL CONTENTS.

Microscopes and their Management
Methods of Illumination
Microscope Lamps
Visit to the Ponds
Vorticella
Three Divisions of Infusoria
Distinction between Plants and Animals
Wheel Bearers, or Rotifers
Structure of Rotifers
Water Fleas
Catching Polyzoa
Motions of Animalcules
The Beautiful Floscule
Movement of Globules
Eggs of Rotifers
Microscopic Hunting in Winter
Water Bears
Their Comical Behaviour
Why they are not Killed by Heating and Drying
Curious Digestive Tube
Multiplication by Division
Change of Form
Subsequent Appearance
A Country Duck-pond
Contents of its Scum

Pitcher Rotifer
Large Eye and Brain of Rotifer
Microscopic Value of Little Pools
Modes of Preservation in Glass Jars
Stephanoceros
Its Gelatinous Bottle
Its Crown of Tentacles
Animalcule Tank
Stentors
Social Habits
Solitary Stentors living in Gelatinous Caves
A Group of Vaginicolae
Changes of Shape
A Bubble-blowing Vorticella
Characteristics of the Polyzoa
Plumatella Repens
Its Great Beauty
The Mouth and its Guard
How it Swallowed a Rotifer, and what happened
Curiosities of Digestion
Worms Colouring Mud
Protozoa
Mellieria Ringens
Its Powers as Brickmaker, Architect and Mason.

A HISTORY of BRITISH BIRDS. With an Illustration of each Species comprising in all Three Hundred and Sixty Coloured Plates. By the Rev. F. O. MORRIS, B.A. 8 vols. royal 8vo. cloth gilt, price 54.

The NESTS and EGGS of BRITISH BIRDS. With Illustrations, comprising in all Two Hundred and Twenty-three Coloured Plates. By the Rev. F. O. MORRIS, B.A. 3 vols. royal 8vo. cloth gilt, price 34. 3s.

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

MANCHESTER MEETING, 4th to 11th September, 1861.
Reception Room, The Portico, Manchester.

President.

WILLIAM FAIRBAIRN, Esq. LL.D. F.R.S. &c.

The objects of the Association are—"To give a stronger impulse and more systematic direction to scientific inquiry; to promote the intercourse of those who cultivate science in different parts of the British empire with one another and with foreign philosophers; to obtain a more general attention to the objects of science and a removal of disadvantages of a public kind which impede its progress."

General Arrangements.

WEDNESDAY, 4th September.—OPENING MEETING and PRESIDENT'S ADDRESS, at 8 p.m., in the Free-Trade Hall.
SECTIONAL MEETINGS daily, as usual, from the 5th to the 10th inclusive.

WEDNESDAY, 11th September.—CONCLUDING GENERAL MEETING, in the Free-Trade Hall.

THURSDAY, 5th September.—SOIRÉE (Microscopes), in the Free-Trade Hall.

FRIDAY, 6th September.—EVENING DISCOURSE.

SATURDAY, 7th September.—SOIRÉE (Telegraphs), in the Free-Trade Hall.

MONDAY, 9th September.—EVENING DISCOURSE.

TUESDAY, 10th September.—SOIRÉE (Field Naturalists' Society), in the Free-Trade Hall.

On THURSDAY, the 12th of September.—Important EXCURSIONS.

RAILWAY PASSES.

The Executive Committee have arranged with the undermentioned Railway and Steam-Packet Companies to issue to gentlemen and ladies attending the meeting in September, as members or associates, *PASSES* entitling the bearer to a ticket to Manchester and back for one fare, between the 8th and 14th of September:—
Lancashire and Yorkshire Railway Company.
London and North-Western Railway Company.
Manchester, Sheffield, and Lincolnshire Railway Company.
Great Northern Railway Company.
North-Eastern Railway Company.
Midland Railway Company.
Caledonian Railway Company.
Great Western Railway Company.
City of Dublin Steam-Packet Company (via Holyhead).
North Lancashire Steam Navigation Company (to Fleetwood).
Belfast Steamship Company (to Liverpool).
Glasgow and Liverpool Royal Mail Steam-Packet Company.
Application for these Passes must be made (the sooner the better) to Local Secretaries, B. A. Portico, Manchester, stating the names of those who will use them, and if any are not yet members or associates, their full names and addresses, and the particular class of membership desired.

The pass cards will have to be exchanged at the railway or packet office for the Company's special ticket.

R. D. DARSHIRE, } Local Secretaries
ALFRED NEILD, } for the Meeting.
ARTHUR WILKINS, }
H. E. ROSCOE, }

KING'S COLLEGE, London.—DEPART- MENT OF GENERAL LITERATURE AND SCIENCE.

The Lectures are adapted for those who purpose to offer themselves for the Indian Civil Service or to enter one of the Learned Professions, and WILL COMMENCE on TUESDAY, Oct. 1.

The following are the subjects embraced in this Course:—
Divinity.—The Rev. the Principal, the Rev. E. H. Plumptre, M.A. Classical Literature.—Professor, Ven. R. W. Browne, M.A.; Lecturer, H. Daniel, Esq. B.A.; Assistant Lecturer, Rev. J. J. Heywood, M.A.
Mathematics.—Professor, Rev. T. G. Hall, M.A.; Lecturer, Rev. T. A. Cook, M.A.; Assistant Lecturer, Rev. W. Howse, M.A.
English Language and Literature.—Professor, the Rev. J. S. Brewer, M.A.
Modern History.—Professor, C. H. Pearson, M.A.
French.—Professor, A. Mariette, and M. Stievenard, Lecturer.
German.—Professor, Dr. Bernays.
There are also Professors for many of the Oriental Languages.
For the Prospectus apply to J. W. CUNNINGHAM, Esq., Secretary.

KING'S COLLEGE, London.—DEPART- MENT OF APPLIED SCIENCES.—LECTURES COM- MENCE October 1, in—

1. The Engineering Section: for young men hereafter to be engaged in Civil and Military Engineering, Surveying, Architecture, and the higher branches of Manufacturing Art.
2. The Military Section:—A. For those intending (a) to compete for admission into the Military Academies; (b) or to pass the examination for commissions. B. For officers wishing to prepare themselves for staff appointments, or to compete for admission into the Royal Military College at Sandhurst.

NAMES OF PROFESSORS.
Divinity.—The Rev. the Chaplain.
Mathematics.—Professor, the Rev. T. G. Hall, M.A.; Lecturer, Rev. T. A. Cook, M.A.; Assistant Lecturer, Rev. W. Howse, M.A.

Natural Philosophy.—Professor Maxwell, M.A.
Arts of Construction.—A. Mosler, Esq.
Manufacturing Art and Machinery.—Professor Shelley.
Land Surveying and Levelling.—H. J. Castle, Esq.
Drawing.—Professor, T. Bradley, and Lecturer, F. A. Bradley.
Chemistry.—Professors, W. Miller, M.D., and Bloxam.
Geology and Mineralogy.—Professor Tennant, F.R.S.
Workshop.—G. A. Timme, Esq.
Photography.—Thomas Sutton, Esq. B.A.
Topographical Drawing, Fortification, Military Surveying, Military Law, the Science of Artillery.—Major Griffiths, R.A., Professor.

French.—Professor Mariette, M.A., Professor, and M. Stievenard, Military Tutor for History, Classics, &c.—Rev. J. O'Reilly, M.A.

NATIONAL ASSOCIATION for PROMOT- ING FREEDOM OF PUBLIC WORSHIP in the CHURCH

OF ENGLAND, by the ABOLITION of the PEW SYSTEM and the REVIVAL of the WEEKLY OFFERTORY.

Resolution passed at the Annual Meeting, WILLIAM JAMES GANNETT, Esq. M.P., Chairman of the Executive Council, in the Chair:—

"That in order to provide Funds for the effectual carrying on of the Free Church Movement throughout the Kingdom, a Guarantee Fund of 1,000l. shall be subscribed for, in sums of 1l. and upwards, to be paid by two instalments, during the Year 1861."

The "General Committee on the Pew System" already consists of upwards of 400 Clergymen and Laymen throughout the United Kingdom.

Papers on the Pew System and Offertory, suitable for circulation in Parishes, Forms of Petition, Lists of Subscribers, &c., may be obtained on application to the Hon. Secretaries, Rev. J. W. H. Molyneux, Sudbury, Suffolk; Rev. W. W. Malpas, Vicar of Arley, Herts; R. Brett, Esq., Stoke Newington; E. Herford, Esq., Manchester.

Members' Subscriptions (Half-a-Crown and upwards) may be paid to the Bankers, Messrs. Cunliffe, Brooks & Co., London and Manchester; or to any of the Officers of the Association; and all sums received are announced in the 'Church of the People and Open Church Circular,' (2d. monthly.) Kent & Co. London.

The names of Clergymen and Laymen willing to aid in forming Branch Societies will be gladly received by the Secretaries.

THE QUEEN:
AN ILLUSTRATED JOURNAL AND REVIEW.

Men of all classes in England—the Clergyman, the Student, the Schoolmaster, the Man of Letters, the Artist, the Merchant, the Artisan—have Journals written especially for them; but for the whole mass of Educated Women not a single Paper of value exists. Under the title of 'THE QUEEN,' a Journal for English women is now in preparation. The first Number will appear on SATURDAY, September 7. 'THE QUEEN' is simply intended to be for Educated Women what certain high-class Journals are for men—recording and discussing from week to week whatever interests or amuses them. There will be a large number of original articles on the Daily Life of Society, its Manners and Morals—on Books, Music, and the Theatre. Considerable space will be devoted to the Amusements which Ladies most pursue, at home and abroad; while, as for its *mode*, 'THE QUEEN' will be the earliest and most accurate chronicle of all its changes. The Engravings in 'THE QUEEN' will really illustrate the Events of the Day, and give point to whatever Topics happen to engage the public mind. No expense and no trouble will be spared in their preparation.

Interesting Supplements will appear every week. With the first Number will be given a PLATE OF THE FASHIONS (printed and painted in Paris), and a genuine PHOTOGRAPH OF HER MAJESTY QUEEN VICTORIA. These Photographs (not Engravings from Photographs) will be suitable for framing, being elegantly mounted on tinted card-paper. They will be executed by Mr. Mayall, of Regent-street—a sufficient guarantee of their excellence. Other interesting Supplements—already in preparation in Paris, Brussels, Berlin and Leipzig, as well as in London—will exhibit the most charming specimens of Fine-Art Printing ever seen in this country. The first Number will appear on SATURDAY, September 7, price SIXPENCE.—To be had of all Booksellers and Newsreaders; also on receipt of Six Stamps, from the Office,
243, STRAND, LONDON, W.C.

THE ART-JOURNAL for SEPTEMBER, price 2s. 6d., contains Turner's *PHRYNE GOING TO THE BATH*, Guido's *DEATH OF CLEOPATRA*, and Noble's *ANGELS*.

MEMORIALS OF THOMAS HOOD. Col-
lated, Arranged, and Edited by his Daughter, with a Pre-
face and Notes by his Son. Illustrated with many Copies from
his own Sketches, and of a MS. Page of 'The Song of the Shirt.'
"The most elaborate biography could not give a better idea of
Thomas Hood than we obtain from the simple Memorials now
published.... These letters perfectly reflect his character, with all
its fun, geniality, and tenderness.... Much or little, however, all
is well done.... The work is a complete success."
—*Times*, Sept. 7, 1860.

Edward Moxon & Co. 44, Dover-street.

THE OXONIAN in ICELAND; or, Notes

of Travel in that Island in the Summer of 1890: with Glances at Icelandic Folk-Lore and Sagas. By the Rev. FREDERICK METCALFE, M.A., Fellow of Lincoln Coll. Oxford; Author of 'The Oxonian in Norway,' &c.

"Mr. Metcalfe has brought home a capital budget from Iceland. The work as a whole is fresh and very entertaining. The concluding chapter, on the way and cost of travelling in Iceland, is minute and practical enough to be of great value to any member of the Alpine Club or other adventurer who wishes to understand the relations of the ground to his purse before he starts from England. Some of the sketches of character, too, are admirably done. But the great interest of the book lies in the impression it gives of the story-telling spirit of the Icelanders, and of the northern gloom that hangs over his superstition." *Examiner*.

London: Longman, Green, Longman, and Roberts.

COMPLETION OF DR. G. SMITH'S HISTORY OF METHODISM.

Now ready, in crown 8vo. price 10s. 6d. cloth,

HISTORY OF WESLEYAN METHODISM:

Forming part of the new School Series projected and edited by the Rev. G. R. GLEIG, M.A., Chaplain-General to H.M. Forces.

London: Longman, Green, Longman, and Roberts.

EXAMINATION FOR GOVERNMENT CERTIFICATES, 1861. LONDON UNIVERSITY DEGREES, 1862, &c.

Now ready, in 12mo. price 5s. 6d. cloth,

SHAKESPEARE'S MERCHANT OF VENICE: With Introductory Critical Comments on the Play and its Chief Personages; and numerous Notes, Illustrative and explanatory of the Text. Adapted for Scholastic or Private Study; and especially for the guidance of persons qualifying for University and Government Examinations. By the Rev. JOHN HUNTER, M.A., formerly Vice-Principal of the National Society's Training College, Battersea.

The immediate purpose of this edition of the *Merchant of Venice*, is to assist students who are graduating for the London University B.A. Examinations of 1862, and those qualifying for the Government Certificate Examinations of 1861. In the preparation of the *Merchant of Venice*, the editor has had no such aid as was supplied to him for the *Julius Caesar* and *Henry VIII.* by North's Plutarch, and the Chronicles of Hall and Holinshed. The present play, therefore, as compared with the two others, has demanded a greater amount of reflection,—a more careful attention to the felicitous language of the dialogue, the surprising knowledge of human nature, and the skilful evolution of the plot, exhibited in this play in a degree of excellence approached by no other dramatic writer:—critical and poetic merits which a youthful student cannot be expected to appreciate without a commentary. It is hoped that no difficulty in Shakespeare's language is here left without elucidation or comment; that many of his expressions, possessing a force or import very liable to be overlooked, have received original illustration; and that his allusions to Scripture, classical antiquity, peculiarities of his own age, &c., will be found distinctly

London: Longman, Green, Longman, and Roberts.

Circulated Free by Post to the MEMBERS and SECRETARIES of BOOK CLUBS and READING SOCIETIES, and, on application, to READERS in GENERAL.

Now ready, in 4to. pp. 24, No. XXVI., AUGUST, 1861,

the high aims and profound statesmanship of Cardinal Julian."
Saturday Review.

**THE POPULAR SEA NOVEL, READY AT EVERY
LIBRARY.**

VONVED the DANE:
THE ROVER OF THE BALTIC.

OPINIONS OF THE PRESS.

MORNING POST.

"This is a great book, both in conception and execution, which
in its own school has no rival. Victor Hugo might be proud to
have written some of its chapters: he has never written anything
more thrilling or more terrible; and Dumas himself, so powerful
in describing prison scenes, has not exceeded this writer in his
account of the Rover of the Baltic."

REV.

"This strange and stirring story will certainly attract atten-
tion."

BELL'S MESSENGER.

"A novel of immense power and variety."

UNITED SERVICE GAZETTE.

"As a romance of the sea, equals some of the most esteemed
works of Marryat."

London: RICHARD BENTLEY, New Burlington-
street,
Publisher in Ordinary to Her Majesty.

WILLIAM WILSON'S POEMS. SECOND EDITION.

Just published, in fcap. 8vo. price 8s. cloth.

GATHERED TOGETHER: POEMS.

By WILLIAM WILSON,
Author of 'A Little Earnest Book upon a Great Old Subject; or,
Chapters upon Poetry and Poets'; 'Such is Life'; 'Sketches
and Poems'; 'A House for Shakespeare,' &c. &c.

OPINIONS OF THE PRESS.

The Examiner.

"The generous sentiment of these poems is real. His verses,
written in sympathy with the struggles of Italian or Hungarian,
are often vigorous in their manly sincerity, and in the domestic
songs matches of graceful music frequently occur."

The Press.

"Mr. Wilson certainly displays taste and feeling, and a com-
mand of harmonious rhythm. In our opinion, he writes with ease
and elegance. We especially recommend the description of a
sunset by the sea-shore, at page 42."

Literary Gazette.

"There are some brilliant touches in these poems. The Author
has no mean poetic power. The last poem in the book is one of
great beauty."

The Leader.

"Mr. Wilson has a decided lyrical vein. He thinks loftily and
feels intensely."

The Critic.

"We are glad to see that the public has received Mr. Wilson's
'Gathered Together' with sufficient favour to necessitate the issue
of a second edition."

Bell's Weekly Messenger.

"In this volume Mr. Wilson has added to his acknowledged
claims as one of the best poets of the day. It is refreshing to
come upon such pages as 'Gathered Together' contains. In some
of the pieces the writer rises to a Tennysonian altitude in his
power of description."

The Observer.

"A fine and lofty spirit pervades these pieces, one and all; but
those which deal with 1848 rise into political eloquence of the
highest order. The 'Sonnets' are very elegant specimens of what
may be done with the English tongue in this peculiar structure of
verse. They are animated by noble sentiments, expressed in
sonorous language, and are in every respect worthy of praise."

The Bookseller.

"We must admit that he exhibits considerable skill in the art
of versification, great command of language, and a highly culti-
vated mind. We are glad to find this pleasing volume has reached
a second edition, a success which has rarely occurred to any new
poet, unless his productions are considerably above the ordinary
standard."

The Court Journal.

"It is refreshing to find one work among a thousand in which
originality is at least attempted, and interest embodied—such is
this book. He aims at originality in his thoughts and in his dic-
tion, and we may safely say he has succeeded. He has 'gathered
together' a collection of the highest merit."

The Morning Post.

"The author of 'Gathered Together' is already favourably
known in the literary world. The present volume will not detract
from his previous reputation."

The Morning Chronicle.

"Some of the poems display considerable merit."

The Morning Advertiser.

"When the first edition of this volume appeared, we gave it well-
merited praise; and now that a second edition has been called for,
the result of a second perusal has been to increase instead of
diminishing the approval with which we first read its pages. It
displays a happy combination of intellectual culture and poetic
appreciation."

The Daily Telegraph.

"Mr. Wilson is a poet with great freshness of feeling and a
considerable elegance of style. On reading for the first time the
selections which he has published, we felt convinced that he pos-
sessed greater power than he has yet put forth. This opinion
was confirmed on a second perusal. His thoughts are fervid, and
even passionate; his imagery is natural and familiar; he is never
at a loss for appropriate language, and he understands the prin-
ciples of versification. Each feeling is gracefully expressed, and
the harmony of the lines faultless. In his 'Sonnets' he exhibits
great taste."

The Era.

"Mr. Wilson is unquestionably possessed of high poetic feeling,
and a free and fearless mode of thought, and he moulds his fancies
into elegant verse. In the collection before us we recognize some
old friends and favourites. 'The Release,' 'My Favorite Tree,'
and 'Nevermore,' are very charming. Our poet is a deep lover of
freedom."

The Morning Star.

"This author possesses some of the finest attributes of the true
poet. And a true poet Mr. Wilson undoubtedly is, and true poetry
is much of that which he has here 'gathered together.' Some of
the pieces, indeed, might be owned by the best writers of the
present day. Collections of beautiful thoughts, happily expressed,
will find in this volume a fruitful store."

The Illustrated London News.

"Many of his songs strike us as being well adapted for music,
by which we mean no little praise. The writer may, perhaps, take
this hint."

John Bull.

"Mr. William Wilson is the author of several books. Many a
graceful fancy and earnest thought is scattered up and down these
pages."

The Weekly Dispatch.

"This is not the first clever production of this Author we have
had occasion to praise, and we are enabled, very conscientiously,
to endorse our past commendations upon the book of poems now
before us. The excellence of this writer is perhaps to be found
most freely developed in the characteristic 'Sonnets.'"

The Illustrated News of the World.

"Mr. William Wilson is very favourably known as a writer of
both poetry and prose, and 'Gathered Together' will add to his
reputation."

London: LONGMAN, GREEN, LONGMAN,
and ROBERTS.

LONDON, SATURDAY, AUGUST 31, 1861.

LITERATURE

Memoirs and Correspondence of King Jerome and Queen Catherine—[*Mémoires et Correspondance du Roi Jérôme et de la Reine Catherine*. Première Partie]. (Paris, Dentu.)

RECENT French trials have given to the early days of King Jerome the interest of romance. Jerome was a naughty boy, and his naughtiness led him into scrapes which had their comic and their tragic sides. The law courts of his nephew have, indeed, been very kind to him, and very hard upon the beautiful young lady whom he betrayed and abandoned; but opinion in Europe is not yet governed by the Code Napoléon; and hence appears to have arisen a necessity for some further literary defence of Jerome's conduct, and especially of his engagement with Elizabeth Patterson. It would almost seem as if M. Alexandre Dumas had been selected for this delicate work. The success is not great. All the Chinese puzzles ever invented, all the hard riddles offered under penalties by the Sphinx, all the hard tasks laid upon victims in fairy tales or out of them, were easy matters compared to the difficulty of transforming King Jerome into a hero. In fact, the task is no less than to make something out of nothing:—*où il n'y a rien le roi perd ses droits*.

In the beginning Jerome is presented, in the Dumas fashion, as a student, at the College of Juilly—a spoiled, noisy, troublesome boy, whose escapades are told in the delicate paraphrases to which the French language lends itself so blandly that a foreigner might imagine the chief end for which it was created was to colour and soften ugly facts with its delicately-tinted epithets. The art of dress is as much shown in the French language as in the French fashions. "Endowed with an agreeable, elegant and admirable appearance, full of impetuosity, Jerome at fifteen was the spoiled child of the First Consul, whose paternal watchfulness was defeated more than once by the unconsidered acts of this ardent and decided nature."

The "ardent and decided nature" exhibited itself in the ways by which prodigal sons have distinguished themselves from time immemorial; an unlimited faculty for spending money, getting into debt and disgrace, varied in Jerome's case by an occasional duel, the folly of which was only to be equalled by its ferocity. The English reader will find as much difficulty in understanding the author's account of the political events of the period as if they were "wars in Flanders." But, as all the political events are made subservient to the hero, and serve only as a background and *mise-en-scène* for Jerome, to enable him to assume a pose, the historical unities are not of much importance; they bear as much resemblance to actual facts as the cannon's smoke and dead soldiers represent the battle raging behind the Marquis of Granby on a village sign-post. Jerome was sent to join the French fleet about to sail under Admiral Ganteaume. Jerome was on board the Indivisible. The fleet sailed about for some time up and down in the Mediterranean, without doing anything particular, except allowing some of their vessels to be captured. Frenchmen are not in the least amphibious, and the author's maritime facts are very hazy. The French fleet sails, in these pages, hither and thither; and the reader will be as perplexed as Nelson if he struggles to understand what they are about.

Jerome saw his first battle, and was rewarded by being sent home on board the prize *Swiftsure*, an English vessel captured and brought

home in pomp; and on his arrival he received commendation, and the commission of an aspirant of the first-class. Napoleon, however, wrote a significant letter to his brother, expressing a hope that he would give his whole mind to learn his profession; that he would go aloft, learn the different parts of a ship, and suffer no one else to do his work. He expresses a hope that Jerome, in time, will become "*aussi agile qu'un bon mousse*."

Jerome assisted at the *fêtes* given to celebrate the brief peace, or rather armistice, which occurred as a lull in the great war. The "*éclat incomparable*" which, according to the author, these rejoicings shed upon the name of Bonaparte, and the "*scènes magiques*" which Paris presented to the whole world (for Paris has always understood the art of getting up *spectacles*), completely turned the head of Jerome; he was the fly on the chariot-wheel in all his glory: "*le trait dominant de son caractère, le sentiment profond de sa dignité personnelle*" received a great accession of force. But before it had time to come to its full growth, Napoleon sent him once more to sea. This time it was the expedition to St. Domingo. The wretched story has been often told; it receives no fresh illustration in these pages; it only becomes more confused in blood, and smoke, and horror. Jerome was again allowed to come home with despatches; and the reader will smile at the tone of delicate deprecation with which the author hints that Jerome got into all the mischief possible during the month he remained at Paris. Napoleon sent him to sea again at the end of a month, but Jerome contrived means to remain at Nantes, and to amuse himself for two months, and when, at length, he tardily embarked, a convenient storm drove him back to port. The difficulty of getting Jerome afloat was like that of launching the *Great Eastern*. At length he sailed, and arrived at Martinique; where, utterly incompetent, and caring nothing for his profession, he was made captain of the brig *Epervier*. He had an attack of yellow fever, which gave him a final disgust for the hardships of a sailor's life, and he expressed a very distinct desire to give up his commission and get rid of the whole concern, which the stony-hearted admiral refused to grant. It was, however, evident that Jerome was unfit to be intrusted with the destinies of a herring-boat. Under his command the *Epervier* was in the most miserable state; betwixt the sickness and the desertion of the men, it needed to be entirely refitted. Jerome was recalled to France, but, with his usual self-will, he had now no inclination to go; he was amusing himself at Martinique, where he found a childish pleasure in being treated "with the distinction due to the brother of the First Consul." He was the torment of his admiral, Villaret Joyeuse, who only desired to get him safely off. At last, after repeated orders, he sailed; but scarcely had he left the shore than he contrived seriously to insult an English man-of-war out of pure insolence and heedlessness. Alarmed, however, at the possible consequences of what he had done, Jerome returned to Martinique; and the admiral, who believed him well on his voyage, had the vexation to see him come back with a folly on his hands which was likely to have serious consequences.

Not in the slightest degree abashed, Jerome was glad of anything that sent him on shore. He hated responsibility, but he delighted in receiving the official demonstration of respect due to him as commander of a vessel of war and brother to the First Consul. He was enchanted when the Governor of Martinique

received him with all the garrison turned out under arms. Jerome was a *parvenu* to the backbone, and his vulgarity was engrained. To appear in a state carriage, to receive attentions from high personages, to be flattered, to spend unlimited pocket-money, to have nothing to do but to go to *fêtes* and public amusements,—these were his notions of royal felicity. The author does not narrate one single trait of youthful generosity, or manly ambition, or rational common sense. Jerome had the unmitigated selfishness of a prince of the days of the "right divine of kings to govern wrong;" but he entirely lacked the royal grace and princely manner with which kings who have left but a sorry name in history conciliated, personally, the good will, and propitiated the patience of their subjects.

Jerome cared nothing for the opportunities offered to him of obtaining distinction; the duties of his profession were a weariness to him; he even wished, as we have seen, to give up the command of his vessel—because it entailed duties. The admiral, exasperated at Jerome's stupid discourtesy to the English flag, ordered him to return at once to France. War was on the point of breaking out, but the peace, though strained to extremity, had not actually been yet broken, and the French admiral did not want to get into a quarrel. Jerome, fertile in expedients for avoiding what he disliked, wrote back excuses, and delayed his departure till it became impossible. The admiral, at his wits' end, and anxious to be quit of him at any rate, yet fearful of his being made prisoner, gave him permission to go to America. Jerome asked nothing better; and to America he went. The biographer, previous to naming the spot where Jerome landed, proceeds to give a description of the attitude assumed by his hero. He says:—

Jerome had scarcely set foot in the American territory than he began to give himself the privileges, manners, and airs of a prince, tempered only by the incognito which he at first assumed. As to his opinions and his conduct, he set them resolutely above all remonstrances and censure from any quarter whatever: *L'audace et toujours de l'audace*.

Jerome, it must be owned, had that quality for success in perfection. The point at which Jerome landed in the "*Etats Unis*" was Norfolk, in Virginia; he was accompanied by three companions, whom he called "*his suite*." He repaired to Washington, and announced to the French consul that he must find the means to convey him and his *suite* to France—a matter by no means easy, seeing that by that time war had been declared between England and France; English vessels were on the watch to do all the harm they could to French ships, and intrinsically worthless as was Jerome in himself, still, as brother to the First Consul, he would have been a prisoner worth making. The poor French consul, Pichon by name, with a vivid prevision of all the difficulties about to encompass him, made an effort to get Jerome off before his presence became known. He plaintively entreated him to guard a strict incognito. Jerome promised; but, with his vanity, was quite unable to keep the promise. He went to Baltimore whilst the consul endeavoured to make his arrangements, and, at the end of three days, everybody in the city knew that the vain-glorious and flashy young Frenchman was no less than brother to the First Consul of France.

"*Les Etats Unis*" were enchanted to find that such a celebrity had come to visit them, and hastened to offer the homage that was dear to Jerome's heart; they took him at his own valuation. Jerome was flattered and

fitted to the top of his bent; and he took it all as a just tribute to his merits. One incident deserves special mention: the hotel-keeper at Washington, whose name was Barney or Barnum, saw at a glance all the capital that might be made out of Jerome; and he took entire possession of him, followed him, flattered him, and showed him off everywhere. The coincidence of name and nature is curious. Jerome lent himself to his tactics, considering him only as an humble satellite. Barnum's reputation was not good, and the French consul Pichon felt it his duty to warn Jerome against his unbecoming intimacy with this man, a counsel which Jerome highly resented, haughtily desiring Pichon to mind his own business, as he, Jerome, was capable of taking care of himself! Pichon *se tint pour dit*, and could only put up his prayers that he might be speedily delivered from the presence of so troublesome a charge, for whose safety he was responsible, and over whom he had no control. All Baltimore was in a state of excitement; all the pomps and vanities that money and enthusiasm could procure were lavished on Jerome, and he enjoyed his position. There were difficulties in the way of obtaining a passage for Jerome in an American vessel, difficulties which Jerome was more inclined to enhance than to obviate; he was, for the first time in his life, entirely his own master, and he was in no haste to return to France, to the subjection of his brother, whose reproofs he was conscious of deserving, and quite certain of receiving. He gave himself up to all the gaieties of the season, obtaining, from time to time, a little money from Pichon; but as all Baltimore only asked for the honour of giving him unlimited credit, it may be conceived

How happily the days of Thalaba went by.

Amongst the belles of Baltimore, a certain Miss Patterson reigned supreme. She was extremely beautiful, as all contemporary testimony declares; she was agreeable, witty, clever, and ambitious;—in short, Miss "Betsy Patterson," as the biographer calls her, was fully aware of her own charms, and determined to draw a good result from them,—she loved admiration, and she desired to obtain a position of distinction. Her character was not unlike Jerome's, in her love for all the vanities of life; but she was beyond measure his superior in energy, sense and spirit. She was very vain, and very fond of admiration, of which she received enough to turn a reasonable woman's head. She desired to shine in a wider horizon. Jerome was the brother of the hero who was master of the Tuileries, and who could, when he pleased, inhabit Versailles. To go to Paris, to have apartments in a palace, to set French fashions and enjoy the delights of unlimited milliners' bills, was a prospect well calculated to dazzle a young girl. Miss Betsy was "beautiful exceedingly," her worst enemies never accused her of being otherwise; with all her vanity "she was a woman of the strictest principle"; her father was a rich merchant, well known and well respected; all her family belonged to that *quasi*-American aristocracy "the upper ten thousand," though it had not then received that compendious name.

In birth, parentage, fortune and education she was Jerome's equal,—in intellect and character she was his superior; but then she had no brother of genius capable of raising his family out of the middle class into the ranks of a reigning dynasty. Napoleon had already risen so high as to make it a dazzling honour to any not born to royal legitimacy to be connected with him; he might soar still higher, but his balloon had not yet passed out of hail, nor quite out of the reach of those still standing on their natural level;—there was yet one brief

moment, when a fortunate and audacious spring might take the aspirant into the ascending car, or, failing, break his neck. Jerome at Baltimore was in the zenith of a vulgar success; all the distinction that Baltimore could offer was given to him;—he was young, lively, tolerably good looking, and well endowed with the quality for which the Puritan divine once innocently prayed, as a crowning grace, "a good conceit of himself." If "Miss Betsy" had any female susceptibility she might be excused if she fell in love with the hero of so much homage from those who made up the whole of her world. Falling in love with a popular hero or a popular clergyman is as much of an epidemic as hysterics among a parcel of school girls. Nothing but the spirit of contradiction and a great deal of good sense can resist the force of example. Jerome fell violently in love with "Miss Betsy," and proposed marriage; she accepted the offer, which made her the envy of all the women in Baltimore. Mr. Patterson, the father, in consideration of the connexion, was willing to overlook Jerome's want of actual fortune, and gave his consent. The Spanish ambassador and the Barnum before mentioned, were Jerome's confederates in the affair; both of them were amiably anxious to promote his views and prevent his thinking of difficulties.

Pichon had been in great perplexity and trouble of mind ever since destiny had sent Jerome to take refuge in America. Pichon's only aspiration was to keep Jerome quiet and to get him safely away. It was hopeless to try to make Jerome quiet, he was bent on producing himself in the most flagrant splendour at every moment, assuming the nonchalant dignity of a Prince in disguise, spending money and ordering about as though he had been the last incarnation of "My Lord Marquis of Carabas." To get him away in safety, even if he would have consented to go, was a matter of great difficulty; for English frigates, quite aware of his presence, were hovering about the coast, on the watch for every French vessel which attempted to leave port. The American Government could not, without violating its neutrality, give a passage to Jerome in one of their own vessels, nor in any case do more than shut their eyes. Jerome, who was a caricature of his brother, possessing all the Bonaparte imperiousness of will, though it was never shown except in matters which touched his own inclination, had declared that nothing should induce him to go back to France in any vessel of less dignity than a man-of-war. Pichon did his best; he got a small armed brig, called *Le Clothier*, ready for sea. A fortunate moment offered for her to get away: Pichon entreated Jerome to embark without delay. But Jerome, who by this time was over head and ears in love, and had matrimonial intentions, declined the invitation to repair on board *Le Clothier*, but he wrote despatches to his brother, which he sent by the vessel, announcing his own intention to remain in America until he should receive a reply to them! Pichon was driven to the verge of madness and grey hairs, though the author tells us that he felt a secret pride to see the ease and dignity with which Jerome represented France. Jerome Bonaparte must have been the original from whom Alexandre Dumas has drawn his heroes.

On the occasion of a visit Jerome paid to Washington, the President Jefferson invited him to a grand dinner. Jerome, who took all marks of attention as his due, treated the American President with dignified affability, and charmed the company with his conversation. The next morning, as he was stepping into his carriage to return to Baltimore, he turned to

Pichon, who stood by, and said, with serene negligence, "It is my intention to be married on the 7th of November next, at Baltimore, to Miss Patterson. I invite you and Madame Pichon to be present on the occasion." Having launched this thunderbolt, he drove away. It required a day and night for poor Pichon to recover his scattered senses. It was now the 28th of October—the Consul-General could do nothing but protest. He wrote three letters—one to Jerome, one to Mr. Patterson, and one to the consul in Baltimore, declaring that by the French Code any marriage contracted by a French subject under the age of twenty-five, without the consent of parents and guardians, was null in France. On the receipt of these letters Jerome was furious, and uttered invectives against Pichon; but papa Patterson was dignified: he broke off the match, and sent his daughter away from home. Jerome was apparently brought to reason by Mr. Patterson's representations; he offered an apology to Pichon for the unparliamentary language he had used towards him in the heat of his displeasure; he professed to see his error, laid all the blame upon the undue influence which had been brought to bear upon him, and especially accused the false counsels of the Spanish ambassador, Mr. Barnum, and a certain General Smith. Jerome even condescended to beg Pichon *not to mention the affair* when he wrote home. Pichon ought to have mistrusted this sudden submission; but he was flattered at the success of his eloquence: and he wrote to Talleyrand a self-glorifying despatch about his own promptness, decision and success. Jerome set out on a tour to dissipate his chagrin. Pichon renewed his efforts to persuade him to leave America; but in vain. Admiral Willaumez sent official orders to him to depart; but Jerome only repeated his intention to await the answer from his brother to his despatches. They could not bring their horse to the water, much less make him drink.

Jerome went on his tour. New York received him with demonstrations of ardent admiration, and gave him *fêtes*, and balls, and entertainments to his heart's content. For three weeks Pichon's heart remained at ease; but on the 25th of December, 1803, he received a brief official announcement that Jerome had been married to Miss Patterson on the previous evening as fast as the Church and the paternal benediction could unite them! They were man and wife by all that was sacred and indissoluble. Bishop Carroll, the Roman Catholic Bishop of Baltimore, performed the ceremony. Joined to the announcement of his marriage was a notification that Jerome wanted money, which Pichon was to furnish immediately.

All things to God are possible save one—
That to undo which is already done.

The marriage was regular and legal in every particular; and Miss Betsy Patterson was, as far as rites and ceremonies could make her, the lawful wife of Jerome Bonaparte, and qualified to share all the honours of his rising star. Jerome had a shrewd notion of the manner in which the news would be received at home; and, with characteristic dislike to everything unpleasant, he left the task of announcing it to Pichon and Admiral Willaumez.

The French Consul thought it his duty to make the best of an accomplished fact, and made a merit of effacing the memory of his opposition by treating Madame Jerome with every formality of official respect. Without troubling themselves about any evil day that might be in store for them, the newly-married pair proceeded to enter into "all the gaieties of the season" at Baltimore. American society felt flattered at the choice of Jerome; and

made an apotheosis of both bride and bridegroom. Nothing but the splendours of the last scene of a pantomime could express the glitter and glory that surrounded them, although the smell of brimstone, and the danger from rockets and red-fire, were unpleasantly apparent through all. What *would* the First Consul say? Nevertheless, France was a long way off, and they could not hear what was said for a long time.

On the 18th of May the news came that Napoleon had been declared Emperor. Madame Jerome was possibly a Princess! From the moment Jerome heard of his brother's elevation, he began to be as restlessly impatient to get back to France as he had hitherto been obstinate to remain. He was, however, afraid to face his brother; and he had passed his word to the Pattersons that he would not leave America until his marriage had been recognized. Papa Patterson promised that when the time arrived for his departure he would show that he was not a father-in-law to be despised, by sending Jerome and his wife to Europe in a vessel of his own, and in a style befitting his rank; but Jerome's desire to remain in America had waned: he wanted to go and share his brother's grandeur in Paris, and be a real prince of the blood.

Napoleon's reply to the announcement of his brother's marriage had not yet been received in America. Napoleon had been First Consul when the news reached him—he was Emperor when he replied on the 9th of June, 1804. He entirely declined to recognize the marriage, taking his stand on the then recent law of the “year xi—12th of the month Pluviose,” which in the language of mortals signified the 13th of February, 1803; prohibiting French subjects under the age of twenty-five to contract marriage without the consent of parents or guardians. The orders to Pichon and all French officials were short, sharp, and decisive. Madame Jerome Bonaparte was recognized as Jerome's mistress, and as such was not to be treated with any marks of respect; and French vessels were forbidden to afford her a passage; if she attempted to enter France with Jerome, orders were given that she should be arrested and conveyed back to America. As to Jerome himself, he was ordered to return home immediately. A pension was offered to *Miss Patterson* of sixty thousand francs a year, on condition that she never assumed the name of Bonaparte or molested Jerome.

If taking matters with a high hand could have overcome difficulties, Napoleon would have borne them down. Except the local enactment, which only held good in France and only regarded French subjects,—the law of marriage as recognized not only by the Catholic Church, but by the consent of Christendom, made the marriage contracted at Baltimore by Jerome and Miss Patterson valid in every respect,—as valid as the canons of the Church could make it. It remained to be seen whether the will of the Emperor or the decree of the Church were the stronger. If Jerome could only be firm, the marriage must hold good—recognition or no recognition.

But Jerome could be true to nothing, except his own inclination. He was not a worse man than Napoleon, but he was a Fool,—a fool who could see nothing, feel nothing, care for nothing beyond the gratification of the whim of the moment. All that he inherited of the strong inflexible Bonaparte will was concentrated in the gratification of his own vanity and his own sensuality. He had had his whim pretty well out in regard to Miss Patterson—he had married her in spite of opposition, but he had been married to her for six months past. To go back to France at any risk, to

be the “brother of the Emperor,” was the idea that now possessed him. His wife was becoming a clog and an incumbrance. He had, however, to deal with a father-in-law who was as determined in his way as Napoleon. Jerome found that he would not be allowed to leave America without taking his wife with him. No French vessel dared to give her a passage; but papa Patterson chartered at his own expense a fine vessel called the *Philadelphia*, on board of which, Jerome, his wife, and her relative Miss Spear, embarked, with the greatest secrecy.

But, as the old ballad sings:—

They scarce had sailed a league, a league,
A league but barely three,
When dark dark grew the foaming sea.

—In plain prose, they encountered a heavy gale and were shipwrecked, the passengers escaping, though much of the baggage and all Jerome's money were lost. If the case had been reversed, and Jerome had sunk to the bottom of the sea instead of his effects, it would have been a solution that would not have called forth tears. The unhappy Pichon, for whose sins Jerome had surely been sent to America, had only just heard authentic tidings of his departure, when he was thrown back into all his troubles by the news of his shipwreck and—escape! His troubles, however, drew near their end; for Jerome was now quite as impatient to depart as Pichon could be to get rid of him. He made another effort to obtain the dignity of returning in a vessel of war, as became a new-made prince of the blood of the Emperor, but inexorable fate and the strict watch kept by English vessels made this impossible. He did at last what he might have done at first;—with the consent of his father-in-law, he took a passage in an American merchant vessel, bound for Portugal, and embarked with his wife and secretary. The vessel arrived quite safely at Lisbon. The French Consul refused a passport to Madame Jerome, and wrote to Paris to announce what he had done.

Jerome had shown some skill in the art of tormenting consuls, and he had never submitted to any reasoning or representation which led contrary to his inclinations. No considerations had withheld him from making Miss Patterson his wife on the 25th of December 1803, and no considerations of his duty as a husband or the common considerations of humanity towards a woman about to become the mother of his child, withheld him from abandoning her, in a strange country, where she had neither friends nor relatives, where her position was more than equivocal, and where if she were not in want of the necessities of life, it was no thanks to Jerome, who made no provision for the protection or support of an extremely beautiful woman of seventeen whose physical condition rendered a return to her own country and her father's house impossible. He left her almost immediately on arriving at Lisbon, professedly to throw himself at his brother's feet and prevail upon him to forgive the marriage. His subsequent conduct proves that he never had any intention to embarrass himself further with her whom he had married; he showed himself as self-willed and inconsequent in running away from difficulties as he had been in running into them.

Jerome set off in hot haste to present himself before his brother, who was at Turin. For eleven days he was kept waiting for an interview; during this time he wrote a letter of abject submission, consenting to be governed in all things by the will of the Emperor, and to recognize his own marriage as absolutely null, not even requiring to be dissolved. Napoleon wrote an order to Jerome, that he himself

should announce to his wife that he had of his own free will recognized that his marriage was and had been null from the beginning.

In return for this unqualified submission, Jerome was graciously pardoned and restored to his brother's favour. Jerome's consent once given, all manner of official acts and declarations were set forth to show how entirely null the marriage had always been, and the offspring illegitimate beyond redemption.

France was not all the world; and the Imperial decrees, although they deprived Madame Jerome of all the advantages she had hoped for from her connexion with the Bonaparte family, neither reduced her to obscurity nor tarnished her name. The Pope declared the marriage binding beyond his power to annul it; and the rest of Europe recognized in Madame Jerome the victim of arbitrary power.

She and her husband never met again after they parted at Lisbon, less than seven months after their marriage. She went to England, where she was received with much kindness and sympathy, and in England her son was born, whom she had baptized as Jerome Bonaparte. She afterwards returned to America. That her conduct and character were always above the power of scandal to impugn, was no thanks to Jerome,—a weaker woman or a less worldly one would have been entirely crushed by such treatment as she had received. Madame Jerome was equal to her situation: she would doubtless have made quite as good a princess as any of the temporary royalties Napoleon loved to create, as though they had been the flowers and garlands of his more solid efforts of power; but, apart from this mortification, she made all the gain possible out of her position. She accepted the handsome pension allotted to her by the Emperor, and lived in such amicable relations with the family, as to give a great colour of probability to her present claim on the estate of Prince Jerome. The loss of such a husband could be nothing but a gain to her. She seems to have been a woman who, like Bussy Rabutin, *n'aimait que le solide*. A very proud sensitive woman would have refused to accept the Emperor's pension; but she judged it best to take it. Poverty was not added to her other vexations. As for Jerome, he was through life a fool and a poltroon. The fine epithets and sentimental phraseology in which the courtly editor of these *Memoirs* dresses his conduct does not disguise the very ugly look of his actions, both public and private. On his submission Napoleon sent him once more to sea, and there he distinguished himself by his entire inability either to obey or to command. He was the torment of his admiral, as he had been of the Consul Pichon.

Cavour: a Memoir. By Edward Dicey. (Macmillan & Co.)

Mr. Dicey, who has lived in Italy, and has had opportunities of talking to the friends of Count Cavour, has in this little volume produced a brief and connected story of that statesman's life. It is not very full, and it does not pretend to much novelty. “It is a Memoir, not a life—a chapter, and not a history,” says its author. The work is full of admiration, if rather barren in facts. The materials, we are told, have been drawn from public rather than private sources—that is, they have been drawn from books, from speeches, from reviews. The memoir of Cavour, which appeared in the *Athenæum* soon after his death, has been, we find, useful to Mr. Dicey, though he does not say so. Signor Bonghi's little book has been appropriated bodily, and we trace the *débris* of articles in the French newspapers, also in every case

without the customary signs of conveyance. Mr. Dicey seems to have thought the acknowledgment of these trifles needless. Perhaps he is right; at least his labour is what it professes to be—and that is the first condition of an honest book. Many persons will be glad to read the tale here pleasantly and accurately told.

Having so very recently gone over the whole ground of Cavour's career and character, we shall not follow Mr. Dicey step by step. We content ourselves with quoting from his narrative a personal anecdote here and there; and should the reader find that he has met with any of these stories before, it will only prove that he and Mr. Dicey have studied at a common source.

Here is Cavour as a boy:—

"Cavour, child as he was, had nothing of the courtier about him, and in a very short time he was sent back to the academy, as unfit for the honours of pageship. There is a story told that, when he heard of his dismissal, the child's remark was, that 'he was glad he had thrown off his pack-saddle.' It is told in all memoirs, and I can only say of it that it is '*ben trovato*.' It is common enough, to meet with great men, of whom in their school days their companions thought nothing; it is still more common to find children, whom their masters and schoolfellows think destined to great things, and who turn out commonplace mortals afterwards; but it is rare indeed, to find a great man, whose talent was recognized from the earliest age. Happily, precocious infants are things unknown in Italy, so that there are no fabulous legends circulated of Cavour's childish sayings; but I have heard from men who were at school with him that, when a mere boy, he excited their attention, young as they themselves were then. He was good-humoured, popular enough, and '*bon enfant*;' but he never played, never joined in boyish games and never seemed to work; he was always reading, not works of fiction, but papers, political treatises and histories. He paid no particular attention to his lessons, and troubled himself very little about them; but when the examinations came round, he appeared to grasp all he was required to learn without an effort, and surpassed his competitors easily. He passed his various examinations with such distinction, that his commission was given him at sixteen, and he was allowed to enter the army at eighteen, though twenty was the earliest age fixed by the regulations."

Here is an early Austrian impression of Cavour:—

"There is an incident worth mentioning in connexion with the commencement of his journey. Somehow or other the Austrian authorities received intelligence that the young Count was likely to visit the Lombard provinces, and thereupon, Count Torressani, who was then Director-General of Police at Milan, issued the following instructions to the officials at the frontier:—

"Milan, May 15, 1833.

"A young Piedmontese nobleman, Camillo di Cavour, is about to set out on his travels. He was formerly an officer in the Engineers, and, in spite of his youth, is already deeply corrupted in his political principles. I lose no time in giving this intelligence to the Commissioners of Police, with instructions, not to permit the entrance of the person in question, if he should present himself at our frontiers, unless his passport is perfectly *en règle*, and, even in this case, only after the most rigorous investigation into his clothes and luggage, as I have reason to suspect he may be the bearer of dangerous documents."

—Even the police, it seems, are sometimes right in their suspicions!"

Cavour as a political student:—

"I have talked to friends of Cavour's who knew him well, and they could tell me little more than this, that there was nothing much to tell. The truth is, that at no period of his life had Cavour friends, with whom he was on terms of real intimacy. He was friendly in disposition, kind-hearted,

sociable. Up to a certain point, it was easy to become intimate with him, but beyond that point there was no advancing; and so, even those who knew him best cannot say much about how he lived during his absence from home, beyond that he lived much as other young men in his position did. He resided for a long time in France, and a good deal in Switzerland. His visits to England were never of long duration, and his knowledge of English life and feeling was rather derived from reading than from personal observation. He was a great English reader at all times, not so much of our standard classics as of contemporary political literature. To the end of his life he took in and read the *Times*, the *Morning Post*, and the *Economist*, to which latter paper he was especially partial. He studied, too, for some time, though how long I have been unable to learn, at Edinburgh and at Geneva. Those countries, where he found freedom and progress, were the lands of his predilection, and, beyond them, he hardly extended his wanderings. Subsequent events showed that at this time he studied the character, the literature, and the government, of the countries he dwelt in, very carefully, and very deeply; but at the time, I doubt whether his casual acquaintances were much aware of his studies."

Cavour's belief in his own capacities:—

"When quite a young man he carried on a correspondence with the Marchioness Barollo, who returned him his letters many years afterwards. Among them was one written, when Cavour was only twenty-four, in reply to the Marchioness's condolences on his disgrace at court, and in it were these words:—'I am very grateful, Madame, to you, for the interest you are kind enough to take in my misfortunes; but I can assure you I shall make my way (*'ferai ma carrière*') notwithstanding. I own that I am ambitious—enormously ambitious—and when I am minister, I hope I shall justify my ambition. In my dreams, I see myself already minister of the kingdom of Italy.'—Many young men have had, perhaps, dreams as wild as this; and I own that the second incident I have to relate, though less striking, impresses me more. Cavour's aunt, of whom I have spoken already, the Duchess of Clermont-Tonnerre, had large estates, chiefly of forest land in the Ardennes, which were badly managed and brought in much less than they ought to have done. Cavour heard of this during his absence from home, and requested the Duchess to give him permission to undertake the management of her estates. His request was granted, and for nearly two years Cavour lived upon this out-of-the-way property, managing it himself, until he had doubled both the value of the estate and its rental."

Cavour's love of dice and cards:—

"The only passion he ever showed, then or at other times, a leaning for, was a love of gambling. On one occasion, I have been told, he had incurred gaming debts to the amount of 8,000*l.*, which the Marquis, his father, paid out of his future share in the property; the payment was, however, accompanied by a declaration, that no further debts he might incur would be paid from the same source. Thereupon Cavour, with that moderation which was always characteristic of him, instead of leaving off gambling and refusing to touch a card again, simply reduced his stakes, but continued playing as before. Till within the last few years of his life, when his occupations became overpowering, Cavour was a frequent visitor at the Turin Whist Club, and was reckoned the first whist-player in the '*Cercle*.' On one of his later visits to France, after he became minister, he was asked to play with M. de Rothschild at Paris, at 1,000 francs points, and rose from the table a winner of 150,000 francs. But with him even gambling was a taste, not a passion. His one passion in the world was for public life."

A more delicate subject—the domestic life of his hero—is dismissed by Mr. Dicey with these observations and reflections:—

"There are some men, whose private and political relations are so interwoven, that you cannot separate them. You could not write a life of

Antony without alluding to Cleopatra, or describe Fox without touching on his wild midnight orgies, or even, to come nearer to my subject, draw a true character of Victor Emmanuel without referring to the *Chronique Scandaleuse* of the city of Turin. But with Cavour, whatever relations of this nature he may have had, were a mere accident, not a vital element, in his career; and with this much of mention, I think I may fairly pass the subject by. I am not writing a moral treatise—I am not describing an ideal character—I am seeking to make known a real man. Characters of his stamp are rare at all times, and impossible almost, except in a state of society like that of Italy at the present day. There (I am speaking rather of the time when Cavour entered life than of the present) religion had no hold on educated men—the sanctity of home and family were ideas hardly comprehended or comprehensible—the health-giving, public life of ours, worthy of a man's best efforts, did not and could not exist. There was no room there for the deep religious aspirations, the sacred home affections, the strong sense of public duty, which were to be found in happier lands. All that was left of good, and great, and noble, and godlike in Italy, was contained and embodied in the one passionate desire for freedom. To make Italy free was the one thing needful; and to labour in behalf of Italy was the whole duty of man. There have been higher creeds, doubtless, in the world, but there have been many lower also. Cavour, like all men who are born to rule their fellow-men, was eminently of his own time and of his own country. His genius was, above all, a material one. Abstract speculations, which led to no tangible result, had no attraction for him; ideal schemes, which could not be reduced into practice, were distasteful to him. His desires and plans and faith were all bounded by what was practicable, possible and realizable. His genius consisted in the power of perceiving at once what was possible, and reducing the possibility into a reality. Very early in his career he saw that it was possible to free Italy, and to that task he devoted his energies and life. The accomplishment of his great work was not only his ambition, but his faith and religion also. About other matters he troubled himself little. There is no evidence that he was sceptical in his religious creed, there is as little that he devoted much thought to it. In his domestic relations, as a childless and wealthy bachelor, he was neither less nor more moral than the men amongst whom he moved. He lived for one object only, and having achieved it—died."

Cavour in private life:—

"True, too, to his Piedmontese nature, the private life of Cavour was a very simple and unpretending one. He rose between four and five, had audiences chiefly on matters connected with his private property till six, breakfasted very lightly, according to Italian fashion, and then, with the interval of half-an-hour's walk in the middle of the day, worked till the Chambers met. He dined late, after the Chambers were over, and almost always, except on the rare occasions when he gave state dinners, alone with his brother. When dinner was over he smoked a cigar, sitting in summer-time on his balcony, where the citizens of Turin used to come and look at 'the Count,' as they were wont to call him; then slept for half-an-hour, and worked again till he went to bed at midnight. His amusements were few and simple. He would drive out at times with his brother in a little pony carriage, known to all Turin. When he was dead tired he went to the theatre, and generally fell asleep there; and, in truth, what he seemed to enjoy most was going over, whenever he could spare time, to his own estates at Leri, or to his brother's property at Santena, and there strolling about the fields, talking with the farmers, and watching the progress of his agricultural experiments. His was a rich genial nature, which took interest in everything and everybody that he came across; and so all persons, who had to do with him in private life, became fond of him, not so much for his open-handed charity as for the ready kindly sympathy which was never wanting."

These extracts give a favourable idea of Mr.

Dicoey's labours. He writes well and with care. His book is short, intelligent and trustworthy.

Creation in Plan and in Progress. By the Rev. Prof. Challis. (Macmillan & Co.)

THIS work, first intended as an answer to Mr. Goodwin's article on the Mosaic Cosmogony in the 'Essays and Reviews,' has grown into a larger undertaking, which nevertheless contains as a part what was intended to be the whole. In the work of the Cambridge Professor of Astronomy we may depend upon sound science, at least: and this is something. Those of our readers who pay due attention to this never-ending branch of controversy will, no doubt, look carefully into Mr. Challis's argument. For ourselves, there is a lion in the path, in the shape of a huge assumption, which must be something more than assumption before we can pass it.

In one point, Mr. Challis does not join in the method of his clerical brethren. Our readers will have observed that in all high quarters the demand for the extermination of the 'Essays and Reviews' is accompanied by a declaration of these remarkable productions being excessively weak. The Convocation, the Bishop of Salisbury, &c., all pronounce this book to be the essence of nullity in its contents. For ourselves, we distinguish: we believe that certain things in the 'Essays and Reviews' can be answered, but not by those to whom they are really addressed. Mr. Challis says that Mr. Goodwin's essay has "the merit of bringing distinctly forward the questions and difficulties which it is reasonable to ask for explanations of from those who maintain the Divine Authority of the first chapter of Genesis."

The first thing which we noticed in Mr. Challis's book is there is much Greek but no Hebrew: the Septuagint is the authority. Not a word of allusion to this occurs in the preface. We supposed the reason to be that Mr. Challis does not understand Hebrew, and preferred the old Greek version to the modern English. We should have been well content to read upon this basis, knowing that depth in Hebrew and depth in science hardly ever meet in one person; and that nothing leads a person astray more effectually than slight knowledge of an original applied to a translation. But when six-sevenths of the book had been got through, we found what we have called our lion, a casual foot-note, which ought, if it be worth anything, to have been put in the front of the book, and defended at length. It is as follows:

"Probably because the language of the ancient Hebrew text became obscure by the lapse of time, it was provided in the wisdom of God that a new form of the Scriptures should be published in the Greek language, which appears to be peculiarly adapted for such a purpose. The Septuagint, the use of which was sanctioned by Apostolic authority, cannot be regarded as a mere translation of the Hebrew, as is evident from the number and character of its deviations from the original. As far as I am able to judge, these deviations are made scientifically, and much Scriptural science might be gathered from comparisons of the Hebrew with the Septuagint. For these reasons I have not hesitated to adopt the text of the latter in the foregoing explanations of the Scripture Cosmogony, considering that for this purpose it is perfectly trustworthy."

It is clear that in this note Mr. Challis abandons all right to be considered as answering Mr. Goodwin, whether what he says be right or wrong. For he demands, as mere matter of assumption, what he cannot reasonably expect another to grant. He demands that the apostolic authority, which is Divine, shall be held as sanctioning a text which has many and marked deviations from the Hebrew text,

which is also Divine—so many and so marked, that the Septuagint cannot be regarded as a mere translation of the Hebrew. In plain words, the Holy Spirit gave a "second edition" of the work, with scientific deviations from the first. This is a very strange—to us a very new—hypothesis. It rather surprises us that Mr. Challis should, in the last sentence, speak in measured terms of his own plan of proceeding. He has "not hesitated"—how could he hesitate? "For this purpose"—why not for every purpose?—"it [the Septuagint] is perfectly trustworthy:" it ought to be as trustworthy as the Hebrew at least.

Mr. Challis claims an apostolic sanction for the Septuagint. Theology is a branch of learning in which inferences are, and always have been, most audaciously presented as primary premises. All that is to go on in the Court of Arches, all the turmoil that has preceded and is to precede that blessed first approximation to truth, subject to a new working of the question by the Privy Council—all turns on this practice. One premise from the Bible; one premise from outside; and the conclusion declared to be the first premise in validity and authority. The Apostles have quoted the Septuagint; he who quotes a book sanctions the use of it; therefore the Apostles have sanctioned the use of the Septuagint. As to the second proposition, all we can perfectly see is, that he who quotes a book sanctions the use of it *by himself*. Whether he will allow another person to use it indiscriminately, is a question of inference from all the circumstances: Mr. Challis may have his inference, and we may have ours. Churches, Convocations, Bishops, dogmatists of all kinds, put "God has declared" before conclusions in which God's word is responsible for one premise; man's word for the other; and such logic as theology finds convenient, for the conclusion. The Church of Rome can generally contrive to be logical: it has by its manufactory of infallibility such a command of premises, that it would be sinning against its mercies, as the Scotch say, if it were to require illogical consequence from its followers. The Protestant Churches, having smaller magazines, cannot afford so much correctness of reasoning.

We have here a new instance of one phase of a succession of controversies which never can come to an end. So soon as one is worn out by mere exhaustion, scientific discovery will bring on another. A new assault upon Moses: the fiery cross—the only one of which controversial divinity knows anything—will be sent round from bishop to bishop, and a new gathering to the fray will take place. Then will come the men of science, like those Indian ants which fill up with clay the holes they eat through the beams, and will patch it up nicely with a new interpretation of the Mosaic writing.

"And God said, Let there be light: and there was light." This is intelligible to all the world, from the day it was written till now. Not "Let the fog clear away, and the sun shine out a bit, a day or two before he takes his regular duty"—which seems to be Dr. Buckland's account. Not "Let the luminiferous ether begin undulating a day or two before the sun is ready to keep it up"—as Mr. Challis seems to render it. But "Let there be light: and there was light." There is no commentator on this passage whom we care to read, and none whom we care to hear,—except Haydn. The light of all the rest is darkness visible. Every author—we mean every honest author—must be held to have meant whatever he knew his words would be taken to mean. The author of Genesis—whether writing the cosmogony under a special Divine guidance or not—has used words about common things which have had but one

meaning to the world at large. Did the author know his words would have that meaning? Let common sense answer. That meaning then is the meaning—if the author were honest. For ourselves, as we do not get into the trap, we do not want a way out. The time will come when it will be seen that the children of the world were fed with milk and not with meat.

NEW POETRY.

Dryope; and other Poems. By Thomas Ashe. (Bell & Daldy.)

IT is a special pleasure to take in hand one of Messrs. Bell & Daldy's books of verse when the inside does not break the promise. These publishers seem emulous of being to Poetry in our time what the Murrays, Pickerings and Moxons have been in the past. They have not yet caught their Byron or their Tennyson; but they will know how to dress him when he comes, and meantime we are glad to get such poetry as they have already given us so choicely printed. We shall be pleased to interest some of the lovers of Keats, Shelley and the daintier half of Mr. Tennyson's poetry in the poems of Mr. Thomas Ashe. Our word will be all the more earnest because the poems are not of a kind to arrest attention by a glare of poppy colours. They will not talk loud to a deaf ear. But they have a sweet low singing of their own,—a quiet charm of quaint beauty,—and a nice fitness of expression, that we like. We have just to hint that the writer must beware lest his love of quaintness should lead him into affectations. The *naïve* must be perfectly natural, or it is fatal. Quaintness of expression must be warranted by the thought,—demanded by the feeling.

In these verses the writer keeps well within the proper limits:—

SPEEDWELLS.

On the hill there stands a house,
With a dainty room in it;
And in the dainty room a gem.
These are secrets. O come near!
The little birds will overhear;
And will whisper them.

Simple-braided hair she has,
And a neck as white as milk,
Or a lily on its stem.
These are secrets. O come near!
The little birds will overhear;
And will whisper them.

I am going to her now;
Plucking speedwells in the grass,
For a fragile diadem.
These are secrets. O come near!
The little birds will overhear;
And will whisper them.

She will kiss me at the gate;
In the garden with me walk,
So late, so late; and be my gem.
These are secrets. O come near!
The little birds will overhear;
And will whisper them.

—But it requires great art to keep the quaint and *naïve* always natural.

'Dryope,' beloved of Apollo, is a pleasant poem, with a morning freshness, a spark of sun-dew and a low bird-warble of music about it. Here is an Arcadian glimpse of the little Dryope as the Dryads found her and stole her for love of her woodland beauty and likeness to all natural loveliness:—

Sweet Dryope! bright little Dryope!
So like a rose-leaf fallen on the grass!
New, rounded, touched with summer tints of youth;
Flushed with the ruddy blood of opening life;
Suffused with softened colour, like a cloud
At sunset toward the zenith! How could they
Flit on, nor stop with wonder-brightening eyes?
They, in among the shadows lingering,
With whispers quick and sudden, joy to catch
Unlooked-for glimpse of thing so beautiful.
How should a longing strange not seize on them?
And long they looked, and looked, and could not go.
And much they doubted, and could not decide.
And such a charm the little cherub thing
Had over them; and such a merry laugh
And innocent glee rang up to heaven's blue dome,
As it lay laughing at the sky, and tried

With tiny moving fingers to reach up
And catch the skimming clouds in its young hands;
And such keen arrows of fond love shot out
From its bright eyes and rosy-tinted lips;
And rounded freshness in the pillowing grass;
And while the old nurse gathered yellow figs
Just out of sight behind the trees, they stole,
Like soft sunbeams, and took the child away.

The description of Dryope among the Dryads, as the strange sweet human yearnings grew within her, and she longed for the closer communion of warmer love while wandering thoughtfully among the cool green leaves and their shadows, is full of tender grace:—

And so she learned to wander in the woods,
As if in search, not knowing where she went.
And she put on a stately beauty, grew
More beautiful thro' sadness, while the years
Led her to womanhood with persuasive hands.
Not Aphrodite coming in her shell,
When those four seasons met her on the shore,
Was lovelier; being in beauty more divine;
But missing her sweet grace of humanness.
And she grew up a perfect woman pure,
With passion in her, well subdued to truth;
Saddened at most things as she went by them:
And made the Dryads weep at her sad looks.
And all her heart and being yearned for love.
She peep'd into the leafy nests of birds,
And wonder'd what could make them twit and sing.

But that such comparisons are worn out and have lost all their meaning, we might say that the scene of Apollo's change from the glistening serpent at her feet to the glorious god that rose to reign over all her life is worthy of ranking with the "transformation scene" in Keats's 'Lamia.' This description of noble love, and of the Hamadryads watching human happiness, is also good:—

Many a pleasant month
Drew out its days, and blessed itself with love.
And they were happy lovers, with no pain
Or sorrow at all. And love made in itself
A rich Elysium; crowned with sunny heights
Of fancy; sloping into vales of bliss;
With little brooks of longing running down
To bays of calm, with changing gleams of hope.
But being noble, they had better fruit
From their great love than lesser lovers have.
They did not miss the sweet delights that fill
The scented eves, and grassy wood-paths soft;
Or kisses in the shadows; or clasped arms
Of linked delight; when two seemed linked in one,
As they should never unclasp any more. And oft
The Hamadryads, stealing near, would weep
To see them both so happy; being glad
Because they loved her kindly: following them
At distance, down thick plane-tree avenues,
By woodland walks and lustful lotus-beds.
But there was yet a holier communing,
They in their careless spirits could not read.

There is a touch of old Homer's manner, sometimes in a realistic application, and a certain quiet emphasis of statement. For example:—

She had a soft, still face; not sharp; but smooth,
And round and gentle; quiet as the moon
On warm June nights, with kindly warmth; and sweet
As full-blown sweetness of a pale, faint rose.
And gradual undulations rose and fell
About her neck and shoulders beautifully:
Hollowed a little in the throat, not much;
But as a dimple hollows in ripe fruit
Of apricot, more lovely for it; and then
Swelled full to meet the swelling breasts, and sloped
Between their wealthy richness; where it were
Most hugging to be lulled awhile, when sick.

This, again, may be said to have quite a smack of satisfaction in its conclusiveness:—

Apollo kissed her, till the tingling blood
Of that long, breathless, eager passionate kiss
Left their lips white. *With that he went his way.*

In his Lyrics we have to charge Mr. Ashe with being too Tennysonian. In these, also, we find his greatest tendency to affectation. Yet we should have to quote them for our fullest proof of his faculty. Here is a brief one, filled with a luxury of languor appropriate to the feeling:—

LYING ILL.
Love, kiss me, kiss me on the lips,
And kiss me on the cheek.
And I would that I could speak.
My heart, my heart so happy pants;
But I feel lost and weak.
This cup of pain so bitter is,
And I grow dull with woe:
And my tears are falling slow.
But I touch your neck, your rosy neck:
So I am blest, I know.

O love, we wedded years ago!
A blessed bliss for me!—
Love, let me, let me see
Your blest soft eyes burn into mine!
Dear eyes, how kind they be!
I touch your neck: my tears flow down:
They soothe me while I speak.
O love, I feel so weak.
But kiss me, kiss me on the lips,
And kiss me on the cheek.

Mr. Ashe's poems are not merely pretty lyrics, moving to dainty music and touched with bright and delicate imagery; he frequently reaches to a wise, calm thoughtfulness. This is perhaps most manifest in his Sonnets. We quote a couple of these:—

There is no hope or help in hard men found;
But in a woman's whisper soft and low:
And comfort lives in words of gentle sound:—
God in his pity fashioned poor man so.
For selfish cares eat out the hearts of man;
And cursed suspicion makes their fair looks cold:
And love, wrecked once, fears much to launch again;
And broken trust will not be overbold.
But if a woman loves you she loves you,
And not herself, or you for selfish gain:
In doubt or guilt she will not prove untrue;
But loves on firm, meet help, and balm for pain.
And little he need heed, tho' rude winds chafe,
Whom restful haven of her love keeps safe.

So till the whole of love's sweet debt be paid,
Think not the crown of hope and life to know.
God man and woman each imperfect made,
That they twain, one, a perfect whole might grow.
The trailing vines their tendrils interlink,
Before their boughs a shady arbour make;
The keystone love must in the centre fit,
Before life's arch the strain of life can take.
So with unwearied feet search near and far,
O man, to find her, blissful hope, somewhere!
Till ye be like twin lips that clasped are,
And unbattered words, whose meaning goes in prayer.
So double stars fair-set in mortal night,
Ye each round each moving shall make one light.

Altogether, this is a book which true lovers of poetry will be glad to get and carry away with them to the quiet of the country, far out of sight and sound and smoke of London life. By the blue sea, lying in its infinite tenderness of calm,—or resting on the heathery hill-top,—or, best of all, under some greenwood tree, where the leaves overhead are just stirred to cast a faint imagery of tremulous shadows, and the twinkling sunburst breaks into misty gold,—such a book will give enjoyment to its readers.

Home Ballads and Poems. By John Greenleaf Whittier. (Boston, U.S., Ticknor & Field; London, Low & Co.)

HERE is poetry worth waiting for, a poet worth listening to. Mr. Whittier may not ascend any lofty hill of vision, but he is clearly a seer according to his range. His song is simple and sound, sweet and strong. We take up his book as Lord Bacon liked to take up the bit of fresh earth, wet with morning and fragrant with wine. It has the healthy smell of Yankee soil with the wine of fancy poured over it. We get a gush of the prairie breeze, weird whispers from the dark and eerie belts of pine, wafts of the salt sea winds wandering inland, superb scents of the starred magnolias and box-tree blossoming white. We hear the low of cattle, the buzzing of bees, the lusty song of the huskers, brown and ruddy, the drunken laughter of the jolly bob-o-link. Here are green memorials of the New World's spring of promise, golden memorials of her abundance when the horn of autumn is poured into the overflowing lap of man; we see the white-horns tossing over the farmyard wall, the cock crowing in the sun with his comb glowing a most vital red, the brown gable of the old barn, roses running up to the eaves of the swallow-haunted homestead, the June sun "tangling his wings of fire" in the net-work of green leaves, the aronia by the river lighting up the swarming shad, the river full of sunshine, with the bonny blue above and the blithe blink of sea in the distance, and many a sight and sound of vernal life and country cheer. No

American poet has more of the home-made and home-brewed than Mr. Whittier. His poetry is not filtered from the German Helicon; it is a spring fresh from New World nature; and we gladly welcome its "sprightly runnings."

Our Yankee Bard is among poets what Mr. Bright is amongst the peace men. He has the soul of some old Norseman buttoned up under the Quaker's coat, and the great bursts of heart will often peril the hold of the buttons, whilst the speaker with all his native energy and a manly mouth is "preaching brotherly love and driving it in." With him, too, the Norse soul is found fighting for freedom, and he has done good service in making the heart of the North beat quicker for the day when black slavery shall be no more, and in bringing about the present movement which the hopeful look upon as preparatory to the gathering up of the slave forces for a final flight.

The poet is less martial in his latest book. He has learnt to possess his soul with more patience. The momentum is more subdued, and has a slower swing, quietly intense. Longer brooding has brought forth a more perfect, though less striking result. Take, for example, a few of the noble lines in remembrance of Joseph Sturge, a man after our poet's own heart:—

For him no minstrel's chant of the Immortals
Rose from the lips of sin;
No mitred Priest swang back the heavenly portals
To let the white soul in.

But Age and Sickness framed their tearful faces
In the low hovel's door,
And prayers went up from all the dark by-places
And shelters of the poor.

Not his the golden pen's or lip's persuasion,
But a fine sense of right,
And truth's directness, meeting each occasion
Straight as a line of light.

The very gentlest of all human natures
He joined to courage strong,
And love out-reaching unto all God's creatures
With sturdy hate of wrong.

Men failed, betrayed him, but his zeal seemed nourished
By failure and by fall,
Still a large faith in human kind he cherished,
And in God's love for all.

And now he rests his greatness and his sweetness
No more shall seem at strife;
And death has moulded into calm completeness
The statue of his life.

Where the dew's glisten and the song-birds warble,
His dust to dust is laid,
In Nature's keeping, with no pomp of marble
To shame his modest shade.

The forges glow, the hammers all are ringing;
Beneath its smoky veil,
Hard by, the city of his love is swinging
Its clamorous iron fall.

But round his grave are quietude and beauty,
And the sweet heaven above,—
The fitting symbols of a life of duty
Transfigured into love.

In a time of trouble and struggle, of war and rumours of war, these lines take one with their quiet mastery and peaceful music, sinking softly into the soul as if spoken by the very Spirit of Rest. To quote the poet's own words, the whole picture is—

Beautiful in its holy peace as one
Who stands at evening, when the work is done,
Glorified in the setting of the sun.

'Telling the Bees' is a ballad as fine as the custom it celebrates is curious. 'The Pipes at Lucknow' is a spirited poem. Many of the stanzas of 'The Shadow and the Light' might have been found worthy of weaving into 'In Memoriam':—

Ah, me! we doubt the shining skies
Seen thro' our shadows of offence,
And drown with our poor childish cries
The cradle-hymn of kindly Providence.

And still we love the evil cause,
And of the just effect complain;
We tread upon life's broken laws,
And murmur at our self-inflicted pain;

We turn us from the light, and find
Our spectral shapes before us thrown,
As they who leave the sun behind
Walk in the shadows of themselves alone.

And scarce by will or strength of ours
We set our faces to the day;
Weak, wavering, blind, the Eternal Powers
Alone can turn us from ourselves away.

Mr. Whittier is most successful perhaps in the present work in setting gravely sweet and kindly comforting thoughts to a common ballad measure, which he has tried again and again until it reaches its perfection in pieces like 'My Psalm' and 'My Playmate.' Here is a specimen of the latter poem:—

O playmate in the golden time!
Our mossy seat is green,
Its fringing violets blossom yet,
The old trees o'er it lean.
The winds so sweet with birch and fern
A sweeter memory blow;
And there in spring the vernalies sing
The song of long ago.

And still the pines of Ramoth wood
Are moaning like the sea,—
The moaning of the sea of change
Between myself and thee!

'My Psalm' is only to be felt thoroughly in the eve of life, when the mellowing influences of age and experience have done their work, and the golden haze gathers about the closing of the calm day, touching this world with the beauty of the next. It must be read slowly and thoughtfully to be felt deeply:—

All as God wills, who wisely heeds
To give or to withhold,
And knoweth more of all my needs
Than all my prayers have told!

Enough that blessings undeserved
Have marked my erring track;
That wheresoe'er my feet have swerved,
His chastening turned me back;

That more and more a Providence
Of love is understood,
Making the springs of time and sense
Sweet with eternal good:

That death seems but a covered way
Which opens into light,
Wherein no blinded child can stray
Beyond the Father's sight;

That care and trial seem at last,
Thine Memory's sunset air,
Like mountain ranges over-past,
In purple distance fair:

That all the jarring notes of life
Seem blending in a psalm,
And all the angles of its strife
Slow rounding into calm.

And so the shadows fall apart,
And so the west winds pass,
And all the windows of my heart
I open to the day.

But we shall not be doing justice to these 'Home Ballads' if we do not vary the strain. They are not all devoted to the life that is lived in our day. Here and there we find a bright and vigorous portrait painted on the dark background of the past. Such is that of 'Samuel Sewall,' the man of God with a "face that a child would climb to kiss." Sometimes, also, the poet peers into the shadowy land of Indian legend, watching, questioning the darkness, till the mist begins to stir and transform itself into spectral life. Then he will tell us a tale of the early time of witchcraft and cruelty.

Our concluding extract is from a robust ballad, called

SKIPPER IRESON'S RIDE.

Body of turkey, head of owl,
Wings a-droop like a rained-on fowl,
Feathered and ruffled in every part,
Skipper Ireson stood in the cart.
Scores of women, old and young,
Strong of muscle and glib of tongue,
Pushed and pulled up the rocky lane,
Shouting and singing this shrill refrain:
"Here's Flud Olsson, fur his horrid horrt,
Torr'd an' futherr'd an' corrd in a corrt
By the women o' Morble'ead!"

Wrinkled scolds with hands on hips,
Girls in bloom of cheek and lips,
Wild-eyed, free-limbed, such as chase
Bacchus round some antique vase,
Brief of skirt, with ankles bare,
Loose of kerchief and loose of hair,
With conch-shells blowing and fish-horn's twang,
Over and over the Menads sang,—
"Here's Flud Olsson, fur his horrid horrt,
Torr'd an' futherr'd an' corrd in a corrt
By the women o' Morble'ead!"

Small pity for him!—He sailed away
From a leaking ship in Chaleur Bay,—
Sailed away from a sinking wreck,
With his own townspeople on her deck!
"Lay by! lay by!" they called to him.
Back he answered, "Sink or swim!
Brag of your catch of fish again!"
And off he sailed thro' the fog and the rain.
Old Floyd Ireson, for his hard heart,
Tarred and feathered and carried in a cart
By the women of Morblehead!

Thro' the street, on either side,
Up flew windows, doors swung wide;
Sharp-tongued spinsters, old wives grey,
Lent a treble to the fish-horn's bray.
Sea-worn grandsires, cripple-bound,
Hulks of old sailors run aground,
Shook head and flat, shook hat and cane,
And cracked with curses the hoarse refrain:
"Here's Flud Olsson, fur his horrid horrt,
Torr'd an' futherr'd an' corrd in a corrt
By the women o' Morble'ead!"

"Hear me, Neighbours!" at last he cried,—
"What to me is this noisy ride?
What is the shame that clothes the skin
To the nameless horror that lives within?
Waking or sleeping, I see a wreck,
And hear a cry from a reeling deck!
Hate me and curse me,—I only dread
The hand of God and the face of the Dead."
Said old Floyd Ireson, for his hard heart,
Tarred and feathered and carried in a cart
By the women of Morblehead!

Then the wife of the Skipper lost at sea
Said, "God has toucht him!—why should we?"
Said an old wife mourning her only son,
"Cut the rogue's tether and let him run!"
So with soft relentings and rude excuse,
Half scorn, half pity, they cut him loose,
And gave him a cloak to hide him in,
And left him alone with his shame and sin.
Poor Floyd Ireson, for his hard heart,
Tarred and feathered and carried in a cart
By the women of Morblehead!

Mr. Whittier has many admirers in this country, to whom this volume will be welcome.

A Treatise on Facts as Subjects of Inquiry by a Jury. By James Ram, Barrister-at-Law. (Maxwell.)

It is not difficult to imagine the grim smile of amusement with which any veteran pleader, into whose hands a law-bookseller may slip this treatise on "Facts," will turn over its pages and lay it aside. A book more out of the usual course of literary production a critic seldom meets. Bound in boards of that neutral tint which the usages of trade appropriate to legal opuscles, and docketed on the back with the white-paper label of precedent, differing but slightly from the label of a medicine-bottle, it has even in its aromatic newness the air of grave and musty erudition, befitting the compositions of a Counsel learned in the Law. Such is its exterior. Inside, however, it is simply a literary scrap-book, the numerous and lengthy quotations from Shakespeare, Wordsworth, Walter Scott, Southey, Coleridge, De Quincey and a host of other distinguished thinkers, being tacked together with the slightest possible thread of argument, and arranged with a view to illustrate the different kinds of facts ordinarily submitted to juries, and the various difficulties which juries labour under in forming their judgments on such facts.

Of course, Mr. James Ram sets out with a definition of "a fact." That done, to obviate all possibility of mistake as to his meaning, he transcribes Wordsworth's ballad of 'Lucy Gray' (eleven stanzas), as an example of cumulation of facts; gives a closely-printed page and a half of 'Romeo and Juliet' as an instance of testimony of facts; and, to display the irrevocability of "facts," quotes from Horace's ode, "Non tamen irritum quodcumque retrò," &c, and finishes off with Lady Macbeth's "What's done cannot be undone." The task of introducing his subject being thus accomplished, the author devotes the next four chapters to essays on Perception, Impression, Memory and Recognition, anecdotes gathered together by much

desultory reading being used to show the fallibility of the senses and the capriciousness or imbecility of memory. Mr. Ram's metaphysical rambles, in which Locke's 'Essay on the Human Understanding' serves him both as staff and crutch, are by no means the occasions when he is seen to least disadvantage. On "Perception" he has nothing to say which an old lady, knitting stockings in a chimney-corner, could not have said for him. "A person's right perception of an object seen by him may depend on his situation relative to the object viewed,—his nearness to, or distance from it; also on his capacity to see with perfect or sufficient distinctness an object far off: he may be able to discern clearly things at a great distance from him, or to see distinctly only objects near to him; that is, he may be either far-sighted or near-sighted. His right perception of the object may also depend on the light by which it is seen, and therefore on the time,—whether day or night. It may depend, also, on the length or shortness of the time he has in which to view the object, also on the freedom of his view from all obstruction at the time, from whatever cause, or however momentary. The sun shining full in the face of a person may very much obstruct his sight. And the same effect may be produced by falling snow, or dense rain, or smoke." True, very true,—but what of it? Our learned brother is all right as to his "facts," but why does he prose about them? To what end is all this labour? Merely to amuse is of course not Mr. Ram's object; and surely he cannot suffer under the hallucination that he is imparting valuable information by such sentence-building. To leave persons of higher intelligence out of consideration, every child in a ragged school knows that it is less easy to discern objects accurately in darkness than in the broad daylight, that a person with a long range of vision sees to a greater distance than one whose sight is short, and that it is beyond human power to look through the masonry of a wall. The laborious pedantry which, not content with recognizing such truths, evident to the humblest understanding, gravely supports them with passages from Horace and Virgil, Cicero and Pliny, calls to mind the memorable labours of the scholar who wrote an essay to prove that in Classic Athens little children cried when their mothers whipped them.

Nor do we confine our disapproval to the general design of Mr. Ram's treatise, for the style in which he carries out his plan of literary illustration is as careless and confused as the plan itself is ridiculous. The following passage will serve as an example:—

"A person may catch some only of, and not all, the words, which another speaks; and a consequence may be, that the words caught do not express the speaker's meaning. A ludicrous instance of this is contained in a story thus told by Hume:—'Some young gentlemen of Lincoln's Inn, heated by their cups, having drunk confusion to the Archbishop [Laud], were, at his instigation, cited before the Star Chamber. They applied to the Earl of Dorset for protection. 'Who bears witness against you?' said Dorset.—'One of the drawers,' they replied.—'Where did he stand when you were supposed to drink this health?' subjoined the Earl.—'He was at the door,' they replied, 'going out of the room.'—'Tush!' cried he; 'the drawer was mistaken. You drank to the confusion of the Archbishop of Canterbury's enemies; and the fellow was gone before you pronounced the last word.'"

Here we have a not unfavourable specimen of Mr. Ram's method of dealing with and writing about facts. He first startles the reader with the interesting discovery that "a person may catch some only of, and not all, the words which another speaks," and then undertakes to

support a proposition so manifestly open to the attacks of scepticism, by an historical example of a person who by such imperfect hearing missed a speaker's meaning,—the instance so appositely cited being, however, after all, that of a listener who hears *all* the words and apprehends the exact meaning of a particular speaker. Of course any one can see what it is that Mr. Ram intended to say; but when that which ought to have been said is so manifest, what excuse has an author for not having said it? This is not the only place where Mr. Ram misrepresents his own meaning, and leaves the reader to rectify the blunder by putting a wrong interpretation on the wrong words of the text.

The Book of Good Counsels: from the Sanskrit of the Hitopadesa. By Edwin Arnold, M.A. Illustrated by Harrison Weir. (Smith, Elder & Co.)

THERE were brave men before Agamemnon, and wise men before Solomon; for the wisest of men tells us himself, that he gathered and set in order proverbs and wise sayings from all quarters; and it may well be that some of the verses and proverbs in the 'Hitopadesa' had found their way to him. The 'Hitopadesa, or Book of Good Counsels,' is a Sanskrit work of high antiquity; hitherto not much known to English readers, although several translations have been published. Sir William Jones translated it, and his translation was published after his death. Dr. Charles Wilkins also translated it. But there were reasons why neither of these obtained much circulation. In 1848, Mr. Stephen Austin, of Hertford, published a literal translation, by Francis Johnson, for the use of students of Sanskrit. It was in a thin quarto, and is very able and masterly; but being intended only to assist students, it has no explanations of the Hindoo allusions with which it abounds, nor is any account given of the work itself. Those readers who had once made its acquaintance, even with these drawbacks, were thankful for the treasury of wisdom thus laid open to them, but it was not a work to gain in that form general circulation; there were also some rather indecent speeches and stories, which modern English taste would not have accepted. For English readers who have never heard of the 'Hitopadesa,' and to whom the fact of a learned work translated from the Sanskrit would only convey the notion of something slow, involved in style, stately and ceremonious in language, altogether a dull, dignified and unattractive book,—for the benefit of this impatient class of readers, and for their conversion from this heresy, Mr. Edwin Arnold has undertaken and executed a new translation. He has made judicious omissions, and given concise explanations of the various allusions and names of things which are essential to a full understanding of the work,—also a preface, giving some account of the 'Hitopadesa.' He has been fortunate in meeting with publishers willing to second him. The work is illustrated by Harrison Weir, and radiantly bound in green and gold. To the outside alone have we any complaint to make: it is got up to look too much like a child's story-book; its appearance would better befit 'The Butterfly's Ball,' or 'The Peacock at Home,' than a work embodying the "voice of eld," the wisdom of the distant East. But the fact of a new translation well executed, and put into a manageable form, is a matter for which readers ought to feel too grateful to carp at trifles. The 'Hitopadesa' is a collection of wise maxims, proverbs, stories, and fables, illustrative of different subjects; the stories are linked together by golden chains of proverbs, interca-

lated by verses and aphorisms so numerous and so weighty, that when given in all their multitude and fullness, the reader loses the thread of the original story. Mr. Arnold has drawn the links closer, and given greater prominence and distinctness to the main narrative. In the original, the work is literally "a paradise of wildernesses."

The groundwork of the story is supposed to be that a certain king, Sudarsana, who lived on the banks of the Ganges, and who, though a monarch renowned for excellence and wisdom, had two sons who were inveterately idle, and indeed were fast going altogether to the bad. He called an assembly of wise men to consult what was to be done with them, to teach them learning and policy, for they had never read the sacred writings, and were beyond his management. Then a great sage, Vishna-Sarana, "who was as learned as the angel of the planet Jupiter," rose up and comforted the king, by declaring that though his sons might be idle and ignorant at present, still they were come from so good a stock that they must be amenable to right reason; they were royal-minded, though not cultivated, and he undertook to teach them "to comprehend policy," and did not fear to lose his labour. The king, much comforted, replied graciously, and thankfully gave his sons into his charge for instruction. Then, by way of introduction, the pundit said in the presence of the princes, as they sat at ease on the terrace of the palace:—

"Princes, hear! In the enjoyment of poetical writings the time of the wise passes away; but that of fools, in dissipation, alumber or strife: therefore, for the amusement of your highnesses, I relate the admirable story of the crow, the tortoise, and the rest." The sons of the Rajah replied,—"Sir, let it be told."—Vishnu-Sarana replied, "Attend now. The Acquisition of Friends, of which this is the first verse,—"Those without means and without wealth, if very friendly, speedily effect their purpose, like the crow, the tortoise, the deer, and the mouse."

Which Mr. Arnold thus versifies:—

*Some way or wealth, wise friends their purpose gain;
The mouse, crow, deer, and tortoise, make this plain.*

We prefer the literal version of these proverbs as given in Johnson's translation to the metrical paraphrase of Mr. Arnold. The literal is somewhat cumbrous, but the significance comes out with more force.

The book is divided into four subjects. The first treats on the Acquisition of Friends, and shows what friendship ought to be: a noble heroic spirit is displayed throughout. The second subject treats on the Separation of Friends: it is full of shrewd lessons, wherein are unravelled the base intrigues by which monarchs are separated from their best advisers and true friends: this portion is very whimsically told, and it abounds in maxims of worldly wisdom, illustrated by stories which would set up a dozen Rochefoucaulds and Talleyrands. The third portion treats of War: it is a mirror, which represents things as they go on at this present time, quite as faithfully as it did three thousand years ago. The respective monarchs, King Jewel-Plume and King Silversides, have each a wise minister, the vulture "Far-sight," and the Brahmany goose "Know-all"; these two ministers and their way of managing their masters are admirable. The whole of this part is full of sarcastic knowledge of the world, but it is combined with a wisdom and breadth of insight that keeps it clear of cynicism; there is a spirit of geniality and fun throughout which is charming, and the mutual respect of the two ministers for each other is well touched in. The last portion relates to the Making of Peace, in which the Vulture and the Brahmany Goose appear to great

advantage. At the conclusion, the Rajah's sons return thanks to the venerable Vishna-Sarana, and declare themselves to have profited greatly by his instructions.

The 'Hitopadesa' may well be called the "father of fables," for it is the original storehouse of all the fables, proverbs, and stories, which have passed like light from country to country, and been adopted for its own by each. This work exhibits a high degree of social civilization, a condition of complicated interests, and indicates an advanced stage of comfort and luxury such as it must have taken ages to produce. How many generations must have lived and died before the experience manifested in these proverbs and fables could have been distilled into speech! This work reminds one of those tiny shells embedded in certain rocks, each one of which has held a living body: the mass of living things which had to exist and pass away before one square foot of the rock could be formed, bewilders the imagination. So it is with this 'Hitopadesa.' Whence did the wisdom come? What was the history of the events and times through which it accumulated? Every line bears the stamp of age, experience, and venerable grey hairs. The world's youth! Was the world ever young? The 'Hitopadesa' has been translated into Hebrew, Greek, Persian, Arabic, and, with more or less completeness and accuracy, into all the vernacular dialects of India.

One remarkable feature in the work is the low and depreciating estimate of women, which is everywhere manifested, mingled with a reluctant testimony to their fascinations; a sense of their dangerous qualities pervades every mention of them. As a specimen of what is to be found in the 'Hitopadesa,' we give the following story of 'The Faithful Rajpoot':—

"A soldier presented himself one morning at king Sudraka's gate, and bade the porter procure an audience for Vira-Vara, a Rajpoot, who sought employment. Being admitted to the presence, he thus addressed the king:—'If your highness needs an attendant, behold one!'—'What pay do you ask?' inquired the king.—'Five hundred pieces of gold a day,' replied Vira-Vara.—'And your accomplishments?' asked the king.—'Are these two arms and this sabre, which may serve for a third,' said Vira-Vara, rolling up his sleeve.—'I cannot entertain you,' said the king; and thereupon the Rajpoot made salaam and withdrew. Then said the ministers, 'If it please your majesty, the stipend is excessive; but give him pay for four days, and see wherein he may deserve it.' Accordingly, the Rajpoot was recalled, and received pay for four days, with the complimentary betel. Ah the rare betel! Truly say the wise of it—

*Betel-nut is bitter, hot, sweet, spicy, binding, alkaline,
An emulcent, an astringent—foe to evils intestine;
Giveth to the breath a fragrance—to the lips a crimson red:
A detergent, and a kindler of love's flame which lieth dead.
Praise the gods for the good betel! these be thirteen virtues
given,*

*Hard to meet in one thing blended, even in the happy
heaven.*

Now the king narrowly watched the spending of Vira-Vara's pay, and he discovered that he bestowed half in the service of the gods and the support of Brahmins, a fourth-part in relieving the poor, and reserved a fourth-part for his sustenance and recreation. This daily division made, he would take his sabre, and stand at the gate of the palace, retiring only upon receiving the royal permission. It was on the fourteenth night of the dark half of the month, that king Sudraka heard below a sound of passionate sobbing. 'Ho! there,' he cried, 'who waits at the gate?'—'I,' replied Vira-Vara. 'Go, and learn what means this weeping,' said the king.—'I go,' answered the Rajpoot, and departed. No sooner was he gone, than the king repented him of sending one man alone into a night so dark that a bodkin might pierce a hole in it; and girding on his scimitar, he followed his guard to the city gates. When Vira-Vara had gone thus far, he encountered a beautiful and splendidly dressed lady, who was

weeping bitterly; and, accosting her, he requested to know her name, and why she thus lamented.—“I am the Fortune (the Lüksmi, the attendant genius) of the king Sudraka,” answered she; “a long while have I lived happily in the shadow of his arm, but on the third day he will die, and I must depart; therefore lament I.”—“Can nothing serve, divine lady, to prolong thy stay?” asked the Rajpoot.—“It might be,” replied the spirit; “if thou shouldst cut off the head of thy first-born, who hath on his body the thirty-two suspicious marks of greatness. Were his head offered to the all-helpful Durga, the Rajah should live a hundred years, and I might tarry beside him!” So speaking, she disappeared, and Vira-Vara retraced his steps to his own house, and awoke his wife and son. They arose, and listened with attention, until Vira-Vara had repeated all the words of his vision. When he had finished, his son exclaimed—“I am thrice happy to be able to save the state of the king. Kill me, my father, and linger not; to give my life in such a cause is good indeed!”—“Yes,” said the mother, “it is good and worthy of our blood; how else could we deserve the king’s pay?”—Being thus agreed, they repaired together to the temple of the goddess Durga, and having paid their devotions and entreated the favour of the deity in behalf of the king, Vira-Vara struck off his son’s head, and laid it as an offering upon the shrine. That done, Vira-Vara said, “My service to the king is accomplished, and life without my boy is a burden;” and there-with he plunged his sword into his own breast and fell dead. Overpowered with grief for her husband and child, the mother withdrew the twice-blooded weapon, and slew herself with it on the bodies of Vira-Vara and her son. All this was seen and heard by king Sudraka. “Woe is me!” he exclaimed; “insignificant creatures like myself live and die, but the like unto him has never existed in the world, nor will exist. What reck I of my realm, having lost these?” and thereat he drew his scimitar to take his own life also. At that moment, there appeared to him the goddess who is the mistress of all men’s fortunes. “Son,” said she, staying his uplifted hand, “forbear thy rash purpose, and bethink thee of thy kingdom.” The Rajah fell prostrate before her, and cried, “O goddess, I have done with life, and wealth, and kingdom. If thou hast compassion upon me, let my death restore these faithful ones to life; anywise, I follow the path they have marked.”—“Son,” replied the goddess, “thine affection is pleasing to me; be it as thou wilt—the Rajpoot and his house shall be rendered alive to thee.” Then the Rajah departed, and presently saw Vira-Vara return and take up his station as before at the palace-gate. “Ho, there! Vira-Vara,” said the king, “what meant that weeping?”—“Let your majesty rest well,” answered the Rajpoot: “it was a woman who wept and disappeared on my approach.” This answer completed the Rajah’s astonishment and delight. So when the day was come, he called a full council, and declaring therein all the events of the night, he invested the faithful guard with the sovereignty of the Carnatic.

Our readers will recognize in the above the original of similar stories of heroic fidelity in different languages of Europe. We had marked other tales; but we must refer our readers to the work itself.

HANDBOOKS.

Handbook for Travellers in North Wales. With a Travelling Map. (Murray.)

OUR fathers and some of their still living sons were formerly wont to consider North Wales only in the light of a highway to Ireland. It was a terrific highway. They who wished to avoid its terrors and yet avoid the long and perilous sea voyage from Liverpool, embarked at Parkgate, near Chester; but many of these foundered in their ships, on the iron-bound coast of Wales. In these days, when we read of Lyttelton shuddering as he describes the dangers of the route, Swift recommending “a glass” before the traveller faced the difficulties of Peamawr, and Johnson trembling to

attempt the pass after dusk, we, to whom the present road is familiar, can hardly make allowance for their timidity. It is, however, only necessary for a man to ascend the old zigzag path, over the hills behind Conway, to understand something of the former dangers and difficulties of the route through North Wales. Even after a “mail-coach road” was constructed, there were two ferries (arms of the sea) to be crossed between Chester and Holyhead; and it sometimes happened that in a dark night the ferry-boat at Conway or Bangor would upset, and passengers, mail, horses, letters and despatches go to the bottom. The journey from London to Holyhead was then not often accomplished in less than three days and nights; whereas now, on the road constructed by Stephenson, a work by which sea as well as land was put under subjection, the Irish mail train flies on its way, with only three stops between London and Holyhead, and accomplishes the intervening distance in seven hours and a half, at a rate of nearly forty-five miles an hour.

It was Sylvester who, about ninety years since, first rendered less rugged that portion of the highway to Ireland which lies between Colwyn and Anglesea. That road may be said to have been rendered both practicable and pleasant by the skill and labour of Telford; but this was not enough for the impatience of eager man; and to satisfy him, Stephenson struggled with the mountain and the wave, and overcame both adversaries. He crushed or cut through the one, and compelled the other to recede; penetrated the opposing rock, and flung his iron pathway above obstructing floods. In the winter season, when the ocean here is angry, and terrible in its anger, the route has perils sufficiently exciting. In the neighbourhood of Colwyn, the furious waves leap the seawall in fierce assault; but the bulwark breaks their force, and they fall on the swiftly-flying train in mountains of spray instead of tons of sheeted water, which would have otherwise arrested and shattered that flying train, though it flew never so swiftly. The road here is a world’s wonder, and he can neither describe nor comprehend it who has not examined it mile by mile between Abergele and the second tubular. It is to this road that travellers are chiefly indebted for facility of access to the most beautiful portion of North Wales. The entire division of the Principality is, however, well worth seeing, and can be all the more easily reached by iron roads, and the more fully enjoyed by help of such guides as the one before us. The land is full of beauty; it is, indeed, a “Cathedral of Immensities,” in which the heart of the most indifferent is warmed and lifted up to God. Yet there is another than a divine spirit which has exercised influences over the inhabitants of this territory of the beautiful. As, in Brittany, there are chapels dedicated to Our Lady of Hatred, where man may invoke evil on his brother; so are there in Wales spots erst sacred to the devil or some Druidical demon, where it is remembered that angry men once called down vengeance on those by whom they had been offended. The most famous of these is the Cursing Well of Elian, to which, we are informed, “persons who have any great malice against others, and wish to injure them, frequently resort to the minister of the well, who, for a sum of money, undertakes to offer them in it. Various ceremonies are gone through on the occasion; amongst others, the name of the devoted is registered in a book, and then a pin in his name, and a pebble, with his initials inscribed thereon, are thrown into the well.” All this was, in fact, a form of devil-worship,

and of a less creditable quality than the devil-worship in Eastern countries. In Brittany and Wales, the Power of Evil was, or is, petitioned to exercise that puissance for the injury of man. In the East, this vengeful course is never thought of. The devil-worshippers there simply acknowledge the power of the great enemy of man, and, dreading it, pay to its holder such respect as they hope may induce him not to exercise it upon them. Seeing how great his influence over the world, their only desire is to escape it, and they think they best accomplish their object by being civil to so formidable a personage. Of course, it would be the easiest thing in the world to assert that they are wrong in their theory; but it would be very difficult for the most skilful of logicians to prove that they had not better reason than the Welsh or the Breton for their practice.

Connected with, or in spite of, absurd and wicked superstitions, the Welsh people have been remarkable for strong and simple religious feeling. This is sometimes exhibited in a singular way. As an illustration, we will cite an incident within our own knowledge. The clerk of a parish church one day made known to the incumbent the earnest desire of the congregation to have the afternoon service at two instead of three o’clock. The reverend gentleman inquired the reason for so unusual a request. The reply was, that by his acceding to their request they would all have time to take their tea comfortably, and to proceed to the Wesleyan chapel, at some distance, in the evening. “What will happen if I do not consent to gratify their wishes?” asked the incumbent. “Just this, Sir,” answered the clerk, “the congregation will then not come to church in the afternoon at all.” The incumbent mused over the matter for a moment, and arrived at a conclusion which may surprise some members of the Establishment. He not only consented to adopt the earlier hour, but announced his intention of being present on the following Sunday evening, after his own services, at the Wesleyan chapel. He wished to judge, he said, as to the instruction his singular flock might receive there. Hearing nothing of which he could disapprove, the new arrangement was made permanent; and one consequence was, that he not only retained his own congregation at the afternoon service, but he found it very greatly increased by numbers of Wesleyans, whose attendance was understood to be out of respect to a man whose spirit was as liberal as his judgment of the people was correct.

Generally, they have been called a proud people; and this they are, but not a vain or an arrogant people. They are proud of their old glories; and if the figure of Edward at Carnarvon is as little pleasant to them as that of Strongbow, “the first and principal invader of Ireland,” in Christchurch, Dublin, is to an Irishman, they proudly and reasonably refer to ancient glories achieved before the period when they were conquered, to their advantage, and kept subdued, to their exceeding great profit.

We have said they are not arrogant in their pride; they have rather been, for the most part, remarkable for their humour. Take the case of David ap Ifan when summoned to surrender Harlech Castle, where he had afforded refuge to Margaret of Anjou and young Edward after the fatal day near Northampton. The gallant David’s reply to Herbert, Earl of Pembroke, was, “that he had held a fortress in France until all the old women in Wales had heard of it; and now he intended to hold Harlech until all the old women in France heard of it.” David is one of the many stout heroes of whom a Welshman is proud, and in

the memory of whom he finds solace for the disasters of his country in the old fighting time. If the banner of Llewellyn went down before the greatest of the Plantagenets, the Great Standard of England was lost at Cunsylt, by its bearer, the Earl of Essex, and capture was almost made of Henry the Second himself. The history of the people is worthy of being better known than it is anywhere except in the Principality; and the historical allusions with which this book abounds should induce its readers to turn to such history, of which they know little, save generally. The people would have been less easy of subjection had all families been as prolific as that of the Hookes of Conway, one of whom was the forty-first child of his father, and the sire of twenty-seven children himself. In a fighting country, and a permanent period of hostility, such Hookes were the best benefactors of a country,—which is excellently illustrated in this pleasant volume.

A Handbook for Travellers on the Rhine, from Switzerland to Holland, &c. By K. Baedeker. (Coblenz, Baedeker; London, Murray.)

THERE are few things more amusing as a spectacle than to contemplate the blank look of English travellers when they come, for the first time, within sight of Ehrenbreitstein. They have carried with them the memories of the glorious imposition on the canvas of Turner; but these disappear in the formal, unpicturesque fortifications, most marked by what Nature and Art abhor: straight lines,—of which there is no end.

Travellers go to the Rhine with scraps of 'Childe Harold,' and they are eager to see "the castled crag of Drachenfels," and the river "whose breast of water broadly swells between the banks which bear the vine." They look out for "the vale of vintage bowers," and for "the peasant girls with deep-blue eyes," who "walk smiling o'er this paradise";—but the end of all is a confession that they have no wish "through life to dwell delighted here."

The fact is, that with the exception of the portion of the river flowing between Bonn and Bingen, which may be descended in a few hours, the Rhine is a dull, melancholy, ugly, and, in some places, "hideous" stream. It is as inferior, in its most boasted district, to the Danube at Dürrenstein, as Goose Creek in the United States is to the Tiber, whose ancient name it has usurped. If you venture to make this observation to a Rhinelander, he will, probably, if he have Byron's testimony by heart, answer with—

The river nobly foams and flows,
The charm of this enchanted ground;

—but this, as a proof of the superiority of the Rhine, is like the corroboration of the feat of the knight who rode in panoply up the perpendicular face of the rock at Lorsch. You hint disbelief of the alleged fact. "But," say they, "we can show you the saddle!"

Through this locality, however, where Turner and Byron should be the acknowledged patron saints of hotel-keepers, steam-boat companies, and vineyard proprietors, Mr. Baedeker undertakes to guide all pilgrims inclined to accept him for a cicerone. We can vouch for both his honesty and simplicity. He fairly warns travellers that there are "obnoxious charges" as well as other unpleasant matters to be met with in the hotels. The arithmetic of Rhine waiters is pronounced "faulty." The landlords, erring mortals like their waiters, too, often present their bills at the last moment, when "wilful impositions must be submitted to for want of time to investigate them." There are other practices which the English traveller

will have to guard against if he would "walk smiling o'er this paradise." Mr. Baedeker thus feelingly alludes to it: "The habit of putting clothes and boots outside the bedroom-door to be brushed is sometimes attended with inconvenience. The editor was once unfortunate enough to be despoiled of a great portion of his wardrobe through this incautious act."

So much for perils to the purses and wardrobes of English travellers in the vicinity of the Rhine. His stomach and general health would seem to be in no less danger. Let him beware of wines of "fictitious body and sweetness." Although sovereign princes be the grapesellers, "the label and cork are not always guarantees that the wine is what it professes to be;" and "the art of adulteration is, unhappily, widely known;" and after the prince wholesale-dealer, and the adulterating retailer, there come those obsequious cheats, the inn-keepers, who "put a profit upon their wines of about one hundred per cent!" Poor English traveller!

Yes, "poor English traveller," for he must exercise very great care how he protests against being thus victimized in the paradisaical land. Mr. Baedeker, remembering, probably, how Capt. Macdonald was treated for making protest against invasion of his rights, and how all England was assailed, in consequence, by the Staats-procurator, Möller, of Bonn, is almost awful in his injunction to English pilgrims to walk gingerly as if they were on hallowed ground. He alludes playfully to the "physical excitement, almost amounting to ferocity," which influences liberal imbibers of port and sherry; and for the benefit, we suppose, of these ferocious toppers he intimates that their bills will be "swollen" if they travel "with a superabundance of luggage" (Mr. Baedeker sets down "two flannel shirts" as sufficient for the pedestrian tourist), if they are "difficult to please," or "find indiscriminate fault," or "impose unnecessary trouble." If a bewildered British wayfarer be perplexed as to the extent of his liberty while in Germany, let him beware of taking as deep a draught of that cordial as he might be inclined to do at home. Let him not, in his extreme perplexity, trust implicitly either landlords or waiters. The editor pleasantly hints that these are mendacious fellows. "It is a good precaution," he says, "to gather information from as many other sources as possible." Finally, if travellers from these islands would escape as little scathed as may be from the perils indicated by the editor, they are bidden to observe many directions, but "above all to conform in their orders and requirements to the manners and habits of the country."

Thus warned and admonished, an Englishman may meekly venture to the Rhine, and there be tolerated and fleeced, according to the evidence of this German editor, who has gone over the old tracks and in the old grooves, and, while telling many things, tells nothing new. Thus, the mere old lions of Bonn, for instance, are duly stirred into liveliness for the benefit of the spectator who, probably, may care for none of them. And yet there are attractions in this university town which no guide-book ever notices. Among these is the ceremony of conferring degrees. We recommend all learned travellers, at least, to witness the making of a Doctor of Philosophy. There is more excitement in it than might be expected, and the hall is open to all comers. The candidate reads his Latin thesis, the arguments of which are combated by an opponent, and then ensues a controversy, or questioning and answering, between the professors, the adversary, and the candidate, the most remarkable feature in which is the readiness and graceful facility with which all these parties employ a colloquial

Latin. In Schlegel's days this was the most interesting feature of the whole ceremony. But this applies only to the occasions when the candidates are German. To these Latin is as familiar almost as their mother-tongue. When English candidates are up, they are seldom able to do more than read their thesis. They have not been taught to employ Latin colloquially, and a special permission from Berlin relieves them (yet not invariably) from that difficulty, in surmounting which the German students frequently reap the greatest distinction.

Another Letter to a Young Physician: to which are appended some other Medical Papers. By James Jackson, M.D. (Trübner & Co.)

THOUGH Dr. Jackson's 'Letter to a Young Physician' is not exactly a publication for the drawing-room table, it is one of which we should gladly hear that it had found its way into the hands of every lady in the country. Scarcely any social change is more to be desired than that women should be better instructed on the theory of medicine, and the arts and sciences pertaining to it. Led by custom and curiosity to dabble in physic, they are almost as ignorant of its first principles as were our grandmothers in the tenth degree, who centuries since doctored their children and dependents with specifics compounded of a hundred different ingredients. Natural affection and domestic convenience make them the nurses of the sick, and not unfrequently, in cases of emergency, they are the only ministrants at hand to discharge offices that would properly devolve on a regularly-trained medical adviser. Yet little or no care is taken to procure them information, without which a mother will often be powerless to afford comfort to a child struggling upon her breast with needless suffering. Indeed, a proposal to instruct ladies in nosology and the mysteries of the pharmacopœia would shock the delicacy or excite the ridicule of most persons able to bring about a better state of things. The result of this unwise treatment of an important subject is, that, as a rule, gentlemen regard a physician's prescription with the same sort of superstition as was formerly expended on amulets and charms, and in pure simplicity believe a dose of medicine to be a mysterious agent capable of driving disease out of the body. If Dr. Allopah's pills are taken previous to the abatement of a fever, to Dr. Allopah's pills the improvement is attributed; if Dr. Homœopath's globule is administered an hour before the advent of a refreshing sleep, Dr. Homœopath's globule gets all the credit of the change for the better; and just as the chamber in which a patient recovers under the kindly efforts of nature has been presided over by Dr. Allopah or Dr. Homœopath, so the one or the other is held by the spectators to be a "wise man." In a particular case this almost blind credulity may be attended with neither good nor evil consequence, but it indicates a state of popular intelligence out of which charlatans have from time immemorial made their profit. The readiness of illogical minds to reason on insufficient data, and embrace the wildest conclusions of "post hoc ergo propter hoc" reasoning, which proclaimed Joanna Stephens a public benefactor, placed Mrs. Mapp in her coach-and-four, bore witness to the cures of Ward and Taylor, and testified that painted nails and slips of wood could draw morbid virus from the human system, did not disappear together with faith in "metallic tractors." It countenanced the obscenities of Mesmer, built Graham's "Temple of Health," upheld the pernicious practices of St. John Long, and in our time furnishes Spirit-Rapping with its thousands of believers.

The time, we trust, is not far distant when a writer of competent attainments and impartial judgment will offer the public a satisfactory history of medicine,—not a compilation wandering over thrice ten centuries of scientific darkness, with a show of erudition filched from Le Clerc and Freind; but a sound, honest history of medicine during the last hundred years, referring to the ancient schools only to display the causes of their errors, and having for its chief object the exposition of those facts and principles which, even at the present unsatisfactory stage of medical science, recent investigations have conclusively ascertained. Until public intelligence is better informed both as to what is really known, and as to the means by which we may reasonably hope to attain further knowledge on subjects concerning which no one can be indifferent, ignorant pretenders, be they ambitious knaves or mere self-deluded enthusiasts, will find a submissive crowd of worshippers and victims. In the mean time it is something to have a physician of reputation come forward and frankly avow how far, and under what circumstances, medical science can cope with disease. It is well for the invalid of average education and sagacity to know that one of the most enlightened physicians of the present century admits that all he can effect in the practice of his profession is, in certain cases—such cases being by no means a majority of those that seek his treatment—to assist nature in working her own cure:—

“When a surgeon is called to a man with a broken leg [writes Dr. Jackson], he places the limb of his patient, and in some measure his whole body, in a fixed position, using splints and bandages; and then he watches him from day to day. He does not pretend that the processes of healing in the fractured bone are brought into operation by the splints and bandages, nor by his watching. But he has placed the injured parts under the circumstances most favourable for healing; and he watches that he may guard against everything which can interfere with the salutary operations of nature, as well as that he may give to her any support which he may think that she needs. Just so, the physician, in the larger number of cases under his care, makes it his business to dispose of everything relating to his patients in such a manner as to give the best chance for the salutary operation of the natural powers. A good nurse, it may be said, may do the same. But the qualifications of a well-educated physician must enable him to take the case with much greater advantage.”

Teasty innovators, who are fond of railing at the intolerance of Orthodox Medicine, will do well to take a lesson of moderation from an orthodox physician.

NEW NOVELS.

Miss Gwynne of Woodford. By Garth Rivers. 2 vols. (Smith, Elder & Co.)—Miss Gwynne of Woodford is a charming woman, and her history is here related in a charming manner, without pretension, without affectation, and without exaggeration. The book is really very pleasant reading. There is just enough of plot to keep up the interest of the story, and not enough to weary and confuse the reader. The heroine is a thoroughly good and loveable woman, doing her duty to her family, to her neighbour, and to herself, without making any ostentatious fuss about it; and yet the author has actually had the strength of mind to refrain from quoting those inevitable lines of Wordsworth's, about—

A creature not too bright and good
For human nature's daily food.

The fault of the book is the hero. Stephen Forrester is nothing but a sottish country squire, without either mind, heart, or principle, and with the addition of a very bad temper. He is scarcely ever sober. He quarrels with his sister, neglects his wife and child, forsakes his old friends, and even carries on an intrigue with his own cousin, while

she is staying in his house on a visit to his wife and sister. In short, it would have been difficult to depict a more weak, foolish, and despicable man; his only good quality appearing to be a kind of rough, instinctive good nature, and a great respect (for the feeling is not worthy of the name of affection) for his old neighbour and playfellow, Miss Gwynne of Woodford. Yet to this worthless creature the noble-hearted Maud is represented as being devoted throughout her whole life. Her attachment survives his drunkenness, his marriage to another woman, his intrigue with her friend, and all his folly and stupidity; for he has not even one talent to recommend him. She goes to him whenever he deigns to want her; she nurses him when he is ill; she adopts his natural child; and, when the wife is dead, and the mistress otherwise disposed of, she actually (after a little struggle and demur, we own—but still she *does* it) marries him herself! Now, constancy is, doubtless, an excellent thing in woman; but this is surely carrying the joke a little too far. We are, however, led to suppose that some twelve years after his marriage to Maud Gwynne, Stephen Forrester has become a model country gentleman—stout, heavy, and ponderous, sober, dull, and steady, but much respected as a J. P. and a parochial authority; while Maud has turned into “a fine woman,” and “takes the lead” among the county families. If such a fate is thought a desirable reward for a whole life of self-abnegation, we can only take leave of Miss Gwynne with regret at losing sight of her, and many thanks for the interest and amusement we have derived from her story. The other characters in the book are equally well portrayed: the saintly High-Church clergyman, Hugh, Maud's brother, who dies; and the merry, natural little Mary, her sister, who marries; the irritable blind father, and the amusing old nurse, all have their merits; and the class of Welsh school-children are described with much drollery. But we cannot conclude without wondering why, in all the novels of the present day, nobody is ever allowed to marry till they have become old, grey, fat, and uninteresting. There is something touching and romantic in the idea of young people of eighteen and sixteen forming unfortunate attachments, and struggling through a year or two of misery, but eventually being made happy, while still in the very bloom of youth and beauty. But now-a-days, nobody begins to be attached till they are getting on in life; and after we have missed several years between each chapter, the *dénouement* never can take place till the poor old hero and heroine have at least one foot in the grave. We feel that however happy they may be in each other's affection, that cannot ward off the attacks of gout, sciatica, and lumbago, to which they must, ere long, be subjected. Dyspepsia, liver complaints, and other infirmities incident to declining years, will, we feel, assail them, in spite of all their sentiment for each other; and we shall be quite relieved when “the fashion comes round” again for the young heroes and youthful heroines of our early days.

OUR LIBRARY TABLE.

Scepticism, a Retrogressive Movement in Theology and Philosophy—as contrasted with the Church of England, Catholic (at once) and Protestant, stable and progressive. By Lord Lindsay. (Murray.)—A kindly and gentlemanly work with ingenious argumentation, but on a curious basis. The Church of England is “the only legitimate branch and representative in the Latin world of the Mediæval, Primitive, and Apostolic Church! The Roman Church broke off when she claimed infallibility for the private judgment of the reigning Pope; the Continental Protestants, when they asserted the private judgment of the individual Christian.” Again—“The Church of England, in other words the Catholic Churches, Apostolic, Primitive, Mediæval, and Modern, as established in England, the same, consistently, without break, yesterday, to-day, and for ever.” And this unity has been obtained by allowing the interpretation of Scripture to reside in “the common consent of the successors of the Apostles, as recorded in the *dicta* of the Six Œcumenical or Universal

Councils, or, more restrictively, of the first Four.’ Lord Lindsay has read a good deal, and has given his own views of the schoolmen and all other theologians, even down to our own time. For ourselves, we cannot make the first step: we cannot yield to the authority of General Councils.

Philosophia Ultima. By C. W. Shields. (Philadelphia, Lippincott & Co.)—PHILOSOPHIA ULTIMA: 1. Scientia Scientiarum; 2. Ars Scientiarum; 3. Scientia Artium. And why is poor *Ars Artium* to be excluded? “My unfortunate client—,” a barrister once began, and stopped to cough.—“Go on, Sir!” said a malicious judge; “so far as you have yet gone the Court is with you.” Our Court is with Mr. Shields so long as he describes the miserable condition of philosophy and theology, both in an inextricable net. But when he comes to his proposals of relief, we begin to feel lost. Every science is to be divided into rational and revealed,—astronomy and geology, for instance. On this point of the Appendix—which is a summary—we staked our chance of understanding something of our author's meaning. We looked carefully for an elucidation of this distinction: and we failed. “Astronomy, for instance, is both discoverable and revealable, though in unequal proportions, being at once a human system of celestial physics, and a divine manifestation of our Father who is in the heavens.” Into what two parts does this divide astronomy?

A Survey of Human Progress. By Neil Arnot, M.D. (Longman & Co.)—Dr. Arnot, always zealous and acute, cannot be reviewed without a disquisition on what knowledge is, and what it is for. The bearing of his work is on education, and he has not been able to arrive at any idea of what classical education is intended for. The root of his system is knowledge—plenty of it. “The greatest sum of knowledge acquired with the least trouble is that which comes with the study of the general and simple truths of science.”—What for? this is the question we cannot find answered. The great question of education is not what is got, but *how*, and with what creation of *power*. That knowledge is power is no more true than that powder and shot are grouse in August and partridges in September. The first will lead to the second, if the possessor should know where to go and what to do. Hereby hangs a great question: and if any one will read Dr. Arnot, always readable, with these considerations in his head, many points of this question will suggest themselves.

Lectures on Natural History. By Edward Jesse, Esq. *Delivered at the Fisherman's Home, Brighton.* (Booth.)—This is another of the gossip compilations of Mr. Jesse. For the accuracy of his science he appeals to the authority of Prof. Owen, who has read and approved of several of these Lectures. Th occasion on which they were delivered disarms criticism, if there were anything in them to provoke it, except, perhaps, the lax use of such important words as “language” and “instinct,” which are often employed without much thought or precision. But the Lectures are full of curious statements and amusing anecdotes, and whilst highly instructive and interesting to the seafaring men to whom they were addressed, are worth reading by anybody. These Lectures belong to a series of efforts which have been made of late years for the improvement of the Brighton fishermen and boatmen, coast loafers and Esplanade touters. For several years past some of the arches built in the face of the cliff, and under the King's Road, have been set apart as a chapel, a Sunday-school, and a reading-room, for the benefit of the fishermen and their families; and attempts have been made to lecture them into habits of prudence and frugality by explaining to them the advantages of savings-banks and life insurance. In the reading-room there are newspapers for the use of the fishermen and boatmen who can read, and for the entertainment of those who cannot, and certain gentlemen of the town, in turn, spend an hour occasionally in reading aloud from books during the long winter evenings. Mr. Jesse was kind enough to compose these Lectures to inaugurate the readings, and they are now sold for the behoof of the institution, which is misnamed a “home.” However far the reader

may be from admiring the theological platitudes which garnish this, like most popular books on Natural History, they may be excused in an author who concludes his last lecture by stating that he has entered his eighty-first year. An increased vigilance on the part of the police having accompanied the means employed for the amelioration of the manners of the boatmen of the Brighton beach, visitors during the present season remark with pleasure that they are now less intrusive and offensive, drunken and quarrelsome, than they were of old. The new generation of them can read and write.

Coheloeth, commonly called the Book of Ecclesiastes. Translated from the Original Hebrew, with a Commentary, Historical and Critical, by Christian D. Ginsberg. (Longman & Co.)—"No!—read it through."—"Then we won't read any." The first sentence was the answer of the author of an elaborate work to the demand for an index: the second was the rejoinder of the educated world. Not a bit of index to this bulky and learned monograph, and table of contents of less than a hundred words! This is too bad. The author has collected from all quarters, and says he has spent seven years of labour upon it: we wish he had given one month to an index. "*Coheloeth*," according to him, is a *female collector*: the work is not by Solomon, though speaking through an impersonation of him. The design of the book is to explain the difficulties of the moral government of God, and to show that happiness is to be found in calm enjoyment of life, resignation, piety, and belief in a future state. The book is well worth the attention of the theological critic; but once more, in the name of all that is mentionable,—we are almost tempted to go further,—why no Index!

The Mechanics of Construction, including the Theories of the Strength of Materials, Roofs, Arches, and Suspension Bridges. By S. Fenwick. (Bell & Daldy.)—The author, who is attached to the Woolwich Academy, has given a very satisfactory treatise. In this subject, when a person who is known to be a good elementary writer publishes a work for students, almost the only grave question that remains is, whether his command of recent information be good. Mr. Fenwick has cited a dozen of the most modern writers, and we find that he has used them, and others as well. We have no doubt that this book will be found to be very serviceable.

Suggestions on Popular Education. By Nassau W. Senior. (Murray.)—This book is making its way, as we see and hear. It is essence of Blue-book, arranged, readable, and furnished with conclusions. It is the argument of one of the Commissioners on Education woven into the facts which the Commission collected. It cannot be reviewed alone: but it must occupy a place in the heading of any deliberate article of our period.

One Thousand Arithmetical Tests; or, the Examiner's Assistant. By T. S. Coyzer. (Griffith & Farran.)—Mr. Coyzer's idea is new, and may be useful. He divides the arithmetical rules wanted into forty heads; and he gives a set of twenty-five examination papers, from A to Z, with forty questions in each, one in each rule. Thus, as he says, the quarry may be worked either horizontally or vertically. Take a letter, and go through the numbers; there is an examination paper on questions of each kind: take a number, and carry it through the letters, and there is a collection of questions on some one rule.

Arithmetical Examples. Part I. By W. Davis, B.A. (Longman & Co.)—This book says it contains 138,000 questions from Numeration to Compound Proportion. The answers are to follow in a key.

Ratios, Concrete and Abstract. By H. M'Coll. (Whittaker & Co.)—A substitute for the fifth book of Euclid, quite accurate in principle, for it substitutes an unlimited power of bisection for an unlimited power of multiplication. The author is master of his subject: but we are not inclined to substitute any method for that of Euclid, which may be made, we think, the simplest of any. The author proposes a second part, in which algebra is to be founded on the notion and language of general ratio: we recommend him to stick to

pure number as the basis. A contemporary, in giving some account of this work, by a lapse, made Mr. M'Coll say against the fifth book of Euclid itself all that he really said against inaccurate substitutes for it. This must vex an author: what would a divine say, who by mistake of a reviewer, had his description of Simon Magus transferred to St. Peter?

The Memory Work of Arithmetic. By W. Davis, B.A. (Longman & Co.)—Definitions, tables and rules: a frightful quantity, though in a small book. But Mr. Davis should have distinguished between what is to come into memory by practice and what is to be learnt by rote.

The Projection and Calculation of the Sphere. By S. M. Saxby, R.N. (Longman & Co.)—A mixture of instructions in projection and in calculation, for young seamen. It is a book which can only be judged of by its results; and the author, instructor of the Steam Reserve, will have the means of giving it a fair trial, or of procuring one. There is much in small space, neatly packed.

Elementary Geometrical Drawing. Part II. By S. H. Winter. (Longman & Co.)—This part contains descriptive geometry; the drawings and explanations are both clear.

Travellers in France and other parts of the Continent, whose knowledge of conversational French may be deficient, cannot have a better help than *The Practical Guide to Modern French Conversation*, by F. E. A. Gasc. (Bell & Daldy.)—It contains the purest French of the present day, both for ordinary conversation and such as is likely to occur in travelling. Two additions have been made to the "Oxford Pocket Classics": *Cicero's Orations—The Oration for Milo, with short English Notes, for the use of Schools* (Parker), and *Cæsar De Bello Gallico. Cæsar's Commentaries, Book I.—III., with short English Notes, for the use of Schools* (Parker). Both are good, though we prefer the former. Even the latter is superior to *C. Julius Cæsar Commentariorum de Bello Gallico, Libri IV., from the Text of Herzog*, by Rev. J. R. Major, M.A. (Tegg), the notes in which are of no great value. The titles of the two following need no explanation:—*Guide to the Army—Competitive Examinations; being a Compendium of Practical Hints for Candidates with reference to Schools, Allowances, Outfits, and other Expenses, together with Extracts from the Examination Papers, Official Rules and Regulations, and all other necessary Information*, by Capt. A. H. Hutchinson (Stanford); and *Chinese and Indo-European Roots and Analogies*, by P. E. Chass (Low), a paper read before the American Philosophical Society.

Of publications of a religious nature we have received:—"*Another Gospel*," examined; or a *Popular Criticism of each of the Seven Essays and Reviews* (Walker).—Part II. of *Exeter Hall versus British India* (Hatchard).—*The Apocalypse expounded by Scripture*, by Mattheos (Nisbet).—*Miracles not Antecedently Incredible: an Examination of Prof. Powell's Argument in 'Essays and Reviews'*, by Rev. W. A. O'Connor (Parker).—*A Reply to the Letter entitled 'The Suppression of Doubt is not Faith'*, by "One who doubts not, but fully believes that the Bible is the Word of God" (Parker).—*The Cherubim: What Do They Mean?* by Mattheos (Nisbet).—*Anti-Essays: the 'Essays and Reviews' Fallacious and Futile, 'at variance with each other and mutually destructive'*, by the Rev. C. H. Davis (Simpkin).—*Exoneravi Animam; or, One Radical Reformer's Way of Thinking: containing a Few Suggestions touching the 'Essays and Reviews,' as appreciated by Convocation, and The Discrepancy between Genuine and Vulgar Christianity, still requiring Reformation*, by J. B. Humperley (Manwaring).—*Some Notes on the First Chapter of Genesis, with References to Statements in 'Essays and Reviews'*, by the Rev. A. M'Cauley (Wertheim).—*Streaks of Light; or, Fifty-two Facts from the Bible, by the Author of 'Peep of Day'* (Hatchard).—*Prayers for Family Worship*, by the Rev. Dr. Lee (Hamilton).—*The Rev. F. Garden on The Atonement as a Fact and as a Theory*,—and the Rev. J. L. Davis on *The Signs of the Kingdom of Heaven*, being Nos. III. and IV. of "Tracts for Priests and People" (Macmillan).—*The Grievance and the Remedy: an Essay in Verse*, by Expectans (Hardwicke).—and *The Doctrines of Jesuit and*

Roman Catholic Writers on Homicide, Theft, Perjury and other Crimes (Protestant Alliance).

LIST OF NEW BOOKS.

Bacon's Life and Correspondence, or *8vo.* 14s. cl.
Bohn's Eng. Gent. Lib. 'Montague's Lady W.' letters, &c. V. 2. 2s.
Bohn's Illus. Lib. 'Nelson's Life, by Southey, with Notes,' &c. cl.
Book of Trades, 13th edit. 16mo. 3s. 6d. cl.
Calmet's Die of Holy Bible, by Taylor, 14 ed. imperial 8vo. 12s. cl.
Caron's First Reading-Book, 12mo. 1s. cl.
Cavour: a Memoir, by Dissey, cr. 8vo. 4s. 6d. cl.
Dalgairns' Practice of Cookery, 13th edit. 8vo. 3s. 6d. cl.
Eadie's Analytical Concordance to Holy Script. 3 ed. or. 8vo. 8s. 6d.
Francisell's Cook's Guide & Housekeeper's, &c. Assistant, &c. cl.
Gleig's School Series. 'M'Leod's Physical Atlas of G. Brit. &c.' 7s. 6d.
Hardlab & Wood's Child's Homoeopathic Physician, and ed. 8s. cl.
Introduction to the Study of Prophecy, post 8vo. 2s. cl.
Italian Navies on West Swiss Railway, Preface by D'Abimig, 1s.
Jarman's Conveyancing, 12 ed. V. 8. Pt. 1; Powers of Attorney, &c.
Jeanne d'Albret, Queen of Navarre, Life of, by Freen, n. ed. 6s. cl.
Lansdowne, The American Crisis Considered, or, &c. 8s. cl.
Lytton's Novels, Lib. Ed. V. 33. 'Eugene Aram, Vol. 1,' 1s. 6d. 5s.

Marryatt's Peter Simple, new edit. 8vo. 3s. 6d. cl.
Moseley's What is Contained of War & What is not, post 8vo. 5s.
Palmer's Way of Holiness, new edit. 12mo. 1s. cl.
Parfleur Lib. 'Galen's Madman of St. James's,' 1s. 2s. bds.
Perfect Cure's Comic Songs, 4to. 1s. swd.
Punch, Re-issue, Vol. 7, 4to. 5s. bds.; Vol. for 1844, 4to. 10s. 6d. cl.
Purdell, Lib. 'The Arabian Nights,' or, Thrice of Country Idols, &c.
Revelation, the Orb of Light, or, 8vo. 7s. 6d. cl.
Riego's Golden Stars in Tattling and Crochet, 16mo. 1s. swd.
Scott's Miscellaneous Works, V. 3 & 4, n. ed. plates, 8vo. 3s. each.
Speeches of Managers, &c. in Trial of W. Hastings, ed. Bond, V. 4, 20s.
St. John's Quadrangle, or, the Slave Mother, 8vo. 2s. bds.
Walter's Rays of Holiness from Sun of Righteousness, 12mo. 1s. 6d.
Wardlaw's Posthumous Works, ed. by his Son, V. 5, 12mo. 8s. cl.
Welcome Guest, 1861, Vol. 2, royal 8vo. 5s. 6d. cl.
Wild Flowers, by Alice T., 16mo. 1s. cl.

BRITISH ARCHEOLOGICAL ASSOCIATION.

The British Archaeological Association held its Eighteenth Annual Congress at Exeter, from the 19th to the 24th of the present month, under the presidency of Sir Stafford H. Northcote, Bart., M.P. Everything favoured the success of the meeting, for the weather was most propitious for the various excursions in a country full of antiquarian interest; the members who attended were numerous, and met with a hearty reception from the leading citizens; and the papers contributed and read during the week were numerous and good. On the Monday, the members of the Association were received rather ceremoniously by the Mayor of Exeter, who invited them to a handsome collation of wine and fruit in the Council-room at the Guildhall, which collation is understood to have been paid for by the Local Committee. Sir Stafford Northcote's inaugural address was rather long, but effective, and gave general satisfaction. He dwelt, perhaps, too much on British, Druidical, and Phœnician antiquities, and on archaeological theories now exploded, especially as this branch of archaeology came very little into the business of the week. On the first day of the meeting, the Devon and Exeter Institution took the lead in that fraternal sympathy which was shown by all the Local Societies to the Metropolitan Association, by giving them a *Soirée* in their rooms in the Cathedral-yard, at which a paper was read 'On the Architectural History of the Cathedral,' by Mr. Davis, who led the visitors over the Cathedral next morning, and explained its architectural peculiarities on the spot. On this day (Tuesday) the President received the Association at his seat at Pynes, and gave them a very handsome entertainment; and they proceeded thence to Crediton, to inspect the rather interesting church of that town, the earliest site of the episcopal see now established at Exeter. On Wednesday, the Association made a long excursion to visit the interesting remains of Ford Abbey, and on their way back they took Ottery St. Mary, where they received a very hospitable entertainment from Sir John Coleridge, and afterwards visited the church; some critical remarks were made on the restorations made in it by Sir John, which appeared not to meet with his approval. On Thursday, the excursion lay in South Devon, and included the Early English church of Hacombe, Compton Castle, Torr Abbey, Torquay, and the celebrated Kent's Cavern, which, however, was only visited by a small party, in consequence of the lateness of the hour and an inopportune shower of rain. On Friday, the Association visited Tiverton, Collumpton, Bradfield House, where they were received with profuse hospitality by J. Walrond Walrond, Esq., and Bradninch Manor-house; and on Saturday they went, by way of Totness, down the beautiful estuary of the Dart, to visit the ancient town of Dartmouth, taking on their way Dartington Hall, one of the finest examples of domestic archi-

number for October 30th, 1847 [No. 1044, p. 1127]. But three years later I gave a full reply in the Appendix to my 'Enquiry into M. Antoine d'Abbadie's Journey to Kaffa to discover the Source of the Nile,' where it took up as much as ten octavo pages closely printed in small type.

Apart from all questions respecting that journey, I asserted in my 'Enquiry,' and have since reiterated in my recently-published work, 'The Sources of the Nile,' my conviction that the Godjeb is the head-stream, or one of the head-streams, of the Sobat, and not of the Tubiri.

Since the time of the Turco-Egyptian expeditions up the Nile the Sobat has been partially explored, but nothing positive respecting its upper course was ascertained till very recently.

The number of Dr. Petermann's *Geographische Mittheilungen* for May last (1861, part v. pp. 171—173,) contains two communications from Monsignor Massaia, Apostolic Vicar for the Gallas, and Father Léon des Avanchers, dated Kaffa, the 12th and 14th October, 1860, which furnish information respecting the Sobat, not only confirmatory of my views generally, but corresponding in a remarkable degree with the particulars recorded in Omar's map. Without deeming it necessary to repeat all that the two missionaries say, I will give here a few of the most material passages in Msgr. Massaia's communication, the order of which passages I have slightly varied, for the purpose of connecting the whole and rendering it more intelligible.

It must be premised that in the year 1859 Father Léon, who had previously been at Zan-zibar and along the east coast of Africa, travelled through Abessinia and the Galla Country southward to join his principal, who was then in Gera, an independent kingdom lying to the south-west of Enarea (see Omar's map); and in May, 1860, the two missionaries reached Kaffa. They there learned the following particulars respecting the Sobat, which river is, in their opinion, "the true White Nile of Ptolemy":—

"Following the course of the Sobat (writes Msgr. Massaia) from its junction with the main stream of the Nile upwards towards the south, it is found to have two principal arms, of which the left [or more northerly] one is the Barro of the Gallas."—"It is the deeper of the two, receiving numerous affluents from the countries of Filawi, Mucha, Kaffa, and Gobo."—"The valley between Filawi and Mucha is that of the river Berber, which receives the waters of Gobba, Wallaga, &c., and falls into the Barro."—"South of the junction [with the Berber] the Barro receives three large tributaries coming from Kaffa, and skirts the base of the mountains of Gimira (provinces of Kaffa, whose native names are Na-ho, Kuicho, Chero, Ichéno, Kabo-iaño.)" This is not very clear, but it is a literal translation of the original. "The inhabitants of the banks [of the river] are the Surro, who are independent of Kaffa, but dwell in that country."—"The river is visible from the mountains of Kaffa at the distance of one day's journey."—"After passing Kaffa the river turns a little towards the east, and bathes the foot of the mountains of Gobo and Kuicho, the inhabitants of which latter country make frequent expeditions towards the west." Therefore Kuicho must lie to the west of Gobo, as "Koisho" is made to do in Omar's map. "In the centre of the plateau south of Gobo, and visible from the summit of the mountains, is a lake or marsh, from which the Barro issues."—"This lake is said to be three or four days' journey southward of Kaffa."

Omar's map, as will be perceived, is a sufficient guide to the description thus given of the course of the Sobat or Barro, by him called Godjeb, and by myself and others Godjeb. At the point beyond Gobo, where Omar represents the union of several streams, the "lake or marsh" of the missionaries must be situated. The two are nowise inconsistent. In page 15 of 'The Sources of the Nile,' already referred to, I have said, "On a comparison of evidence (somewhat conflicting, it is true) it would also appear that along the course of the Godjeb there is a large lake or a series of lakes or marshes"; referring in a foot-note to the *Journ. Roy. Geogr. Soc.*, vol. xvii. p. 62, and to my map in vol. xiii.

of the same journal. When I received in Mauritius a proof of the 'General Map of the Basin of the Nile,' inserted in my said work, on comparing it with the text I found that this lake had been overlooked, and I immediately wrote to England requesting that it might be inserted in the map; but my instructions arrived too late.

From my map I have taken a few particulars, and added them in dotted lines to Omar's map as now given. These are the course of the river Shol of M. Brun-Rollet, corresponding with Msgr. Massaia's second principal arm of the Sobat coming from the south, and that of the river "Berber," with its tributary the Gaba ("Gobba") coming from Wallaga. In my map the Berber bears the name of Baro, which the missionaries say is the proper designation of the main stream of the Sobat. This latter in its upper course is in my map named Bako, and afterwards Godjeb or Uma, while the Shol is treated as the direct upper course of the Sobat. These little differences, which do not in the slightest degree affect the courses of the several rivers themselves, are quite immaterial. If "Baro" be another name for the main stream of the Sobat below the junction of the Berber, Godjeb and Shol, it is perfectly intelligible how that name (or indeed both names) should be attributed to each one of the three affluents by the people dwelling on their banks respectively. In my work already cited I have instanced the successive application of the name "Nile" to the three principal tributaries of that river, the *As'taboras* or *Athara*, the *As'tapus* or *Abai*, and the *Asta-sobas* or *Sobat*.

Whatever names may be eventually attached to the several head-streams of the Sobat, we have now the satisfaction of knowing that Kaffa, Enarea and the neighbouring countries are all situate within the basin of that great tributary of the Nile; the water-parting of which, like that of the Blue River, has consequently to be placed along the fortieth meridian east of Greenwich, or thereabouts. How far the basin of the Sobat extends southward cannot yet be determined: it depends on the exploration of its southernmost branch, the Shol.

With your permission, I purpose availing myself of some future opportunity to make a few remarks on the opinion expressed by Msgr. Massaia and Father Léon des Avanchers, that "the Sobat is the true White Nile of Ptolemy." On the present occasion I will confine myself to directing attention to the fact, that the former of those missionaries, writing from Kaffa, has now, after eighteen years, testified to the accuracy of the information furnished by "my poor friend, Omar, whom I always looked on as a very honest fellow" [see *Athen.* No. 1044, p. 1127; No. 1105, p. 1330; 'Enquiry,' p. 48], and whom I have now more reason than ever for believing to be one.

CHARLES BEKE.

COLERIDGE'S MANUSCRIPT OF SCHILLER'S PICCOLOMINI.

August 12, 1861.

My letter on Mr. Gillman's Manuscript of 'Wallenstein,' in No. 1755 of the *Athenæum*, has led to the discovery of another authentic Schiller manuscript in this country. It is a complete and accurate copy of the 'Piccolomini,' in the original form of the drama, verified and corrected by Schiller's own hand, and has been entrusted to me for examination by the liberal courtesy of its present possessor, Mr. Henry R. Mark, of 17, Highbury Crescent.

Like Mr. Gillman's manuscript, this, too, is a thin volume in folio. It consists of twenty-six leaves of double columns, like the twenty-four leaves of the Gillman manuscript. The writing is again in English characters, but not by the same hand which copied Mr. Gillman's 'Wallenstein.' A piece of penmanship more neat, more painstaking, and more exact than this copy of the 'Piccolomini,' I have rarely, if ever, met with. An English friend to whom I showed the volume, paid me, jestingly, the flattering compliment that, in his opinion, such a calligraphic feat could only be performed by a German, or—a Chinese.

The writing of Schiller's verification on the last page (likewise in English characters) is far from

anything Chinese; but quite in the grand, bold and soaring style which we had to admire in the writing of the verification of Mr. Gillman's book. The wording is slightly different. It runs thus:—

"Dieses Schauspiel ist nach meiner eigenen Handschrift copiert und von mir durchgesehen. Solches besetze hiemit. FRIDR. SCHILLER."

"Jena, 30 September, 1799."

—the date, it will be remarked, being the same, on which the poet verified the copy of 'Wallenstein' in Mr. Gillman's possession. The corrections and alterations in the body of the manuscript (also in Schiller's own hand) are considerably less in number and importance than those in Mr. Gillman's 'Wallenstein.' They are, as far as I have observed, only emendations of the (very rare) mistakes of the copier. Improvements upon the text, entirely cancelled words and passages, &c., do not occur. Nor have I found anything in the shape of the pencil-marks, which, in 'Wallenstein,' bear witness to the labour of the translator.

The history of the manuscript, so far as I have been able to ascertain it, is this:—Mr. Mark was presented with the volume, about thirty years ago, by a Mr. Clarke, a merchant in the City, who, for his part, had held it as a gift, for at least fifteen or twenty years, from Mr. Winter, Secretary to the (then) Patriotic Fund, Lothbury. How Mr. Winter happened to acquire it, and whether or not he was an acquaintance of S. T. Coleridge, Mr. Mark cannot say. The manuscript, by external evidence, cannot be traced back, like Mr. Gillman's, into Coleridge's hands.

Nevertheless, I have not myself the slightest doubt that it was, originally, the property of Coleridge, and that, in fact, it is the very copy of the 'Piccolomini' from which he translated,—the long-lost companion volume to the manuscript of Mr. Gillman. Who, besides Coleridge, should have been the possessor, in this country, of a manuscript copy of the 'Piccolomini,' verified by Schiller exactly on the same day on which he verified Coleridge's manuscript of 'Wallenstein,' now in the hands of Mr. Gillman? Indeed, the whole character of the two attestations strongly impresses me with the opinion that they were written at the same moment and with the same pen. They are so strikingly alike that the mere sight of them almost obviates the necessity of tracing the channels through which the 'Piccolomini' manuscript passed from Coleridge's hands into those of its present possessor. Coleridge's careless habits and frequent movements easily account for his having lost so interesting a document,—the voucher of one of his own most interesting literary labours. His translation of the 'Piccolomini,' I must not omit to mention, follows the manuscript of Mr. Mark with the greatest fidelity,—almost line for line.

The manuscript has been collated by me, this time, not only with the various readings of the Berlin manuscript, as published by Herr von Maltzahn, but also with a copy of the second original edition of 'Wallenstein,' which appeared at Tübingen in September 1800, three months after the publication of the first edition, of which it is, in fact, an unaltered reprint. The result of my examination, without entering too much into detail, is as follows:—

1. As to the arrangement of the acts and scenes, it is again the same in both manuscripts. I have discovered only one slight deviation. Octavio's words—

Die Sachen liegen der Entwicklung nah,
Und oh' der Tag, der eben jetzt am Himmel
Verhängnisvoll heranbricht,† untergeht,
Muss ein entscheidend Loos gefallen sein—

wind up, in the London copy, the second scene of the third act, (just as they close, in the printed book, the second scene of the fifth act,) while, in the Berlin copy, they are the first of the following scene, thus addressed to Max, and not to the departing Cornet. The Berlin arrangement seems preferable.

2. All the important passages not adopted by Schiller in the printed editions, and first published by Herr von Maltzahn from the Berlin manuscript, are likewise contained in the London copy.

† Thus, in conformity with the printed editions, the word reads in the London manuscript. The Berlin manuscript has *hereinbricht*.

3. Among the differences between the two manuscripts, those occasioned by various readings of smaller significance are not very frequent. Mostly, it would seem, they originate in a want of accuracy on the part of the Berlin copier. Thus, for instance, when we read in the Berlin manuscript,—

ACT I., SCENE II.

Und wir um so viel Unterthanen Krmer!

ACT I., SCENE XI.

Die Geisterlatter, die aus dieser Welt des Raubes
Bis in die Sternenwelt, &c.

—it is easily seen from the context that the words in italics cannot have been written so, but by some clerical error, which must have escaped Schiller's notice. The London manuscript, in common with the printed book, has "Und *wird* um so viel," &c., and "Welt des *Staubes*." The reading of the Berlin manuscript (Act II., Scene VII.): "Es bricht sich die Welle mit Macht und Macht," is certainly no improvement upon the common reading, (given, also, in the London manuscript): "Es bricht sich die Welle mit Macht, mit Macht."

4. A more important difference, and indeed a highly characteristic one, is established by those passages which Herr von Maltzahn indicates as not to be found in the Berlin manuscript, while they occur in the first (and, therefore, too, in the unaltered second) printed edition. Of the seventy-five passages (if I have counted right) which are thus wanting in the Berlin 'Piccolomini,' forty-seven are wanting, also, in the London copy, whereas the latter gives entirely the twenty-eight remaining ones. Among these, there are several not only of considerable length, but also of great poetical beauty; such, for instance, as the dialogue between Max, Thekla and the Countess Terzky (Act II., Scene IV.), with Thekla's description of the astrological tower; and the conversation between Neumann and the Kellermeister (Act II., Scene XII.), in which the worthy old domestic gives his fine interpretation of the emblems of the great Service-cup.† Passages like these, it will be observed, are more of an epic and lyric than of a dramatic stamp. However beautiful in reading, yet, on the stage, they stem the current of the action, and must decidedly be signalized as *longueurs*. It is evident why passages of this nature were suppressed by Schiller in the Berlin book, which served as a stage manuscript, and why he did not suppress them in the London copy, which was intended for a literary purpose. The London manuscript, we must not forget, is five weeks older than the Berlin one.

5. Another difference, which must be assigned to the same reason, is this:—The struck-out passages of the Berlin manuscript (I have counted nineteen) are not struck out in the London copy.

6. The sixth scene of the first act is suppressed in the Berlin copy. In the London copy it is not so; but, while the dialogue of the servants, in the printed edition, (where the scene corresponds with the first of the second act,) is in iambics, the London copy lets them speak in plain prose:—

ERSTER BEDIENTER.—(mit einem Rauchfass herumgehend.) Greift an. Macht dass ein Ende wird. Ich höre die Wache in 's Gewehr rufen. Sie werden den Augenblick da sehn.

ZWEITER BEDIENTER. Warum sagte man uns aber auch nicht eher, dass die Audienz hier seyn sollte. Es war auch gar nichts darauf eingerichtet.

DRITTER BEDIENTER. Ja! warum ist die Erkerstube contermandirt worden, die mit der grossen gewirkten Tapete, die sieht doch nach was aus!

ERSTER BEDIENTER. Das frag den Mathematikus. Der sagt, es sey ein unglückliches Zimmer.

† A curious mistake of Coleridge, occurring in this scene, has hitherto remained unnoticed, I believe. The Kellermeister says:—

Drum waren meine Ahnherrn Taboriten,
Und dienten unter dem Prokop und Ziska—
—a passage which Coleridge (translating, by-the-by, the whole of the Kellermeister's iambics in prose), has rendered thus:

So were my forefathers, and for that reason were they minstrels, and served under Procopius and Ziska.

The author of 'The Ancient Mariner' was not acquainted with the Sussian expression "drum," we must not blame him for; but how are we to explain the strangely erroneous translation of "Taboriten" by "minstrels"? Should it not have struck Coleridge (Procopius and Ziska, moreover, might have given him the hint,) that the Taborites were a branch of the followers of Huss? He seems to have had some vague idea of "Taboriten" being *men with labors*. "Tabor," a musical instrument, an emblem of minstrelsy, therefore "Taboriten," minstrels.

ZWEITER BEDIENTER. Ei, Narrenspöken! Das heisst die Leute scherzen! Saal ist Saal! Was kann der Ort viel bei der Sache bedeuten!

7. It is the same with the few words which the servants have to say in the twelfth scene of the second act. This scene, besides, presents us with a little piece of dry fun, neither to be found in the printed editions nor in the Berlin manuscript. After the Kellermeister's admonition:—

Ein ordentlicher
Bedienter muss kein Ohr für so was
haben!

—we read the following:—

ZWEITER BEDIENTER.—(zum Laufer, dem er eine Weinflasche rustet, immer den Kellermeister im Aug behaltend, und zwischen diesen und den Bedienten sich stellend.) Geschwind, Thoms! Eh der Kellermeister heriaht—Eine Flasche Frontignac—Hab sie am dritten Tisch westpitpit—Bist du fertig?

LAUFER. Nur fort! 'Sist richtig!

DRITTER BEDIENTER.—(bei Seite zum ersten.) Pass ja wohl auf, Johann, &c.

—and, at the bottom of the page, immediately after Neumann's gentle rebuke to the Kellermeister for his having spoken slightly of the Spaniards, the interlude of John Thomas and the bottle quietly winds up as follows:—

KELLERMEISTER.—(zieht dem Laufer die Flasche aus der Tasche.) Mein Sohn, du wirst's zerbrechen!

The son of the Taborites, one sees, had his eyes everywhere, even while explaining emblems, and giving vent to his feelings against the "Hispanier" and "Welschen." In a preceding line (I may as well mention here)—

Doch seit der Grätzer über uns registert...

he says, in the London copy, "der Steiermärker," instead of "der Grätzer."

8. There occur a few more passages in the London copy which are neither to be found in the printed editions nor in the Berlin manuscript. The first (Act II., Scene XIII.),—

TIFFENBACH. Sie gab den besten Tisch im Böhmerlande.
OCTAVIO.—(sehwärzte zu Maradas.)

Erzeigt mir den Gefallen, sprech mit mir—
Wovon Ihr wollt—thut nur als ob Ihr sprücht—
Ich mag nicht gern allein stehn, und vermute
Es wird hier vieles zu bemerken geben.

(Er bethält ein Aug über der ganzen nachfolgenden Scene.)

is inserted between the words of Götz: "Gott hab sie selig! Das war eine Hausfrau!" and Isolani's command "Lichter! Lichter!" The second (*ibid.*),—

TERZKY.—(sieht dem Isolani zu, der heftig mit der Hand zittert und lange mit seinem Nadeln subringt.)

Habt Ihr den garstigen Zufall da schon lang, Herr Bruder? Schafft ihn fort.

ISOLANI. Die Jugendstuden!

Stahlböder hab' ich schon gebraucht. Was hilft's?

stands between the line spoken by Götz: "Ja wohl! der Schwed' frug nach der Jahreszeit nichts!" and the stage-direction: "Terzky reicht das Papier," &c. The third (*ibid.*),—

OCTAVIO.—(der den Maradas an Butlern präsentiert.)
Don Balthasar Maradas! Auch ein Mann
Von unserm Schlag und Euer Verehrer längst.

(Butler verbeugt sich.)

precedes Octavio's address to Butler:—"Ihr seyd hier fremd," &c. (not found in the printed editions, but given in both manuscripts); and the last (Act IV., Scene I.):—

SENI.—(ist herabgekommen). In einem Eckhaus, Hohelt.
Das bedenke!

Das jeden Segen doppelt kräftig macht.

WALLENSTEIN. Und Mond und Sonne im gesechten Schein.

Das milde mit dem heft' gen Licht. So Lieb' ich's.
Sol ist das Herz, Luna das Hirn des Himmels,
Kühn sey's bedacht und feurig sey's vollführt—

fills the place between Wallenstein's words,—"Und bringen ihn am Himmel mir gefangen," and Seni's reply,—"Und beide grosse Lumina von keinem," &c.† The scenic directions, too, at the beginning of the fourth act are more explicit in the London manuscript than in the Berlin one and the printed editions. I give them at full length:—

"Vierter Aufzug. Ein Zimmer zu astrologischen Arbeiten eingerichtet und mit Himmelscharten, Globen, Fernröhren, Quadranten und andern mathematischen Geräthe versehen. Sieben colossale Bilder, die Planeten

† All the above passages are wanting in the collections of Supplements to Schiller's works published by Boas and Hoffmeister. Nor have I ever met with them in any other place. It would appear, therefore, that they are here printed for the first time.

vorstellend, jedes einen transparenten Stern von verschiedener Farbe über dem Haupt, stehen in einem Halbkreis im Hintergrund, so dass Mars und Saturn dem Auge die nächsten sind. Das übrige ist in dem vierten Auftritte des zweiten Acts angegeben. Diese Bilder müssen durch einen Vorhang dem Auge entzogen werden können. (Im fünften Auftritte, Wallensteins mit Wrangel, dürfen sie nicht gesehen werden, in der siebenten Scene aber müssen sie ganz oder zum Theil wieder sichtbar seyn.) Erster Auftritt. Wallenstein (vor einer schwarzen Tafel, worauf ein Speculum astrologicum mit Kreide gezeichnet ist). Seni observirt durch ein Fenster."

The above, to the best of my judgment, are the principal individual features, upon the merit of which the London manuscript may claim a place and an importance of its own. For the editors of the future critical edition of Schiller's works it will be fully as valuable as Mr. Gillman's Manuscript of 'Wallenstein.' If, in the interest of literature, I may be permitted to express a wish, it is this—that the two manuscripts which I have been fortunate enough to draw forth from their fifty years' obscurity may, ere long, be saved from all possible future chances and mishaps of private possession, and be re-united, after their long separation, on the shelves of some public library.

One question remains to be solved: What has become of Coleridge's copy of Wallenstein's 'Lager'? For, although Coleridge has not translated the 'Lager,' yet it is evident, from his preface to the first edition of the translation of 'Wallenstein,' that the manuscript of "the Prelude in one act," was likewise in his hands. Where, then, if it is still in existence, does it hide itself? It may be as well to put this question once more, although this time, I fear, with very little hope of any result.

FERDINAND FREILIGRATH.

CODICI OF THE DIVINA COMMEDIA.

Newington Butts, Surrey.

THE number of Codici of the Divina Commedia existing in European libraries may be estimated at upwards of five hundred. The majority of these are found, as might be expected, in Italy. Florence and the Tuscan cities contain at least two hundred of them; Northern Italy has about one hundred; Rome and the Roman States have about eighty; Naples and Sicily very few indeed, probably not more than ten: thus making, in all, about three hundred and ninety codici in Italy. After Italy, England appears to possess the largest number of codici, between sixty and seventy. Lord Ashburnham's collection is stated at eighteen. The Bodleian Library at Oxford, enriched by the purchase of the Canonici collection of Venice, numbers fifteen codici. Our British Museum Library has twelve. The library of Lord Vernon at Sudbury Hall, that of the Earl of Leicester at Holkham, and of Sir Thomas Philips at Middle Hill, contain several; there are a few in other private libraries in England and Scotland, and there is one in the Hunterian Museum at Glasgow.

In France there are about forty known codici; the greater number of which, thirty-two, are in the National Library at Paris.

In Spain and Portugal there are about twelve known codici.

In Germany there are very few. Vienna, in 1850, had only two, one of which was a mere miniature curiosity; the other that which had once belonged to the Prince Eugene of Savoy. Berlin had only one; Dresden only one; Frankfurt one; Belgium two; Denmark has three. Breslau is said to have three; Goerlitz in Prussia, one; Stuttgart, one; Poland one: these latter I have not seen. There are, probably, a few others in the north of Europe, making the whole somewhat more than five hundred.

In estimating the importance of Codici it is usual to consider those in the Laurenziana at Florence as taking the lead. Batines, in his 'Bibliografia Dantesca,' gives one hundred and fifty-nine codici as the number contained in the public libraries of Florence, including the Palatina. Of these codici the Laurenziana contains eighty-seven, which is more than those of all the others put together. But although the codici in the Laurenziana are so numerous, the most important are only eight, and these have a relative value among themselves. The Magliabechiana has thirty-six codici; the Riccardiana contains the same number;

the Palatina had fourteen. There are other codici in private libraries; that of Mr. Seymour Kirkup has five.

Of some fifteen or sixteen known codici distributed over Tuscany, Siena possesses six.

The number of codici in the libraries of Rome is about seventy; sixty-three of these I have examined, as also a few others in the Roman States, at Ravenna, Perugia, &c. There are in the library of the Vatican several very important codici, the value of which has by some been underrated. Of the collections in the north of Italy, that at Milan is the largest, consisting of about thirty-three codici, of which twenty-two are in the Biblioteca Trivulziana. After Milan comes Venice; the Biblioteca Marciana, according to Batines, contains twenty-two codici, but when last there I could only find nineteen; the best of these is the Codice Marciano, No. CCLXXVI. At Padua there are four codici; at Pavia one; and at Treviso one. At Modena, in the late Ducal Library, I could find only five codici—Batines mentions six; but at Parma, where he describes only three, I found four. The codice of the late Marquis Landi, which he showed me with much courtesy at Piacenza in 1851, bears the date 1336, only fifteen years after Dante's death: it is a very important codice, though, unfortunately, the original readings have in many places been altered.

The greater number of the codici of the Divina Commedia extant date from the middle of the 14th century to the middle of the 15th; very few are earlier than the former period, though many are later than the latter, and a few as late as the middle of the 16th century. There are several very good codici in the National Library at Paris, among them may be mentioned that which once belonged to Pope Pius VI., and is numbered "*Fonds de Réserve*," No. 10. Also the codice No. 4,148, written in 1351 by Bettino di Pilia, and obtained from the Biblioteca Giustina of Padua. The codici Nos. 4,150, 4,154, and 7,255, are also deserving of special notice. There is a good codice in the library of the School of Medicine at Montpellier. The one formerly at Carpentras has disappeared, nobody knows when, how, or where.

The codici of the Divina Commedia in the British Museum Library consist of five belonging to the Harleian Collection of MSS. No. 3,459, 3,460, 3,488, 3,513, and 3,581; two belonging to the Egerton, Nos. 932, 943; one to the Lansdowne, No. 839; and four to the general collection, Nos. 10,317, 19,587, 21,163, and 22,780. Of these codici No. 943 is considered as the CODICE BRITANICO, *par excellence*, and along with its companion codice No. 19,587, is not allowed to migrate beyond the Manuscript department; all the others can be obtained in the Reading Room. Of the five hundred codici and upwards of the Divina Commedia found in European libraries, probably not more than three hundred and fifty have the poem complete; in the others some portion, or perhaps the whole, of one or more cantiche may be wanting.

These codici vary in form and bulk, from a large and cumbersome folio to a small and slender octavo, or even less, but the more general form is that of a moderate folio. The larger ones are mostly those on vellum with numerous illustrations, or illuminations, and usually with an accompanying commentary, frequently written in smaller characters surrounding the text, and which thus appears as if set in a framework of very neat writing. Those with the commentary of Buti are thus found.

Codici are either entirely without notes, though this is rather rare, or they have very short ones, *postille*, either in the margin, or over the lines; or they have longer ones at the foot of the page, or a complete commentary, perhaps exceeding the text in extent. Frequently *varianti* are found in the margin, or over the text, and may be of the same period, but occasionally of all subsequent periods.

The Commentaries met with *in extenso* are usually those of Jacopo della Lana, of the Ottimo, of Benvenuto da Imola, and of Francesco di Bartolo da Buti; or they may be selections from these with some few additional particulars. The early codici are generally on parchment, but some

few are on a soft and yellowish paper. The styles of writing of these codici may be reduced to five distinct varieties: the Gotico-Italiano, the mezzo-Gotico, the mezzo-Gotico-tondo, the mezzo-tondo, and the tondo.

To one or other of these characters the writing of all codici may be referred. Our Museum codici afford examples of most of these: the Egerton Codice, No. 943; the Harleian, 3,488; and the Cod. of the general collection, 19,587, and also No. 21,163, have the Italian-Gothic character, which is somewhat less angular than the German and English. Of the *mezzo-Gotico* there is no good specimen; but two of the *mezzo-Gotico-tondo*, as the Egerton Cod. No. 932, and the Cod. 22,780, formerly the Antaldo Codices. Of the *mezzo-tondo* there is a very noble specimen, and most characteristic, the Lansdowne Codice No. 839; the Harleian No. 3,513 belongs to this class, and so does the Cod. 10,317, though in this there is a tendency to the Gothic character in some of the letters; so also Cod. 3,460. Of the *tondo* the Museum contains two remarkable specimens, Nos. 3,459 and 3,581. The nomenclature here proposed was suggested by that of Batines, who uses these words in a very unsystematic manner. The *mezzo-Gotico* is a character in which the Roman or Italian element is introduced; and when the letters are more rounded, especially the tops and tails of b's and d's and g's, then it becomes *mezzo-Gotico-tondo*. When the Gothic character is wholly, or almost entirely, eliminated, then the writing becomes *mezzo-tondo*, the letters preserving a general squareness of form. The *tondo* is the rounded character, as seen in the 16th century, and sometimes before, with at times a Gothic tendency in its capital letters, a variety which, if it required to be specified, might be named the *tondo-mezzo-Gotico*. The *tondo* degenerates into a scribble, often very difficult to decipher, and then becomes a worthless scrawl. Codici in this style are not worth notice. I remember seeing one in the library at Poppi in the Casentino; they are mere careless copies from printed texts.

The more costly codici are those which have been written by professional scribes, when calligraphy was an honourable calling, though not a learned profession, and have been ornamented by the best miniaturists of the age; such is the Codice Urbinate of the Vatican Library, No. 365, the most splendid I know of. It is a large and handsome folio volume of two hundred and ninety-six vellum leaves, and has upwards of one hundred beautiful and elaborately-executed miniatures or illuminations, commonly ascribed to Giulio Clovio, but which are in fact by two different artists; those up to the 21st Canto of the Purgatory, inclusive, being in a very careful but somewhat insipid early manner, that reminds one of Mantegna in his more minute and fanciful pencilling; but after this the style is bolder and more modern, has a certain resemblance to that of Taddeo Zuccheri, and is very gay, with much prettiness. At Canto 10 of the Paradise the original manner re-appears, but for only one canto. Batines calls the writing of this codice *tondo*; it would be more correctly called *mezzo-tondo*; great care has been taken with the text. In general, however, in reference to the correctness of the text and the readings, those codici are the most valuable which have been written out by students of the Divina Commedia for their own use, or as a pious exercise: as the very important codice in the library of the Prince Barbarini, No. 1,535; the codice at Paris, written by Bettino di Pilia, and that in the library of Mr. Seymour Kirkup, written by the same hand. In copies without miniatures we often find arabesques, or ornamental borders, at the beginning of each cantica, or at least to the first page. Generally the first verse of each cantica has an ornamented initial, and often the first verse of each canto, with, most commonly, a *rubric*, or title in red, and not unfrequently the first letter of each *terzina* is marked with red or blue. Sometimes a table of contents precedes the poem; more frequently we find the capitulo of Messer Bosone da Gubbio, consisting of sixty-four ternaries and one verse, and beginning—

Pero che sia più fructo e più diletto;

it is usually followed by the capitulo of Jacopo di Dante, of fifty-one ternaries and one verse, beginning—

O voi che siete del verace lume.

We also sometimes find, at the end, the three capitoli of Boccaccio explanatory of the poem; and occasionally a much longer composition, in eleven capitoli, or cantos, attributed to Mino Vanni d'Arezzo, and also, by some, to Jacopo di Dante, and even to Petrarca, which is absurd. The "*Credo*" of Dante occurs at times, also his epitaph at Ravenna, and a notice when he died. Lastly, there is the date when the codice was written, the name of the scribe, and a pious expression of thanks to Christ or the Blessed Virgin, or to both, for the happy termination of the writer's labour.

H. C. BARLOW, M.D.

OUR WEEKLY GOSSIP.

Manchester understands business; and we expect to find all the arrangements for the Meeting of the British Association in that city perfect. The Meeting opens next week. Mr. Fairbairn will deliver the inaugural address on Wednesday, and the Sectional work will open on Thursday morning. The usual *soirées* and excursions will take place. There will be one night with telegraphs, another with microscopes. Prof. Miller, of King's College, will explain the new Spectrum Discoveries. Prof. Airy, the Astronomer Royal, will describe the solar eclipse of last year. A new and a pleasant feature in the proceedings will be the night with the Field Naturalists. If the Manchester naturalists produce as fine a show as that of their Liverpool brethren in St. George's Hall, they will add very much to the popular attractions of the week. A number of extensive and important Exhibitions have been prepared. Some are confined to the *Soirées* given in the Free Trade Hall, where 3,000 persons can easily be accommodated, others permanent Exhibitions, in various localities, and open to the Members and Associates during the week. Of the *Soirées* Exhibitions, we may mention that on Thursday, the 5th, the Microscopic Section of the Literary and Philosophical Society of Manchester intend to exhibit 150 microscopes, which will be arranged to show a series of illustrations, from the simplest to the most complicated form of organized structures. A permanent Exhibition of Telegraphic Apparatus is also being collected, and will be the first one of the kind ever brought together. In this, the earliest and nearly all the latest forms of Electric Telegraph will be found. This Exhibition is to be transferred to the Free Trade Hall, on the evening of Saturday, the 9th, when the two Great Telegraphic Companies will bring their wires into the Hall, in communication with many towns in Great Britain and several of the Continental Cities, and will place the wires at the disposal of the members during the evening. Another interesting collection, illustrative of the enormous extent and range of the chemical manufactures of the South Lancashire district, has been also arranged. Immense blocks of alum, weighing many hundredweight, and cakes of sal ammoniac, eight feet in diameter, as well as the more delicate chemical preparations, have been liberally promised by the manufacturers. A Photographic Exhibition will also be open to the members, in which the history of the art will be especially represented. The city has been from of old famous for its good cheer; and we understand that most of the guests will be quartered at hospitable boards. The minor details have been well prepared by the Local Committee; and, most of all, perhaps, in regard to fares and travelling. The railways connecting Manchester with London, as well as with the great towns in the north of England and of Scotland, have been induced to grant passes to Members of the Association, in and out, at a single fare—an arrangement which will be profitable to the visitors and, we hope, to the railway companies. A similar arrangement has been made with the Dublin, Glasgow and Belfast steamboat companies. A very large company is expected to assemble in Manchester; and very great interest is expected to develop itself in the Mechanical Section. Amongst the excursions proposed is a

Felis Champêtre, at Worsley, liberally offered to the Members of the Association by the Earl of Ellesmere. Others to the Chemical and Glass Works of St. Helen's, under special charge of gentlemen interested in those subjects; to Messrs. Knowles and the deep coal pit at Dukensfeld; to the copper mines at Alderley Edge, and to a very large number of the Mills and Works peculiar to Manchester, are promised.

The British Museum will be closed to visitors for the usual autumnal week, from Monday next, September 2, until the following Monday. During the week, improvements will be made in Prof. Owen's Department, so as to include the Gorilla specimens recently acquired. The mosaics from Carthage, some of which are very beautiful, and all interesting to the archaeologist, will be arranged for public exhibition. Additional catalogues will be placed in the Reading Room.

In the list of subjects for prizes proposed by the Institute of Civil Engineers is that of Railway Accidents. The theme is certainly open. An accident, which has been as fatal to life as an American battle, has suddenly drawn attention to the system; and a cry of anger and despair has arisen from more than a hundred bereaved families against the companies whose greed of traffic and whose defective arrangements of breaks and signals have led to this destruction of life and mutilation of limb. The Brighton Company is the one immediately at fault; but the lessons of the accident are for all the companies alike. It would be well for the public—and for the railways—if the companies showed a more lively disposition to meet the necessities of the case. But the accident seems to have struck the railway mind in a very odd way. On the day following the first inquest on the mangled bodies of their victims,—and while the Coroner and his jury were engaged in taking evidence, the railway people held a meeting in the city—to devise what? A safer system of signals? Some means of promptly relieving the sufferers? Not at all. Nothing so romantic and so charitable occupied their thoughts. They met to devise some means of escaping from the compensation claimed and awarded in our courts of law for injuries sustained by the public on their lines! A report of their meeting reads like a grim and ghastly pleasantry. The agonized sufferers, lying near London Bridge, were to them not objects of pity and tenderness, but of terror and aversion. They heard afar off the chink of their gold as it departed from their coffers to the houses of mourning and of death. And they met to confer and to protest against the possibility of being held in penalty for their neglect. The very magnitude of the injuries which it appears that they are in the yearly habit of inflicting on life and limb was paraded to this meeting as a reason for reducing by law the amount of compensation that could, under any circumstances, be demanded from railway companies. One company, we were told, paid last year for its killed and wounded no less than 80,000*l.*, exclusive (mark you!) of the expenses incurred in contesting the claims and in repairing the broken carriages and the damaged way. Surely, it is hard to pay so much! Thunderbore complains that some of the people whom he eats disagree with him, and he has to pay his doctor for a box of pills. It does not seem to have been suggested to these railway shareholders that they would reduce their liabilities, if they would take means to reduce their collisions.

The Members of the Somersetshire Archaeological and Natural History Society have been holding their Thirteenth Annual Meeting during the week at Langport, under the Presidency of R. N. Grenville, Esq. The Congress lasted three days. A Temporary Museum was opened at the Council Room, and the Members made excursions to Machelney, Kingsbury Episcopi, Shepton Beauchamp, Pitney Church, Roman Remains at Pitney, Athelney, and other places.

The Austrian Government has intimated that the period fixed upon as the birth-time of "Modern Art" will be 1784 in that country, the date of Heinrich Füger's admission to the Academy of Vienna.

We do not object to any theological contemporary

reprinting our articles, even as specimens of "that literary liberalism which is sapping the foundations of faith." Their foundations are so well sapped already, that if there had been none stronger, faith would have been a thing of the past long ago. But, we do object to their changing our typography, and making us—as Martin of Galway said—speak in Italics because they want emphasis. High Churchmen should not imitate Victor Emmanuel, who wants to change a Roman See into an Italic capital. But our greatest objection—though no bishop would share it—is their translating us from a small c to a large one. Any ecclesiastical blunder will be sure to be given to us: nobody will suppose it to be a clerical error of their own. They make us talk about the "extra-Cathedral discussions" of the clergy. Do they think that when the Pope speaks *ex cathedra*, he speaks from a Cathedral? Do they not know that every preacher has his *cathedra*, *chaire*, or *chair*,—this last word being sometimes used in Scotland, though we in England call it a *pulpit*? Are we to tell them that the Cathedral is so called because it is the *ecclesia cathedralis* of a Bishop, the church of a chair? And that *cathedra* means nothing but a seat or chair? If we must tell these things, we must.

A Pedestrian, one of many who are making excursions through these islands, guide-book in hand, wishes to say a word on the importance of Guides giving distances on the roads correctly:—

"Walcott's 'Guide to the Coast of Sussex,' which I happen to have in my pocket, is careless on this point (p. 168), 'The road from Battle to Bexhill, three miles, passes through Bulverhithe.' Now I found, to my inconvenience, that these places are six miles apart by the *direct* road, which does not pass through or near Bulverhithe. Again (p. 170), 'The road to Pevensey, nine and a half miles from Hastings,' &c. The railway distance between Pevensey and Hastings, by a line almost absolutely straight, is nearly eleven and a half miles, and the distance by road fully thirteen miles, the cabmen call it fourteen."—It is impossible to overrate the impatience of a critic who, in August, in a long walk along the Sussex coast, under a burning sun, finds himself deceived by his Guide. Walking tourists are increasing in numbers. Guide-books are in demand. The compilers, if they would please their public, must remember the walker as well as the rider. The road is again coming into use, and an increased attention must be paid to the matter of distance. Three or four miles in a walk are of some importance; and no guide-book to an English county, should its literary merits be as great as that of Ford, will have any chance of popularity which does not give exact measurement of the turnpike and cross roads.

The Rev. A. J. D. D'Orsey, one of the Members of the Education Section of the Social Science Congress, thinks our Dublin Correspondent of last week rather hard upon the doings of that Section. We have looked through the files of Dublin daily papers; and we regret to say that in the detailed reports we have found only too much confirmation of the truth of our Reporter's words. It is impossible to believe that the discussions there reported can have had the effect of "peace on earth and good will to all men." The Government, it is greatly to be hoped, will pay no attention to the Congress, but will continue its firm and loyal support to the system of secular education, which is working so well.

Cheapness and uniformity are elements in success, as Sir Rowland Hill has proved, when cheapness and uniformity are applied to things required by large classes. The United Kingdom Electric Telegraph Company, struck with the result obtained by the Post-Office Department, are about to adopt its system. The rate is to be 1*s.* for all messages—whether going five miles or five hundred miles.

Ten per cent. in two years is the increase of qualified candidates for trial by the Oxford Local Examiners. Such an advance is the sign of a steady and safe, if not of a very brilliant success. The certificates granted in 1859 were about 480; in 1860, about 500; this year they have reached 600 within one. These figures are, in our opinion, very satisfactory.

The restoration of the interesting round church of St. Sepulchre, Northampton, noticed by us some months ago, goes on in a satisfactory manner. The enlarged nave is nearly completed. The funds, it appears, are not sufficient to carry out Mr. G. G. Scott's designs entirely. Upon the work already done 3,100*l.* has been expended; but in order to connect the new roof with the old one,—the two being totally dissimilar—an additional sum of 250*l.* will be required to repair the old roof over the chancel. The architect would, however, prefer to construct an entirely new roof, to harmonize in style with the new buildings—this would cost 1,000*l.* A great effort is to be made to raise this sum. A public meeting will be held shortly to consider means to raise the funds in request. The plan for the completion of the whole of the restorations is that the old round church should be restored and used as a vestibule, and an enlarged church built on the site of the old nave and aisles. The numerous population of the parish in which this church stands demanded increased accommodation. The round church, when restored, is destined to form a memorial to the late Marquis of Northampton.

LAZARUS, COME FORTH! By DOWLING.—This work, pronounced by the first critics to be the finest Scripture Picture of the age, is NOW ON VIEW at Betjemann's, 23, Oxford Street. W.—Admission, 6*d.*: Fridays and Saturdays, 1*s.*

SCIENCE

Four-and-Twenty Views of the Vegetation of the Coasts and Islands of the Pacific; with Explanatory Descriptions taken during the Exploring Voyage of the Russian Corvette "Senjavin," under the command of Captain Lutke, in the years 1827, 1828 and 1829. By F. H. von Kittlitz. Translated from the German, and edited by Berthold Seemann, Ph.D. (Longman & Co.)

THE translator and editor of this volume says these Views have been so much admired upon the Continent by botanists and artists, that the work is already out of print. He translated it from the last copy which could be procured. Herr von Kittlitz himself supplies us with the particulars, which we abridge, respecting the origin of his work. When the Russian corvette *Senjavin* was preparing to leave St. Petersburg, the botanists of that capital suggested the advantages which might be obtained by taking as many sketches and making as many pictures as possible of vegetation. Deeply interested in this suggestion, he carried it out by conceiving in his mind a series of pictures, from which these Views may have borrowed their form. The features of the vegetation of the country he visited were constantly before his eyes, whilst he was following his occupations as a sportsman and collector of zoological specimens. During the stay of the *Senjavin* at anchor before each place, he generally succeeded in constructing a landscape of the geological aspects of the scene, and in introducing into his sketch portraits of the larger plants. Immediately after the departure of the vessel, and while his impressions were still vivid, and he had nothing to look at but sea and sky, he generally executed a rough draft. The mistakes of the artist were corrected by the botanist of the expedition, Dr. Mertens. Anxious to secure accuracy of portraiture above all things, Herr von Kittlitz engraved the copper-plates himself, rather than entrust them to an engraver, who might have sacrificed correctness and exactitude by working for elegance and effect. Characteristic foliage, and large masses of vegetation, must have been seen in nature, as he observes very justly, by the artist, who would merely copy a drawing of them without utterly spoiling it, to say nothing of rendering it in quite a different manner. No artist, however able as a landscape-painter, can ever render, without having seen them, the

shadows of a tropical forest, or the freedom peculiar to the small branches of the shrubs and trees, of regions suffering neither from cold nor from sudden changes of temperature. Under the thick and widely-spread foliage of trees which nowhere allows the sky to be seen, there is at every time of day a surprising amount of light which, by scattered, reflected, and broken solar rays in a thousand directions, reaches the lower vegetation. Freedom from sudden changes of weather produces a peculiar appearance of trellis-work, a feathery foliage, elegant and delicate, which seems as if floating in the air. No doubt, the broken light of the tropical forests and the aerial freedom of the tropical foliage must be seen to be rendered with that truth compared with which artistic treatment is a minor consideration.

"The gravest fault of the present publication," says Herr von Kittlitz, "will doubtless be the poverty of the accompanying botanical remarks;" and they are, we must admit, very unsatisfactory and meagre. The cause of this defect is the unfortunate death of Dr. Mertens, who did not live to write the letter-press, for the composition of which he had collected materials and made observations. It was well his loss did not prevent the publication of the work. Dr. Berthold Seemann, the English editor, tells us he has freed the text from much ambiguity, and endeavoured to mend the defects of the letter-press, "as much as lay in his power."

Plant life is an effect of heat and moisture. In the climates where there is but little heat, plant life is represented by a crust of lichens on the rocks, and in the tropical climates by luxuriant vegetation, from the coral reefs of the shores up to the mountain tops, the palm form being the type of the climate. Vegetation spreads from the tops of the mountains to the depths of the ocean, wherever there is heat enough to animate its structures. And deserts occur both from cold and heat,—where the spores cannot find heat enough to stimulate germination, and where the seeds cannot find moisture enough to sustain their life. Very lofty mountains in hot countries exhibit, it has often been remarked, an epitome of the vegetation of the globe. But this is true only as a very vague and general conception, for the similarity of the vegetation is less striking than its diversity and variety. There is but little similarity between the vegetation of Europe and the vegetation of the Straits of Magellan, notwithstanding the correspondence of their latitudes. No doubt, there are a number of species which are found wild in both the Arctic and the sub-Antarctic circles; but the difference of conditions, and the mixture of plants appertaining to different climates, produce great diversity in the botanical physiognomy. The oaks and firs on a mountain in Mexico, 8,000 or 9,000 feet above the level of the sea, may recall Europe or North America; but it is only, says Herr von Kittlitz, to give greater prominence to its yuccas and fourcroyas. Longitude also produces new and different pictures. Passing over the differences due to local circumstances, such as deserts, steppes, and swamps, longitude alone produces differences. The range of the species is often not sufficient to occupy the whole longitude of the zone:—

"Thus, in consequence of the spherical shape and position of our earth, continually increase, with the temperature of the climates, not only the capabilities of vegetation and the number of species of each country, but also the space; so that the principal character of the vegetation, as imparted by the different climates, may obtain full play to divide into numerous variations longitudinally defined. The so-called region of palms, the longitudinal range of which is the most extensive, would seem to be

on that account the richest in species as well as in peculiar features. How interesting would prove the contrast between three views representing respectively an East Indian, an African, and an American virgin forest, as nearly as possible having the same soil and climate! Without doubt there would be in all three much physiognomic resemblance, notwithstanding the total difference of their component elements! What in the one would only be indicated, would in the other have obtained full development. Thus climbing plants play a more important part in the physiognomy of the Indian jungle than in that of the American forest, whilst the latter enjoys the advantage of harbouring a greater number of strange and beautiful epiphytes."

The plants most characteristic of American vegetation are the epiphytes, no doubt; but Herr von Kittlitz uses the word in a wider sense than is generally understood among botanists. By epiphytes botanists generally understand plants growing upon the stems and branches of trees without penetrating their tissue, as the mistletoe grows upon oak and apple trees. Plants of the same species growing upon the old stumps of trees when converted into vegetable mould are not epiphytes. They are, however, most striking features of the vegetation of the climates in which they occur; for example, in the underwood and swamp of the island of Sitka, upon the west coast of America, in the latitudes 57° and 58° north. In these latitudes there are no trees upon the eastern side of the American continent; whilst on the western side the sea breezes making the winters comparatively mild, and the summer skies being cloudy and most days rainy, woody vegetation clothes rocks apparently naked of mould; and forests of hemlock, spruce, swamp-pine, and larch, a variety of pines, in fact, flourish luxuriantly. Old stumps are turned into vegetable mould whilst still retaining their shapes. In Plate II. Herr von Kittlitz has carefully copied—

"A fine group of two young plants which have taken root upon the undisturbed remnant of an old stump, as furnishing a good illustration of the prevailing character of growth in this region, old dead wood, already converted into vegetable mould harbouring the roots of other trees whilst it yet [still] retains its perfect shape and bark. Thus most of the plants grow epiphytically upon their own kind, a phenomenon finding a ready explanation in the prevailing moisture and low temperature of the climate, the absence of destructive insects, &c., but which may be regarded as an interesting addition to the fact that America generally produces numerous parasites and epiphytes of very diversified form."

Plate V. transports us from the umbellifers of Kamtschatka to the mangroves of the Caroline Islands, from latitude 58° to latitude 5° N. The mangrove forests cover the shores of the tropics near the equator, as reeds and bulrushes cover the margins of our inland lakes, occurring in swamps near the mouths of rivers and rivulets, which are protected from surf. The stemless nipa palm (*Nipa fruticans*) contrasts strikingly in these swamps with the true mangroves (*Rhizophora* and *Bruguiera*), rising up out of the mud upon aerial roots. The nipa palm looks like a palm all submerged except the top leaves, and the mangroves look as if, in a panic to avoid a similar fate, they were trying to get out of the water, top, stem and roots. The nipa palms never exhibit trunks above ground, for the trunks creep horizontally along the mud, throwing out numerous small roots, and dividing into several branches, the lower end decaying gradually and new roots growing continually. The roots of the mangroves, on the contrary, seem a mere scaffolding of converging props. But, singular as these peculiarities may appear, they are surpassed by the freaks of the roots of the *Sonneratia* and the *Balanopteris*. It is the *Sonneratia*, a member of the myrtle

family, which more than the mangroves gives its physiognomy to these forests. Spreading out branching stems, it rises to a considerable height above the low mangrove woods, and its foliage almost touches the water, giving the tree the appearance of a huge shrub. When they are in full vigour their dark bark contrasts finely with their pale green round leaves, and when they begin to die their trunks are covered with fine ferns. But the most singular features of these trees are the wooden pegs covered with dark brown bark rising to the height of about a foot, wherever the ground is not under water. Beyond their apparent connexion with the deeper-lying roots of the *Sonneratia*, nothing seems to be known respecting the significance of these excrescences. The roots of a species of *Balanopteris* are still more singular. Curiously shaped and widely spread, they form a kind of labyrinth, consisting of thin walls of tough wood covered with a soft smooth greyish brown bark. When one of them is struck, a hollow drum-like sound is produced, which is audible at some distance. The foliage of the *Balanopteris* is of a greyish green. Everybody knows how strangely the roots of the banyan trees issue from the stem, grow downwards, enter the earth, and then form new stems, and how the stems like certain creepers grow together when they come into contact. In a view of a swampy forest, with banyan trees, at Ualan, Plate VI., Herr von Kittlitz gives us a glimpse into a huge bower, formed by the crowns of large trees. This glimpse can be obtained where the underwood is composed of stunted trees, instead of the usual impenetrable creeper *Hibiscus populneus*. There is a singular spell about this picture. More than any other we have ever seen, it reproduces the impression of the cathedral aisles; for the study of Gothic architecture or of tropical vegetation always forces upon the mind of the student the conviction that the forms of the stones are only imitations of the forms of the trees. Not merely is the Gothic pointed arch formed by two palms and the meeting of their leaves, but the architects reproduced the general effects of the forest bowers and imitated their details very carefully, such as the suspended creepers and the hanging branches, the epiphytes, flowers and fruits.

MEETING FOR THE ENSUING WEEK.
Mon. Entomological.

FINE ARTS

OUR ART-COLLECTIONS.

THE Report of the Committee of the House of Lords upon the manner of fulfilling the conditions of Turner's Will contains so much matter interesting to artists, that we shall make running extracts from the evidence of the various witnesses examined, quoting briefly those subjects which are of current importance. With regard to the duty of fulfilling the conditions of Turner's will, the Director stated that it was the general wish, and more especially the wish of the Trustees of the National Gallery, to fulfil them. He considered the removal of the pictures from South Kensington a departure from the obligation to do so. He considered, and other witnesses fully agreed, that a selection of Turner's pictures would be indispensable; that many were unfit for public exhibition, as being unfinished, and therefore only of interest to artists, to whom a reserve might be advantageously displayed. It was elicited that under the Act, 19th & 20th Vict. c. 29. s. 3, the Trustees were at liberty to accept portions of a bequest of pictures and return the remainder, in which case the last would fall into the residuary estate of the testator; by this Act it would seem, says Sir Charles, "that the Trustees would not have the option of setting aside the certain pictures for the purposes of study; it would appear

that such pictures ought to go to the nearest of kin." With Mr. Ruskin the witness thought that the Turner collection would enable six separate collections of a most instructive character to be made. The next matter which arose illustrated in no small degree the progress of public taste and the growth of a sound judgment in Art. Habitual visitors to the National Gallery remember how the pictures of West, which countryfolks loyally considered as the real gems of the collection, gradually disappeared, first going on to the stair-landing, then on the stairs, thence into the hall, and, finally, how they took a dive and vanished altogether to the region below, only to reappear upon the ample walls of South Kensington. Miss Angelica Kauffmann's works followed to fit obscurity, and were not missed. These weeding were, of course, desirable and right; and the evident willingness of the Trustees to part with the two large Guidos shows how the people have learnt to prize the real above the meretricious art. Years ago the people crowded before these big pictures, were fascinated by the minauding nudités, and thought far more of an ill-drawn and clay-cold "Christ crowned with thorns" than of the "Ariadne" or the Raphaels; now the case is so much altered, that some sort of apology is thought needful for a proposition to send them to Dublin or Edinburgh, and "it would be a great relief to the Gallery" to do so. It is even said that the fact of transferring indifferent pictures to the above cities "might deter people from leaving inferior pictures, which might be rather an advantage." As to the disposal of the Turner pictures, the witness considered various courses were open, supposing it were absolutely necessary to house them in the National Gallery before the expiration of the decade after referred to. "One would be to place them in the National Gallery, removing an equivalent number of pictures to the South Kensington Museum. I should say not the Mediæval pictures, but the Dutch, Flemish, and Spanish pictures, because that would make room enough; the Mediæval might be added, if necessary, but the removal of these alone would not make room enough in the Gallery. Another course would be to place the Turner pictures in the rooms below, where many of them once were, but where they were not exhibited; the Vernon pictures were exhibited in those rooms; they were so badly placed as hardly to be visible, but still they occupied the walls of rooms in the National Gallery. If that were done, and if some were placed in such space as can be afforded in the upper rooms the legal conditions would be complied with." In the event of immediate action not being imperative, the witness would prefer the pictures should remain where they are; but he hoped this very inquiry would urge the Government to carry out what the public had been waiting for so long, namely, the erection of a New National Gallery to contain the works of the old masters, the British school and the best works of Turner. He is entirely opposed to gas in the neighbourhood of pictures, and, notwithstanding the high authorities asserting its harmlessness, he could not believe it to be so; he thought the works should be examined, to decide the question, from decade to decade, as change would be exceedingly gradual. Photographs of the cracks in certain pictures have been taken, which could be compared with the originals from time to time; not the slightest change had been observable hitherto. It would not be possible to provide a better temporary place than South Kensington for the reception of the pictures, but the more temporary it was the better. With regard to the Royal Academy vacating the National Gallery, Sir Charles did not know what arrangement is pending with the present Government, but under the last Government it was decided that the Royal Academy should be removed to Burlington House, and the members would, upon a site to be granted, erect an edifice for themselves. It would depend upon the terms offered whether the Academy would hold themselves ready to vacate on the requisition of the Government; on those above named it would certainly do so. Mr. Redgrave was examined. If it was put to him he should not exhibit in the National Gallery many of Turner's pictures which are now at South Kensington; he does not think they do Turner's fame any justice,

being in such an unfinished state that they are caviare to the multitude; there are some which would not even benefit students,—the works of one whose powers were failing. Mr. Redgrave regretted there is no exhibition of Turner's water-colour drawings. Turner was the father of water-colour art in this country, and, with a very few exceptions, there were no examples of his work in the Gallery. It would be desirable to change the works exhibited from time to time, so that they might pass successively under the public eye; with proper arrangements as to light, a series of water-colour drawings might be as safely exhibited as oil-pictures. (Mr. Wornum expressed a very decided opinion in opposition to this.) The witness was not prepared to say that they will not gradually fade, any more than that oil-pictures will not deteriorate in time; but he believed that, under due conditions, they may be preserved, and thought, taking into account Turner's fame and the impression he has made upon the world at large, it is better that one hundred thousand should see these drawings annually, than that ten thousand should see them in ten centuries. (It is well worth while for the public to give good heed to this opinion; for it is now acted upon, and may be still more so. It is opposed to all the feelings and experience of amateur collectors and the conservators of great galleries. Which party is in the right should be decided at once. We may, out of sheer heedlessness, be destroying the heritage of our children in Art.) With regard to the complete exhibition of Turner's works, and the manner in which he conceived that artist desired his will should be carried out, the witness thought he had two views—"one was that in our National Gallery there should be a tribune, or *salon carré*, in which the choice works of all schools should be gathered together; and he desired to have some of his best works in that collection: he specially named two that should be put with the Claudes. In no arrangement that can be made (I speak with deference to Sir C. Eastlake) could you place these Turners by the Claudes in a sequence of schools; they must be in a collection forming the cream of various schools." In the second place, Mr. Redgrave considered, Turner wished his works to be kept together as far as possible, in order to form a part of a British School of Art in the National Gallery. The witness was of opinion that if the powers given by the above-named Act of Parliament for the disposal of bequests of works of Art, irrespective of conditions attached thereto by the testator, were known to the latter, there would be no difficulty in dispensing with those conditions, as the Act declares, beforehand, an intention so to deal with bequests.—In reply to a question, the witness said that most deceased British artists of eminence are represented in the National Gallery—that is, if the Collections at South Kensington are the National Gallery; "but then Turner's will is carried out, because his pictures are in part of the National Gallery. Adopting this view, I consider that Turner's will is carried out; but if he wished his pictures to be in Trafalgar Square, in connexion with the Old Masters, neither his pictures, nor the other British pictures, are in the National Gallery, since they are both at South Kensington." Mr. R. N. Wornum, Keeper and Secretary of the National Gallery, was examined. Presuming it were desirable to remove the pictures now in the Kensington Museum to Trafalgar Square, he would wish to build a wing over the east side of the barrack-yard, running from the new square room contiguous to the new large gallery, which would give the space of perhaps four such rooms as the new gallery. He would propose a wing on iron pillars, giving great headway to the barracks. These rooms would not only hold the Turner Collection, but those of Vernon, Bell, and the Old English pictures. Such a work might be constructed in a few months, and would be permanent. A corresponding wing could be made hereafter, where the workhouse now stands, and the extremities of the two wings joined by a cross gallery. The gallery proposed would cover part of the barrack-yard, and be of great service to the soldiers when drilling in wet weather. By adding this wing the pictures would be better seen, as they would be more accessible to

the public at Trafalgar Square than at South Kensington. The nation possesses 362 pictures, 105 of which are finished oil pictures; the remainder contains many that are "mere botches." There are 19,000 and odd altogether, including pencil and water-colour sketches; "the mass of them are of no value whatever." The witness's opinion is, that water-colour drawings generally fade on being exposed to the light; but that pencil, chalk and sepia drawings do not fade. To exhibit all the water-colour drawings of Turner that might be exhibited would require a very large space. Turner, in one of the codicils to his will, directed the course of changing the drawings in succession to be pursued. The finest of them were exhibited for one year at Marlborough House, and withdrawn from fear of injuring them by a constant exposure to the light; these are now framed, and may be seen on application; probably twenty persons apply to do so in the course of a year; but there is really no one to show them, except myself,—and I have not time. If we are to be liable to public applications to see these drawings "I must have a curator for the purpose. 1,800 are prepared for public exhibition, if we had a place and a servant who could watch them." 400 are in frames and 1,400 mounted. If the Royal Academy were removed there might be more accommodation for the pictures than in the proposed wing, "because we should have the sculpture-room, which would be a very good room for the exhibition of these framed and mounted drawings." If the wing were built there would be room to display the water-colour drawings in frames, changing them from time to time. "I am sure they (water-colour drawings) fade, because I have often seen drawings which have faded. When a drawing has been taken out of a frame, where the frame has covered part of the drawing, the colours protected have been more intense than the part of the drawing which has been exposed to the light. You do not detect deterioration in oil pictures so readily as you do in water-colour drawings." Mr. J. Pennethorne was examined. He would not recommend a temporary building being added to the National Gallery, but a permanent enlargement, so as to comprise part of what would ultimately be a very fine building; therefore, if anything is to be done for the temporary accommodation of the pictures it ought to be done inside the present building. A permanent gallery might be completed in nine months. The witness had submitted a plan to the Chief Commissioner of Works for a further extension, and would undertake, if needful, to erect a complete and sufficient National Gallery in connexion with the present site in two years. In this plan there would be no alteration of the present building, except breaking through the two internal doorways. "There would be a great advantage in building at the back, because you need not go to much outlay for architectural ornament; but, besides that, we are, without difficulty, enabled to have recourse to all those means of lighting which a good deal interfere with the architecture of a building facing a public street. I propose to build an addition to the National Gallery, in such a manner that the ground-floor of it should be built upon columns, so that it should serve as a colonnade for the soldiers, thereby increasing their accommodation. The ground-floor of this building would not be necessary for the purpose of the Gallery, and would be valuable for the barracks. There are two passages through the building, one to the barracks and the other to Castle Street. I propose not to encroach upon the last, but to let that be the boundary of the new buildings. In doing that, I have only to take from the workhouse half its site, leaving the other half on which to re-erect the schools and parish offices, &c. The witness would begin with a gallery, 136 feet long over the barrack-yard, which would accommodate the Turner pictures. The cost of the entire building would be about 100,000*l.*; it would cover an area of 30,000 feet: that of the present National Gallery and the Royal Academy taken together, cover 20,000 feet superficial. The portion of the scheme which is considered pressing to be executed, would form a portion of the larger design, and be consistent with an alteration of the façade to the south. The witness

would undertake to build that portion required for the Turner pictures for 25,000*l.* in nine months. It would cost about 100,000*l.* to erect a similar building in the rear of Burlington House to that proposed for the National Gallery. If the Royal Academy were removed, there would be plenty of room in Trafalgar Square for all the pictures belonging to the nation; but that would be turning the Academy into the streets; they ought to be allowed two years to find a new home, even in Burlington House. The Turner Collection requires 3,500 feet of wall for exhibition.

MUSIC AND THE DRAMA

ALFRED MELLON'S PROMENADE CONCERTS, THEATRE ROYAL, COVENT GARDEN. GRAND ORCHESTRA OF NEARLY 100 PERFORMERS.—Middle. Parepa every Evening. In the course of the week the following novelties will be given:—A Grand Orchestral Selection of National Airs, English, Irish, Scotch and Welsh, with Solos for the principal Performers. The New York Quadrille—New Waltz. The Warblers of the Forest, introducing a novel effect. A Mozart Night, on THURSDAY NEXT, September 5, on which occasion the First Part of the Concert will consist of Selections from the Works of that great Master; and on SATURDAY NEXT, September 7, a repetition of the Volunteer Night, &c.—Promenade, 1*st*: Amphitheatre Stalls, 1*st* 6*d.*; Boxes, 2*nd* 6*d.*; Private Boxes, 1*st* 1*2s.* and 10*s.* 6*d.*—Conductor, Mr. Alfred Mellon.

MIDDLE WHITTY will appear at the THEATRE ROYAL, DUBLIN, on September 18*th*, in 'PURITANI'; on the 19*th*, in 'NORMA'; and on the 20*th*, in 'IL BARBIERE,' with Titieni, Giuglini, Swift, Lemaire, Della Sedie and Ciampi.

NEW PUBLICATIONS.

A monograph on the music written by women would be curious, if not instructive. Up to this time it has had no Baillie, no Hemans, no Browning,—no original genius, distinct as feminine,—the strangeness of such fact being increased by recollection that, as representative artists, such women as a Clairon, a Siddons, a Pasta, a Rachel, a Ristori, have, in individual and unprompted genius, rivalled, if not outrivalled, the most remarkable men. Let due examination of the causes of this want be left to the sisterhood who are now so honourably occupying themselves to ascertain Woman's right place and duty. Meanwhile, that the standard of excellence is perceptibly rising may be seen from a group of songs—'Morning Song,' 'The Recall,' 'Come to me, oh, ye Children,' 'Jeanie,' 'The Rose à Lyndsaye,' 'Lattice,' 'Roli's Morning Hymn,' by C. A. Macirome. (Ollivier & Co.) These will bear examination, without any "allowance" made. The first named is the most to our liking. 'The Recall,' though musically good, pleases us less: the tone of the words being too long-drawn in the setting. 'The Rose' is a quaint tune, with something of the Scotch style in it. These songs are mostly composed for a *contralto*, that voice being considered the most expressive one and best for declamation. It is time that some great *soprano* should break the spell of such exclusiveness.—'Daybreak,' words by Longfellow, 'Echoes,' words by Miss Procter, set by Maria Tiddeman (Mills & Co.), are thoughtful and well made, if not attractive by any new fancy.—Miss Gabriel's 'Maurem,' (Lonsdale & Co.) has been made popular by the singing of Madame Catherine Hayes. The melody is elegant, and the tone of Irish music caught to a certain degree.—We have next another group of songs: 'Remembrance,' 'Sacred Song,' 'How sweet in the musing, &c.,' 'David's Consolation,' 'An Aspiration,' 'A Happy Year,' 'Now thou art gone,' 'The Voice of the Grass' (for two voices), by S. A. Sheppard (Ollivier). In this the accompaniment has received more attention than the cantilena.—'Blind Alice,' 'Marion's Song,' 'The Trefoil Leaf' (Hall, Cheltenham), by the lady who signs herself 'Claribel,' are slighter wares than the above.—To close the paragraph, let us announce a quaint song, 'What is Love,' by Elizabeth Philp, 'Beautiful Bay,' by Mrs. Edward Theweneti (Addison & Co.), 'Switzerland,' Duett, by Mrs. Henry Ames (Ashdown & Parry), 'Go, lovely Rose,' once again set by L. P. (Novello), and 'The Fountain,' by Mrs. W. D. Wilson (Lonsdale).

LYCUM.—Mr. Falcner, who has succeeded, notwithstanding the summer weather, in attracting the public to this theatre by the indisputable merits of his new comedy, gave to the stage

another new farce on Monday, entitled 'The Fetches; or, the Onconvenience of Single Life.' The hero is played by the author. Tim O'Reilly is over-persuaded by his sweetheart, Mary Brady (Miss Lydia Thompson), who is fond of playing off practical jokes on her lover, to disguise himself as a Peep-o-day Boy, in order to frighten her young mistress's father out of his consent to his daughter's marriage. Two real robbers, however, are on the premises, and, being similarly attired, are mistaken by both for Tim's Fetches. At length, they are disabused of their superstitious fears, and, with the aid of the young lady and her lover, are in time to rescue the old gentleman from his peril. The parts were both well supported. Miss Thompson dances a jig at Tipperary fair which was exceedingly vigorous and characteristic, and commanded applause and an *encore*. We may now consider that Mr. Falcner has accomplished a very fair plant of his dramas; and we hope that his season may be profitable.

MUSICAL AND DRAMATIC GOSSIP.—The Birmingham people have had fine weather, if not original music, for their Festival. The town has been very gay, and the listeners curious and excited. In the absence of any new feature calling for musical remark, we have only to record the fact of a Musical Festival having been held, and with an appearance of success.

The perversity of the Germans in musical iconoclasm has reached the pedestal of Weber's statue. They are now finding out that 'Der Freischütz' is "trivial" in many portions. The same people who endure the flimsy 'Stradella,' and the faded 'Haimonakinder,' are now speaking sarcastically of the want of popularity for 'Euryanthe' and 'Oberon.' The same people who swallow the recitatives of 'Tannhäuser' and the cacophonies of 'Lohengrin,'—who exalt Schumann above Mendelssohn,—who pity *grandpapa* Haydn, and who, among the works of Beethoven, deify Beethoven's aberrations,—are trying to cry down Weber. There is no turning back the stream of the great river Folly, but in the storm of its own violence it runs itself dry;—and then, perchance, those may be listened to who have not been swept away by the wash current, but who have rallied round the tombs of the great men with honest faith, as distinct from superstition.—'De mortuis' is a much-abused motto, but ingratitude to the dead is worse than the worst abuse of blind flattery. It is true that one weakness of Weber has given great encouragement to the new school (so called) of German opera; this weakness being a deficiency of steady constructive power, ascribable to the freaks and experiments of his crotchety master, Vogler, for the concealment of which the imperfectly taught pupil was driven into the repetition of those extreme and rejected chords, which, however permissible as a last enhancement of suspense, make a false basis for any composition. It is easy to seem original for him who "sticks at nothing." But queerness and novelty are not one. It is not easy to emulate the sweetness of Weber's melodies. Better the "triviality" of the delicious opening to the 'Precious' overture and the admirable grace of its dance-music,—better such "triviality" as the double chorus which commences 'Euryanthe,' as *Adolar's* romance,—as the heroine's *bravura*, as the Hunting and the May choruses in that opera (impracticable, mainly owing to the stupendous absurdity of the *libretto*), than the deep meaning of a dozen 'Manfreds' and 'Genovevas,'—than libraries full of the psalmodes of the love-singers on the Wartburg,—whom the ungrateful countrymen of the German composer who showed Germany the way to its own folk-lore for the stage, are now exalting by comparison, with as much bad faith as bad taste.

What living concert-goer knows anything of Clementi's Duets for two Pianofortes? What amateur is there who would not desire to make their acquaintance?—A republication of them by Breitkopf & Härtel, Leipzig, is announced in the German papers.

TO CORRESPONDENTS.—W. W. F.—A. D. W.—J. T.—E. H. H.—F. S.—J. H.—O. W. B.—C. C. C.—T.—H. W. C.—received.

THE OKAVANGO RIVER. A Narrative of Travel, Exploration, and Adventure. By CHARLES JOHN ANDERSON, Author of 'The Nile from Khartoum,' &c. with Portrait of the Author, and numerous Illustrations. 21s.

"Mr. Anderson's book, from the number of well-told adventures, its unpretending style, its rich fund of information, and spirited illustrations, will command a wide circle of readers, and become a favourite with all those who can appreciate daring perseverance, and a buoyant spirit under overwhelming difficulties. The interest of his story never flags for a moment." — *Athenæum*.

"Mr. Anderson's book, illustrated with many animated pictures of adventures connected with the wild sports of the journey it describes, is one that will be popular as a budget of trustworthy traveller's tales, besides being valued for the information it gives to geographers." — *Standard*.

"This volume, profusely and splendidly illustrated, will take a high rank among works of adventure and exploration. There can be no question of the great service Mr. Anderson has rendered to geographical science." — *Herald*.

The SECRET HISTORY of the COURT of FRANCE under LOUIS XV. Edited, from rare and unpublished Documents, by DR. CHALLICE. 3 vols. with Portraits, 21s.

The ANGLO-SAXON SAGAS: an Examination of their Value as Aids to History. A Sequel to the 'History of the Conquest of the Saxons.'

London: J. RUSSELL SMITH, 36, Soho-square.

ITALY AND SICILY.

Just published, in post 8vo. (with original Photograph of Garibaldi, and Plan of Gaëta), price 10s. 6d. cloth,

IN THE TRACK OF THE GARIBALDIANS THROUGH ITALY AND SICILY.

By ALGERNON SIDNEY BICKNELL.

"Mr. Algernon Sidney Bicknell is no vulgar writer."
Athenæum.

"This volume is much above the average of average books of travel. The author has more originality, curiosity, and resolution than the majority of travellers. He expresses himself on all occasions with an amusing quaintness; wherever there was anything remarkable to be seen he is certain to have seen it, and where there were obstacles to be overcome he is equally sure to have overcome them. A happy mixture of assurance, intelligence and coolness seems to have carried him through a rather trying journey."
Spectator.

"A lively, amusing and sensible book, containing numerous episodes of travel, narrated in a fresh and agreeable style. We have to thank Mr. Bicknell for a very readable volume, well put together and enlivened by many pleasant anecdotes and legends."
Press.

"Of all the books that have been given to the world in the name of Garibaldi, this is by far the most reliable and the most interesting. The author's style is lucid and animated, his method thoroughly natural; he sympathizes with all the glory of the grand revolution he describes, but he records with faithful frankness the vices that stained its progress and the deeper political faults which may place in peril the perpetuity of its results."
Sunday Times.

"Among the many works on Italy which recent events have called into existence, this book certainly deserves to rank as one of the most meritorious. It is on the whole a very excellent and attractive work, and deserves to be widely read."
Morning Star.

"Mr. Bicknell's book is a valuable repository of indisputable facts connected with a subject of great interest, and collected by an honest, able and trustworthy authority."
London Review.

"Mr. Bicknell is an observant, cultivated gentleman, and his book is vivacious and entertaining."
Literary Gazette.

London: GEORGE MANWARING, 8, King William-street, Strand.

PRACTICAL MECHANIC'S JOURNAL for SEPTEMBER, Part 100, 1s., with Engraving of Harper's Automatic Coffee-Roaster, and Woodcuts—Articles on Engineering: Indian Railways; Steam Hammer; Air Engines Colours from Coal Tar; Steam and its Economy; Photography and Engraving; Thames Embankment; Blackfriars Bridge—Recent Patents: Kinler, Sawing; Austin, Floughing; Hunt, Boiler-feed; Wellman, Carding; Taylor, Belts; Henderson, Yarns Paton, Laces; M'Kenzie, Reels—Law Reports of Patent Cases—Correspondence—Registered Designs—Scientific Societies—Marine Memoranda—Monthly Notes—Lists of Patents and Designs, &c.
London: Longmans, Paternoster-row. Editor's Office (Office for Patents), 47, Lincoln's Inn-fields, W.C.

This day is published, Second Edition, in post 8vo. Illustrated, price 10s. 6d.

THE RUSSIANS AT HOME. Unpolitical Sketches. Showing what Newspapers they read, what Theatres they frequent, and how they Eat, Drink, and Enjoy themselves; with other matters relating chiefly to Literature and Music, and Places of Historical and Religious Interest in and about Moscow. By SUTHERLAND EDWARDS.

A book that we can sincerely recommend, not only to those desirous of abundant and reliable information respecting the social economy of the Russian people, but to those who seek an entertaining volume that may be perused in any part with both profit and amusement."
Edinburgh Evening Courier, March 26.

London: Wm. H. Allen & Co. 7, Leadenhall-street.

GERALD MASSEY'S LAST VOLUME OF POEMS.

HAVELOCK'S MARCH; and Other Poems. (The major part now printed for the first time.) By GERALD MASSEY. 12mo. cloth, price 5s.

"All the sea-pieces have the dash and saltiness of the ocean in them. They deserve to be read, and if read are sure to be admired. The poet's love-lyrics will find many admirers. Readers who find this vein of feeling in their own humour—and there will be many such—will get the volume for themselves. The whole mass of song and celebration is inscribed to Lady Marian Alford in a poem of great beauty. One of the Elizabethans might have written these lines."
Athenæum.

London: Trübner & Co. 60, Paternoster-row.

"The general reader will find in this volume much that will help to enlighten him on the causes of the present condition of the beautiful land of the South. The volume is garnished with one of the most striking portraits of Garibaldi we have ever seen."
Globe.

"Mr. Bicknell had the advantage of following closely in the track of the Garibaldians, of seeing the illustrious chief, of listening to the din of conflict and the stir of contending passions in the hour of revolution, and he has turned these advantages to a good purpose, and produced a very readable volume."
Dispatch.

"A lively book, which will be read with interest by all who wish well to United Italy. The style is eloquent and unaffected. Mr. Bicknell's book is amusing and instructive, and contains much useful information."
Morning Chronicle.

"Mr. Bicknell has presented in an agreeable form personal impressions relating to that famous era in the history of Italy. His book is written in a pleasant and unaffected style."
Inquirer.

"Mr. Bicknell writes graphically and easily. 'In the Track of the Garibaldians' is a title which hardly does justice to the volume, inasmuch as our author was for a time actually in their camp."
Unitarian Herald.

"Anything relating to the Italian hero will be acceptable. Our author publishes his book at the right time. He has been over the battle-fields sacred to liberty fought by Garibaldi and his heroes."

Illustrated News of the World.
"Garibaldi's eloquent hymn which terminates Mr. Bicknell's pleasant book as fitly as the portrait commences it, sounds already louder than the chant of the priestly reactionary and the comminations of a falling Pope."

Oriental Budget.
"For the present we must say addio to Mr. Bicknell and his very agreeable work. We may have the pleasure of again accompanying him in his 'Track' until we reach the goal of his interesting labours."
Dublin Nation.

This day is published, crown 8vo. cloth, price 6s. 6d.

CAVOUR: A MEMOIR.

By EDWARD DICEY,
Author of 'Rome in 1860.'

"Dr. Sullivan's school-books, seven in number, are distinguished by one great principle—that of simplifying the subject taught, and of bringing out, in a few plain and striking rules, the great leading ideas of the science in hand."

Dublin University Magazine, August, 1858.
"In fact, Dr. Sullivan's school-books have been mainly instrumental in making a name for the system of education pursued in the National Schools." *The Irish Quarterly Review*, January, 1868.

*. The Circulation of these books in Ireland, Great Britain, and the Colonies, amounts to upwards of 170,000 copies per annum. London: Longman & Co. Dublin: M. & J. Sullivan, 27, Marlboro'-street. And sold by all Booksellers.

T. ROSS, OPTICIAN.

2 and 3, FEATHERSTONE-BUILDINGS,
HIGH HOLBORN, LONDON, W.C.

TO MICROSCOPISTS and OTHERS.

To complete our system of Manufacture, and to
meet the demand for our Instruments, we have built an entirely
new Factory; and whilst we shall thus be enabled to continue our
improvements in Manufacture, we shall also concede to our Cus-
tomers every reduction that we can in Price.

ACHROMATIC MICROSCOPES.

We have carefully arranged our different forms of Stand with
various Object-Glasses and Apparatus, so as to offer Microscopes,
more or less complete, at certain amounts, in each instance con-
siderably less than the sum of the individual prices of the several
parts, and these we keep constantly in stock.

WENHAM'S BINOCULAR MICROSCOPE.

We shew manufacturing, under the immediate superintend-
ence of the Inventor, this valuable addition to the Microscope.
Mr. Wenham's arrangement not only gives the most perfect and
well-defined Stereoscopic vision with any Object-Glass or Eye-
Piece, but it can be applied to almost any Microscope, and when
adapted, it in no way whatever interferes with the ordinary use
of the Instrument.

MALTWOOD'S FINDER FOR THE MICROSCOPE.

This is the only method that has become universal for the pur-
pose of finding Objects.

MICROSCOPIC OBJECTS.

In the endeavour to make our Collection of Prepared Specimens
complete in every branch, we have lately secured the sole agency
for the sale of some most remarkable transparent injections.

IOELAND SPAR.

We have a number of Cabinet Specimens of this interesting
substance on Sale, the pieces having been selected from a large
quantity which we have purchased, and besides being of very fine
quality, we are enabled to offer them at prices considerably below
the ordinary value.

ACHROMATIC STEREOSCOPES.

GORHAM'S KALEIDOSCOPIC COLOUR TOP, &c.

Catalogues, giving full particulars, may be had on application
or sent post free.

SMITH, BECK & BECK,
4, Coleman-street, London, E.C.
and Lister Works, Holloway.

GRAPHIC TEACHER:** A Guide to a Practical Acquaintance
with the Art of Shorthand, &c.; by post, 7d. *The Lessons of
Students are corrected gratuitously, per post, by Members of the
Phonetic Society.*
London: F. Pitman, 20, Paternoster-row, E.C.

**PHONETIC READING.—First Book in Pho-
netic Reading, 1d.; Second Book, 2d.; Third Book, 3d.**
Children and Adults can acquire the art of reading common books
in one-fourth of the time now spent in learning, by first going
through a course of Phonetic Reading.
London: F. Pitman, 20, Paternoster-row, E.C.

HAVET'S GRAMMAR OF FRENCH GRAMMARS.
New Edition, 480 Svo. pages, 7s.

THE COMPLETE FRENCH CLASS-BOOK:
A Theoretical and Practical French Manual, prepared
expressly for the Use of English Learners, and based upon the
Works of the French Academy and the Standard Grammars of
the present day.

"Havet's treatise is a complete exposition of the principles
and peculiarities of the French language."—*Athenæum*.

"No other book is so well calculated to make a complete
French scholar as M. Havet's admirable and comprehensive
work."—*English Journal of Education*.

"Havet's popular 'French Class-Book' is by far the most solid
and practical production of its kind. It contains the rudiments,
the usual practice, and the niceties of the language, all in one
volume, lucidly arranged, and set forth with an intimate know-
ledge of what is easy and what is difficult to English students of
French."—*Continental Review*.

London: W. Allan, 2, Stationers' Hall-court.

THE ADVANCEMENT OF SCIENCE.

With a fine Portrait of Lord Brougham, F.R.S., and a Vignette
of the New Oxford Museum, price 6s. cloth, (postage 4d.).

THE YEAR-BOOK OF FACTS IN SCIENCE
AND ART: exhibiting the most important Improvements
and Discoveries of the past Year in Mechanics and the Useful
Arts, Natural Philosophy, Electricity, Chemistry, Zoology and
Botany, Geology and Mineralogy, Meteorology and Astronomy.

By JOHN TIMBS, F.S.A.,

Author of "Curiosities of Science," &c.

"* * This work records the Proceedings of the principal Scien-
tific Societies, and is indispensable for such as wish to possess a
faithful picture of the latest novelties of Science and the Arts."
Lookwood & Co., 7, Stationers' Hall-court, E.C.

French Simplified and Condensed, Fifth Edition, 3s. 6d.

HOW TO SPEAK FRENCH:
French and France: Facts, Rules, Practice. By
A. ALBITER, LL.B., Paris, Edgemoor Proprietary School.
"A true gem."—*Debate*. "Incomparably superior."—*Athenæum*.
"Perfect."—*Era*. "Most valuable, and extremely well adapted for
self-instruction."—*The Verdict*. "Aris's Gazette. Longmans.

J. H. DALLMEYER (Son-in-Law and Pupil
of the late ANDREW ROSS)

Respectfully begs to inform the Scientific Public that he ex-
clusively manufactures the ASTRONOMICAL TELESCOPE ac-
cording to A. R.'s processes, who has also bequeathed to him the
whole of that faculty.

For particulars of J. H. D.'s recent IMPROVEMENTS in
MICROSCOPIC OBJECT-GLASSES, PHOTOGRAPHIC
LENSES, &c. see Catalogue, which may be had on application at
19, BLOOMSBURY-STREET, Oxford-street, W.C.

60	1 10 1	1 19 10	6 6 8	6 0 11	
70	2 3 4	3 17 0	6 12 9	6 0 10	

MUTUAL BRANCH.

Assurers on the Bonus system are entitled, after five years, to
participate in nine-tenths, or 90 per cent. out of the profits.
The profit assigned to each policy can be added to the sum
assured, applied in reduction of the annual premium, or be re-
ceived in cash.

At the first division a return of 30 per cent. in cash on the pre-
mium paid was declared; this will allow a reversionary increase,
varying, according to age, from 66 to 38 per cent. on the premiums,
or from 5 to 25 per cent. on the sum assured.

One-half of the "Whole Term" Premium may remain on credit
for seven years, or one-third of the premium may remain for life
upon the Policy at 5 per cent., or may be paid off at any
time without notice.

Claims paid one month after satisfactory proof of death.

Loans upon approved security.

No charge for Policy Stamp.

Medical Attendance paid for their reports.

Persons may, in time of peace, proceed to or reside in any part
of Europe or British North America without extra charge.

No extra charge for the Militia, Volunteer Rifles, or Artillery
Corps on Home Service.

The Medical Officers attend every day, at a quarter before Two
o'clock.

E. BATES, Resident Director.

LE SOMMIER ÉLASTIQUE PORTATIF.—

HEAL & SON have patented a method of making a Spring
Mattress portable. The great objection to the usual Spring
Mattress is its being so heavy and cumbersome. The "Sommier
Élastique Portatif" is made in three separate parts; and, when
joined together, has all the elasticity of the best Spring Mattress.
As it has no stuffing of wool or horse-hair it cannot harbour
mould, to which the usual Spring Mattress is very liable; the
price, also, are much below those of the best Spring Mattresses,
viz.:

3 ft. wide by 6 ft. 4 in. long	£3 5 0
3 ft. 6 in. " "	" 3 5 0
4 ft. " " "	" 3 5 0
4 ft. 6 in. by 6 ft. 4 in. long	£3 0 0
5 ft. " " "	" 3 5 0
5 ft. 6 in. " "	" 3 10 0

The "Sommier Élastique Portatif" therefore, combines the
advantages of elasticity, durability, cleanliness, portability and
cheapness.

An ILLUSTRATED CATALOGUE of Bedsteads, Bedding
and Bed-Room Furniture sent free by post on application.

HEAL & SON, 126, Tottenham Court-road, W.

DEFRESHING BALM FOR THE HAIR.—

Every one values and admires a beautiful head of hair; yet
there are hundreds who desire to make their hair look well, keep
it from turning grey and falling off, but are unacquainted with
the means to do so. OLDRIDGE'S BALM FOR THE HAIR is the
means to do so. It is a priceless treasure—it is the only certain remedy. Estab-
lished in 1830, it has stood the test of time, and has proved its value
innumerable times. It is a most valuable and useful preparation, and
produces whiteness or monochrome, adding weak thin hair to be
come strong, it has no equal. Price 3s. 6d., 6s., and 11s. only.—Sold
Wholesale and Retail by C. & A. OLDRIDGE, 28, Wellington-
street (seven doors from the Strand), W.C.

HORTICULTURAL TOOLS, LAWN MOWERS, &c. delivered carriage free; also Chaff Cutters at 50s. each. **Price Lists** post free. **BURBESS & KEY, Manufacturers, 95, Newgate-street, London, E.C.**

THE BEST AND CHEAPEST TEAS AND COFFEES in England are to be obtained of **PHILLIPS & CO., Tea-Merchants, 8, King William-street, City.** Good strong useful Tea, 2s. 6d., 3s. 6d., 4s. 6d.; Rich Bouquet, 2s. 6d., 3s. 6d., 4s. 6d.; Pure Coffee, 1s. 6d., 2s. 6d., 3s. 6d., 4s. 6d., and 1s. 8d. Tea and Coffee to the value of 40s. sent carriage-free to any railway-station or market-town in England. A Price Current free. Sugars at market-prices. All goods carriage-free within eight-miles of the City.

TEA.—DR. HASSALL'S ("The Chief Analyst of the Sanitary Commission of the Lancet on Food") Report on the Teas and Coffees sold by Messrs. STRACHAN & CO. 36, Cornhill, London, E.C.—"Having purchased through my own agents, and in the ordinary way of business, a variety of samples of the several qualities of Tea and Coffee vendible by Messrs. Strachan & Co., I have subjected the whole of them to Microscopical Examination and Chemical Analysis. The result of the examinations obtained was in the highest degree satisfactory." A full Report of the above Analysis, also List of Prices, can be had on application to Messrs. STRACHAN & CO. 36, Cornhill, E.C. London. Carls to all parts of London daily.

MORTLOCK'S CHINA WAREHOUSE, 250, OXFORD-STREET.—SELLING OFF.—In consequence of the Marquis of Westminster's refusal to renew the Lease of the above Premises in connexion with Park-street, JOHN MORTLOCK is anxious to decrease his RICH Stock, and is prepared to make a great allowance for Cash.—250, OXFORD-STREET, and 58, PARK-STREET, near Hyde Park.

ELKINGTON & CO. desire respectfully to call the attention of the Nobility and Gentry requiring PLATE, to their Manufactures, which may be obtained in great variety, both in SILVER and ELECTRO PLATE, from either of their Establishments:—

Shower Baths, from 5s. 6d. to 25 0s. each.
Lamps (Moderate), from 6s. 6d. to 25 10s. each.
All other kinds at the same rate.
Pure Gals Oil, 4s. per gallon.

THE PERFECT SUBSTITUTE FOR SILVER.—The REAL NICKEL SILVER, introduced more than 25 years ago by WILLIAM S. BURTON, when PLATED by the patent process of Messrs. Elkington & Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver. A small useful Set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern	Thread or Brunswick Pattern	Lily Pattern	King's Military, &c.
12 Table Forks	1 12 0	1 12 0	1 12 0	1 12 0
12 Table Spoons	1 12 0	1 12 0	1 12 0	1 12 0
12 Dessert Forks	1 4 0	1 12 0	1 12 0	1 12 0
12 Dessert Spoons	1 4 0	1 12 0	1 12 0	1 12 0
12 Tea Spoons	0 16 0	1 12 0	1 12 0	1 12 0
6 Egg Spoons, gilt bowls	0 10 0	0 12 0	0 12 0	0 12 0
6 Sauce Ladles	0 6 0	0 6 0	0 6 0	0 6 0
1 Gravy Spoon	0 6 0	0 10 0	0 11 0	0 12 0
3 Salt Spoons, gilt bowls	0 3 0	0 4 0	0 5 0	0 6 0
1 Mustard Spoon, gilt bowl	0 1 8 0	0 3 0	0 3 0	0 4 0
1 Pair of Sugar Tongs	0 2 6 0	0 3 0	0 4 0	0 5 0
1 Pair of Fish Carvers	1 4 0	1 7 0	1 10 0	1 12 0
1 Butter Knife	0 3 6 0	0 5 0	0 6 0	0 7 0
1 Soup Ladle	0 10 0	0 17 0	0 17 0	0 20 0
1 Sugar Sifter	0 3 8 0	0 4 0	0 5 0	0 6 0
Total	9 19 0	13 10 0	14 19 0	16 4 0

Any article to be had singly at the same prices. An oak chest to contain the above, and a relative number of knives, &c. 12s. 6d. Tea and coffee sets, dish-covers and corner dishes, cruet and liquor frames, &c. at proportionate prices. All kinds of replating done by the patent process.

HENRY'S CALCINED MAGNESIA continues to be prepared, with the most scrupulous care and attention, by Messrs. THOS. & WM. HENRY, Manufacturing Chemists, Manchester. It is sold, in bottles, price 2s. 6d., or with glass stoppers at 4s. 6d., stamp included, with full directions for its use by their various Agents in the Metropolis and throughout the United Kingdom; but it cannot be genuine unless their names are engraved on the Government Stamp which is fixed over the cork or stopper of each bottle. Sold in London, wholesale, by Messrs. Barclay & Sons, Farringdon-street; Sutton & Co., Bow Churchyard; Newbery & Sons, 4, Strand; and Messrs. Butler, St. Paul's Churchyard; Savory & Co., New Bond-street; Ranger, Oxford-street. And of most of the vendors of the Magnesia may be had, authenticated by a similar stamp. HENRY'S AROMATIZED CALCINED MAGNESIA, the property of Mr. Henry, and the only genuine preparation of this article.

KEATING'S PERSIAN INSECT-DE-STROYING POWDER.—This powder is quite Harmless to Animal Life, but is unrivalled in destroying Fleas, Bugs, Emmets, Flies, Cockroaches, Beetles, Gnats, Moths in Furs, and every other species of insects in all stages of metamorphosis. An invaluable remedy for destroying Fleas in Ladies' Pet Dogs. It is perfectly harmless in its nature, and may be applied without apprehension, as it has NO QUALITIES DELIBERIOUS TO ANIMAL LIFE.
Sold in Packets, 1s. 2s. 6d., and 4s. 6d. each, or post free for 14, or treble size for 38 postage-stamps, by THOMAS KEATING, Chemist, 79, St. Paul's Churchyard, London, E.C.

DINNEFORD'S PURE FLUID MAGNESIA has been, during twenty-five years, emphatically sanctioned by the Medical Profession and universally accepted by the Public, as the Best Remedy for acidity of the stomach, heartburn, headache, gout and indigestion, and as a mild aperient for delicate constitutions, more especially for Ladies and Children. Combined with the Acidulated Lemon Syrup, it forms an agreeable and refreshing draught, which its permanent qualities are much increased. During Hot Seasons and in Hot Climates, the regular use of this simple and elegant remedy has been found highly beneficial. Manufactured (with the utmost attention to strength and purity) by DINNEFORD & CO. 172, New Bond-street, London; and sold by all respectable Chemists throughout the Empire.

NO MORE PILLS NOR ANY OTHER MEDICINE.—"We find DO BARRY'S HEALTH RESTORING REVALENTA ARABICA Food the safest remedy for habitual constipation, indigestion (dyspepsia), palpitation, nervousness, headache, indigestion, consumption, diarrhoea, nervousness, biliousness, torpidity of the liver, &c."—Andrew Ure, M.D. F.R.S., Dr. Harvey, Dr. Shorland, Dr. Campbell, Dr. Wurser's Testimonial.—"Bonn, July 19, 1860. Dr. Barry's Food is particularly effective in effectually curing indigestion (dyspepsia), a confirmed habit of body, as also in diarrhoea, bowel and liver complaints, inflammatory irritation and cramp of the urethra, the kidneys and bladder, and hemorrhoids; also in cough, asthma, debility, bronchitis, and pulmonary and bronchial consumption." Dr. Rud. Wurser, Professor of Medicine and Surgery, in Bonn. Packed in tins, with full instructions. 1lb., 2s. 6d.; 2lb., 4s. 6d.; 5lb., 11s.; 10lb., 22s.; 20lb., free of carriage, 40s.—Barry Du Barry & Co., 77, Regent-street, London; Fortnum & Mason; also at 60, Gracechurch-street; 4, Cheap-side; 63 and 150, Oxford-street; 220, 230, 430 and 451, Strand; and all Grocers.

HOLLOWAY'S OINTMENT AND PILLS. Anti-rheumatic Remedy.—For all inflammatory affections of the joints, muscular pains, and neuralgic tortures, the sufferer need only turn to Holloway's unrivalled remedies to find present comfort and future cure. Whatever be the predisposing cause of rheumatism, or the extent to which it has exposed to wet or cold induces them, and it should be as universally known that Holloway's Ointment well rubbed upon the affected parts is a safe and certain antidote. It soothes the severity of the attack, and effectually wards off its future return. When the pain is chronic, continued friction with the Ointment soon restores strength to the muscles and flexibility to the joints. It regulates the local circulation and precludes illness.

RECEIVE A FEW YOUNG GENTLEMEN attending the Classes, and provide for them a comfortable home, with every facility addressed to the Principal.

References.—Rev. J. C. Harrison, 34, Queen's-road, Regent's Park; J. G. Wilkinson, M.D., 4, St. John's Villas, Finchley-road; James Walton, Esq., 25, Upper Gower-street, W.C.

ROYAL COLLEGES OF PHYSICIANS AND SURGEONS OF EDINBURGH.

The List of Subjects and Books for the Preliminary Examination in General Education required to be passed by Candidates for the Double Qualification in Medicine and in Surgery conferred conjointly by the Royal Colleges of Physicians and Surgeons, and for the separate Diploma of each College—to be held on OCTOBER 26th, and on NOVEMBER 2nd, 9th, and 16th, 1861, and on FEBRUARY 1st, MAY 3rd, and AUGUST 2nd, 1862—is now ready, and may be applied on application to the Office of either College.
The New Regulations for PROFESSIONAL EDUCATION, and for the PROFESSIONAL EXAMINATIONS, are also now ready.

The attention of intending Students of Medicine is specially requested to the following New Regulations in accordance with a resolution of the Medical Council, applicable to all the Royal Colleges, Universities, and Licensing Boards:—1. That all Students of Medicine must be registered. 2. That those commencing medical studies after September 1861 cannot be registered until they have passed a Preliminary Examination in General Education. 3. That, except for those who have been detained by illness or other unavoidable cause, the Register at all Medical Schools must be closed within Fifteen days after the commencement of each Session.

ALEXANDER WOOD,
President Royal College of Physicians.
DOUGLAS MACLAGAN,
President Royal College of Surgeons.
Edinburgh, August, 1861.

QUEEN'S UNIVERSITY IN IRELAND.
QUEEN'S COLLEGE, GALWAY.
SESSION 1861-62.

On FRIDAY, the 18th of OCTOBER NEXT, an EXAMINATION will be held for the Matriculation of Students in the Faculties of LAW and MEDICINE, and in the Departments of CIVIL ENGINEERING and AGRICULTURE.

The Matriculation Examination for Students intending to pursue the course of study for the Diploma of Licentiate in Arts, will take place on the same day. The subjects of Examination are the same as those for the ordinary Matriculation Examination in Arts, save that Latin and Greek are not required.

An Additional Matriculation Examination for Students in the Faculty of Medicine will be held on the 24th of November.

The Examinations for Scholarships will commence on Tuesday, the 19th of October. The Council have the power of conferring at these Examinations Ten Senior Scholarships of the value of 40l. each, viz.:—Seven in the Faculty of Arts, Two in the Faculty of Medicine, and One in the Faculty of Law; and Forty-five Junior Scholarships, viz.:—Fifteen in Literature, and Fifteen in Science, of the value of 40l. each; Six in Medicine, Three in Law, and Two in Civil Engineering, of the value of 20l. each; and Four in Agriculture, of the value of 15l. each.

The Council is also empowered to award at the same Examinations several Prizes, varying in value from 5l. to 15l. A Prospectus, containing full information as to the Subjects of Examination and Courses of Instruction, may be had on application to the Registrar.

By order of the President,
WILLIAM LUITON, A.M., Registrar.
Galway, 10th July, 1861.

NORTH LONDON or UNIVERSITY COLLEGE HOSPITAL.—APPEAL FOR AID.—The Committee find it necessary respectfully, but urgently, to entreat assistance in their exertions to maintain the Charity during the remainder of the year without incurring fresh debt or drawing upon their very small amount of invested funds.

In the seven months now elapsed of the current financial year, the receipts have been about 2,700l., including 322l. annual subscriptions and 1,347l. students' fees. These sources, from which the ordinary revenue of the Hospital is mainly derived, are nearly exhausted; while the annual expenditure under recent arrangements for improving the nursing, for the treatment of special diseases, for baths, and for providing for an increase in the number of patients, amounts to at least 1,500l.

These extensions and improvements the Committee have ventured to make, well knowing that they would by so doing encroach on the scanty resources at their command, and that no increase was this year to be expected from contributions at a public dinner, but fully believing that for effecting objects of such importance the generous aid of the public is essential.

In the Hospital relief is every year afforded to about 21,000 patients, of whom 1,300 are in-patients, 750 Women in Childbirth, attended at their own habitations, and 1,100 Ophthalmic patients; the remaining number receive relief as out-patients or as casual applicants.

The building is capable of containing 200 beds, but want of funds obliges the Committee to limit the number to 125, and to refuse numerous urgent applications.

The debt, although in some degree reduced, is still upwards of 4,700l.

The Committee trust that the benefits which the Institution confers on the poor, in a form so unquestionable that no other exercise of beneficence can bear comparison with them, and the economy with which its resources are administered, will induce charitably disposed persons to afford it their support in the present emergency. Towards the object of this appeal donations, mentioned below, have been received from a few zealous friends.

Amount of Contributions already announced, £300 0 0

John Hilbert, Esq., for investment, being the 7th

donation of the like amount 100 0 0

Sir Geo. Phillips, Bart. 50 0 0

John Patch, Esq. 25 0 0

Miss Swanwick 21 0 0

Henry Hooper, Esq. 1 1 0

H. Robinson, Esq. 25 0 0

Edward Yates, Esq. 20 0 0

Messrs. Shoolbred & Co. 10 10 0

Henry Latham, Esq. 21 0 0

In Contribution Boxes at doors of Hospital, 1st

August, 1861, 9 8 5

Collection after Sermon by the Bishop of London, at St. Matthew's Church, Oakley-square, on

21st of July 63 13 0

Donations and subscriptions will be received by the following Bankers: Messrs. Glyn, Vintners & Co., 55, Strand; and Messrs. Barclay & C. (Bankers), 1, Abchurch-lane; Sir C. Scott & Co. Cavendish-square; Messrs. Smith, Payne & Co. 1, Lombard-street; also by the Treasurer, Sir Francis H. Goldsmid, Bart. M.P., 14, Portland-place; by the Members of the Committee by Mr. J. W. Goodiff, at the Office of the Committee, at the Hospital; and by the Collector, Mr. C. Buck, Napier Villas, Camberwell-road.

By order of the Committee,
Sept. 2, 1861. J. W. GOODIFF, Clerk.

FRENCH, Italian, German.—9, OLD BOND STREET.—Dr. ALTSCHUL, Author of 'First German Reading-Book,' dedicated to Her Grace the Duchess of Sutherland, and 'Philol. Soc., Prof. Eloquence.—TWO LANGUAGE TEUGHT in the same lesson, or alternately, on the same Terms as One, at the pupils' or at his house. Each language spoken in his PRIVATE Lessons, and select CLASSES for Ladies and Gentlemen. Preparation for all ordinary pursuits of life, the Universities, Army and Civil Service Examinations.

EDUCATIONAL ESTABLISHMENT FOR YOUNG LADIES. Conducted by Mrs. J. BAKERWELL, No. 3, STANLEY CROSBY, NOTTING HILL, London, W. Inclusive Terms, from 60 to 100 guineas per annum. The AUTUMN TERM will COMMENCE on SEPTEMBER the 17th, and CLOSE on DECEMBER, 31st. References to the Parents of Pupils.

EXAMINATIONS.—Mr. TRAVERS, B.A. Oxon, and a Master in University College School, RECEIVES to HIS HOUSE, 4, Fitzroy-square, PUPILS of the School and STUDENTS reading for the Examinations of the Universities and Civil Service.—Address to Sept. 30, Portland House, Andover, Hants.

A LADY wishes strongly to RECOMMEND, as GOVERNESS to Young Children, or as Useful Companion, a Lady, 30 years of age, who has had great experience in tuition, having resided in years, is of ladylike manners, and most amiable disposition.—Address to A. T., 30, Avenue-road, New-road, Hammer-smith, W.

BELSIZE COLLEGE FOR LADIES, 8 and 4, BELSIZE PARK, HAMPTSTEAD, N.W. (Removed from Kensington Hall).

Principal—Mrs. JOHNSON.

Director of Education—Mr. JOHNSON.

This Institution provides Resident Pupils with a Superior Course of Education and Instruction upon a Liberal and Comprehensive Plan, based on the principles of the Church of England, and combining under two divisions, Junior and Senior, the advantages of the best School and College Systems, with more than usual attention to domestic comforts and enjoyments, and to those attainments in useful knowledge and the accomplishments which prepare a Lady for the duties of home life.

The Lecture Arrangements include Courses of Literature, Science and the Scriptures, Self Knowledge, Education and the Laws of Health. Much valuable information is conveyed conversationally; and Sources and Musical Meetings, conducted by and among the Pupils, are regularly held.

Day Pupils are not received.

The next Term begins September 16.

For Prospectuses, &c., address Mrs. JOHNSON, 3, Belsize Park.

PRIVATE TUITION.—A Married Clergyman, Gold Medalist and Hebrew Prize-man, residing in Surrey, six miles from London, RECEIVES a limited number of PUPILS. He is assisted by competent Tutors for the Modern Languages, &c.; and the Course of Instruction embraces all that is necessary to prepare for the Universities, the Public Schools, and the Military or Civil Service. His house is very healthily situated in the own grounds, of 20 acres.—For Terms, address Rev. N. W., Field's, Bookseller, Regent-street, London, W.

EDUCATION.—WEST CENTRAL COLLEGIATE SCHOOL FOR YOUNG LADIES, at 40, SOUTHAMPTON-ROW, will receive on Sept. 9, for the Michaelmas Term, A Lady wanted as Junior Teacher.—Apply to Miss WORTH, at 40, Southampton-row, by letter.

EMILY TAYLOR, Hon. Sec.

NOTICE.—TO TOURISTS IN IRELAND. SIR CUSACK RONEY'S MONTH IN IRELAND: HOW TO SPEND IT, AND WHAT IT WILL COST, is now ready, price 1s.—W. H. SMITH & SON, and all Railway Stations; McGlashan & Gill, Dublin.

TO ALPINE TOURISTS.—T. H. GLADWELL, Publisher, and Importer of Foreign Photographs, invites an inspection of his Collection of Views of Peaks, Passes, and Glaciers. A Series of 160, at 8s. each, including—

The MATTERHORN from six different points.
The WETTERHORN from GRINDELWALD.
The GARNER GLACIER from ZERMATT.
MONTE ROSA and LISVAKAM from the HORNLI.
MONTE ROSA from the RIFFEL-BERG.
MONTE ROSA and the CIMA-DI-JAZI from MONTE-MORO, a magnificent View, most successfully depicted.

A fine PANORAMIC VIEW of the CHAIN of MONT BLANC, taken from the FLEGÈRE (with Index to the Names and Heights of all the Mountains), price 16s.

Catalogues of the above and the principal English Photographs may be had on application, T. H. GLADWELL, 21, Gracechurch-street, E.C.—N.B. Portfolios of the best description kept in stock.

RESIDENCE AND PARTIAL BOARD are OFFERED in the most convenient and pleasant part of Islington. A Gentleman, or two friends who can have separate Bedrooms, desiring a quiet, respectable home, would find this an eligible opportunity. Good references will be required and given. Terms moderate. Apply, or enter in the instance, to F. G. S., Mr. Braden's, Post-office, High-street, Islington, N.

BOARD AND RESIDENCE in a respectable family residing at Holloway, are offered to a YOUNG GENTLEMAN pursuing his Studies in London.—Address M. N., care of Mr. H. K. WILLIAMS, 113, Bishopsgate-street.

ENGLISH BOOKSELLING IN CANADA.—The undersigned, established twenty years, would invite the attention of the Publishers of Great Britain to their facilities for the Sale of small Consignments of new English Books; there is now no duty on English books entering Canada; there is a rapidly increasing reading population; and the present troubles in the United States have operated largely in stopping reprints of English Works. Returns will be promptly made every four months, with bill at sixty days.—Reference is permitted to Messrs. Sampson Low, Son & Co., Ludgate-hill, who will receive packages, and forward with our regular orders.

W. C. OSWERT & Co., Booksellers, 17 and 19, King-street East, Toronto, C.W.

London: Ward & Lock, 158, Fleet-street.

THE QUEEN: AN ILLUSTRATED JOURNAL AND REVIEW.

Men of all classes in England—the Clergyman, the Student, the Schoolmaster, the Man of Letters, the Artist, the Merchant, the Artisan—have Journals written especially for them; but for the whole mass of Educated Women not a single Paper of value exists. Under the title of 'THE QUEEN' a Journal for English women is now in preparation. The first Number appears THIS DAY, September 7. 'THE QUEEN' is simply intended to be for Educated Women what certain high-class Journals are for men—recording and reviewing from week to week whatever interests or amuses them. There will be large numbers of original articles on the Daily Life of Society, its Manners and Morals—on Books, Music, and the Theatre. Considerable space will be devoted to the Amusements which Ladies most pursue, at home and abroad; while, as for the mode, 'THE QUEEN' will be the earliest and most accurate chronicler of all its changes. The Engravings in 'THE QUEEN' will really illustrate the Events of the Day, and give point to whatever Topics happen to engage the public mind. No expense and no trouble will be spared in their preparation.

Interesting Supplements will appear every week. With the first Number are given a PLATE OF THE FASHIONS (printed and painted in Paris), and a genuine PHOTOGRAPH OF HER MAJESTY QUEEN VICTORIA. These Photographs (not Engravings from Photographs) are suitable for framing, being elegantly mounted on tinted card-paper. They have been executed by Mr. Mayall, of Regent-street—a sufficient guarantee of their excellence. Other interesting Supplements—already in preparation in Paris, Brussels, Berlin and Leipzig, as well as in London—will exhibit the most interesting and Fine-Art Printing ever seen in this country. The first Number appears THIS DAY, September 7, price SIXPENCE.—To be had of all Booksellers and News-vendors; also on receipt of Six Stamps, from the Office,

248, STRAND, LONDON, W.C.

This day is published, price 5s.

THE MASSACRES IN SYRIA.

By J. LEWIS FARLEY,

Author of 'Two Years in Syria', &c.

"Mr. Farley's book is unquestionably the work of an honest man, and Mr. Farley will be believed; he has defended a just cause; he has defended it with ability, with a tone of sincere conviction, with an authority which carries persuasion to the minds of his readers."—*Courrier d'Orient, Constantinople.*

"Any contribution to the authentic history of those deplorable outbreaks of fanatical hatred which took place in the Lebanon and at Damascus just a year ago, ought to be welcomed as exceedingly valuable and an opportunity."—*Saturday Review.*

London: Bradbury & Evans, 11, Boulevard-street.

This day, crown 8vo. 4s. 6d.

ELEMENTARY EXERCISES in GREEK

PROSE COMPOSITION. By H. MUSGRAVE WILKINS, M.A., Fellow of Merton College, Oxford.

This volume, the plan of which has been highly approved by the authorities at the chief public and other schools, aims at covering, more systematically and less diffusely, the ground hitherto occupied by Messrs. Arnold and Kendrick's books conjointly. It is founded on the rules in Bishop Wordsworth's Syntax, so widely circulated in schools, but with such occasional developments as the full illustration of the subject requires. The corresponding Greek words are placed beneath the English, in each example, whereby the aid of an English-Greek Lexicon is dispensed with. That more detailed information which is at once indispensable and too minute to be embodied in Rules, will be found in the shape of Observations, in which the pupil may be questioned, orally or on paper, by his tutor.

London: Parker, Son & Bourn, West Strand.

2s. 6d. purple cloth boards, gilt letters.
ROME'S ORDERS NOT VALID IN ENGLAND'S CHURCH. By LEX ANGLICANA.

MULTÆ TERRICOLIS LINGUÆ, CÆLESTIBUS UNA.

SAMUEL BAGSTER & SONS,
 15, PATERNOSTER-ROW, LONDON.

POLYGLOT BIBLES AND BIBLICAL WORKS,
In Ancient and Modern Languages.

Presentation Copies, in every variety of suitable Binding.
 Catalogues, by post, free.

BAGSTER'S POLYGLOT BIBLES, in Pocket Volumes. The various languages, as separate Volumes, are complete in all respects, and adapted for study per se, but they also afford their possessor the assistance of the costly Polyglot editions of the libraries. An individual, for instance, purchases a single language of this series, and proceeds to study it—be it Greek, French, English, or what it may; he then desires to compare the object of his study with another translation, or with the Original, and, possessing himself of it, he finds, to his inexpressible comfort, that he has only to refer to the same page, and part of the page, to obtain the desired comparison. He afterwards adds another and another Version to his Library, and finds the same principle carried through the whole; and he obtains a Bible of two, three, four, or more languages, not only containing a Bible of comparison with one another, but adapted to the various uses of single pocket volumes. This arrangement affords the purchaser also the opportunity of providing himself only with those languages he may require; and supplies his wants in the most convenient, elegant, as well as inexpensive manner.

THE GREEK STUDENT'S MANUAL:

consisting of—I. An Introductory Guide to the Language—II. The whole New Testament, Greek and English, in parallel columns, with Various Readings; and—III. A complete Greek and English Lexicon. Pocket volume, price 12s.

BUNYAN'S PILGRIM'S PROGRESS.

New Edition, with a Memoir, by J. M. HARE. The *Allegory* illustrated with Outline Engravings, drawn by J. R. Clayton; and the *Biographical Sketch* illustrated with Engravings of interesting Relics and Recollections of Bunyan, from Drawings by J. L. Williams.
 "This edition is one of remarkable excellence. It is handsomely got up, and very cheap. But its principal charm lies in its beautiful outline engravings, which are, for the most part, extremely elegant, appropriate, and classical. We strongly recommend this as the best and most useful family edition of the Pilgrim's Progress with which we are acquainted."
Congregational Pulpit.
 London: Simpkin, Marshall & Co.

III.

LORD DUNDONALD.

A REPLY to the OBSERVATIONS in 'THE QUARTERLY REVIEW' on THE AUTOBIO- GRAPHY of LORD DUNDONALD. By MARCUS. 8vo. with Charts.

IV.

MEMOIRS of MARSHALL HALL,

M.D. F.R.S. By HIS WIDOW. 8vo. with Portrait, 14s.

"In the world of physiological science Dr. Marshall Hall may fairly be ranked as the companion of Harvey and Bell."—*Athenæum.*

"Will command respect and sympathy. Dr. Hall was a public benefactor, an able physician, an accomplished gentleman, and a thoroughly good-hearted man."—*Observer.*

"Dr. Hall did enough good service to earn for himself the esteem of many generations."—*Examiner.*

V.

JOHN HUSS and JEROME OF PRAGUE.

The LIFE and TIMES of CARDINAL JULIAN. By the Rev. R. C. JENKINS. 8vo. 14s.

"Truthfully written. The book has solid value, and deserves close attention."—*Examiner.*

"A well-written work. The author has sketched a good picture of a remarkable man, distinguished by splendid talents and vigorous energy."—*Morning Post.*

VI.

The POPULAR SEA NOVEL, ready at every Library. VONVED the DANE, the ROVER of the BALTIC. 3 vols.

"This is a great book, both in conception and execution, which in its own school has no rival. Victor Hugo might be proud to have written some of its chapters: he has never written anything more thrilling or more terrible; and Dumas himself, so powerful in describing prison scenes, has not exceeded this writer in his account of the Rover of the Baltic."—*Morning Post.*

London: RICHARD BENTLEY, New Burlington-street,
Publisher in Ordinary to Her Majesty.

HURST & BLACKETT'S NEW PUBLICATIONS.

13, Great Marlborough-street.

THE OKAVANGO RIVER. A Nar-

native of Travel, Exploration, and Adventure. By CHARLES JOHN ANDERSSON, Author of 'Lake Ngami.' 8vo. with Portrait of the Author, and numerous Illustrations. 21s.

"Mr. Andersson's book, from the number of well-told adventures, its unpretending style, its rich fund of information, and spirited illustrations, will command a wide circle of readers, and become a favourite with all those who can appreciate daring perseverance, and a buoyant spirit under overwhelming difficulties. The interest of his story never flags for a moment."—*Athenæum.*

"Mr. Andersson's book, illustrated with many animated pictures of adventures connected with the wild sports of the journeys it describes, is one that will be popular as a budget of trustworthy traveller's tales, besides being valued for the information it gives to geography."—*Examiner.*

"This volume, profusely and splendidly illustrated, will take a high rank among works of adventure and exploration. There can be no question of the great service Mr. Andersson has rendered to geographical science."—*Herald.*

The SECRET HISTORY of the

COURT of FRANCE under LOUIS XV. Edited, from rare and unpublished Documents, by Dr. CHALLICE. 3 vols. with Portraits, 21s.

"These volumes are very useful and valuable contributions to the history of France during one of its most important epochs. They are, moreover, entertaining to the general reader, as well as highly instructive to the student."—*Observer.*

TRAVELS in the REGIONS of the

AMOO, and the Russian Acquisitions on the Confines of India and China. By T. W. ATKINSON, F.R.G.S. F.G.S., Author of 'Oriental and Western Siberia.' Dedicated, by permission, to Her Majesty. Second Edition. With Map and 88 Illustrations, 21s. bound.

"A noble work. The entire volume is admirable for its spirit, unexaggerated tone, and the mass of fresh materials by which this really new world is made accessible to us."—*Athenæum.*

From Original and Authentic Sources. By Miss FREER, Author of 'The Lives of Marguerite d'Angoulême, Jeanne d'Albret,' &c. 2 vols. with Portraits, 21s. bound.

"A work of the highest value. The volumes do the author great credit. They bear all the marks of industry and research, and are written throughout with ease and correctness."—*Daily News.*

A SAUNTER THROUGH the WEST

END. By LEIGH HUNT. 1 vol. 10s. 6d. bound.

"Few men felt, as Leigh Hunt did, the human poetry of the old memories that crowd upon the lettered and thoughtful wanderer about London streets. His gentle, genial humour shines in a book like this—worthy companion to his 'Town' and 'Old Court Suburb.'—*Examiner.*

The LIFE of JEANNE d'ALBRET.

QUEEN of NAVARRE. By Miss FREER. Price 5s. bound and illustrated, forming the 18th Volume of HURST & BLACKETT'S STANDARD LIBRARY of Cheap Editions of Popular Modern Works.

"We have read this book with great pleasure, and recommend it to general perusal. It reflects the highest credit on the industry and ability of Miss Freer. Nothing can be more interesting than her story of the life of Jeanne d'Albret, and the narrative is as trustworthy as it is attractive."—*Post.*

A BOOK ABOUT DOCTORS. By

J. C. JEAFFRESON, Esq. New, Revised, and Cheaper Edition, in 1 vol. 10s. 6d. bound.

THE NEW NOVELS.

EAST and WEST. By J. Frazer

CORKRAN. 3 vols.

A HERO in SPIKE of HIMSELF.

By Captain MAYNE REID. From the French of Luis de Bellemare. 3 vols.

"This story is full of exciting adventures, and will meet with a cordial welcome from the numerous admirers of Capt. Mayne Reid's stirring narratives."—*Observer.*

ALONE in the WORLD. By the

Author of 'COUSIN GEOFFREY,' &c. 3 vols.

"This new tale by Mrs. Gordon Smythes (whom Thomas Campbell, the poet, decided to be the queen of the domestic novel) unites the pathetic and high morals of her 'Married for Love' with the wit and humour of her 'Cousin Geoffrey' and the humour of her 'Marrying Man.'—*Chronicle.*

PAUL FOSTER'S DAUGHTER. By

DUTTON COOK. 3 vols.

"It is not often that a novel so witty, wise, and healthful in spirit offers itself for perusal."—*Athenæum.*

A FAMILY HISTORY. By the

Author of 'THE QUEEN'S PARDON,' &c. 3 vols.

"A very good novel, well imagined and well told."—*Post.*

UNDER THE SPELL. By the Author

of 'GRANDMOTHER'S MONEY,' 'WILDFLOWERS,' &c. 3 vols.

"The best story hitherto written by a very pleasant novelist. It is throughout a good story—rapid and rich in incident—that nobody will leave unfinished."—*Examiner.*

NOTICE TO QUIT. By W. G. WILLS,

Author of 'Life's Forebodings,' &c. 3 vols. [Just ready.]

MACMILLAN & CO.

HAVE LATELY PUBLISHED THE FOLLOWING

BOOKS FOR SUMMER READING.

CAVOUR: a Memoir. With a Portrait from an Original Photograph. By E. DICEY, Author of 'Rome in 1860.' 4s. 6d.

"He writes well and with ease. His book is short, intelligent and trustworthy."—*Athenæum.*

FOOT-NOTES from the PAGE of NATURE; or, First Forms of Vegetation. With numerous Illustrations, and a Coloured Frontispiece. By Rev. H. MACMILLAN, F.R.S.E. 4s.

A popular work on Mosses, Lichens, Fresh-water Algae and Fungi.

GOLDEN TREASURY: a Collection of the Best English Poems. Beautifully printed, and bound in extra cloth, 4s. 6d.

"No book in the English language will make a more delightful companion than this."—*Spectator.*

PICTURES of OLD ENGLAND. With a Map. By PAULI. 8s. 6d.

"Presents the facts of History with the pleasing accompaniment of a Romance."—*Clerical Journal.*

THE HUMAN FOOT and the HUMAN HAND. By G. M. HUMPHREY, M.D. F.R.S. With numerous Illustrations. 4s. 6d.

"A very interesting and useful little book."—*Spectator.*

STRAY NOTES on FISHING and NATURAL HISTORY. By CORNWALL SIMON. 7s. 6d.

"The result of long experience, simply and skilfully told."—*Athenæum.*

GLAUCUS; or, Wonders of the Sea Shore. Coloured Illustrations. By PROFESSOR KINGSLEY. 7s. 6d.

"No volume so fit as this to direct the beginner into the right way of studying the wonders of the shore."—*Examiner.*

TWO YEARS AGO. Third Edition.

By PROFESSOR KINGSLEY. 6s.

"Genial, large hearted, humorous."—*Guardian.*

WESTWARD HO! Fourth Edition.

By PROFESSOR KINGSLEY. 6s.

"A good novel to an excellent purpose."—*Times.*

PROF. KINGSLEY'S LECTURE on HISTORY. 2s.

"A vigorous and manly discourse."—*North American Review.*

MOOR COTTAGE. A Tale of Home Life. 10s. 6d.

"This charming tale."—*Athenæum.*

GEOFFREY HAMLYN. Second Edition.

By HENRY KINGSLEY. 6s.

"Keeps up its interest from the first page to the last."—*Athenæum.*

TOM BROWN'S SCHOOL DAYS.

Seventh Edition. 5s.

"A book which an English father might well wish to see in the hands of his son."—*Times.*

LITERATURE

A Lexicon, English and Turkish, to facilitate to Turkish Students the Acquisition of the English Language. By J. W. Redhouse. (Quaritch.)

THE accession of a Sultan who refuses the customary present of a beautiful slave, and who sends the seraglio jewels to an auctioneer in Bond Street, is a wonder of wonders. Haroon was not half so revolutionary as Abd-ul-Aziz. What would Scheherazade have said of such a Caliph? How will the story-tellers of Cairo and Damascus deal with a prince who tells the world that he has a wife whom he loves, and will not be bothered with a tag-rag of Houris? Is the end of the world, or only the prospectus of a loan, at hand? Let us wait and see. The energetic and unexpected measures of reform with which Abd-ul-Aziz has signalized the commencement of his reign once more revive our hopes for the Ottoman Empire; and the language and literature of the Osmanlis, irrespective of the attention which they would otherwise merit, were it only for their intrinsic value, will, at the present moment, have a new and peculiar interest for the literary and political world. The late Sultan, it was supposed, had done all that he could to introduce European civilization, and the reforms suggested to him by England and France, into his empire; and it was feared that the accession of his brother, reported to be bigoted to the ancient régime, and to have even conspired against Abd-ul-Mejid for his leaning towards Europeans, would be the last feather on the camel's back. The foreboding was, moreover, not confined to Occidentals, for there is an ancient Turkish prophecy, in accordance with which the empire is fated to fall under the reign of an Aziz; and such prophecies as this in the East are of no trifling importance, as they not unfrequently verify themselves by the faith that is put in them. Great and natural, therefore, was the apprehension felt in Europe when the news arrived of the decease of Abd-ul-Mejid; but, a few days afterwards, this anxiety was removed by the wise and salutary proceedings with which the new Sultan inaugurated his ascent to the throne. A strong will in all persons and in all countries works miracles, and a monarch endowed with such a gift has often in Europe done more good than a better, but vacillating and weak-minded man. A Caliph who begins his reign with the sacrifice of his own sensual pleasures begins it well. Abd-ul-Mejid was a reformer, but he never dreamt of reforming the seraglio. He prescribed civilization for his subjects; but a civilization that sends the ornaments of his odalisques to London was beyond his reach. Abd-ul-Aziz walks his way with a firmer tread. A Sultan with a single wife is a sensation, and for the sake of Turkey we are glad that he has caused it. In the East, where so much depends on the individual character of the monarch, where hesitation is looked upon as weakness, and decision as strength, where half-measures only inspire contempt, and where resolution even verging on tyranny gains respect and admiration, such a monarch as Abd-ul-Aziz appears to be may save the nation for a long time to come, and, for aught we know, open a new era in Turkish history. The language and literature of the Turks, therefore, as we have said, acquire, by late events a new importance, and will just now have an additional interest in the eyes of every one.

Some few months since, previous to the death

of the late Sultan, just when there seemed to some the least need of such a work, a new Turco-English Lexicon made its appearance. We take the present opportunity of giving it the attention it deserves, and of making some remarks on the language of the people for whom it is written.

A really good dictionary, although the first essential to the study of any language, is, strange to say, one of the rarest things to be found; and, with a few exceptions which have appeared of late years, such works are in general of the most inferior description. A complete English-Turkish Lexicon had long been wanted; and the author of the present one, in the preface to his smaller one, had spoken of the pleasure he would have in filling this void in our literature. He has now completed his task, and we may unhesitatingly say successfully.

Regarded only as the language of a people who once influenced half the world, who overturned and established empires,—in whose possession the thrones of Persia, India, Syria, Egypt, and Arabia have been, and whose influence was felt and dreaded by Italy, Germany, and France,—Turkish might have been expected to have attracted more attention than it has; but when we find that the last words of Othman to his son Orkhan were "Be the upholder of the faith and the protector of science," and that no sooner had the Crescent been planted on the walls of Brussa, than that Orkhan gave orders for the erection of a royal college, and that his successors vied with each other in the protection and encouragement of letters, we cannot account for the neglect of the study of the language of such a people but by the fact that, led away by their attempt to make the language magnificent and sonorous, they have rendered its vocabulary so redundant, and its construction so difficult, that foreigners have despaired of ever mastering it.

The literary language of the Osmanlis has incorporated almost the whole of the vocabularies of the Arabic and Persian languages; and, to understand it, the reader must be acquainted with the greater part of the grammar of these two languages; as, although Arabic and Persian words are used with Turkish words with Turkish construction, it is equally legitimate and usual, even in cultivated language, to follow the rules of the grammar of these languages when using words taken from them. For example, in pure Turkish the adjective is indeclinable, as in English, but when Arabic words are used, the adjective is generally made to follow the noun and to agree with it, as in French; and all the rules of Arabic grammar concerning that agreement are to be attended to. Again, there is no article in Turkish, originally; but the Arabic article *el* is constantly to be met with. This incorporation of almost two entire languages has the disadvantage of making the language extremely difficult and redundant, but the advantage of giving it an almost unequalled richness and versatility. Thus, for instance, compound nouns can be formed in three ways, as:—1st, In the Turkish way, *demirin yoli*, "iron's road," so to speak. 2ndly, *Harb el Hadid*, "the road of iron." 3rdly, *Demir-yol*, "the iron road." Again, although there is a Turkish termination *ji*, corresponding to the English *er*, the French *eur*, and the Italian *ore*, to express those who exercise a calling or profession, as *papuch*, "a boot," *papuchji*, a bootmaker," the Persian termination *ger*, "a maker," and others, are used to form such nouns as *Kefesh*, "boot," *Kefeshger*, "maker of boots," and hundreds of Arabic participles used in Arabic as nouns, are adopted in Turkish, thus:

Katib, the active participle of *Katabe*, "to write," means a writer, a clerk, &c. In this respect of having a barbarous language as the foundation, and borrowing from two more refined languages, the Turkish resembles the English: the Turkish corresponding to the Saxon, the Arabic and the Persian to the Latin and Greek, with this difference, however, that our words are derived from the Latin and Greek, the Turkish taken pure from the Arabic and Persian, with the exception of some few in common use in colloquial language.

It is to be regretted that with such materials and such liberty of expression the language has not been more developed and simplified by fixed laws, instead of each writer, as has been the case hitherto, rioting in the richness of the materials, and only caring to excel in making his composition intricate and abstruse. To appreciate the real difficulty is almost impossible. Some idea of Turkish style may be gained from the following translation (by no means exceptionally difficult) of the 'Romance of the Forty Viziers,' a manuscript copy of which is to be found in the British Museum:—

"In the name of God the Merciful, the Clement, Endless praise and unceasing prayer are due to the majesty of the mighty God the Creator (may His glory increase!), in the contemplation of whose greatness the eye of intellect and the sight of the soul are dazzled; and in the abyss of the mountain of whose infinity and divinity the thoughts and ideas of all created things are lost! and thanks and praise be to the gracious God, to compass whose goodness the girdle of speech is stretched in vain, and to the true splendour of one ray of whose beauty the glass of the mind does not reach; the voice of the crier of whose greatness is lost in the porch of fear, and the faintest echo of whose voice is lost in the vault of imagination; the sea of whose knowledge surrounds all science, real or abstract, particular or universal, changeable, unchangeable, for, as the Holy Koran says, 'There is nothing that He does not know, no nothing.' From Him purity and truth are inseparable, of whom the verse says, 'The Most High is the King of Truth, and there is no God but He.' Trust in Him is the hope which supports all the faithful and the pious searchers after truth, for it is said, everything is by the graciousness of God and His mercy. The quality of unity and the predicate of particularity and singleness can be attributed only to His pure being, as the Koran says, 'Your God is a single God; and there is no God but the Merciful, the Clement.' The greatest happiness of all nations is in attending in the glorious court of His service, of whom it is said 'They fled to take refuge in him.' The hand of His help and His succour is apparent in the lives of all who are passed as the Koran says, 'They held fast to the rope of God.' The praise of all who praise, and the thanks of all who thank, and the record of all recorders constantly is of Him, of whom the prophet says, 'Your Lord God is He who created the heavens and the earth.' And praise without end, and numberless salutations to the holy tomb and illuminated sepulchre of Mahomet Mustafa (peace be on him!) and his family and friends. Now, as by the unalterable decrees of fate it has been predestined that the Sultan of this prosperous empire, the Sultan of our glorious sovereignty, the great King, the monarch of the world, the shadow of Allah over the people of religion, the helper of the world and of religion, the supporter of Islam and the Moslems, the Emperor Murad, son of Muhammad, son of Bayazid (God help his friends and vanquish his enemies!), the mine of justice and munificence, should be King in the palace of the world, and these his qualities have become apparent to all the world, it is the duty of the devotees and the faithful to put up fervent prayers for the continuance of his reign and the duration of his glory, and to do homage to him by sending tribute of material things, or abstract things from the sciences. For two reasons, it appears to me that this tribute should not be of

material things: firstly, because the cry of 'What God has vouchsafed me is greater than what he has vouchsafed you,' has resounded in support of his rank, and for the spread of his firmness and power; secondly, because the things of the world are trifling, as God has said in his honoured book. Moreover, it is not wise to present trifling things to a king, and thus it is evident that the proper and fit things to present to a king are books of science. For this account Ahmed put the tale, entitled 'The Forty Nights and Mornings,' to paper, translating it from the Arabic into the Turkish language."

A letter, however, is the form in which the style is most difficult. A Turk seems always to attempt to express the whole letter in one or two sentences. The Turkish style is, in this respect, somewhat like an exaggerated German style, putting everything that qualifies before the thing qualified, making whole paragraphs mere sentences: for example, a simple note would run as follows:—

"According to the necessity of the pure love of him who prays for you, in activity for your high person, day and night passing in prayer for the prolongation of your life and the duration of your glory, and waiting in eagerness for news of your health and of your well-being, as a fruit of your perfect goodness and favour being sent, letter, the hand of him who prays for you has reached. To explain that it is impossible to express the obligation and joy arising from your favour and kindness on this occasion, and to inquire after the state of your own health, with the prayer that you will make my heart glad by condescending to send me tidings of you, this miserable letter was written and sent."

In spite, however, of the cumbersomeness of this style, the Osmanlis have a great and interesting literature: works of history, geography, biography, astronomy, mathematics, algebra, geometry, arithmetic, and translations of many of the standard works of foreign nations. During the reign of the first Sultans many Latin and Greek works were translated. Plutarch was translated, by order of Mohammed the Second, the 'Commentaries of Cæsar' were spread amongst the Osmanlis under the reign of Suleiman the Second, and translations have also been made of Aristotle and Euclid in Turkish. To these may be added, the works of Bonnycastle, Sydenham, Vauban, Lafitte, Truquet and Lalande. Very naturally, however, translations of Persian and Arabic works are more numerous; many of which, it is said, surpass the originals, as the Turks never translate literally, but allow themselves the greatest liberty. A few amongst many are the translations of the 'Arabian Nights,' from the Arabic; the celebrated 'Fables of Bidpai,' the loves of Leileh and Mejnun, from the Persian, &c.

The Turkish writers excel particularly in history. They have many valuable works of history, written by private individuals, and a regular series of public annals from the most remote times to the present written by the official historiographers of the empire.

Among their most celebrated historians are, Sead-u-din, the historiographer of Murad the Third, the author of 'Taj-ut tevarikh' (The Crown of Histories), Jelal Zadeh, the author of 'Tarikh Jelal Zadeh,' the Annals of the Reign of Suleiman the First, and Selaniki, whose works are only to be found in manuscript, and Rashid Efendi, Sami, Shagir and Subhi, whose works have been printed by the Imperial press. Amongst historians also must not be omitted the learned Haji Khalifeh, who wrote several historical and geographical works and a work on Oriental bibliography, a universal history in Arabic, and also the History of the Maritime Wars of the Turks, the History of Constantinople, and the celebrated Oriental

Geography, called 'Jihan Numa,' The World Shower.

The Turkish, like most Oriental languages, is written from right to left, so that a book ends where ours commences; and the vowels are as often omitted as written: a formidable obstacle to the acquisition of the language, as the pronunciation of each word must be sought for in the dictionary. The Turks, too, as yet have no punctuation, so that where a sentence begins or ends can only be ascertained by the sense. This, however, is not of such importance as might at first be thought, as in general the Turks run on, scarcely ever stopping, so that when you come to a finite verb, you may safely conclude that you have come to the end of a paragraph, and the places where we should put commas are generally indicated by their participles, thus: in the Tales of Khoja Nasreddin, which are written in an extremely simple style, a sentence runs thus:—"One day Khoja, on his shoulder a ladder taking, carrying it, against the wall of a garden leaning, up going, afterwards it up drawing, in he enters." Here at the end, where the first finite verb comes, there would be a full stop in any European language, and a comma would be put in after each participle. The next sentence goes on in the same manner. "The gardener him seeing, you, who are you? and here what do you seek? having said, Khoja near to the ladder standing, 'I ladders sell,' cried." To indicate the beginnings of chapters, quotations, and even the beginning of a new paragraph, in many manuscripts red ink is used. It is a curious fact also, which indeed shows that there is no accounting for taste, that it is considered a beauty in writing for the lines to bend upwards, or rather to converge to the left-hand side of the paper. Like English, the Turkish language follows the natural division of gender, which saves the great trouble given to foreigners by the arbitrary distinctions established in so many other languages. The adjective is indeclinable in Turkish, and precedes the noun, as in English. A peculiar power, richness and conciseness are given to the language by the verbs being able to be made negative, potential, causal, reciprocal, reflective, and passive by the addition of a single syllable or even letter to the root. Sentences of several words in European languages can be expressed in one word in Turkish, as *sevishdirenemek*, "to cause to be impossible to love reciprocally." Another point in which the Turkish is pre-eminently concise is, in the use of the declinable participles in the place where relative sentences would be used in European languages. Thus, "the letter which I have written" would be expressed in two words, *yazdigim*, meaning "having written," which is declined with the termination *m*, "my," and precedes the noun *mektub*, "letter." So, "the letter which they have written" would be *yazdikleri mektub*, and so on with all the pronominal terminations. "He who wrote," "they who write," &c., are expressed in one word *yazan*, *yazanlar*, &c.

To conclude, the Turkish language in the simplicity and regularity of its inflections is only to be equalled among the languages of Europe by the Spanish; in the attention and weight which it gives to euphony by no European language, except perhaps Hungarian; and in the variety and richness of its resources (let it make but proper use of them) it may rank with any languages of Europe or Asia.

It may be asked to whom we are indebted for obtaining this Oriental Lexicon. All who know anything of such matters will be aware that such a work is never remunerative enough to pay the author, in ever so small a degree. Mr. Redhouse's Preface tells

us:—"The book (his former Dictionary) threatened to become a burden on the publisher's hands, and all chance of a demand for the preparation of a more complete Lexicon of the two languages seemed to have vanished." He then goes on to say that a body of American gentlemen, who wished to introduce enlightenment into the East, felt it was desirable to create a body of bi-lingual books. To assist these American gentlemen in their praiseworthy object, a committee was formed in London, called the Anglo-Turkish Literature Committee. Some progress had indeed been made in obtaining promises of support for the work, when all further exertion was rendered unnecessary, by the munificent offer on the part of one sole individual, an American merchant, to bear the whole expense.

Practical Illustration of Woman's Right to Labour. Edited by Caroline H. Dall. (Boston, U.S., Walker & Co.)

Treatise on Deportment, Dancing, and Physical Education for Young Ladies. By Madame D'Egville Michau. (Newby.)

Mrs. Caroline H. Dall and Madame D'Egville Michau would both object, with equal dislike, to having their names coupled together, and their respective *brochures* named in the same day. One, an emancipated woman, with stern contempt for the vanities of dress and adornment, desirous that all women should aim at making themselves as much like men as possible, claiming for them "an equal right to labour" at all masculine occupations, and calling upon women everywhere to cease from the domestic and ornamental frivolities which have hitherto been the badge of all their tribe, and to become the hard-working, self-sustained, independent female branch of the human race, living in an amiable neutrality towards men, and in a close offensive and defensive sisterly alliance amongst each other; Madame D'Egville Michau, professor of dancing and deportment, high priestess of elegance, grace, and the conventionalities of polite society,—what can the two women have in common? We answer, a great deal. Madame Michau, training girls to become elegant women, to be the ornaments of the drawing-room and the ball-room, finds that exactly the same virtues of character are required as Mrs. Caroline Dall invokes for "woman's right to labour"; only that Mrs. Dall takes a pretentious, dogmatic and aggressive tone. In their records of the deficiencies in female education, their testimony is agreed; in their opinions as to the remedy, there is no difference. In the result, we suspect that a pupil brought up after the fashion of Madame D'Egville Michau would be more modest, unpretending, thorough-bred, and altogether more pleasant as a woman and a companion, than a girl educated on the proud and Spartan-like self-assertion of Mrs. Dall. Both ladies agree in their remarks on the defective foundation that is laid in girlhood for the future character of the woman; Madame Michau remarks:—

"What a thousand pities it is that the whims and caprices of children are so much listened to at home! A certain branch of education is commenced; and, after a little time, the pupil finds that it gives more trouble to accomplish than she likes. She writes home, stating some plausible excuse for discontinuing the lessons; and the parent, instead of remonstrating with the child, or writing to the lady under whose care the child is placed, at once allows the lessons to be given up. The reason why so many girls are only half educated is occasioned by so much time having been lost in attempting and giving up different branches of education. With regard to dancing lessons, I know many girls who would join my classes if

they could fly about the rooms as they pleased; but they object to exercise as well as to being told of their faults; and, as this appears to be the age for children to govern their parents, of course, the education of a girl who has not much mind and is (what is termed) indulged amounts to a positive absence of any knowledge whatever."

Mrs. Caroline Dall testifies:—

"After the publication of 'Woman's Right to Labour,' generous men came forth to help me carry out my plans. The best printer in Boston said, 'I am willing to take women into my office at once, if you can find women who will submit to an apprenticeship like men.' On the same conditions, a distinguished chemist offered to take a class of women and train them to be first-class apothecaries or scientific observers, as they might choose. To these offers there were no satisfactory responses. 'Yes,' said the would-be printers, 'we will go into an office for six months; but by that time our oldest sisters will be married and our mothers will want us at home.' 'An apprenticeship of six years!' exclaimed the young lady of a chemical turn, 'I should like very much to learn, so that I could be a chemist if I ever had to; but poison myself over those "fumes" for six years—not I!' It is easy to rail against society and men in general; but it is very painful for a woman to confess her heaviest obstacle to success,—viz., the weakness of women. 'Six years out of the very bloom of our lives to be spent in the printing-office or the laboratory!' exclaim the dismayed band; and they flutter out of reach through the side walks of Beacon Street or through the mazes of 'The Lancers.' * * * What does common sense demand, if not that women should make thorough preparation for trades or professions; and, having taken up a resolution, should abide by all its consequences like men?"

Both these extracts show the blossom and the fruit of the evil tree of self-indulgence. Women seem incapable of doing anything they are not inclined to do; they are in general as unteachable as cats, which therein seem the type of the female character; viz., that they are incapable of being controlled or taught. The fault lies at the very root of their life; they are not trained to work; there is nothing thorough in their education; to seem, to appear, to look like, is the sum of their learning; boys are subjected to the discipline of circumstances; they have to serve an apprenticeship in the workshop, in the merchant's counting-house, or if they enter a profession they have to stick to their choice, to go through the drill or the examination, and however shallow or incompetent some amongst them may be, both in professions and out of them, there is an element of reality in their training which is absent from that of a woman. Boys come in for the benefit of whatever rationality or common sense there may be in the world. Men are expected as a matter of course to be rational beings; but it is made a marvel when a woman shows herself to be one. The reform must, as we have so often said, begin with women themselves. Before they undertake great things, such as taking their places as professional men, and going out into the world to push their way in the active walks of life to fame and fortune, let them, as mothers, sisters, and wives, train the girls, the future women, committed to their charge; in earliest life, let them lay the foundation of industry, perseverance, and, above all, of obedience. The habit of honest obedience "to those who are put in authority over her," goes for a great deal in laying the foundation of a sterling character in woman; for self-will is not firmness of purpose, nor is it an indication of strength of character, but women flatter themselves that it is so, and they "hate to be instructed" or controlled; they are radically indocile and intractable. All the talk that is now going on about "woman's work" and "woman's right to labour" is so much wasted breath; women who have grown up in the

desultory, self-willed habits which women allow themselves, never can turn to the steady, heavy drudgery of learning a trade or profession thoroughly; those who wish to improve the condition of women must begin at the other end, and train them from early childhood to look forwards to work as a natural condition, and not as a voluntary or exceptional state of things "for a woman." There is not the least objection to a woman earning her own living, or to her getting as much money as she can; Mrs. Dall testifies that men are quite ready to assist her, to receive her, and to teach her,—if she will only submit to the discipline of being thoroughly taught. The subject of Mrs. Dall's 'Practical Illustration' is a young Polish woman, Maria E. Zakrzewska, M.D., who, from assisting her aunt, who was a professional nurse, imbibed an ardent desire to become a physician, and who, by dint of great energy and firmness of purpose, accomplished her desire. There are many points of interest in the narrative, and the lady's indomitable perseverance is worthy of all esteem; but we must confess that we found the tone of the book disagreeable and repelling. It left us with no wish to become acquainted with Dr. Maria, and not the least desirous that any woman belonging to us should resemble her. The practical illustration is worth reading, as a sign of the increasing disposition in women to seek some useful and permanent employment for their energy; but we recommend the little brochure of Madame D'Egville Michau, with its unpretending common sense, to the perusal of parents and guardians, as well as to the young people for whose benefit it is more especially intended. If they will lay to heart and follow out the suggestions, they will not only walk better, dance better, and be more elegant in "deportment," but they will stand a chance of becoming considerably wiser during the process.

Political Poems and Songs relating to English History, composed during the Period from the Accession of Edward III. to that of Richard III. Edited by Thomas Wright. 2 vols. (Longman & Co.)

To have the last shot in a fight—to give the final word in argument or quarrel—to have their "say" despite tyrannical law to the contrary, and to have it and utter it, shout it, or sing it all the more loudly and defiantly because the law tyrannically forbade such delight—has been at all times, and under the heaviest disadvantages, the bold, hearty, and honest characteristic of the English people.

At no period has it been possible to "put down" the exercise of this spirit. The strong hand of unlawful might could never so tightly grasp the throat of the English people, but that through it they could and would give expression to their scorn or their defiance. The pressure might be almost irresistible for a season, but opportunity was watched for, and seized upon; if failure came, the outspoken patriots decided or denounced their tyrants, again bided their time, and meanwhile found patience and solace and encouragement in pummelling their oppressors in verses of every possible and impossible metre. They could never be held down by force beneath the heel of an unrighteous master; as little possible was it to cajole them into a belief that they were free when they were not. How great the contrast, and different the result, among nations of other blood and temperament! No one hailed with more ecstasy than Coleridge the advent of the first French Revolution,—as that revolution is called which, in truth, is only yet in progress; no one lamented

more bitterly the result when he discerned how the people were turned from the early good purpose, and

In mad game
They burst their manacles and wore the name
Of Freedom graven on a heavier chain.

Here, at home, with English earnestness of purpose was combined a perfect good humour of expression. The utterance which found its way by the tongue of satire was by no means wanting in determination, but it was never truculent, or ruffianly, or sanguinary. Throughout these two volumes, which embrace the period from the reign of Edward the Third to the accession of the third Richard, there is no lack of severity against any faction which is the subject and the victim of the satirist. From the King on his throne to Jack Ploughman, with priest and reformer between, every man comes in for his flagellation, and an additional lash or two falls on the shoulders of prominent noblemen,—too prominent not to come in for it; but although the play be rough, the players are manifestly not bad-hearted fellows. You have here satirists of adverse parties, provoking and pouncing on each other; but they are thoroughly English,—they have shaken hands before they began,—they have smiled lugubriously as one or the other staggered beneath his antagonist's "facers,"—they respectively did their very best, but without malice,—and while the vanquished athlete lay panting and gasping on the ground, his adversary, now his advocate, went among the spectators with a cap and made a collection in order to pour balm into the wounds and over the bruises of him who had had the worst of it. This good humour characterizes both sides; but it is, naturally, stronger on that of the winning party. Perhaps this party is on the conquering side because of its imperturbable humour. It is certain that loss of temper is the imperilling even of a good cause. If a soft answer turneth away wrath, a good-humoured comment may save a menaced cause. When James the First swore to the Mayor of London that he would abandon the capital, his Lordship slyly remarked that he hoped His Majesty would not take the Thames with him! What could have better exhibited the insanity of the royal menace? What could such a King do but thrust his huge hands in his huger pockets, open his still huger mouth to laugh, and remain in the place from which it was not permissible nor possible for him to depart?

We have alluded to the period the social, ecclesiastical and the political history of which these ballads serve to illustrate. It must be confessed that such a period offered rare opportunities, for all men who had something to say, knew how to say it, and had prudence enough to circulate their manuscripts without putting their persons in peril by discovery. It was a time when gloom and ruin succeeded to glory and prosperity; when the prestige of the old Church faded away as swiftly as that of the old royal prerogative; when the people began to speak as well as to think, and to be convinced that Saxon John Nokes was something in the social system as important, in his way, as any Fitz Sang de Rien who came over with the Conqueror. It is not, however, the satirist from among the lower orders who alone speaks loudly here. There is "pluck" in every utterance, and we think that the very excellent gentleman who designated the English king, Edward the Third, under the name of *Taurus*, the godfather who furnished us with our national name of John Bull, was the worthy progenitor of the stout English Lord Whitworth of our fathers' days; a lord of whom even a French author is proud, for having answered Napoleon when he

threatened to attack England, "Sir, that is your affair!" and, on the angry Emperor adding, "I will annihilate England," also answering with a polite smile, "Sir, that is *our* affair!"

The humour and the spirit of the answer remind us of the wit and the courage of the old assailants of men who abused their power, as exhibited in these volumes. The fact is, we have always expected the popular advocates of the rights of the people to be bold, courteous, witty, self-possessed and determined. If Beckford did not make the speech to the astonished "King George upon his throne" which we have so often read and admired in our younger days, Horne Tooke at least inscribed on his City monument the speech he ought to have made. The fact is, that we are a light-hearted, steel-nerved nation; that we enjoy the humour and bravery of any one who worthily represents us; and that if one man fails in the performance of an expected duty, there is sure to be another at hand who will triumphantly show how he ought to have set about it.

Probably, not a few of these satires and songs are from hands which show the way where others should have led. Taken as a whole they are valuable beyond their own especial signification, for the insight which they afford into the morals and manners as well as the politics and designs of the people of those days. That many of the pieces have been before in print does not at all injuriously affect their value. They have been so scattered that the collection is, in every respect, a new and an acceptable work. The name of the editor is a guarantee that the necessary labour required for such a work has been conscientiously and profitably expended.

From whatever hands these various poems originally came, we congratulate the public on possessing them in their present collected form. Not only is there great variety in them, but they are not exclusively satirical; sketches of character which stand out like photographic portraits, alternating with fair measure of panegyric on some favourite of the author. Among those thus eulogized is a prince who has been exceedingly well abused by his enemies, and who was so unfortunate as to have no friend at leisure to say a good word for him,—we allude to the Duke of Gloucester, subsequently Richard the Third. Whatever his crimes may have been, these, at least, did not commence when he was young, and the youthful Lord of the Manor of Notting Hill certainly did not stab the other princely boy "on the field near Tewkesbury." Of Richard we have this notice in a long poem on the 'Recovery of the throne by Edward the Fourth':

The Duke of Gloucester, that nobill prynce,
Yonge of age and victorius in batayle,
To the honour of Ectour that he might comens,
Grace him followeth, fortune, and good spede.
I suppose he's the same that clerkes of rede,
Fortune hath hym chosyn, and forthe wyth hym will goo,
Her husbonde to be, the wille of God is soo.

This is the pleasantest picture of Gloucester that ever was limned by flattering artist; and in pictures of one quality or another these volumes abound. A striking one is that of the Earl of Salisbury, at the Heron's Vow, making love to the daughter of the Earl of Derby, a monocular lover then, he having been thus maimed in the Scottish wars. With incidents of court life, where the gentlest of queens was not over refined, we have dashing sketches of individuals in battle. King David of Scotland and the Scots generally receive but small measure of courtesy at the hands of the minstrels, and the inefficiency of Papal protection is illustrated by the victory of the Earl of Derby over the French in spite of the favour shown to them by their countryman, Pope

Clement. Of the private life of the great King Edward we have traits which are not to his credit as the husband of so good a wife as he possessed, and passages of royal gallantry contrast with those illustrative of the pestilence of 1361, which invaded court and castle, and carried off the Duke of Lancaster and many other men of noble birth. Next to death or ruin by pestilence are enumerated the disasters brought on the people by that universally detested complaint—the "tax," and then it would be difficult to say which strikes hardest, the Lollards, who denounce the friars, or the partisans of the latter, who rain down contumely upon the Lollards. Our rhyming controversial forefathers evidently did not confine themselves to parliamentary language, and strong and unsavoury epithets were not rejected. The abuse of dress by the ultra-fashionable is as fertile a subject to the satirists and novelists as hoops were to our grandfathers and crinoline is to their grandsons; and if accidents happened to court ladies riding processionally in chariots, by the upsetting of the vehicle in which they rode, there was more enjoyment than compassion on the part of the spectators. Here is an example when Richard the Second with his queen "progreddur cum tota cohorte versus Chepe":—

Nam sequuntur cum currus duo cum dominabus,
Rexerat hos Phaeton, unus enim cecidit.
Femina feminea sua dum sic femina nudat,
Vix poterat risum plebs retinere suum.

The *vix*, however, indicates some refinement, or self-control, on the part of the *plebs*; and the sight of the court-maidens' ankles was followed by no scandal. But if the ladies were spared, it was otherwise with the friars. On these, the satirical poets had no mercy. The following is only one of many satirical pictures of their way of life:—

They dele with purses, pins, and knives,
With girdles, gloves, for wenches and wives.
But ever backward the husband thrives
There they are haunted till.
For when the gude man is fro hame,
And the frere comes to cure dame,
He spares neither for sin nor shame,
That he ne does his wille.

These friars, it will be observed, were pedlars and packmen as well as missionaries, and in the former capacity, as it would appear, fooling the silly women with all the audacity, if not the wit, of Mr. Slick himself. The pictures drawn of this class are among the very best in the book. They are not ill-naturedly limned, but the satire never fails to represent a rosy, well-knit, good-humoured, evil-designing, merry rogue who is to be avoided by all honest men, and never to be allowed to shrive, "nauther loude nor stille," either wives or daughters.

We have already alluded to the rather sunny portrait of the Duke of Gloucester, and we may add that not only do these volumes reinstate suffering individuals in reputation long forfeited, but in some cases we find old and popular traditions utterly overthrown. It will be remembered that Voltaire was the first who expressed disbelief in the ancient but accepted romance which told of the burgesses of Calais, condemned to death by Edward's wrath, and saved from doom by Edward's queen. The story stands painted among other legends in our new Houses of Parliament. The real and truthful tale is told among Lawrence Minot's songs of King Edward's wars, wherein the poet sings:—

How Edward, as the Romance says,
Held his siege before Calais.

There is not a word introduced respecting the burgesses that were to be surrendered and hanged, and the mediation of the gentle Queen. The knights, sword in hand, but in sorrow, and the burgesses, with "rapes about their swire," in token of abject humility,

approach Edward unasked, and surrender themselves, because

Sir Philip, our syre,
And his son, Sir John of France,
Have left us lying in the mire,
And brought us to this doleful dance.

—The King receives his half-famished foe, and from their magistrates the keys of the town; and

All on this wise was Calais won;
God save them that it so gat won!

More than one subsequent ballad shows how ill the English occupation of the town was brooked by the French, and how earnestly our people were warned not to let it go, like Rouen and Harfleur.

Mr. Wright remarks of this interesting collection, how few are the pieces that are composed in Norman-French. That tongue was being talked down, and talked out, by the Anglo-Saxon. The Latin poems point to learned readers, but the English songs prove a popular taste and teaching; nor do we at all regret the paucity of Norman-French ballads; they are very "hard reading," and the slightly initiated will find it as difficult to follow their meaning, without extraneous aid, as native Jersey congregations do to pursue the meaning or forget the accent of those ambitious English clergymen who are bold enough to try to preach to them in French. Such a congregation, with its painful decorum, its perplexedness, and the amusing self-possession of the well-designing but inefficient preacher, is a subject of which an artist might make much before the next Exhibition.

Finally, we congratulate Mr. Wright on a work of which we hope this may only be a part, and not a whole. In such books we do not so much read history as live among the people whose thoughts, words, deeds, sufferings, and glories, furnish the materials out of which history itself is built up.

The Annals of Kendal: being a Historical and Descriptive Account of Kendal and the Neighbourhood: with Biographical Sketches of many Eminent Personages connected with the Town.
By Cornelius Nicholson. (Kendal, Wilson; London, Whittaker & Co.)

WITH the aborigines, the Romans, or the Saxons, who once had abiding-places more or less agreeable in and about the old valley of the Ken, we will not trouble ourselves or our readers. We are more inclined to notice Mr. Nicholson's List of Subscribers, inasmuch as it contains matter singularly worthy of notice. Out of about three hundred individuals, chiefly of the vicinity, who are registered on the subscription, nearly one hundred are tradesmen, keeping their shops in the good and pleasant old town; among them are chemists and drapers and saddlers; a dozen, perhaps, of inn and tavern keepers; a good sprinkling of painters, ironmongers, and hatters, grocers, printers and booksellers, auctioneers and tobacconists, maltsters, dyers, bakers, and brush-manufacturers, fishhook-makers, and cabinet-makers and joiners, coach-builders, and comb-manufacturers, whitesmiths, plasterers, tailors in abundance, shoemakers, and a couple of marine-store dealers! The character of the old inhabitants of the place, their history, and the whole local story, are, evidently, matters of interest to these worthy persons, of whose taste we are inclined to entertain a favourable opinion.

In arranging the names and qualifications, Mr. Nicholson seems to have been somewhat puzzled. He claps "Esq." to a stockbroker and a coal-agent, but designates a dentist as "Mr.," placing the latter in the social scale not higher than the dealer in marine-stores, or the

Boniface of any one of the many taverns whose owners have subscribed to 'The Annals of Kendal.'

Opening the pages in which these 'Annals' are recorded, we are reminded of the old inquiry as to where all the bad people were buried, seeing that only the good are noticed on tombstones. In Kendal sleep the superlatively good. Never have we read such eulogy as that contained in the copies of epitaphs from the old church;—fancy a provincial medical practitioner being described as "a happiness to his country"! As for the ladies, they lacked nothing but wings to make them angels.

It must be acknowledged, however, that the town and the valley have produced some very notable personages. We do not think so much of Queen Katherine Parr, or her brother William, Marquis of Northampton, as Mr. Nicholson appears to do. The town and valley beat the castle, any day, in celebrities. Among these honest townsmen are to be reckoned Barnaby Potter, King Charles's Bishop of Carlisle, "notwithstanding there were other suitors for it, and he never sought it." Brathwaite, the author of 'Barnaby's Journal,' Ephraim Chambers, the farmer's son, and the father of Encyclopædists; Wilson, the Kendal shoemaker, who was the first who systematically arranged in the English language the indigenous plants of Great Britain. Wilson had a brilliant compeer in Hudson, the innkeeper's son, and author of the *Flora Anglica*. Then Shaw, whose sire was a "shearman-dyer," became a D.D., and a traveller and author of repute; Dr. Askew, born in the market-place, enjoyed an European reputation as the greatest collector of Greek manuscripts in England. Kendal is proud, too, of John Gough, the blind philosopher, and, like Dr. Shaw, the son of a shearman-dyer. Better known, perhaps, to some of us, is the name of "Jocky Bell," that famous Chancery barrister, who wrote three hands, all illegible to himself or others, and who started from the grocery-counter of his father in Kendal with a blessing, and retired from the practice of the law with 200,000*l.*,—a very handsome sum, as Lord Erskine remarked of another wealthy lawyer, to begin the next world with. These are but a few of the "illustrations" of Kendal, and we will only add to them the name of the Rev. John Hudson, who went from between the handles of his father's plough to become a Senior Wrangler, made a Greek scholar of Bishop Bloomfield, and, as Vicar of Kendal, fell under the ecclesiastical jurisdiction of his old pupil, when the latter was Bishop of Chester.

By the side of these names, those of personages of higher station appear but small; and yet there is much that is interesting connected with the latter. The story, for instance, of the Taillebois is complete. The first of them came over with the Conqueror, and marrying the sister and heiress of the great Saxon Earls Edwin and Morcar, took his Lucy's inheritance in Lancashire and Westmoreland, and founded the great line whence sprang the Barons of Kendal and of Lancaster. The male line of this branch of the House of Anjou did not long exist, but the last descendant of the Taillebois died only a few months ago. Mr. Nicholson, quoting 'Ups and Downs in the House of Peers,' states that this relic of a great race was a girl of eighteen, named Emily Tailbois, who died a pauper in Shrewsbury workhouse.

But let us pass from persons to things. Who has not heard, through the poets at least, of Kendal green? Mr. Nicholson shall tell us how that famous colour was produced:—

"The Kendal cottons which were for home consumption, were mostly white, made in pieces 20 yards long. Some of them were spotted by the

hand with red, blue or green, and were hence called 'ermine,' or 'spotted cottons.' Of this kind, probably, was the dress of the Kendal bowmen, at the battle of Flodden Field, mentioned at p. 26. The spots might easily, by poetic fancy, be magnified into 'crosses red.' Or, the 'spots' might be designed as the (rude) armorial bearings of the several Barons, for the sake of distinguishing their respective retainers. There were other cloths of a somewhat finer description, dyed mostly blue with a mixture of green, or altogether green. Of this colour was the clothing of Falstaff's 'misbegotten knaves,' and 'Ragged Robins,' in Strutt's romance of 'Queenhoo-hall.' And as the Kendal green was perhaps the first colour of celebrity in the manufactures of this kingdom, it may not be amiss to give a few particulars of the process by which it was obtained. A plant which is known to have abounded in the neighbourhood of Kendal many years ago, though it be now nearly uprooted, called by Linneus *Genista tinctoria*, and commonly called 'Dyers' Broom,' was brought in large quantities to Kendal, from the neighbouring commons and marshes, and sold to the dyers. This plant, after being dried, was boiled for the colouring matter it contained, which was a beautiful yellow. The cloth was first boiled in alum water, for the mordant, and then immersed in the yellow dye. It was then dried, and submerged in a blue liquor extracted from *woad*, which, combining with the yellow, produced the solid green so much celebrated. About the year 1770, the plant above alluded to fell into disuse, being superseded by the Saxon green, —considered to be a brighter colour, and obtained with less labour. The art of dyeing was introduced into this country about A.D. 1550. From the establishment of manufactures to this period, all goods made in England were sent into Holland to be dyed, and brought back again for the consumption of this kingdom. One William Cholmley, having mastered the secret of the Flemish dyers, offered his discovery, through the English government (temp. Edw. VI.) as a free gift to his countrymen; and urging the Council to take advantage of his proposal, he added a remarkable prophecy, that if England would develop its manufactures, and rely upon itself for the completion of them, the trade of Antwerp would droop, and London become the mart of Europe! The dye-woods manufactured in this town have been, and are, at the present day, highly approved in the great manufacturing districts."

We close Mr. Nicholson's volume with the simple record, that it is worthy of taking a place among the best of our provincial histories —histories that are often so little known, and that are so well worth knowing!

THE AMERICAN QUESTION.

A Journey in the Back Country. By F. L. Olmsted. (Low & Co.)

IN the Valley of the Lower, and in a portion of Northern Mississippi, in the interior Cotton Districts, and in various sweeps of country connected with those localities, Mr. Olmsted has recently travelled, and has produced from his notes a readable book,—excepting some details of social Negro life, which, however they may interest Malthusians or their opponents, are certainly not calculated for every reader in a modest household. Our enlightened traveller goes largely into the history and conditions, nature, uses and abuses, of slavery in its personal and property aspect, its character and its manners, —with the influence and counter-influence which the latter produces among the white population by whom the "niggers" are possessed.

Taken altogether, this is the ablest and the most useful and interesting of those books of travel which the author has yet published. The scenes of Negro life are quite as humorous as those the author has already depicted, without the exaggerated and farcical tone which marred, now and then, some of his

most graphically described incidents. He has gone into an examination of the great slave question like a passionless and a discriminating judge. The evidence he extorts from slaves, overseers and owners, he sifts with a rare impartiality; and adding thereto his own experiences, he arrives at a conclusion which all parties should respect, though neither party will accept it as a solution. The "peculiar institution" is not to be swept away in a day, but that an end must come is manifest to all men; that end will be all the safer for society, and perhaps the more remote, if the slave be considered a little less as property, and a little more as a person. He will be the more contented to remain where he is if he be not kept as he is. Give him an interest in and a reward for his labour, let justice administer those penalties which are now awarded by caprice, let him have human sympathy and encouragement as a slave, while he is being imperceptibly but surely educated for liberty, and the bond now existing may be maintained, with certain differences, till the hour arrives when it may be broken with mutual advantage. Something like this we take to be the view of the case adopted by Mr. Olmsted. The bigots on either side will, probably, only the one curse, and the other sneer at him. Meanwhile, the fetters of the slave may be made to drop from him by other hands. His value has been increased and abolition rendered less probable as well as possible by the continually rising demand for, and the increasing value of, the cotton crop. If we ever realize, what ought long since to have been accomplished, our own dreams and small beginnings towards the raising of cotton-crops on land belonging to our own Empire, the knell of American slavery will have struck. If, ere that, the swelling populations of the South have not destroyed the white, the latter will hold very different sentiments of the "institution" from those which now possess and sometimes agitate his breast.

Though the staple of this volume is Cotton, and its chief subject Slavery, both of these are so copiously illustrated by incidents rather than arguments, that the volume is an encyclopedia of scenes and anecdotes of life and livers in the Back Country; and, as we have indicated the serious questions of which it fully and gravely treats, we will turn to its lighter pages for samples of its humour and raciness.

Here is a bit of fashion from Natchez:—

"Next came—and it was a swelteringly hot afternoon—an open carriage with two ladies taking an airing. Mr. S. had said the swell-heads 'had got to think that their old maumy niggers were not good enough for their young ones'; and here on the front seat of the carriage, was a white and veritable French *bonne*, holding a richly-belaced baby. The ladies sat back, good-looking women enough, and prettily dressed, but marble-like in propriety, looking stealthily from the corners of their eyes without turning their heads. But the dignity of the turn-out chiefly reposed in the coachman, an obese old black man, who should have been a manufacturer of iced root-beer in a cool cellar, but who had by some means been set high up in the sun's face on the bed-like cushion of the box, to display a great livery top-coat, with the wonted capes and velvet, buttoned brightly and tightly to the chin, of course, and crowned by the proper narrow-brimmed hat, with broad band and buckle; his elbows squared, the reins and whip in his hands, the sweat in globules all over his ruefully-decorous face, and his eyes fast closed in sleep."

From the drive near Natchez let us go (or rather, much rather, let us not go) and look on with Mr. Olmsted at Memphis. The bill of fare includes "Jole and Greens," "Giblets

volivon," "Cold (and Hot) Slaughter," and other dainties in as mysterious English and French:—

"Here, at the 'Commercial Hotel,' I am favoured with an unusually good-natured room-mate. He is smoking on the bed—our bed—now, and wants to know what my business is here, and whether I carry a pistol about with me; also whether I believe that it isn't lucky to play cards on Sundays; which I do most strenuously, especially as this is a rainy Sunday, and his second cigar is nearly smoked out. This is a first-class hotel, and has, of course, printed bills of fare, which, in a dearth of other literature, are not to be dropped at the first glance. (A copy of to-day's, is presented on the opposite page.) Being in a distant quarter of the establishment when a crash of the gong announced dinner, I did not get to the table as early as some others. The meal was served in a large, dreary room, exactly like a hospital ward; and it is a striking illustration of the celerity with which everything is accomplished in our young country, that beginning with soup, and going on by the fish to the roasts, the first five dishes I inquired for, when at last I succeeded in arresting one of the negro boys, were 'all gone,' and as the waiter had to go to the head of the dining-room, or to the kitchen, to ascertain this fact upon each demand, the majority of the company had left the table before I was served at all. At length I said I would take anything that was still to be had, and thereupon was provided immediately with some grimy bacon and greasy cabbage. This I commenced eating, but I no sooner paused for a moment, than it was suddenly and surreptitiously removed, and its place supplied, without the expression of any desire on my part, with some other Memphitic *chef-d'œuvre*."

Such is one aspect of the "freedom" fairly won by our cousins; and this comment reminds us of a passage which is very apt to our times, seeing that it treats of a people invaded, and of the peculiar quality of those by whom the invasion was successfully repelled:—

"How was it at our own Revolution? The characteristics of the North and South then differed only from the present in degree, as clearly appears on reading Jefferson's Notes on the Virginians. There was probably more plodding industry and less chivalrous adventure and martial ambition in Connecticut than in any other colony. Yet when, at length, success was earned, Washington looking back with pain upon what it had cost, said: 'If I had done their duty as well as the little State of Connecticut, the war would have ended long ago.' The people of South Carolina were probably the most warlike of all, as, for the present, we use that term. But Governor Rutledge could not even get the militia to muster in defense of their own houses. Marion did bravely with a small body of skirmishers, but confessed and bewailed the fact, that the people in general had not the spirit to defend themselves, and that the State was lost through their own stupidity and factiousness, which he attributed directly to the general enslavement of the working classes, and the ignorance, idleness, and selfishness of the free. It was much the same throughout the slaveholding and chivalric districts; better in the free hill country. General Greene wrote, when in command of the Southern army, and stationed in the Carolinas, 'The back-country people are brave and daring, but the people on the sea-coast are sickly, and but indifferent militia.' The independence of this country is due chiefly to the good fighting qualities of what had been its most quiet, peaceable, hard-working, and plodding citizens before the war. Since the Revolution, the real military strength of the North has never been for a moment engaged. It is its yeomanry—men who have been accustomed to labour with their own hands, who have no impatient personal ambition, and who will not leave their farms, and their shops, and their families until the demand is urgent—that a hard pressed nation always finally depends upon. And there is nowhere else in the world so numerous, or so generally intelligent, or so every way capable, a yeomanry as that of our Northern States. It was by seamen out of this class that our navy was chiefly manned during the second English war, their ordinary occupations having been interrupted

by it (as those of the yeomanry proper were not), and it was precisely in the qualities of cool, deliberate, and determined application of means to ends, and of steadiness under fire, that they were found to excel even the British sailor, whose ardour and neglect to make the most of his advantages repeatedly occasioned his defeat when engaged with them."

The above passage is well written and full of valuable truth. But, while speaking of a well-written passage, we must protest against Mr. Olmsted's vitiated orthography. Why will he spell a "plough," *plow*? Why does he write of a *theater*, and shake hands with a *traveler*? We do not, without question, accept even his *jewelry*,—so much of which was worn by the young ladies who had been brought up at an Institute, and learned everything in creation, from the first rudiments to wax-work and 'Watts on the Mind.' These young ladies might be expected to spell after this fashion, which might also be looked for in the lively young gentleman spoken of thus in the *Lynchburg Virginian*:—

"We are informed that a negro man, the property of Mr. William Mays of this city, was killed last Thursday by a youth, the son of Mr. William Payne, of Campbell county. The following are the circumstances, as we have received them. Two sons of Mr. Payne were shooting pigeons on the plantation of Mr. Mays, about twenty miles from this place, and went to the tobacco-house, where the overseer and hands were housing tobacco; one of the boys had a string of pigeons and the other had none. On reaching the house, the negro who was killed asked the boy who had no pigeons, 'where his were.' He replied that he had killed none, but could kill him (the negro), and raised his gun and fired. The load took effect in the head, and caused death in a few hours. The negro was a valuable one. Mr. Mays had refused \$1,200 for him."

Of youthful life, generally, in this part of the States Mr. Olmsted sets down truths that are startling. It is fortunate that so many of these precocious lads kill themselves early by hideous excesses from which they will not, otherwise, be turned away. But for this, the prospect of the future would be something too horrible to calculate. Let us get away from the thought of it to fresh air and divine nature.

In the rare power of describing scenery Mr. Olmsted exhibits both grace and facility. In his words we occasionally behold scenes that remind us of the magic of Mr. Cropsey's canvases. Sometimes his own magic turns upon us with a peculiar charm; and when we are longing to be with him in the way under the foliage-covered road, he "brings us up" with the remark, that these scenes reproduce to him "the sentiment of the most charming Herefordshire lanes." And, again, when we seem to be breathing new life with him in the fresh air and fragrant woods of the Back Country, he turns round upon us with a smile, and asks if it is not, for all the world, like dear old England? But all is not merry here in the green, green wood:—

"The general admiration of Jude brought up the topic of negro dogs again, and the clergyman told a story of a man who hunted niggers near where he lived. He was out once with another man, when, after a long search, they found the dogs barking up a big cottonwood tree. They examined the tree closely without finding any negro, and concluded that the dogs must have been foiled, and they were about to go away, when Mr. —, from some distance off, thought he saw a negro's leg very high up in the tree, where the leaves and moss were thick enough to hide a man lying on the top of a limb with his feet against the trunk. He called out, as if he really saw a man, telling him to come down, but nothing stirred. He sent for an ax, and called out again, saying he would cut the tree to the ground if he did not come down. There was no reply. He then cut half

through the tree on one side, and was beginning on the other, when the negro hallooed out that if he would stop he would come down. He stopped cutting, and the negro descended to the lowest limb, which was still far from the ground, and asked the hunter to take away his dogs, and promise they should not tear him. But the hunter swore he'd make no conditions with him after having been made to cut the tree almost down. The negro said no more, but retained his position until the tree was nearly cut in two. When it began to totter, he slid down the trunk, the dogs springing upon him as soon as he was within their reach. He fought them hard, and got hold of one by the ear; that made them fiercer, and they tore him till the hunter was afraid they'd kill him, and stopped them. I asked if dogs were often allowed to tear the negroes when they caught them? 'Wh in the hunters come up they always call them off, unless the nigger fights. If the nigger fights 'em that makes 'em mad, and they let 'em tear him good,' said the clergyman."

After all, the whole battle of freedom has not been fought out in this interesting country. That it may ultimately be solved to the advantage of master and slave is the hope of every man in this other country, to whose readers, through his English publisher, Mr. Olmsted has presented himself. His coming was welcomed; and may we soon meet again with so honoured an acquaintance!

Life and Correspondence of John A. Quitman, Major-General U.S.A., and Governor of the State of Mississippi. By J. F. H. Claiborne. 2 vols. (New York, Harper & Brothers.)

THE claim this work has on public attention exists neither in the historical importance of General Quitman nor in the charms with which biography invests his career. Indeed, the General, although he was a gallant soldier and a successful politician, was not a sufficiently distinguished personage for the world outside the political cliques of the United States to care about him now that he is in his grave. American readers will turn to Mr. Claiborne's volumes and peruse them with interest, although more than two-thirds of their substance consists of prolix and very commonplace letters, which the biographer never attempts to condense, and only occasionally condescends to illustrate. In respect of new information, a more barren memoir was never produced—two pages instead of two volumes being space enough to contain the scanty data relating to the chequered course of the man who in the arts of peace and war displayed no ordinary faculties, and who, ere he expired, on the 17th of July 1858, at the age of fifty-nine years, could say that, like Jackson and many other famous citizens of the United States, he had been successively an usher in a school, a barrister, a judge, a soldier and a statesman, and in each of these diverse capacities had zealously and completely done his duty.

It is not with the hero of the Mexican war, but with the sentiments of his biographer on slavery and federal unity that we care now to concern ourselves. Mr. Claiborne is a Southern man, surveying domestic politics from a Southern point of view, and discussing them with Southern ardour; and throughout his two volumes he avails himself of every opportunity to quit General Quitman and advocate the cause of his party in the great contest which, slowly developing during long years in magnitude and intensity, threatens to work even greater evils than the partition of a glorious republic. Of course we by no means approve of all that Mr. Claiborne advances in behalf of his friends; for he is a partizan, speaking with the extravagance of an angry disputant about matters which should be discussed with

coolness and moderation, or not discussed at all. From time to time, in taking notice of the literature it has produced, we have drawn attention to the conflict of the Abolitionist and Pro-Slavery parties in the United States; and certainly in criticizing the actions of the two contending sides, we have not failed in generosity to that which labours under the disadvantages of unpopularity. Upon principle uniformly condemning slavery, as an institution which at the utmost can be adapted only to multitudes in a transitional state between barbarism and civilization, we have exclaimed against the folly and injustice of those embittered zealots who use "slaveholder" and "oppressor" as synonymous terms, and are never so happy as when they are heaping obloquy on the Southern States of America. Learning from history that slavery cannot, without grave disaster, be abruptly swept from the organization of a large community, we have opposed agitators who, instead of ameliorating a class, would uproot a constitution. Remembering, too, that the abolition of compulsory labour in our own plantations is so recent an affair that many of the most humane and intelligent English gentlemen of the last generation not only owned slaves, but maintained that servitude was the most suitable condition for the Negro workman, we have declined to brand as ruffians men who, taken at the worst, are only a few years behind ourselves in effecting a radical reform of domestic economy. American statesmen have never had cause to remind us that the embarrassing question of slavery has come to them from a traffic carried on by British monopolists, and encouraged by so benevolent a person as William the Fourth. But Mr. Claiborne is not content with this measure of liberality. Instead of favouring schemes of gradual emancipation, he maintains that slavery is an institution of unmingled beneficence,—that it is good for America, but better for Africa,—profitable to the planter's purse, but to the negro a spiritual as well as a temporal gain. For the cotton growers to rest content with their present stock of human chattels would be for them to turn a deaf ear to barbaric tribes crying aloud for Christianity and civilization. Wilberforce was wrong in painting the slave as freighted with the victims of unholy greed. He should rather have regarded the objects of his compassion as favoured members of a luckless race, effecting—possibly, by a somewhat rough and unalluring process—an ascent in the scale of existence. Humanity demands that the slave trade should be re-opened. Of course, measures must be taken to prevent the over-crowding of vessels, and to secure the bodily well-being of the coloured emigrants; but no longer may Christian America neglect her duty to the wretched populations of Africa. Before ridiculing this extravagance, our readers would do well to reflect from whom its turn and tone are borrowed. Slave-owners have been so long preached at and howled upon by Bible-quoting demagogues that they have caught the knack of preaching from their sanctimonious assailants. Nor can we blame them for it. For years they tried a far different style of address, admitting that slavery was an anomaly in a free country, professing their anxiety to devise some unexceptionable means for its removal, but asking for time to solve the problem how voluntary could be substituted for involuntary labour. But when they found that this moderation, instead of conciliating, only roused their self-elected censors to stronger exhibitions of hostility; when, instead of being credited with honesty of intention, and the ordinary virtues of civilized life, they saw themselves pointed at as monsters of iniquity who habitually lashed

their miserable bondsmen to death; when, moreover, they discovered that vast numbers of their opponents, far from being enlightened philanthropists, were invariably nothing better, were often something far worse, than mere self-seeking politicians bent on making their game out of a party cry,—it was only natural for them to assume another attitude. Becoming disputants, they answered texts with texts, and sermons with sermons. Even those who regarded them as the devil's servants were compelled to admit that they quoted Scripture like very learned clerks. And now that the polemic war has lasted until there is a movement to lay aside words and have recourse to blows, we find the slave-owners have persuaded themselves that they are the true exponents of Christian benevolence, and that the Abolitionists, under a detestable affectation of brotherly love, are the worst enemies of the human species. Not a few of our countrymen will be incredulous that the Pro-Slavery advocates are sincere in these professions. A dispassionate observation, however, of all the phenomena of this fearful storm, so long nursed, so often deferred, leads us to the conclusion, that the violence of the one side, and the intemperance of the other, are alike genuine and unassumed. With the caricatures of the North the English readers of 'Uncle Tom's Cabin' are familiar. Here is Mr. Claiborne's picture of Southern slavery:—

"The condition of the Southern slave is not stationary, but progressive. As the master's circumstances improve, the position of his slaves is ameliorated. Every comfort he gathers about him is enjoyed, more or less, by his dependents. They rough it, as he does, in the outset of life; but when he builds a comfortable house for himself the improvement of their quarters is certain to follow. As his stock increases, they get their share of milk and fresh meats, in addition to salted provisions. As his plantation expands, they are allowed more ground for the culture of esculents, from which, and their poultry, they derive no inconsiderable revenue; often more, for each family, than a hard-working New England yeoman realizes, by the labour of his household, at the end of the year. They enjoy, both at home and in the neighbouring meeting-houses, the preaching of the Gospel. Convenient chapels are built on many plantations expressly for them. They do no compulsory labour on the Sabbath, and usually have most of the holidays kept by their owners, and participate in the festivities. They are clothed well, and often dress in the height of the *ton*. From the youngest members of the family they get the latest fashions. They dance polkas and mazurkas. They warble airs from the last opera. Their weddings are celebrated with the usual ceremonies, and their funerals with religious solemnity, the owner of his family often casting the first shovel of earth, and shedding tears over the tomb of the faithful servant. They occupy confidential positions, keep the stores of the plantation, collect dues, and are often intrusted with large sums to transmit from place to place, and some of them are employed as overseers. By the will of the late Philip Hoggatt, of Adams County, Mississippi, one of his slaves, intrusted with the management of several plantations, receives \$500 per annum. Many of them command a credit at the neighbouring stores beyond the means of many Northern farmers, so well established is their reputation as punctual paymasters. They are attached to the whites; they imitate their manners and mode of dress; they are proud of an admixture of blood; their whole aim is to progress, and their strongest term of contempt, when a comrade incurs their displeasure, is to stigmatize him as a 'd—d black nigger.' Compared with the original or recent importation of Africans, their progress has been wonderful. When first brought to this country they lived in hovels, got their peck of corn without meat, went almost naked, worked early and late, and were often severely whipped and otherwise punished. The whip is now rarely applied

—on many plantations never. Besides meat and meal in abundance, and milk and vegetables, they get a reasonable allowance of sugar, coffee, and tobacco, flour and molasses; they have gardens, orchards, poultry-yards, and piggeries; corn, melon, and potato patches; they are never without money; their cabins are comfortable and neat, with an unlimited command of fuel; shoes, hats, blankets, mattresses, and winter and summer clothing are regularly apportioned to them; in sickness, the best nursing, the best medical advice, and nicely prepared diet; and the Sunday dinners of every thrifty family of slaves would be considered a sort of thanksgiving dinner in New England. In old age they are carefully sheltered and supported."

Of the slave trade and the history of public opinion with regard to Negro slavery in America, Mr. Claiborne says:—

"The interdiction of the slave-trade was made with the apparent consent of the Southern States. It was made when the British auspices under which it had been fostered were hateful to the people of the South, and when the grand but delusive optimism of the French Revolution still influenced the public mind. Virginia, particularly, was deeply infected with the universal emancipation doctrines of the day, and received with rapture the eloquent platitudes of Lord Mansfield on the subject of slavery. The institution of slavery has since been more thoroughly studied. The normal condition of the negro, his slavery in Africa, his improvement, morally, and physically, when brought in contact with civilization, the effect of his labour on the commerce of the world, on society and public morals, and the sanction for his subjection found in the Holy Scriptures, have changed the opinions of mankind. In Virginia, where fifty years ago her statesmen, her Legislature, and her judiciary all favoured the policy of gradual emancipation, there is now a constitutional ordinance prohibiting the Legislature itself from setting free a slave, expelling from the commonwealth all set free by their owners, giving authority to the Legislature to forbid the power of emancipation in any case, giving like authority to reduce the free negro population into perpetual slavery, either by compulsion or by their own election, providing a mode for such reduction into slavery, and a further act inflicting fine and imprisonment in the penitentiary upon any one maintaining the doctrine that Virginia masters have not the right of property in their slaves."

As is only natural in one who, as the defender of existing institutions, is fighting the battle of conservatism, Mr. Claiborne professes a horror for the revolutionary tendencies, the black republicanism, of the Abolitionists. This horror may be unreasonable; but candour must allow that it finds more countenance in facts than the alarms of conservatism usually enjoy. From first to last, the Abolitionists have fought recklessly, unscrupulously and mischievously. They have exasperated where they ought to have conceded; and to gain the ascendancy they have dared to connive at, and even to encourage, projects for provoking servile rebellion in the South.

The Abolition of Slavery—[*L'Abolition de l'Esclavage*, par Augustin Cochin]. 2 vols. (Paris, Lecoffre.)

"Christianity," says M. Cochin, "has put an end to slavery;" and with the dogma on his lips he proceeds to narrate the history of the most appalling servitude the world has ever witnessed, which had its origin in modern Christendom, has been fostered by Christian Powers, and has never since its commencement shown more or surer signs of permanency than it manifests at the present time. Bringing considerable learning and care to his task, (the historian endeavours to arrive at the first creators of negro slavery, the odium of establishing which has been attributed, by writers of various schools, to priests and kings. Following Labat,

Montesquieu accredited Louis the Thirteenth with the infamy of constituting the black population of his colonies slaves, the monarch having for his justification the assurance of his ministers that the blacks would be much more readily converted to Christianity when dealt with as slaves than when encountered as free-men. One thing, however, is certain;—the first legislative enactment relating to traffic in slaves that emanated from the French metropolis is dated November 11, 1673—thirty years subsequent to the death of Louis the Thirteenth. Equally certain is it that the first missionaries to the West Indies, far from recommending slavery, either as a permanent arrangement or a temporary expedient, were pathetic in their expressions of commiseration for the wretches whom Du Tertre designates "*pauvres misérables*." In all probability negro slavery was never planted in Transatlantic soil by the hand of any recognized authority, but was in the outset nothing more than a contract between African labourers and European merchants, in which ignorance and helplessness left the former at the mercy of the latter, who knew well how to make the most of their position. The first black slaves on American ground to which history can point were landed in Virginia in 1620—the same year that witnessed the arrival of the Mayflower with its freight of pious zealots. Thus in the same year the American colonies became the cradle of independence and slavery. Little did the speculators in this early and modest venture—the slaves numbered only nineteen—imagine the rapid growth which awaited the system so inaugurated. Little could any English recipient of those nineteen blacks discern in his new acquisition the first fruits of a traffic, which, christened by its chief patrons, should be known in both hemispheres as "the trade," and should become a lucrative monopoly secured by treaty to the mother-country.

If England in the last century extracted greater gains from the iniquity than any other European power, she made some amends for her greed and cruelty in the present century by putting an end successively to "the trade" and "the institution" at an enormous sacrifice of wealth, and no small risk of social discomfiture. She was not, however, the first to attempt the reform. M. Cochin maintains that abolition of slavery was a French idea, and had its birth amongst the countless generous sentiments which flashed forth at the outburst of the French Revolution. We should be sorry to lower France in the estimation of any of her children, or to rob M. Cochin of any harmless source of patriotic congratulation; but we cannot concede that his country gave "*le premier signal*" for African liberation, or that England in freeing her slaves acted on the instructions of the National Convention, whose benevolent intentions were not carried into effect till more than half-a-century more had elapsed. Surely M. Cochin does not need to be reminded from what source the advocates of freedom in France at the close of the last century derived their chief inspiration and leading "ideas." To none, save its miserable victims themselves, had negro slavery been more obnoxious than the colonists, on whom it had been imposed by European governments. They had in vain made repeated attempts to terminate the traffic, but the same power that profited by the hateful commerce insisted on its continuance. The sentiments that actuated them in these endeavours burst out in greater force upon the Declaration of Independence, and throughout the struggle for freedom gained every day fresh recipients. M. Cochin's pages tell more than once how African slavery only just escaped indignant repudiation by the framers

of that memorable compromise, the constitution of the United States. So earnest were the statesmen and moralists of America in their exclamations of hatred for slavery, that they roused the conscience of Europe. They, and not the patriots on the banks of the Seine, were the orators who fired the breasts of Clarkson and Wilberforce. The voice of the French Convention was only an echo of the cry that had traversed the waves of the Atlantic.

In his survey of the results of emancipation to the colonies of England and France, M. Cochin displays an amount of candour that is rare in an enthusiastic abolitionist. Unlike the foolish advocates who injure none so much as those whom they would befriend, M. Cochin, far from denying the existence of depression and disorganization in our colonial interests, admits that they stare us in the face, and only endeavours to show that they have been exaggerated, and that they are no sufficient cause for repenting of having taken a course out of the highest considerations of principle. Some of the difficulty, he maintains, must be attributed to causes in action prior to the abolition of slavery, and some, he hopefully trusts, may be cleared away by the adoption of new regulations in the employment of labour, and the gradual improvement of the black population. He admits that the rates of labour are ruinously high, and that many of the liberated negroes have given themselves over to idleness and debauchery. But for these causes of dissatisfaction he finds ample compensation in the better religious instruction and the higher social rights which the negroes may profit by and enjoy—if they are so inclined. In two words, he sums up, wealth has suffered a little, civilization has gained much: "*En deux mots, la richesse a peu souffert, la civilisation a beaucoup gagné; voilà le bilan de l'expérience anglaise*." This summary would be very comforting, if it were true; but, unfortunately, wealth has lost more and civilization has gained less than M. Cochin supposes.

In the same way M. Cochin endeavours to be impartial in his criticisms on the history and politics of the United States; but his strong bias in favour of abolition overcomes his intention to do justice between the North and the South. He allows that the Northern States liberated their slaves at a time and under circumstances that scarcely permit us to call their sacrifice of interest a display of virtue. He admits, too, in one part of his second volume, that difference of climate renders the question of negro liberation in the South an altogether different matter from negro liberation in the North. He even laments that the abolitionists of the North should in many cases have identified themselves with the apostles of revolution and anarchy. But when he comes to consider the South, he unsays all he has previously conceded; and quotes as authorities, for facts as well as arguments, so unscrupulous and untruthful a party writer as Hinton Helper, and such works as 'Uncle Tom's Cabin' and C. G. Parson's 'Inside View of Slavery.' John Brown is spoken of as though he had been a martyr, instead of a mischievous fanatic. In his sketch of the different crises in the abolition contest, M. Cochin displays knowledge and care, but he fails to perceive that underneath the question of slavery lies that of protection. To difference of institutions he sets down all those difficulties which are the manifest results of difference in commercial interests. The chief objection, however, that can be urged against this portion of his lengthy treatise is, that, after making great promises to enter on the question, he avoids the point on which the whole subject of Southern slavery rests. The historic and religious

arguments in favour of slavery he refutes with needless elaboration; but two pages of flippancy are deemed sufficient for the consideration of climate. The apologists of the Southern system of labour argue that the production of cotton demands a temperature which is destructive of the health of white men, but is not pernicious to the negro, who, though a serviceable labourer under a firm discipline, requires more incentives to exertion than men of European extraction. It follows, therefore, that if we set aside the present system of labour in the Southern States, we must for a time make up our minds either to discontinue or at least greatly diminish our consumption of cotton, or else to expend a priceless fund of white life on its production. Such is one argument of the apologists of negro slavery. It may be bad. But M. Cochin does not prove it so, when he maintains that if the climate of a locality is destructive to white men and not prejudicial to black men, it is manifestly a spot designed by Providence for the blacks, and is a region which white men ought to avoid as much as possible.

Memoir of the Life and Writings of William Tennant, LL.D., Professor of Oriental Languages in the University of St. Andrews. By Matthew Foster Conolly, Town Clerk of Anstruther. (Edinburgh, Grant; London, J. Blackwood.)

WE have only taken a *titling* of the long title-page of this little book; the worthy Town Clerk sets it forth like a legal document, specifying all it ought to contain. Prof. Tennant was the schoolfellow of Dr. Chalmers, and they were life friends, which was at once a great pleasure and a great honour. William Tennant was the son of a small farmer at Anstruther-Easter, in Fifeshire, where he was born, May 15, 1784. A weakness in his feet rendered him lame in early childhood, and he had ever afterwards to go on crutches. This affliction settled the direction of his life, and, fortunately, his love of study and power of acquiring information, combined with mental endowments of a high quality, enabled him to make an honourable career for himself in his vocation of schoolmaster. He was sent for two years to St. Andrew's College, but his father's family was large and his means limited,—William Tennant was therefore reluctantly recalled home before he had completed his academical course. He did not cease from his studies, but pursued them with ardour under difficulties, and displayed qualities of character which, even more than his abilities, were the means of his after-success. He became a clerk to one of his brothers, a small corn-factor—a situation not in the least congenial to his tastes and inclinations. His brother's affairs became involved, and William was very unjustly implicated in the unpleasant results; but he had an indestructible cheerfulness of heart, which carried him through everything, and at the most dreary point of his fortunes, when there seemed no possible outlook but a continued struggle for existence in an obscure, dull country town, without means of access to books or society, he wrote a poem, which brought his name into notice. It was published, in a modest form, in his native town. Two years after its first appearance it became known to Lord Jeffrey, who reviewed it, with commendation, in a number of the *Edinburgh Review*. The poem was called 'Anster Fair,' and had in its day a great success. It was a whimsical, burlesque story of chivalry, somewhat in the manner of Pulci; the heroine was no other than Maggie Lauder, of questionable fame, but transformed, for the occasion, into a mythic heroine, endowed with all necessary virtues; the period is sup-

posed to be the reign of King James the Fifth, the "gaberlunzie man," whose love of fun and rollicking adventures are the subject of numberless traditions. This poem got the author many pleasant acquaintances and an opening into a sphere of society where he was at once more happily and more appropriately placed, and able to pursue his studies. In 1812, he was appointed to be schoolmaster of Dunod, about five miles from the College of St. Andrew's; here he had access to the College library. The study of Oriental languages was the special branch to which he applied himself, and he acquired a knowledge of Arabic, Syriac and Persian—a knowledge which in those days was really remarkable; but the cheerfulness, energy and perseverance which he displayed were more valuable than any of his acquirements, and were the real source of the respect in which he was held. In a few years, Tennant was offered the schoolmastership of Lasswade, near Edinburgh. He was afterwards made teacher of classical and oriental languages in Dollar Academy; and, finally, his worldly success reached its culminating point in 1834, when he was elected to the Professorship of Oriental Languages at St. Mary's College, St. Andrew's. He became a Member of the Royal Society, and had the degree of Doctor of Laws conferred on him by the Marischal College, Aberdeen. He died highly respected and regretted in October, 1848. Such is the outline of the biography of his townsman, which Mr. Conolly, the Town Clerk of Anstruther, has compiled. Ordinary readers would find a difficulty in picking out these simple facts from the bushel of extraneous matters in which they are lost. The thoroughly provincial tone and style of the work do great injustice to the excellent man who has the misfortune to be selected as the hero of the worst attempt at memoir-writing we have ever met with. It is thoroughly ill done: loaded with heavy criticisms and long quotations from forgotten poems, which offer no plea against the justice of their doom. The good Professor loved to write sacred dramas of the dreariest and flattest kind; we only judge them by the specimens put forth by his admiring friend, Mr. Conolly. Hannah More's Sacred Dramas, which used to be the delight of ladies' schools, are spirited and dangerously exciting plays in comparison. Mr. Conolly entirely lacks the skill to make his Memoir either instructive or interesting. We give a specimen of his style:—

"Dr. Tennant took boarders into his house (whilst at Dollar), and was most kind and attentive to his pupils, in which he was ably assisted by his intelligent sister, Miss Tennant; and during vacation he was treated by the parents of his pupils whom he visited with that respect and kindness which every careful father will pay to him whose lessons he expects his children to receive with attention and advantage. During his residence at Lasswade Dr. Tennant frequently visited his kind patron, Lord Woodhouselee" [and so forth for a list of friendly patrons]; "from all of whom he received flattering attention, and many important testimonies to the interest which they took in his success."

Although the name of Mr. Conolly is on the title-page, we cannot help believing that this little book must have been written by Miss Austen's immortal "Mr. Collins" in 'Pride and Prejudice,' or by one on whom his mantle has descended in all its amplitude.

Pictures of Old England—[*Bilder aus Alt-England*, by Reinhold Pauli] (Gotha, Perthes; London, Williams & Norgate.)

Pictures of Old England. Translated by E. C. Otté. (Macmillan & Co.)

Dr. Pauli, whose work on Alfred the Great has already been received as a valuable contribu-

tion to Anglo-Saxon history, has published under the above title a collection of twelve papers illustrating the condition of England during the Middle Ages. The subjects are various, embracing, as they do, ecclesiastical and temporal matters, internal and foreign relations, short biographies, and episodes of literary history. The author is one of those Germans, fortunately common at the present day, who look with admiration on the greatness and constitutional liberty of England, and are pleased to remind the different branches of the Teutonic race that they are naturally brothers. He brings with him the qualification of a diligent student and a pleasant writer; and it would be difficult to find a more agreeable and instructive miscellany than this gallery of "pictures."

An especially interesting and comprehensive paper is one that is devoted to the progress of Monasticism in this country, and the different aspects it assumed,—as the Benedictines, the Cistercians and the Franciscans became the leading representatives of the system.

Monasticism began in Anglo-Saxon England with the Benedictines. Augustin, the missionary, and his forty followers all belonged to the Order of St. Benedict, and as early as the seventh century abbeys and priories under the same rule sprang up in every part of England, several of them seats of theological and classical learning, and all of them favourable to the progress of agriculture. Of this the old Celtic monks had been wholly regardless; but as far as we know anything about them, they abandoned themselves to an Oriental state of contemplation, leaving woods and fields in their native wildness.

Of the manner in which the Benedictines made themselves generally useful, we have a creditable instance at Abingdon, near Oxford, where a monastery, founded by two pious brothers, towards the end of the seventh century, was shortly afterwards placed on a firm footing by the virtuous King Jni. This excellent monarch, whose admirable qualities are, we fear, not sufficiently remembered, made laws, by which all his subjects were ordered to convert at least half the soil into arable and pasture land; but the Benedictines, who found in their rules a prescription to much the same effect, were the first to reduce the theory to practice. They not only worked themselves, but they called in their lay neighbours to help them, and rewarded them with a share of the produce. Thus woods were cleared, marshes were drained, and Abingdon became rich.

Having property to sell, the Benedictines began to offer facilities to purchasers, and a market was soon held in front of the abbey gate. Ornamental arts likewise flourished, and painting, music, sculpture, architecture, were all assiduously cultivated in the Anglo-Saxon convents. Nor were moral duties neglected. Rough-riden serfs found in the monks their best defenders against tyrannical lords; hospitality was largely practised; the sick and the suffering were kindly tended; and for these worthy objects several sources of revenue were devised, which afterwards degenerated into as many forms of abuse.

Under the strictly feudal government introduced by William the Conqueror, the convents were included in the general system, and enjoyed the privileges, while they submitted to the burdens, of lay landholders. The monks, while they maintained their old reputation for charity, became more worldly, and when the country had been brought to a state of tranquillity by Henry the Second, their wealth was incalculably augmented. The value of tithes and other dues were in proportion with that of

the land, and the practice of making large testamentary bequests to religious houses actually grew into a fashion; the terror of the deathbed proving a most profitable instrument in the hands of the rapacious monks, until the government interfered with those Statutes of Mortmain, of which the present laws respecting charitable bequests are the known descendants.

Abingdon was not behindhand in the general march of luxury; indeed, it is from the archives of this monastery, recently published in London, that Dr. Pauli obtains much evidence respecting the monkish enjoyment of creature-comforts. The holy men were very particular in the choice of their *chef-de-cuisine*, who was required to be a person of a liberal and sober character,—a veritable father of the congregation. That he might be more free in the discharge of his important duties, he was allowed to attend less regularly at chapel than the rest of the brethren; he gave the sign for grace at table, for sitting down, and drinking; the perquisites due from the neighbouring villages for the use of the refectory were at his disposal. On the principal fast-days he had a right to three especial dishes of fish, but he had the responsibility of distributing alms to the proper objects of charity. Another important officer was the cellarer, who was not however allowed to absent himself from chapel so often as the master of the kitchen. He was bound to see that there was abundance of good beer at dinner and supper, and to take care that the monks found their goblets well replenished, whenever they reposed from their onerous duties of praying and singing. The charge of covering the table belonged to the rectorarius, who with all proper ceremony and with fitting observance of the distinction of rank, placed the abbot's spoon, the friar's cup, and the vessels of the other brethren.

Those luxurious habits, together with divers flagrant immoralities, considerably lowered the Benedictines in the public estimation; but monkery again assumed a severe form, through the exertions of St. Bernard, and the Cistercians, who first made their appearance in the twelfth century, seemed to promise a return of the ancient asceticism. These paid particular attention to sheep, and it was chiefly in consequence of their pastoral disposition that wool became the staple commodity of England. In a short time they had so far degenerated that their morals were not a whit superior to those of the Benedictines, while they remained their inferiors in scholarship. The style of their chronicles is dry and inelegant, whereas the brethren of the older order had so completely identified themselves with literary proficiency, that for many ages the Abbey of St. Albans, one of their most important foundations, compiled a sort of official history of the kingdom, and was intrusted with the care of state documents.

The Mendicant orders, which arose under the influence of that attempt of the Papacy to subjugate the Christian world which began with Innocent the Third, represented a theory totally different from that of their monastic predecessors. These had lived in secluded places, and chiefly concerned themselves with rural populations; whereas the Mendicants plunged into crowded cities, and devoted their attention to the sufferers of unwholesome streets and alleys. They were, in fact, the prototypes of what we now call "Home Missionaries," and in their mode of operation were in some respects similar to the lower dissenting preachers of the present day, who, however, will be by no means inclined to admit their relationship, when they hear that they particularly recommended the adoration of the Virgin. Of the secular clergy

the Mendicants were declared foes, and they set out with a strong contempt for profane learning, which appears in a rigid abstinence from allusion to classical authors. Even when they relaxed somewhat from their primitive rigidity, Roger Bacon, the glory of the Franciscans, found himself obliged to petition the Pope for a freer use of ink and parchment than the rule of his order permitted.

The principal Mendicant orders were the Franciscan and the Dominican. Of these the former were influential in England and likewise in Italy, while the latter were more largely diffused over France, Spain, and the district of the Rhine. In 1224, two years before the death of their founder, the first party of Franciscans landed at Dover, and at once proceeded to London. They were natives of different countries, but they all looked exactly alike, in their coarse brown frock, which was their sole garment, and which was fastened about their loins with a rope, which served the double purpose of a girdle and a discipline. A prayer-book and the simplest materials for writing constituted their sole luggage. Beggars they professed to be, beggars they were, and with beggars they associated. In the worst and most unhealthy quarters of the principal towns, the places shunned by opulent citizens, they fixed their quarters, teaching industry to the poorer classes by precept and example, and particularly urging the virtue of cleanliness.

Attendance on the sick in the hospitals and lazaret-houses was one of the most regular duties of the Mendicant friars, and the study of medicine, which was found necessary to the efficient performance of this duty, soon led many of them to abandon their pristine love of ignorance, and to become adepts in physical science. Having chiefly sprung up in commercial places, they had, as it were, a natural taste for foreign missions, coasted the Mediterranean Sea, visited the Czar of Muscovy at Kiev, and even penetrated into Tartary, bringing back all sorts of geographical information on their return. From physics they speedily passed to metaphysics, and Duns Scotus and William Occam still remain celebrated among the scholastic lights of the University of Oxford, where, under the patronage of the famous Robert Grosseteste, Bishop of Lincoln, the Franciscans acquired great influence. In the struggles between Simon de Montfort and the Crown, they were generally arrayed on the side of liberty and right.

The Mendicant friars are doubtless to be regarded as the precursors of the Reformation, but their moral influence had ceased before the great work was actually begun. They do not assume the profane magnificence of the Benedictines and Cistercians, but they plunge into a lower kind of disreputability, and are soon regarded as shameless impostors and vulgar debauchees; fit targets for as many darts as a Chaucer may be pleased to direct against them.

A Map of London in the fifteenth century is an useful addition to the miscellany; which E. C. Otté has translated for Mr. Macmillan into readable English.

OUR LIBRARY TABLE.

A Manual of British Lichens. By William Mudd. (Darlington, Penney.)—This is an octavo volume of 309 pages, containing descriptions of all the species, arranged upon a new plan by the author. We cannot but express our regret that so much labour should have been consumed to so little purpose. It is evident, indeed, that Mr. Mudd is thoroughly in earnest, that he has a very extensive knowledge of these little plants, and that what he has written is the result of long and patient original observation. Had his power of generalizing but equalled his industry in observing, and if he had possessed the art of combining in as

eminent a degree as that of separating, he would have produced a valuable scientific work. Unfortunately, such is not the case. From want of technical skill in managing his typographical arrangements, it is excessively difficult to understand what his classification is; and owing to the formidable scientific jargon adopted throughout the work, without the smallest necessity, it is hopeless to expect any reader to master it, except an adept. Nevertheless, in the midst of the thickest verbal fog which we ever endeavoured to penetrate, we are to grope for the distinctions of no fewer than 105 genera, where Linnæus made one suffice; Acharius, the great reformer of the order, 43; and even Fries could discover no more than 32. Some may call this the result of scientific exactitude, and adduce it as a proof of the advance made in the modern power of observation. We cannot accept the explanation. Undoubtedly it arises out of a microscopical examination of the tissues of these plants, and a belief that structural peculiarities invisible to the naked eye are of more importance than those which are obvious to all men. But we cannot perceive any proof that mere microscopical characters possess the value assigned to them, and that a plant is better known by the micrometrical measure of its internal particles than by its general form and surface. To say nothing of the notorious uncertainty of over-minute examination and the variable form of vegetable cells, we are at a loss to discover upon what principle the spores (or microscopical seeds) of a *Nephroma* are to be distinguished from those of a *Peltigera*, or a *Synechoblastus* or *Roccella*; or why they should be selected for distinguishing characters rather than the old Acharian marks derived from the thallus and its shield. We might as well endeavour to classify animals by differences in the form of the ultimate organized elements of their fat, flesh, muscular fibre or bones, instead of taking those manifest differences with which zoologists have hitherto been satisfied. A good manual of British Lichens is wanted; and if Mr. Mudd will discard his crabbed phraseology—introduce clearness into his arrangement—throw overboard all such spurious genera as *Diploicia*, *Thallidima*, *Toninia*, and *Leucothecium*—offer differences to the consideration of the reader instead of descriptions,—in short, follow the example set by Bentham in his admirable *Handbook of the British Flora*;—if he will do all this, we have no doubt that he will produce a work which English science will gladly recognize.

Common Objects of the Microscope. By the Rev. J. G. Wood. (Routledge & Co.)—This is a very cheap shilling's worth of scientific information: upwards of 400 engravings, by Tuffen West, and a running text of observations on the figures. Of course, all books on the microscope are more or less like each other; but this work is so like one recently illustrated by Mr. West, that the one might be mistaken for the other if the plates alone were seen. The paper and print, however, indicate that it has been got up for a large sale at a low price. One drawback to the general utility of the volume will be found in its recommending the microscopes and apparatus sold by one particular house. It would have been better in a book intended for popular use either that all good makers should have been recommended or none at all mentioned. The author, also, strongly recommends the Society of Arts microscope, but does not mention that this highly praiseworthy instrument, which has done so much for the extension of the use of the microscope, was manufactured by the Messrs. Field, of Birmingham, who gained the prize of the Society of Arts for their manufacture.

Inspiration and Interpretation: Seven Sermons preached before the University of Oxford; with Preliminary Remarks: being an Answer to a Volume entitled 'Essays and Reviews.' By the Rev. T. W. Burgon. (Parker.)—The Fellow of Oriel, and Select University Preacher, adds to his sermons a diatribe against the seven. If we were to call him insolent, blustering and vulgar, we should but borrow terms which he has applied to one or another of the gentlemen whom he assails; we think he has entitled himself to wear his own epithets. And his remarks are addressed to his own pupils, the undergraduates of Oriel; which does not mend

the matter. Our readers will have observed in this Oxford controversy, so far as it has gone, little or nothing of that personal disrespect of which old disputes were so prolific: Oxford has learnt a gentlemanly tone of controversy. Mr. Burgon may stand, among models for imitation, as a model for—what shall we say?—*evitation*. We need not warn the undergraduates of Oriel against his style and temper; too many of them are finished gentlemen, and nearly finished scholars. But we may remind the public, that such excesses are by no means characteristic of the Fellows of Oriel. We should not, in any case, have discussed the doctrines of this work; but we think, had it been our province, we should have declined to handle in detail theology of so barbarous a tone. We will make only one extract. Speaking of the late Baden Powell—and we must do Mr. Burgon the justice to say that his manner of assailing the dead is comparatively decent—he says that either his mind was illogical, or he “cannot have studied the Bible with that ordinary attention which would entitle him to dogmatize concerning its contents.” We know that men who have paid but ordinary attention to high subjects are very apt to dogmatize; but we did not know they were “entitled” to do so. Mr. Burgon thinks differently, as appears by his practice. We recommend him to give the Bible that extraordinary attention, so as to be able to hold an opinion which, in spite of its uncompromising character, in spite of the downrightness of the warning against the contrary which accompanies its expression, shall avoid the reproach of dogmatism,—which has been described by Douglas Jerrold as puppyism arrived at its full growth.

The Threshold of Chemistry. By Charles W. Heaton. (Chapman & Hall.)—Amidst all the Manuals, Elements and Introductions to Chemistry, we think Mr. Heaton's volume will be found acceptable. It is not an attempt to go into the theory of the science of chemistry, but simply what it professes to be,—a guide to those who are about to step on to the threshold of that vast temple of human knowledge known as Chemistry. Without any attempt at defining the science, the author considers the most practical of all questions, first, the expense of chemical experiments. Having settled the fact that chemistry may be very economically studied, our author then describes some of the indispensable apparatus for chemical experiments. After this is all done, the student is set to work, and, step by step, he is inducted into the principal properties of the elements. The work is neatly printed, and illustrated with numerous woodcuts.

Of Pamphlets on miscellaneous subjects we have received, “*High Speeds, a Letter to the Right Hon. T. M. Gibson*, by G. R. Stephenson (Clay).—*Supplement to Thoughts on a Few Subjects of Political Economy*, by J. Cazenove (Simpkin).—*The Bank Act of 1844—Free Trade in Gold not Incompatible with our Standard of Value, and the True Remedy for Ruinous Fluctuations in Prices and in the Bank Rate of Discount*, by H. Brookes (Wilson).—*A Letter on the Bank of England Charter, and Lord Overstone's Theory of Currency*, by E. Phillips (Bowie).—*The Tannin Process*, by C. Russell (Davies).—*A Proposed New Mode of Collecting the Animal, Vegetable and other Refuse of Towns*, by H. Liddell (Whittaker).—*London Sewage and the Thames Embankment. A Plan for Carrying off the London Sewage without Pumping, and without Low Level Sewers through the City and Southwark, and for a Thames Embankment unincumbered by a Sewage passing through it*, by T. Macneill (Weale).—*Colliery Explosions and a Means to Prevent them*, by R. H. Hughes (Plummer).—*What is the Manchester Unity? An Attempt to furnish a Plain and Truthful Account of the Principles and Practice of Odd Fellowship*, by G. F. Pardon (Judd & Glass).—*The American Crisis; or, The True Issue, Slavery or Liberty?* by the Rev. W. Patton (Low).—*The Country? The Company, or why British North America may be Peopled, and how it may be Done*, by Capt. Syngé (Stanford).—*North and South; or, The American Crisis; a Poem* (J. Blackwood).—*Memorandums and Recollections on Gout and Rheumatism, and their Treatment*, by E. Moore

(Churchill),—*Nurses for the Sick; with a Letter to Young Women*, by Louisa Twining (Longman),—*How shall I get into an Hospital? a Guide for Patients*, by the Rev. A. Alston (Stanford),—and *Historical Records of the Various Affections Cured by Means of the Electro-Chemical Bath*, by Dr. Caplin (Baillière).

LIST OF NEW BOOKS.

Aimard's White Sealper, fcap. 8vo. 2s. bds.
All Round the World, edited by Ainsworth, Vol. 2. imp. 8vo. 7s. 6d.
Brewer's Guide to Grecian History, 3rd edit. 18mo. 3s. 6d. cl.
British Library, Osweli's Summer on the Lakes, &c. 8vo. 3s. bds.
Brook's Silver Cord, 3 vols. cr. 8vo. 11. 11s. 6d. cl.
Cambridge School and College Text Books, Goodwin's Elementary Dynamics, fcap. 8vo. 3s. cl.—Statics, 8vo. 3s. cl.
Charley and Georgy; or, the Children at Gibraltar, 18mo. 1s. cl.
Charlie Cheerful's Nursery Stories, coloured illust. royal 8vo. 3s. 6d.
Corkran's East and West; or, Once upon a Time, 3 vols. 31s. 6d. cl.
Crawford's Humpty Casket, and other Tales and Lyrics, fcap. 8vo. 3s. 6d.
Davis's Pictures for the Mind's Eye, fcap. 8vo. 1s. 6d. cl.
English Cycle, conducted by Knight, Arts and Sciences, Vol. 2. 12s.
Farr's Manual of Geography, Physical and Political, new edit. 3s.
Farrarwood Post Office, 3rd edit. 18mo. 2s. 6d. cl.
Friendly Truths for Working Homes, fcap. 8vo. 1s. 6d. cl.
Goethe's Torquato Tasso, translated into English Verse, 3s. 6d. cl.
Haigh's Anglo-Saxon Sagas as Aids to History, 8vo. 6s. 6d. cl.
Haigh's Conquest of Britain by the Saxons, 8vo. 15s. cl.
Home Life of English Ladies in the 17th Century, 2nd edit. 6s. cl.
Hull's Coal Fields of Great Britain, their History, &c. 2nd edit. 10s.
Ikhvân-u-Safa, tr. by Ikram, revised by Forbes and Eieu, 12s. 6d.
Knight (Miss Cornelia), Autobiography of, 3rd edit. 3 vols. 8vo. 25s.
Landmarks of History, Ancient History, 5th edit. 18mo. 3s. 6d. cl.
Lang's Wanderings in India, new edit. 18mo. 2s. bds.
Leighton's Court of Cases, Story of Burke and Hare, fcap. 8vo. 3s.
Lewis's Bankruptcy Manual, 8vo. 1s. bds.
Lord's Woodbine, Poems, fcap. 8vo. 3s. cl.
Mant's Christophoros, and other Poems, cr. 8vo. 6s. cl.
Minutes of the Wesleyan Conference, 1861, 18mo. 1s. 4d. bds.
Mysterley; or, Faith and Knowledge of God, 2 vols. 8vo. 30s. cl.
Parish of Livewood; or, Who is Responsible? fcap. 8vo. 3s. cl.
Parlour Library "Favell's White Wolf of Brittany," fcap. 8vo. 3s. bds.
Peverley and Hatt's New Bankruptcy Law, 18mo. 1s. cl.
Pigeon Pie, 2nd edit. 18mo. 1s. cl.
Pope's Celtic Inquiries on the Law of Bankruptcy, 18mo. 1s. cl.
Steinmetz's Military Gymnastics of the French, 8vo. 1s. swd.
Stephens's List of Principal London Shippers, 22mo. 1s. cl.
Vieland's Stepping-Stone to Translation of French, fcap. 8vo. 1s. 6d.
Voice of Thanksgiving, 18mo. 1s. 6d. cl.
Wade's Hist. of St. Mary's Abbey, Melrose, illust. cr. 8vo. 6s. 6d. cl.
Yelverton's Martyrs to Circumstance, Part 3, fcap. 8vo. 3s.
Young Naturalist's Lib. "Adams's Nests and Eggs," n. ed. 16mo. 1s.

BRITISH ASSOCIATION.

Manchester, Sept. 5, 1861.

BLESSED with brilliant weather, with an excellent programme, and with a good subscription, the Thirty-first Congress of the British Association has opened in this city most auspiciously. Our last meeting in Manchester was a conspicuous failure. We came to it in a period of great commercial depression; and many of us feared that the American troubles would have procured for us this September a repetition of our former ill-luck. But these fears are at an end. Of our success this time there can be no doubt whatever. The gathering of scientific sages is greater than it was last year in Oxford, and the general company is enormously greater. The Sheldonian Theatre was vast enough for the biggest Oxford audience ever got together; but the Free Trade Hall has proved too limited in space for the crowd which thronged to Mr. Fairbairn's inaugural address. The tickets sold amount to more than 2,500, of which about 80 are those of life members. The increase of funds will therefore be considerable.

So far every one seems pleased. Our sages find themselves in pleasant places—some of them much to their surprise,—the beauties of the districts around Manchester being little known to your true southron. The hospitality is boundless, the General Committee having made a set of admirable arrangements on the subject of billets. Yesterday, before the meeting, the Mayor gave a sumptuous dinner to 150 guests,—cold, but the wine very good,—and the amount of private preparation in this line of which one hears is somewhat alarming to those who have not yet reconciled themselves to the theory that the British Association is a social institution. The great majority are reconciled to the *fêtes*. Lord Ellesmere's party next week is looked forward to, even in this city of machinery, with as much interest as anything likely to occur in Section G.

After the Mayor's dinner the company repaired to the Free Trade Hall to hold the General Meeting, when LORD WHOTESLEY resigned the presidency, in a graceful speech, to his successor, Mr. FAIRBAIRN, who rose and delivered—

The President's Address.

Gentlemen of the British Association, — Ever since my election to the high office I now occupy I have been deeply sensible of my own unfitness

for a post of so much distinction and responsibility; and when I call to mind the illustrious men who have preceded me in this chair, and see around me so many persons much better qualified for the office than myself, I feel the novelty of my position and unfeigned embarrassment in addressing you. I should, however, very imperfectly discharge the duties which devolve upon me, as the successor of the distinguished nobleman who presided over the meetings of last year, if I neglected to thank you for the honourable position in which you have placed me, and to express at the outset my gratitude to those valued friends with whom I have been united for many years in the labours of the Sections of this Association, and from whom I have invariably received every mark of esteem.

A careful perusal of the history of this Association will demonstrate that it was the first, and for a long time the only institution which brought together for a common object the learned Professors of our Universities and the workers in practical science. These periodical *réunions* have been of incalculable benefit in giving to practice that soundness of principle and certainty of progressive improvement which can only be obtained by the accurate study of science and its application to the arts. On the other hand, the men of actual practice have reciprocated the benefits thus received from theory, in testing by actual experiment deductions which were doubtful and rectifying those which were erroneous. Guided by an extended experience, and exercising a sound and disciplined judgment, they have often corrected theories apparently accurate, but nevertheless founded on incomplete data or on false assumptions inadvertently introduced. If the British Association had effected nothing more than the removal of the anomalous separation of theory and practice, it would have gained imperishable renown in the benefit thus conferred. Were I to enlarge on the relation of the achievements of science to the comforts and enjoyments of man, I should have to refer to the present epoch as one of the most important in the history of the world. At no former period did science contribute so much to the uses of life and the wants of society. And in doing this it has only been fulfilling that mission which Bacon, the great father of modern science, appointed for it, when he wrote that "the legitimate goal of the sciences is the endowment of human life with new inventions and riches," and when he sought for a natural philosophy which, not spending its energy on barren disquisitions, "should be operative for the benefit and endowment of mankind." Looking, then, to the fact that, while in our time all the sciences have yielded this fruit, engineering science, with which I have been most intimately connected, has pre-eminently advanced the power, the wealth, and the comforts of mankind, I shall probably best discharge the duties of the office I have the honour to fill by stating, as briefly as possible, the more recent scientific discoveries which have so influenced the relations of social life. I shall, therefore, not dwell so much on the progress of abstract science, important as that is, but shall rather endeavour briefly to examine the application of science to the useful arts, and the results which have followed, and are likely to follow, in the improvement of the condition of society.

The history of man throughout the gradations and changes which he undergoes in advancing from a primitive barbarism to a state of civilization shows that he has been chiefly stimulated to the cultivation of science and the development of his inventive powers by the urgent necessity of providing for his wants and securing his safety. There is no nation, however barbarous, which does not inherit the germs of civilization, and there is scarcely any which has not done something towards applying the rudiments of science to the purposes of daily life. Among the South Sea Islanders, when discovered by Cook, the Applied Sciences,—if I may use the term,—were not entirely unknown. They had observed something of the motions of the heavenly bodies, and watched with interest their revolutions, in order to apply this knowledge to the division of time. They were not entirely deficient in the construction of instruments of husbandry, of war, and of music. They

had made themselves acquainted with the rudiments of ship-building and navigation in the construction and management of their canoes. Cut off from the influence of European civilization, and deprived of intercourse with higher grades of mind, we still find the inherent principle of progression exhibiting itself, and the inventive and reasoning powers developed in the attempt to secure the means of subsistence. Again, if we compare man as he exists in small communities with his condition where large numbers are congregated together, we find that densely-populated countries are the most prolific in inventions, and advance most rapidly in science. Because the wants of the many are greater than those of the few, there is a more vigorous struggle against the natural limitations of supply, a more careful husbanding of resources, and there are more minds at work. This fact is strikingly exemplified in the history of Mexico and Peru; and its attestation is found in the numerous monuments of the past which are seen in Central America, where the remains of cities and temples, and vast public works, erected by a people endowed with high intellectual acquirements, can still be traced. There have been discovered a system of canals for irrigation; long mining galleries cut in the solid rock in search of lead, tin and copper; pyramids not unlike those of Egypt; earthenware vases and cups, and manuscripts containing the records of their history; all testifying to so high a degree of scientific culture and practical skill that, looking at the cruelties which attended the conquests of Cortes and Pizarro, we may well hesitate as to which had the stronger claims on our sympathy, the victors or the vanquished.

In attempting to notice those branches of science with which I am but imperfectly acquainted, I shall have to claim your indulgence. This Association, as you are aware, does not confine its discussions and investigations to any particular science; and one great advantage of this is, that it leads to the division of labour, while the attention each department receives, and the harmony with which the plan has hitherto worked, afford the best guarantee of its wisdom and proof of its success. In the early history of Astronomy, how vague and unsatisfactory were the wild theories and conjectures which supplied the place of demonstrated physical truths and carefully observed laws! How immeasurably small, what a very speck, does man appear, with all the wonders of his invention, when contrasted with the mighty works of the Creator; and how imperfect is our apprehension, even in the highest flights of poetic imagination, of the boundless depths of space! These reflections naturally suggest themselves in the contemplation of the works of an Almighty Power, and impress the mind with a reverential awe of the great Author of our existence. The great revolution which laid the foundation of modern astronomy, and which, indeed, marks the birth of modern physical science, is chiefly due to three or four distinguished philosophers. Tycho Brahe, by his system of accurate measurement of the positions of the heavenly bodies; Copernicus, by his history of the solar system; Galileo, by the application of the telescope; and Kepler, by the discovery of the laws of the planetary motions, all assisted in advancing, by prodigious strides, towards a true knowledge of the constitution of the universe. It remained for Newton to introduce, at a later period, the idea of an attraction varying directly as the mass, and inversely as the square of the distance, and thus to reduce celestial phenomena to the greatest simplicity, by comprehending them under a single law. Without tracing the details of the history of this science, we may notice that in more recent times astronomical discoveries have been closely connected with high mechanical skill in the construction of instruments of precision. The telescope has enormously increased the catalogue of the fixed stars, or those "landmarks of the universe," as Sir John Herschel terms them, "which never deceive the astronomer, navigator, or surveyor." The number of known planets and asteroids has also been greatly enlarged. The discovery of Uranus resulted immediately from the perfection attained by Sir William Herschel in the construc-

sion of his telescope. More recently, the structure of the nebulae has been unfolded, through the application to their study of the colossal telescope of Lord Rosse. In all these directions much has been done both by our present distinguished Astronomer Royal and also by amateur observers in private observatories, all of whom, with Mr. Lassells at their head, are making rapid advances in this department of physical science. Our knowledge of the physical constitution of the central body of our system seems likely, at the present time, to be much increased. The spots on the sun's disc were noticed by Galileo and his contemporaries, and enabled them to ascertain the time of its rotation and the inclination of its axis. They also correctly inferred, from their appearance, the existence of a luminous envelope, in which funnel-shaped depressions revealed a solid and dark nucleus. Just a century ago, Alexander Wilson indicated the presence of a second and less luminous envelope beneath the outer stratum; and his discovery was confirmed by Sir William Herschel, who was led to assume the presence of a double stratum of clouds, the upper intensely luminous, the lower grey, and forming the penumbra of the spots. Observations during eclipses have rendered probable the supposition that a third and outermost stratum of imperfect transparency incloses concentrically the other envelopes. Still more recently, the remarkable discoveries of Kirchhoff and Bunsen require us to believe that a solid or liquid photosphere is seen through an atmosphere containing iron, sodium, lithium, and other metals in a vaporous condition. We must still wait for the application of more perfect instruments, and especially for the careful registering of the appearances of the sun by the photoheliograph of Sir John Herschel, so ably employed by Mr. Warren De La Rue, Mr. Welsh, and others, before we can expect a solution of all the problems thus suggested. Guided by the same principles which have been so successful in astronomy, its sister science, Magnetism, emerging from its infancy, has of late advanced rapidly in that stage of development which is marked by assiduous and systematic observation of the phenomena, by careful analysis and presentation of the facts which they disclose, and by the grouping of these in generalizations, which, when the basis on which they rest shall be more extended, will prepare the way for the conception of a general physical theory, in which all the phenomena shall be comprehended, while each shall receive its separate and satisfactory explanation. It is unnecessary to remind you of the deep interest which the British Association has at all times taken in the advancement of this branch of natural knowledge, or of the specific recommendations which, made in conjunction with the Royal Society, have been productive of such various and important results. To refer but to a single instance: we have seen those magnetic disturbances, so mysterious in their origin and so extensive in simultaneous prevalence,—and which, less than twenty years ago, were designated by a term specially denoting that their laws were wholly unknown,—traced to laws of periodical recurrence, revealing, without a doubt, their origin in the central body of our system, by inequalities which have for their respective periods the solar day, the solar year, and, still more remarkably, and until lately unsuspected, solar cycle of about ten of our terrestrial years, to whose existence they bear testimony in conjunction with the solar spots; but whose nature and causes are in all other respects still wrapped in entire obscurity. We owe to General Sabine, especially, the recognition and study of these and other solar magnetic influences, and of the magnetic influence of the moon similarly attested by concurrent determinations in many parts of the globe, which are now held to constitute a distinct branch of this science, not inappropriately named "celestial," as distinguished from purely terrestrial magnetism.

We ought not in this town to forget that the very rapid advance which has been made in our time in Chemistry is due to the law of equivalents, or Atomic Theory, first discovered by our townsman, John Dalton. Since the development of this law, its progress has been unimpeded, and

it has had a most direct bearing on the comforts and enjoyments of life. A knowledge of the constituents of food has led to important deductions as to the relative nutritive value and commercial importance of different materials. Water has been studied in reference to the deleterious impurities with which it is so apt to be contaminated in its distribution to the inhabitants of large towns. The power of analysis, which enables us to detect adulterations, has been invaluable to the public health, and would be much more so if it were possible to obviate the difficulties which have prevented the operation of recent legislation on this subject. We have another proof of the utility of this science in its application to medicine; and the estimation in which it is held by the medical profession is the true index of its value in the diagnosis and treatment of disease. The largest developments of chemistry, however, have been in connexion with the useful arts. What would now be the condition of calico-printing, bleaching, dyeing, and even agriculture itself, if they had been deprived of the aid of theoretic chemistry? For example, aniline—first discovered in coal tar by Dr. Hoffman, who has so admirably developed its properties—is now most extensively used as the basis of red, blue, violet, and green dyes. This important discovery will probably in a few years render this country independent of the world for dye stuffs; and it is more than probable that England, instead of drawing her dye stuffs from foreign countries, may herself become the centre from which all the world will be supplied. It is an interesting fact that at the same time, in another branch of this science, M. Tournet has lately demonstrated that the colours of gems, such as the emerald, aqua-marina, amethyst, smoked rock-crystal, and others, are due to volatile hydro-carbons, first noticed by Sir David Brewster in clouded topaz, and that they are not derived from metallic oxides, as has been hitherto believed. Another remarkable advance has recently been made by Bunsen and Kirchhoff in the application of the coloured rays of the prism to analytical research. We may consider their discoveries as the commencement of a new era in analytical chemistry, from the extraordinary facilities they afford in the qualitative detection of the minutest traces of elementary bodies. The value of this method has been proved by the discovery of the new metals, cesium and rubidium, by M. Bunsen; and it has yielded another remarkable result in demonstrating the existence of iron and six other known metals in the sun. In noticing the more recent discoveries in this important science I must not pass over in silence the valuable light which chemistry has thrown upon the composition of iron and steel. Although Despretz demonstrated many years ago that iron would combine with nitrogen, yet it was not until 1857 that Mr. C. Binks proved that nitrogen is an essential element of steel; and more recently M. Carou and M. Frémy have further elucidated this subject; the former showing that cyanogen, or cyanide of ammonium, is the essential element which converts wrought iron into steel; the latter combining iron with nitrogen through the medium of ammonia, and then converting it into steel by bringing it at the proper temperature into contact with common coal gas. There is little doubt that in a few years these discoveries will enable Sheffield manufacturers to replace their present uncertain, cumbrous, and expensive process by a method at once simple and inexpensive, and so completely under control as to admit of any required degree of conversion being obtained with absolute certainty. Mr. Crampton, also, has proved that cast iron contains nitrogen, and has shown that it is a definite compound of carbon and iron, mixed with various proportions of metallic iron, according to its nature. Before leaving chemical science, I must refer to the interesting discovery by M. Deville, by which he succeeded in rapidly melting 38 or 40 pounds of platinum—a metal till then considered almost infusible. This discovery will render the extraction of platinum from the ore more perfect, and, by reducing its cost, will greatly facilitate its application to the arts.

It is little more than half a century since Geology assumed the distinctive character of a science.

Taking into consideration the aspects of nature in different epochs of the history of the earth, it has been found that the study of the changes at present going on in the world around us enables us to understand the past revolutions of the globe, and the conditions and circumstances under which strata have been formed and organic remains embedded and preserved. The geologist has increasingly tended to believe that the changes which have taken place on the face of the globe, from the earliest times to the present, are the result of agencies still at work. But while it is his high office to record the distribution of life in past ages, and the evidence of physical changes in the arrangement of land and water, his results hitherto have indicated no traces of its beginning, nor have they afforded evidence of the time of its future duration. Geology has been indebted for this progress very largely to the investigations of Sedgwick and the writings of Sir Charles Lyell. As an example of the application of Geology to the practical uses of life, I may cite the discovery of the goldfields of Australia, which might long have remained hidden but for the researches of Sir Roderick Murchison in the Ural Mountains on the geological position of the strata from which the Russian gold is obtained. From this investigation he was led by inductive reasoning to believe that gold would be found in similar rocks, specimens of which had been sent him from Australia. The last years of the active life of this distinguished geologist have been devoted to the re-examination of the rocks of his native highlands of Scotland. Applying to them those principles of classification which he long since established, he has demonstrated that the crystalline limestone and quartz rocks which are associated with mica schists, &c., belong by their embedded organic remains to the Lower Silurian rocks. Descending from this well-marked horizon, he shows the existence beneath all such fossiliferous strata of vast masses of sandstone and conglomerate of Cambrian age; and, lastly, he has proved the existence of a fundamental gneiss, on which all the other rocks repose, and which, occupying the north-western Hebrides and the west coasts of Sutherland and Ross, is the oldest rock formation on the British Isles, it being unknown in England, Wales, or Ireland.

It is well known that the temperature increases as we descend through the earth's crust, from a certain point near the surface, at which the temperature is constant. In various mines, borings, and artesian wells the temperature has been found to increase about one degree Fahrenheit for every sixty or sixty-five feet of descent. In some carefully conducted experiments during the sinking of Dukinfield Deep Mine—one of the deepest pits in this country—it was found that a mean increase of about one degree in seventy-one feet occurred. If we take the ratio thus indicated, and assume it to extend to much greater depths, we should reach at two-and-a-half miles from the surface strata at the temperature of boiling water; and at depths of about fifty or sixty miles the temperature would be sufficient to melt, under the ordinary pressure of the atmosphere, the hardest rocks. Reasoning from these facts, it would appear that the mass of the globe, at no great depth, must be in a fluid state. But this deduction requires to be modified by other considerations, namely, the influence of pressure on the fusing point, and the relative conductivity of the rocks which form the earth's crust. To solve these questions a series of important experiments were instituted by Mr. Hopkins, in the prosecution of which Dr. Joule and myself took part; and after a long and laborious investigation it was found that the temperature of fluidity increased about one degree Fahrenheit for every five-hundred pounds of pressure in the case of spermaceti, bees'-wax, and other similar substances. However, on extending these experiments to less compressible substances, such as tin and barytes, a similar increase was not observed. But this series of experiments has been unavoidably interrupted; nor is the series on the conductivity of rocks entirely finished. Until they have been completed by Mr. Hopkins, we can only make a partial use of them in forming an opinion of the thickness of the earth's solid crust. Judging, however, alone from the greater conductivity of

the igneous rocks, we may calculate that the thickness cannot possibly be less than nearly three times as great as that calculated on the usual suppositions of the conductive power of the terrestrial mass at enormous depths being no greater than that of the superficial sedimentary beds. Other modes of investigation which Mr. Hopkins has brought to bear on this question appear to lead to the conclusion that the thickness of the earth's crust is much greater even than that above stated. This would require us to assume that a part of the heat in the crust is due to superficial and external rather than central causes. This does not bear directly against the doctrine of central heat, but shows that only a part of the increase of temperature observed in mines and deep wells is due to the outward flow of that heat.

Touching those highly interesting branches of science, Botany and Zoology, it may be considered presumptuous in me to offer any remarks. I have, however, not entirely neglected, in my earlier days, to inform myself of certain portions of natural history, which cannot but be attractive to all who delight in the wonderful beauties of natural objects. How interesting is the organization of animals and plants! how admirably adapted to their different functions and spheres of life! They want nothing, yet have nothing superfluous. Every organ is adapted perfectly to its functions; and the researches of Owen, Agassiz, Darwin, Hooker, Daubeny, Babington, and Jardine, fully illustrate the perfection of the animal and vegetable economy of nature.

Two other important branches of scientific research, Geography and Ethnology, have for some years been united, in this Association, in one Section, and that probably the most attractive and popular of them all. We are much indebted to Sir Roderick Murchison, among other members of the Association, for its continued prosperity, and the high position it has attained in public estimation. The spirit of enterprise, courage and perseverance displayed by our travellers in all parts of the world have been powerfully stimulated and well supported by the Royal Geographical Society; and the prominence and rapid publicity given to discoveries by that body have largely promoted geographical research. In Physical Geography, the late Baron von Humboldt has been one of the largest contributors, and we are chiefly indebted to his personal researches and numerous writings for the elevated position it now holds among the sciences. To Humboldt we owe our knowledge of the physical features of Central and Southern America. To Parry, Sir James Ross and Scoresby we are indebted for discoveries in the Arctic and Antarctic regions. Geography has also been advanced by the first voyage of Franklin down the Copper Mine River, and along the inhospitable shores of the Northern Seas, as far as Point Turnagain; as also by that ill-fated expedition in search of a North-West passage, followed by others in search of the unfortunate men who perished in their attempt to reach those ice-bound regions, so often stimulated by the untiring energy of a high-minded woman. In addition to these, the discoveries of Dr. Livingstone in Africa have opened to us a wide field of future enterprise along the banks of the Zambesi and its tributaries. To these, we may add the explorations of Capt. Burton in the same continent, and those also by Capt. Speke and Capt. Grant of a hitherto unknown region, in which it has been suggested that the White Nile has its source, flowing from one of two immense lakes, upwards of 300 miles long by 100 broad, and situated at an elevation of 4,000 feet above the sea. To these remarkable discoveries I ought to add an honourable mention of the sagacious and perilous exploration of Central and Northern Australia by Mr. M'Douall Stuart.

Having glanced, however imperfectly, at some of the most important branches of science which engage the attention of Members of this Association, I would now invite attention to the Mechanical Sciences, with which I am more familiarly acquainted. They may be divided into Theoretical Mechanics and Dynamics, comprising the conditions of equilibrium and the laws of motion; and Applied Mechanics, relating to the construc-

tion of machines. I have already observed that Practice and Theory are twin sisters, and must work together to insure a steady progress in mechanical art. Let us, then, maintain this union as the best and safest basis of national progress, and, moreover, let us recognize it as one of the distinctive aims of the annual *réunions* of this Association. During the last century, the science of Applied Mechanics has made strides which astonish us by their magnitude; but even these, it may reasonably be hoped, are but the promise of future and more wonderful enlargements. I, therefore, propose to offer a succinct history of these improvements, as an instance of the influence of scientific progress on the well-being of society. I shall take in review the three chief aids which engineering science has afforded to national progress,—namely, canals, steam navigation and railways; each of which has promoted an incalculable extension of the industrial resources of the country. One hundred years ago, the only means for the conveyance of inland merchandise were the packhorses and waggons on the then imperfect highways. It was reserved for Brindley, Smeaton and others to introduce a system of canals, which opened up facilities for an interchange of commodities at a cheap rate over almost every part of the country. The impetus given to industrial operations by this new system of conveyance induced capitalists to embark in trade, in mining, and in the extension of manufactures in almost every district. These improvements continued for a series of years, until the whole country was intersected by canals, requisite to meet the demands of a greatly extended industry. But canals, however well adapted for the transport of minerals and merchandise, were less suited for the conveyance of passengers. The speed of the canal boats seldom exceeded from 2½ to 3 miles an hour; and, in addition to this, the projectors of canals sometimes sought to take an unfair advantage of the Act of Parliament, which fixed the tariff at so much per ton per mile, by adopting circuitous routes, under the erroneous impression that mileage was a consideration of great importance in the success of such undertakings. It is in consequence of short-sighted views and imperfect legislation that we inherit the numerous curves and distortions of our canal system. These defects in construction rendered canals almost useless for the conveyance of passengers, and led to the improvement of the common roads and the system of stage-coaches; so that before the year 1830 the chief public highways of the country had attained a remarkable smoothness and perfection; and the lightness of our carriages, and the celerity with which they were driven, still excite the admiration of those who remember them. These days of an efficiently worked system, which tasked the power and speed of the horse to the utmost, have now been succeeded by changes more wonderful than any that previously occurred in the history of the human race.

Scarcely had the canal system been fully developed when a new means of propulsion was adopted—namely, steam. I need not recount to you the enterprise, skill, and labour that have been exerted in connexion with steam navigation. You have seen its results on every river and every sea; results we owe to the fruitful minds of Miller, Symington, Fulton, and Henry Bell, who were the pioneers in the great march of progress. Viewing the past, with a knowledge of the present and a prospect of the future, it is difficult to estimate sufficiently the benefits that have been conferred by this application of mechanical science to the purposes of navigation. Power, speed, and certainty of action have been attained on the most gigantic scale. The celerity with which a modern steamer, with a thousand tons of merchandise and some hundreds of human beings on board, cleaves the water and pursues her course far surpasses the most sanguine expectations of a quarter of a century ago, and indeed almost rivals the speed of the locomotive itself. Previous to 1812 our intercourse with foreign countries and with our colonial possessions depended entirely upon the state of the weather. It was only in favourable seasons that a passage was open, and we had often to wait days,

or even a week, before Dublin could be reached from Holyhead. Now this distance of sixty-three miles is accomplished in all weathers in little more than three hours. The passage to America used to occupy six weeks or two months; now it is accomplished in eight or nine days. The passage round the Cape to India is reduced from nearly half a year to less than a third of that time, while that country may be reached by the overland route in less than a month.

These are a few of the benefits derived from steam navigation, and, as it is yet far from perfect, we may reasonably calculate on still greater advantages in our intercourse with distant nations. I will not here enter on the subject of the numerous improvements which have so rapidly advanced the progress of this important service. Suffice it to observe that the paddle-wheel system of propulsion has maintained its superiority over every other method yet adopted for the attainment of speed, as by it the best results are obtained with the least expenditure of power. In ships of war the screw is indispensable, on account of the security it affords to the engines and machinery, from their position in the hold below the water line, and because of the facility it offers in the use of sails, when the screw is raised from its position in the well to a recess in the stern prepared for that purpose. It is also preferable in ships which require auxiliary power in calms and adverse winds, so as to expedite the voyage and effect a considerable saving upon the freight.

The public mind had scarcely recovered itself from the changes which steam navigation had caused, and the impulse it had given to commerce, when a new and even more gigantic power of locomotion was inaugurated. Less than a quarter of a century had elapsed since the first steamboats floated on the waters of the Hudson and the Clyde, when the achievements thence resulting were followed by the application of the same agency to the almost superhuman flight of the locomotive and its attendant train. I well remember the competition at Rainhill in 1825, and the incredulity everywhere evinced at the proposal to run locomotives at 20 miles an hour. Neither George Stephenson himself, nor any one else, had at that time the most distant idea of the capabilities of the railway system. On the contrary, it was generally considered impossible to exceed 10 or 12 miles an hour; and our present high velocities, due to high-pressure steam and the tubular system of boilers, have surpassed the most sanguine expectations of engineers. The sagacity of George Stephenson at once seized upon the suggestions of Henry Booth, to employ tubular boilers: and that, united to the blast-pipe, previously known, has been the means of effecting all the wonders we now witness in a system that has done more for the development of practical science and the civilization of man than any discovery since the days of Adam.

From a consideration of the changes which have been effected in the means for the interchange of commodities, I pass on to examine the progress which has been made in their production. And, as the steam-engine has been the basis of all our modern manufacturing industry, I shall glance at the steps by which it has been perfected. Passing over the somewhat mythical fame of the Marquis of Worcester and the labours of Savery, Beighton, and Newcomen, we come at once to discuss the state of mechanical art at the time when James Watt brought his gigantic powers to the improvement of the steam-engine. At that time the tools were of the rudest construction, nearly everything being done by hand, and, in consequence, wood was much more extensively employed than iron. Under these circumstances Watt invented separate condensation, rendered the engine double-acting, and converted its rectilinear motion into a circular one suitable for the purposes of manufacture. But the discovery at first made little way, the public did not understand it, and a series of years elapsed before the difficulties, commercial and mechanical, which opposed its application, could be overcome. When the certainty of success had been demonstrated, Watt was harassed by infringements of his patent, and lawsuits for the maintenance of his rights. Inventors, and pretended inventors, set up claims,

and entered into combination with manufacturers, miners, and others, to destroy the patent and deprive him of the just fruits of his labour and genius. Such is the selfish heartlessness of mankind in dealing with discoveries not their own, but from which they expect to derive benefit. The steam-engine, since it was introduced by Watt, has changed our habits in almost every condition of life. Things which were luxuries have become necessities, and it has given to the poor man in all countries in which it exists a degree of comfort and independence and a participation in intellectual culture unknown before its introduction. It has increased our manufactures tenfold, and has lessened the barriers which time and space interpose. It ploughs the land and winnows and grinds the corn. It spins and weaves our textile fabrics. In mining it pumps, winds, and crushes the ores. It performs these things with powers so great and so energetic as to astonish us at their immensity, while they are at the same time perfectly docile, and completely under human control. In war it furnishes the means of aggression, as in peace it affords the bonds of conciliation, and, in fact, places within reach a power which, properly applied, produces harmony and good will among men, and leads to the happiest results in every condition of human existence. We may, therefore, well be proud of the honour conferred on this country as the cradle of its origin, and as having fostered its development from its earliest applications to its present high state of perfection. I cannot conclude this notice of the steam-engine without observing the changes it is destined to effect in the cultivation of the soil. It is but a short time since it was thought inapplicable to agricultural purposes from its great weight and expense. But more recent experience has proved this to be a mistake, and already in most districts we find that it has been pressed into the service of the farm. The small locomotive, mounted on a frame with four wheels, travels from village to village with its attendant, the thrashing machine, performing the operations of thrashing, winnowing, and cleaning at less than one-half the cost by the old and tedious process of hand-labour. Its application to ploughing and tillage on a large scale is, in my opinion, still in its infancy, and I doubt not that many members of this Association will live to see the steam-plough in operation over the whole length and breadth of the land. Much has to be done before this important change can be successfully accomplished: but, with the aid of the agriculturist preparing the land so as to meet the requirements of steam machinery, we may reasonably look forward to a new era in the cultivation of the soil. The extraordinary developments of practical science in our system of textile manufacture are, however, not entirely due to the steam-engine, although they are now in a great measure dependent on it. The machinery of these manufactures had its origin before the steam-engine had been applied, except for mining purposes; and the inventions of Arkwright, Hargreaves, and Crompton were not conceived under the impression that steam would be their moving power. On the contrary, they depended upon water; and the cotton machinery of this district had attained considerable perfection before steam came to the aid of the manufacturer, and ultimately enabled him to increase the production to its present enormous extent.

I shall not attempt a description of the machinery of the textile manufactures, because ocular inspection will be far more acceptable. I can only refer you to a list of establishments in which you may examine their operations on a large scale, and which I earnestly recommend to your attention. I may, however, advert to a few of the improvements which have marked the progress of the manufacturing system in this country. When Arkwright patented his water-frames in 1767, the annual consumption of cotton was about 4,000,000lb. weight. Now it is 1,200,000,000lb. weight—300 times as much. Within half a century the number of spindles at work, spinning cotton alone, has increased tenfold; while by superior mechanism each spindle produces 50 per cent. more yarn than on the old system. Hence the importance to which the cotton trade has risen, equalling at the present time the

whole revenue of the three kingdoms, or 70,000,000l. sterling per annum. As late as 1820 the power-loom was not in existence; now it produces about 14,000,000 yards of cloth, or, in more familiar terms, nearly 8,000 miles of cloth per diem. I give these particulars to show the immense power of production of this country, and to afford some conception of the number and quality of the machines which effect such wonderful results. Mule spinning was introduced by Crompton, in 1787, with about 20 spindles to each machine. The powers of the machine were, however, rapidly increased; and now it has been so perfected that 2,000 or even 3,000 spindles are directed by a single person. At first the winding on, or forming the shape of the cop, was performed by hand; but this has been superseded by rendering the machine automatic, so that it now performs the whole operation of drawing, stretching, and twisting the thread, and winding it on to the exact form, ready for the reel or shuttle as may be required. These and other improvements in carding, roving, combing, spinning, and weaving, have established in this country an entirely new system of industry; it has given employment to greatly increased numbers, and a more intelligent class of work-people. Similarly important improvements have been applied to the machinery employed in the manufacture of silk, flax, and wool; and we have only to watch the processes in these different departments to be convinced that they owe much to the development of the cotton manufacture. In the manufacture of worsted, the spinning jenny was not employed at Bradford until 1790, nor the power-loom until about 1825. The production of fancy or mixed goods from alpaca and mohair wool, introduced to this country in 1836, is, perhaps, the most striking example of a new creation in the art of manufacture, and is chiefly due to Mr. Titus Salt, in whose immense palace of industry, at Saltaire, it may be seen in the greatest perfection. In flax machinery, the late Sir Peter Fairbairn was one of the most successful inventors, and his improvements have contributed to the rapid extension of this manufacture.

I might greatly extend this description of our manufacturing industry, but I must for the present be brief, in order to point out the dependence of all these improvements on the iron and coal so widely distributed among the mineral treasures of our island. We are highly favoured in the abundance of these minerals, deposited with an unsparring hand by the great Author of Nature, under so slight a covering as to bring them within reach of the miner's art. To them we owe our present high state of perfection in the useful arts; and to their extended application we may safely attribute our national progress and wealth. So that, looking to the many blessings which we daily and hourly receive from these sources alone, we are impressed with devotional feelings of gratitude to the Almighty for the manifold bounties He has bestowed on us. Previously to the inventions of Henry Cort, the manufacture of wrought iron was of the most crude and primitive description. A hearth and a pair of bellows was all that was employed. But since the introduction of puddling, the iron-masters have increased the production to an extraordinary extent, down to the present time, when processes for the direct conversion of wrought iron on a large scale are being attempted. A consecutive series of chemical researches into the different processes, from the calcining of the ore to the production of the bar, carried on by Dr. Percy and others, has led to a revolution in the manufacture of iron; and although it is at the present moment in a state of transition, it nevertheless requires no very great discernment to perceive that steel and iron of any required tenacity will be made in the same furnace, with a facility and certainty never before attained. This has been effected to some extent by improvements in puddling; but the process of Mr. Bessemer—first made known at the meeting of this Association at Cheltenham—affords the highest promise of certainty and perfection in the operation of converting the melted pig direct into steel or iron, and is likely to lead to the most important developments in this manufacture. These improvements in the

production of the material must, in their turn, stimulate its application on a larger scale and lead to new constructions.

In iron shipbuilding an immense field is opening before us. Our wooden walls have to all appearance seen their last days; and as one of the early pioneers in iron construction, as applied to shipbuilding, I am highly gratified to witness a change of opinion that augurs well for the security of the liberties of the country. From the commencement of iron shipbuilding in 1830 to the present time, there could be only one opinion among those best acquainted with the subject, namely, that iron must eventually supersede timber in every form of naval construction. The large ocean steamers, the Himalaya, the Persia, and the Great Eastern, abundantly show what can be done with iron, and we have only to look at the new system of casing ships with armour plates, to be convinced that we can no longer build wooden vessels of war with safety to our naval superiority and the best interests of the country. I give no opinion as to the details of the reconstruction of the Navy—that is reserved for another place—but I may state that I am fully persuaded that the whole of our ships of war must be rebuilt of iron, and defended with iron armour calculated to resist projectiles of the heaviest description at high velocities. In the early stages of iron shipbuilding, I believe I was the first to show, by a long series of experiments, the superiority of wrought iron over every other description of material in security and strength, when judiciously applied in the construction of ships of every class. Other considerations, however, affect the question of vessels of war; and although numerous experiments were made, yet none of the targets were on a scale sufficient to resist more than a 6-pounder shot. It was reserved for our scientific neighbours, the French, to introduce thick iron plates as a defensive armour for ships. The success which has attended the adoption of this new system of defence affords the prospect of invulnerable ships of war, and hence the desire of the Government to remodel the Navy on an entirely new principle of construction, in order that we may retain its superiority as the great bulwark of the nation. A committee has been appointed by the War-office and the Admiralty for the purpose of carrying out a scientific investigation of the subject, so as to determine, first, the best description of material to resist projectiles; secondly, the best method of fastening and applying that material to the sides of ships and land fortifications; and, lastly, the thickness necessary to resist the different descriptions of ordnance.

It is asserted, probably with truth, that whatever thickness of plates is adopted for casing ships, guns will be constructed capable of destroying them. But their destruction will even then be a work of time, and I believe, from what I have seen in recent experiments, that with proper armour it would require, not only the most powerful ordnance, but also a great concentration of fire, before fracture will ensue. If this be the case, a well-constructed iron ship, covered with sound plates of the proper thickness, firmly attached to its sides, will, for a considerable time, resist the heaviest guns which can be brought to bear against it, and be practically shot-proof. But our present means are inadequate for the production of large masses of iron, and we may trust that, with new tools and machinery, and the skill, energy, and perseverance of our manufacturers, every difficulty will be overcome, and armour plates produced which will resist the heaviest existing ordnance. The rifling of heavy ordnance, the introduction of wrought iron, and the new principle of construction with strained hoops, have given to all countries the means of increasing enormously the destructive power of their ordnance. One of the results of this introduction of wrought iron and correct principles of manufacture, is the reduction of the weight of the new guns to about two-thirds the weight of the older cast-iron ordnance. Hence follows the facility with which guns of much greater power can be worked, while the range and precision of fire are at the same time increased. But these improvements cannot be confined to ourselves. Other nations are increasing the power and range of their artillery

in a similar degree, and the energies of the nation must, therefore, be directed to maintain the superiority of our Navy in armour as well as in armament.

We have already seen a new era in the history of the construction of bridges, resulting from the use of iron; and we have only to examine those of the tubular form over the Conway and Menai Straits to be convinced of the durability, strength, and lightness of tubular constructions applied to the support of railways or common roads in spans which ten years ago were considered beyond the reach of human skill. When it is considered that stone bridges do not exceed 150 feet in span, nor cast-iron bridges 250 feet, we can estimate the progress which has been made in crossing rivers 400 or 500 feet in width, without any support at the middle of the stream. Even spans greatly in excess of this may be bridged over with safety, provided we do not exceed 1,800 to 2,000 feet, when the structure would be destroyed by its own weight.

It is to the exactitude and accuracy of our machine tools that our machinery of the present time owes its smoothness of motion and certainty of action. When I first entered this city the whole of the machinery was executed by hand. There were neither planing, slotting, nor shaping-machines, and, with the exception of very imperfect lathes and a few drills, the preparatory operations of construction were effected entirely by the hands of the workmen. Now everything is done by machine tools with a degree of accuracy which the unaided hand could never accomplish. The automaton, or self-acting machine tool, has within itself an almost creative power; in fact, so great are its powers of adaptation, that there is no operation of the human hand that it does not imitate. For many of these improvements the country is indebted to the genius of our townsmen, Mr. Richard Roberts and Mr. Joseph Whitworth. The importance of these constructive machines is, moreover, strikingly exemplified in the Government works at Woolwich and at Enfield, chiefly arranged under the direction of Mr. Anderson, the present inspector of machinery, to whose skill and ingenuity the country is greatly indebted for the efficient state of those great arsenals.

Among the changes which have largely contributed to the comfort and enjoyment of life, are the improvements in the sanitary condition of towns. These belong probably to the province of social rather than mechanical science; but I cannot omit to notice some of the great works that have of late years been constructed for the supply of water and for the drainage of towns. In former days 10 gallons of water to each person per day was considered an ample allowance. Now, 30 gallons is much nearer the rate of consumption. I may instance the water-works of this city and of Liverpool, each of which yield a supply of from 20 to 30 gallons of water to each inhabitant. In the former case the water is collected from the Cheeshire and Derbyshire hills, and, after being conveyed in tunnels and aqueducts a distance of 10 miles to a reservoir, where it is strained and purified, it is ultimately taken a further distance of eight miles in pipes, in a perfectly pure state, ready for distribution. The greatest undertaking of this kind, however, yet accomplished is that by which the pure waters of Loch Katrine are distributed to the city of Glasgow. This work, recently completed by Mr. Bateman, who was also the constructor of the water works of this city, is of the most gigantic character, the water being conveyed in a covered tunnel a distance of 27 miles through an almost impassable country to the service reservoir, about eight miles from Glasgow. By this means 40 million gallons of water per day are conveyed through the hills which flank Ben Lomond, and after traversing the sides of Loch Chon and Loch Aird, are finally discharged into the Mudgock Basin, where the water is impounded for distribution. We may reasonably look forward to an extension of similar benefits to the metropolis, by the same engineer, whose energies are now directed to an examination of the pure fountains of Wales, from whence the future supply of water to the great city is likely to be derived. A work of so gigantic a character may be looked

upon as problematical, but when it is known that six or seven millions of money would be sufficient for its execution, I can see no reason why an undertaking of so much consequence to the health of London should not ultimately be accomplished.

In leaving this subject, I cannot refrain from an expression of deep regret at the loss which science has sustained through the death of one of our vice-presidents, the late Prof. Hodgkinson. For a long series of years he and I worked together in the same field of scientific research, and our labours are recorded in the *Transactions* of this and other Associations. To Mr. Hodgkinson we owe the determination of the true form of cast-iron beams, or section of greatest strength; the law of the elasticity of iron under tensile and compressive forces; and the laws of resistance of columns to compression. I look back to the days of our joint labour with unalloyed pleasure and satisfaction.

I regret to say that another of our Vice-Presidents, my friend, Mr. Joseph Whitworth, is unable to be present with us through serious, but I hope not dangerous illness. To Mr. Whitworth mechanical science is indebted for some of the most accurate and delicate pieces of mechanism ever executed; and the exactitude he has introduced into every mechanical operation will long continue to be the admiration of posterity. His system of screw threads and gauges is now in general use throughout Europe. We owe to him a machine for measuring with accuracy to the millionth of an inch, employed in the production of standard gauges; and his laborious and interesting experiments on rifled ordnance have resulted in the production of a rifled small arm and gun which have never been surpassed for range and precision of fire. It is with pain that I have to refer to the cause which deprives me of his presence and support at this meeting.

A brief allusion must be made to that marvellous discovery which has given to the present generation the power to turn the spark of heaven to the uses of speech; to transmit along the slender wire for a thousand miles a current of electricity that renders intelligible words and thoughts. This wonderful discovery, so familiar to us, and so useful in our communications to every part of the globe, we owe to Wheatstone, Thomson, De la Rive, and others. In land telegraphy the chief difficulties have been surmounted, but in submarine telegraphy much remains to be accomplished. Failures have been repeated so often as to call for a commission on the part of the Government to inquire into the causes, and the best means of overcoming the difficulties which present themselves. I had the honour to serve on that commission, and I believe that from the report, and mass of evidence and experimental research accumulated, the public will derive very important information. It is well known that three conditions are essential to success in the construction of ocean telegraphs—perfect insulation, external protection, and appropriate apparatus for laying the cable safely on its ocean bed. That we are far from having succeeded in fulfilling these conditions is evident from the fact that out of 12,000 miles of submarine cable which have been laid since 1851, only 3,000 miles are actually in working order; so that three-fourths may be considered as a failure and loss to the country. The insulators hitherto employed are subject to deterioration from mechanical violence, from chemical decomposition or decay, and from the absorption of water; but the last circumstance does not appear to influence seriously the durability of cables. Electrically, india-rubber possesses high advantages, and, next to it, Wray's compound and pure gutta percha far surpass the commercial gutta percha hitherto employed; but it remains to be seen whether the mechanical and commercial difficulties in the employment of these new materials can be successfully overcome. The external projecting covering is still a subject of anxious consideration. The objections to iron wire are its weight and liability to corrosion. Hemp has been substituted, but at present with no satisfactory result. All these difficulties, together with those connected with the coiling and paying out of the cable, will no doubt yield to care-

ful experiment and the employment of proper instruments in its construction, and its final deposit on the bed of the ocean. Irrespective of inland and international telegraphy, a new system of communication has been introduced by Prof. Wheatstone, whereby intercourse can be carried on between private families, public offices, and the works of merchants and manufacturers. This application of electric currents cannot be too highly appreciated, from its great efficiency and comparatively small expense. To show to what an extent this improvement has been carried, I may state that 1,000 wires in a perfect state of insulation, maybe formed into a rope not exceeding half-an-inch in diameter.

I must not sit down without directing attention to a subject of deep importance to all classes,—namely, the amount of protection inventors should receive from the laws of the country. It is the opinion of many that patent laws are injurious rather than beneficial, and that no legal protection of this kind ought to be granted: in fact, that a free trade in inventions, as in everything else, should be established. I confess I am not of that opinion. Doubtless there are abuses in the working of the patent law as it at present exists, and protection is often granted to pirates and impostors, to the detriment of real inventors. This, however, does not contravene the principle of protection, but rather calls for reform and amendment. It is asserted by those who have done the least to benefit their country by inventions, that a monopoly is injurious, and that if the patent laws are defended, it should be, not on the ground of their benefit to the inventor, but on that of their utility to the nation. I believe this to be a dangerous doctrine, and I hope it will never be acted upon. I cannot see the right of the nation to appropriate the labours of a lifetime, without awarding any remuneration. The nation, in this case, receives a benefit; and assuredly the labourer is worthy of his hire. I am no friend of monopoly, but neither am I a friend of injustice; and I think that before the public are benefited by an invention, the inventor should be rewarded either by a fourteen years' monopoly, or in some other way. Our patent laws are defective, so far as they protect pretended inventions; but they are essential to the best interests of the State in stimulating the exertions of a class of eminent men, such as Arkwright, Watt and Crompton, whose inventions have entailed upon all countries invaluable benefits, and have done honour to the human race. To this Association is committed the task of correcting the abuses of the present system, and establishing such legal provisions as shall deal out equal justice to the inventor and the nation at large.

I must not forget that we owe very much to an entirely new and most attractive method of diffusing knowledge, admirably exemplified in the Great Exhibition of 1851, and its successors in France, Ireland and America. Most of us remember the gems of Art which were accumulated in this city during the summer of 1857, and the wonderful results they produced on all classes of the community. The improvement of taste, and the increase of practical knowledge which followed these Exhibitions have been deeply felt; and hence the prospects which are now opening before us in regard to the Exhibition of the next year cannot be too highly appreciated. That Exhibition will embrace the whole circle of the sciences, and is likely to elevate the general culture of the public to a higher standard than we have ever before attained. There will be unfolded almost every known production of art, every ingenious contrivance in machinery, and the results of discoveries in science from the earliest period. The fine arts, which constituted no part of the Exhibition of 1851, and which were only partially represented at Paris and Dublin, will be illustrated by new creations from the most distinguished masters of the modern school. Looking forwards, I venture to hope for a great success and a further development of the principle advocated by this Association—the union of Science and Art.

In conclusion, my apologies are due to you for the length of this address, and I thank you sin-

cereally for the patient attention with which you have listened to the remarks I have had the honour to lay before you. As the President of the British Association, I feel that far beyond the consideration of merely personal qualifications, my election was intended as a compliment to practical science, and to this great and influential metropolis of manufacture, where those who cultivate the theory of science may witness, on its grandest scale, its application to the industrial arts. As a citizen of Manchester, I venture to assure the Association that its intentions are appreciated; and to its members, as well as to the strangers who have been attracted here by this meeting, I offer a most cordial welcome.

In the morning, a Meeting of the General Committee had been held in the Town Hall. Prof. PHILLIPS read the following—

Report of the Council.

1. The Council were directed by the General Committee at Oxford to maintain the establishment of the Kew Observatory by aid of a grant of 500*l*. At each of the meetings of the Council the Committee of the Observatory have presented a detailed statement of their proceedings, and they have transmitted the General Report for the year 1880-1881, which is annexed.

2. A sum not exceeding 90*l*. was granted for one year, and placed at the disposal of the Council, for the payment of an additional photographer for carrying on the photolithographical observations at Kew. On this subject the Report of the Kew Committee may be consulted.

3. A further sum of 30*l*. was placed at the disposal of Mr. Brown, Dr. Lloyd, and Mr. Stoney, for the construction of an induction dip-circle in connexion with the Observatory at Kew. The result of this recommendation is stated in the Report of the Kew Committee.

4. The Report of the Parliamentary Committee has been received by the Council for presentation to the General Committee to-day, and is printed for the information of the members.

5. Prof. Phillips was requested to complete and print, before the Manchester Meeting, a Classified Index to the *Transactions* of the Association from 1831 to 1880 inclusive, and was authorised to employ during this period an assistant; and the sum of 100*l*. was placed at his disposal for the purpose. Prof. Phillips reports that he has secured the assistance of Mr. G. Griffith, of Jesus College, Oxford, in carrying on the index, which had been already much advanced by the help of Mr. Askham, and states that with the aid thus afforded he had hoped to be able to complete the work within the time specified. Though this expectation has not been realized, specimens of the work are laid before the Meeting.

6. Prof. Phillips requested the attention of the Council to circumstances regarding his own health and occupations, which are gradually rendering it necessary for him to prepare to withdraw from the duties of the Assistant General Secretary, which have been for many years intrusted to him, and suggested that opportunity might be taken of this announcement to consider whether the arrangements connected with the secretariate should remain unchanged, or be modified. The Council regret to have received letters from Prof. Walker, General Secretary, dated the 15th of March and 20th of April, stating that, on account of indisposition which required cessation from labour, it would not be in his power to continue his attention to the official business of the Association. Under those circumstances the Council requested Prof. Phillips to draw up in writing such statements and suggestions as might appear to him likely to assist the Council in considering the steps to be taken in consequence of these announcements. The statement drawn up by Prof. Phillips, in consequence of this request, is printed for the information of the Members.

7. The communication of Prof. Phillips in reference to the appointment of a General Secretary having been considered, the following resolution was adopted:—"That the President and the gentlemen who have formerly acted as General Secretaries—viz., the Rev. W. V. Harcourt, Sir R. I. Murchison, and Major-General Sabine, together with Prof. Phillips, be a committee to consider and report the steps which they deem it advisable for the Council to take in regard to the appointment of a General Secretary; and that their Report be printed and circulated among the Members of Council previous to their Meeting in Manchester on the 4th of September next."

By the following Report, which has been received from these gentlemen, the General Committee will learn with satisfaction that if it be their pleasure to elect him, the services of a most efficient and experienced Member, who has discharged many offices, including the Presidency, with great benefit to the Association, are at their disposal for the duty of General Secretary:—

"Report of the Rev. W. V. Harcourt, Sir R. I. Murchison, and Major-General Sabine.

"Considering the present state of health of the General Secretary of the British Association, the Rev. Prof. Walker, F.R.S., and the announced withdrawal at no distant period of Prof. John Phillips, F.R.S., from the post of Assistant General Secretary, which he has so long held, and with such very great advantage to the British Association, we, the undersigned, as requested by the Council to propose some suitable arrangement, have now to express our unanimous opinion that Mr. William Hopkins, F.R.S., of St. Peter's College, Cambridge, is eminently qualified to fill the post of Joint General Secretary. We beg to add that, having applied to Mr. Hopkins, we find that he cordially accepts

the offer, and, with the sanction of the Council, will be ready to commence his duties at the ensuing Manchester Meeting. The consideration of the future relation of Prof. Phillips to the British Association is postponed, in compliance with his own request.

"WILLIAM VERNON HARCOURT, RODERICK I. MURCHISON, EDWARD SABINE, Former General Secretaries.

"July 25, 1881."

The Council have resolved, in conformity with the recommendation of this Report, to propose to-day in the General Committee that W. Hopkins, Esq., M.A., F.R.S., be elected General Secretary.

8. The following foreign gentlemen, eminent in science, who were present at the late Oxford Meeting, and took part in the proceedings, were elected Corresponding Members of the British Association:—Dr. Bergama, Utrecht; Dr. Carnus, Leipzig; Prof. A. Favre, Geneva; Dr. Geinitz, Dresden; Dr. Hochstetter, Vienna; M. Khanikoff, St. Petersburg; M. Werner Siemens, Vienna; Prof. B. Pierce, Cambridge, United States; Prof. E. Verdet, Paris.

9. Major-General Sabine communicated a copy of the Statutes of the Humboldt Foundation, now definitely organized, and of a circular issued by the Committee, announcing that about 8,000*l*. had been secured as a capital fund, and that about 260*l*. will be available in the year 1882 for the general object of assisting researches in Natural Science and Travel, in which Humboldt was conspicuously active. The disposition of the fund rests with the Royal Academy of Sciences of Berlin, and is open to applications from scientific travellers of all nations.

10. The Council are informed that invitations will be presented to the General Committee at its Meeting, on Monday, September 9, to hold the next Meeting in Cambridge. The invitations formerly offered on the part of Birmingham and Newcastle-on-Tyne will be renewed on this occasion; and other invitations will be presented from Bath and Nottingham.

Prof. PHILLIPS read a letter from Prof. Walker, as follows:—

It is with the deepest regret that I give up my intention of visiting Manchester at the meeting of the British Association. I had hoped to have resigned the office of Secretary in person, and to have expressed as well as I could my sense of the honour that had been conferred on me, and my thanks for the confidence that was placed in me; but I am forbidden, and I must submit to God's will. I must, therefore, beg of you to be so kind as to convey to the General Committee my regrets, and to inform them of my inability to discharge the duties of General Secretary. At the same time, let me congratulate them that one so eminent as Mr. Hopkins has consented to supply my place. Most gladly do I resign in favour of one so competent.—Believe me, yours truly,

ROBERT WALKER.

His resignation was accepted, and Mr. Hopkins elected to the vacant office.

Mr. NINNIS read the financial statement:—

The General Treasurer's Account,

From June 27, 1880 (at Oxford), to September 2, 1881 (at Manchester).

RECEIPTS.		£.	s.	d.

		£8,754	13	3

Mr. GASSIOT presented the

Report of the Kew Committee.

The Committee of the Kew Observatory beg to submit to the Association the following Report of their proceedings during the past year.

It was noticed in a previous Report that General Sabine had undertaken to tabulate the hourly values of the magnetic elements from the curves given by these instruments. These values have been reduced under his superintendence, and some of the results have been embodied in the following papers which he has communicated to the Royal Society.

1. On the Solar-diurnal Variation of the Magnetic Declination at Pekin.—Proceedings of the Royal Society, vol. x. p. 300. 2. On the Laws of the Phenomena of the larger Disturbances of the Magnetic Declination in the Kew Observatory: with notices of the progress of our knowledge regarding the Magnetic Storms.—Proceedings of the Royal Society, vol. x. p. 624. 3. On the Lunar-diurnal Variation of the Magnetic Declination obtained from the Kew Photographs in the years 1858, 1859 and 1860.—Proceedings of the Royal Society, vol. xi. p. 73.

The Superintendent, Mr. Stewart, has also communicated to the Royal Society a description of the great magnetic storm at the end of August and beginning of September 1859, deduced from the Kew Photographs.

Mr. Chambers continues to be zealously employed in the magnetical department, and attends to the self-recording magnetographs, which have been maintained in constant operation.

The usual monthly absolute determinations of the magnetic elements continue to be made, and the dip observations from November 1857 to the present date (292 in all), a large portion of which were made by the late Mr. Welsh and Mr. Chambers, have been made available by General Sabine in connexion with some previous observations of his own for determining the secular change in the magnetic dip in London, between the years 1821 and 1860. See Proceedings of the Royal Society, vol. xi. p. 144.

The instruments for the Dutch Government alluded to in the last Report have been verified at Kew and taken away. They consisted of a set of self-recording magnetographs with a tabulating instrument, two dip circles, and one Fox's dip circle for Dr. Bergama; also of two unifilar, one for Dr. Bergama and one for Dr. Buys Ballot.

Shortly after the despatch of these instruments, another set of self-recording magnetographs were received at Kew, in order to be tested previous to their being sent to Dr. Bahe, of the United States, and these were despatched in the early part of this year to America, along with a tabulating instrument, a unifilar, and dip-circle, all of which were verified at Kew.

The staff at Kew are at present occupied with a third set of these instruments, along with a dip-circle and unifilar, for the University of Coimbra; and Prof. Da Souza of that University is engaged at present at the Kew Observatory in examining his instruments, and in receiving instructions regarding them.

It will thus be seen that no fewer than three sets of these instruments have been furnished during this last year, under the superintendence of the Committee, and it has hitherto been deemed advisable for the interests of science that no charge should be made for their verification. As this, however, is an operation involving labour and a large expenditure of time, an application was made to the Royal Society for the sum of 90*l*. from the Donation Fund, in order to cover the expense of verifying these three sets of instruments, while it was arranged that in future a charge of 30*l*. for verification should be added to the cost of each set. This sum was at once granted by the Council of the Royal Society, and it will be found among the receipts in the financial statement appended to this Report.

In addition to the instruments already mentioned, the following have also been verified at Kew Observatory:—For the Havana Observatory, a set of differential magnetic instruments, also a unifilar, dip-circle, and an altitude and azimuth instrument for absolute determinations of the magnetic elements. For Dr. Smallwood, Montreal, a unifilar, dip-circle, and differential declinometer. For the Astronomer Royal, Greenwich, a 9-inch unifilar. For the Rev. W. Scott, Sydney, a unifilar and dip-circle. For Dr. Livingstone, Africa, a unifilar, dip-circle and azimuth compass. For Mr. Jackson, Bath, of Science, Ceylon, a unifilar and dip-circle.

Mr. Jackson and M. Capello, of the Lisbon Observatory, have also received instruction at Kew in the use of instruments.

The meteorological work of the Observatory continues to be performed in a satisfactory manner by Mr. George Whipple; and here the Committee desire to mention that both from the report of the Superintendent, and from their own observation, each member of the staff at present attached to the establishment seems to interest himself in the duties he is called upon to discharge.

During the past year, 150 barometers, 660 thermometers and 8 hydrometers have been verified at the Observatory. Seven standard thermometers have also been constructed and disposed of. Dr. Bergama and Dr. Buys Ballot were each presented with one of these instruments.

For some time telegraphic reports of the meteorological elements were daily sent to Admiral FitzRoy's office, the expense being defrayed by the Board of Trade; but these despatches were ultimately discontinued, on account of the Board of Trade having only a limited sum disposable for meteorological telegraphy, and Kew being too near London to prove a useful station.

At the last meeting at Oxford it was announced that the

Kew Heliograph was about to be transported to Spain for the purpose of photographing, if possible, the so-called red flames visible on the occasion of a total solar eclipse. That the mission had most successfully accomplished the object contemplated was known in England on the morning of the 10th of July, 1860 (the day after the eclipse), by the publication in the *Times* newspaper of a telegram sent by Mr. Warren De La Rue from Rivabellosa, near Miranda, where the Kew party were stationed.

It will be remembered that, at the suggestion of the Astronomer Royal, the Admiralty had placed at the disposal of the expedition of astronomers H.M. ship *Himalaya*, and that the Government Grant Committee of the Royal Society had voted the sum of 160*l.* for the purpose of defraying the expenses of transporting the Kew Heliograph with a staff of assistants to Spain. As the scheme became matured, it was deemed desirable to extend considerably the preparations originally contemplated, and actual experience subsequently proved that no provision which had been made could have been safely omitted. Originally it was thought that a mere temporary tent for developing the photographs might have answered the purpose; but on maturing the scheme of operations, it became evident that a complete photographic Observatory, with its dark developing room, cistern of water, sink, and shelves to hold the photographs, would be absolutely necessary to ensure success. An Observatory was therefore constructed in such a manner that it could be taken to pieces and made into packages of small weight for easy transport, and at the same time be readily put together again on the locality selected. The house when completed weighed 1248*lb.*, and was made up in eight cases. Altogether the packages, including house and apparatus, amounted in number to thirty, and in weight to 34 cwt. Besides the Heliograph, the apparatus comprised a small transit theodolite for determining the position of the meridian, and ascertaining local time, and the latitude and longitude of the station, and also a very fine three-inch achromatic telescope, by Dallmeyer, for the optical observation of the phenomena of the eclipse. Complete sets of chemicals were packed in duplicate in separate boxes, to guard against failure through a possible accident to one set of the chemicals. Collodion of different qualities was made sensitive in London, and some was taken not rendered sensitive, so as to secure as far as possible good results. Distilled water, weighing 139*lb.*, had to be included; and engineers' and carpenters' tools, weighing 118*lb.*, were taken. Mr. Cassella lent some thermometers and a barometer, and Messrs. Elliott an aneroid barometer to the expedition.

The preparations were commenced by Mr. Beckley (of the Kew Observatory) early in the year 1860; and in June Mr. De La Rue engaged Mr. Reynolds to assist Mr. Beckley in completing them. Mr. Beckley and Mr. Reynolds were charged with the erection of the Observatory at Rivabellosa; and so well were the plans organized that the Observatory and Heliograph were in actual operation on the 12th of July, the expedition having sailed from Plymouth in the *Himalaya* on the morning of the 7th. This could not, however, have been so expeditiously accomplished without the energetic co-operation of Mr. Vignoles, who met the expedition in a small steamer he had chartered to convey the expedition and their apparatus into the port of Bilbao, and who despatched the Kew apparatus as soon as it was landed to the locality he and Mr. De La Rue had agreed upon. This was situated seventy miles distant from the port of landing, and accessible only through a difficult pass. Mr. Vignoles had also taken the trouble to make arrangements for accommodating the Kew party, and for the due supply of provisions—a matter of some importance in such a locality.

Besides Mr. De La Rue, Mr. Beckley and Mr. Reynolds, the party consisted of Mr. Downes and Mr. E. Beck, two gentlemen who gave their gratuitous services, and of Mr. Clark, who acted as interpreter, also kindly assisting during the eclipse. Each of the party had only one thing to attend to, and thus rapidity of operation and certainty of result were secured. The total expenditure of this expedition amounted to 512*l.*; the balance of 362*l.* over the amount granted by the Royal Society has been generously defrayed by Mr. De La Rue.

Upwards of forty photographs were taken during the eclipse and a little before and after it, two being taken during the totality, on which are depicted the luminous prominences with a precision impossible of attainment by hand drawings. The measurements which have been made of these prominences by Mr. De La Rue show incontrovertibly that they must belong to the sun, and that they are not produced by the deflection of the sun's light through the valleys of the moon. The same prominences, except those covered over during the moon's progress, correspond exactly when one negative is laid over the other; and by copying these by means of a camera, when so placed, a representation is obtained of the whole of the prominences visible during the eclipse in their true relative position. The photographs of the several phases of the eclipse have served to trace out the path of the moon's centre in reference to the sun's centre during the progress of the phenomenon. Now, Rivabellosa being north of the central line of the moon's shadow, the moon's centre did not pass exactly across the sun's centre, but was depressed a little below it, so that a little more of the prominences situated on the north (the upper) limb of the sun became visible than would have been the case exactly under the central line, while, on the other hand, a little of those on the southern limb was shut off. It has been proved by measuring the photographs, that the moon during the totality covered and uncovered the prominences to the extent of about 94' of arc in the direction of her path, and that a prominence situated at a right angle to the path shifted its angular position with respect to the moon's centre by lagging behind 5' 55". On both the photographs is recorded a prominence, not visible optically, showing that photography can render visible phenomena which without its aid would

escape observation. Copies of the two totality pictures are being made to illustrate Mr. De La Rue's paper in the Report of the Himalaya Expedition by the Astronomer Royal. Positive enlarged copies of the phases of the eclipse, 9 inches in diameter, have also been made by means of the camera, and will be exhibited at the Manchester Meeting.

The Heliograph has since been replaced in the Observatory, but few opportunities have occurred for using it in consequence of the pressure of other work; latterly, however, Mr. Beckley has been requested to carry on some experiments with the view of ascertaining whether any more details are rendered visible when the full aperture of 8 inches of the telescope is used, than when it is reduced to about one inch and a half. Up to the present time no definite conclusion can be drawn from the results obtained; so that, at all events, an increase of aperture does not appear to give a strikingly better result when a picture of the same size is taken with various apertures of the object-glass. More experiments, however, are needed before this point, which is one of some importance in guiding us in the construction of future instruments, can be answered definitely. Mr. Beckley has obtained sun pictures of great beauty during the course of these experiments.

The work of the Kew Observatory is now so increased that it has become absolutely imperative to make some provision for working the Heliograph in a way that will not interfere with the current work of that establishment; and Mr. De La Rue has been requested by his colleagues of the Kew Committee to take charge of the instrument at his Observatory, where celestial photography is continuously carried on. This request Mr. De La Rue has kindly acceded to; and he will for a time undertake to record the sun spots at Cranford, as long as it is found not to interfere with his other observations. Mr. De La Rue has contrived, and had made by Messrs. Simms, at his own expense, an instrument for measuring the photographs, which will much facilitate the reduction of the results. It consists of a fixed frame in which work two slides, moving at right angles to each other. Each is furnished with a vernier reading to 1/100th of an inch. The top slide works on the lower slide, and carries a hollow axis 4 1/2 inches diameter, on which rotates horizontally a divided circle reading to 10', and this carries a second circle on the face of which are fixed four centering screws. An image intended to be measured is placed on the upper circle, and is centered by means of the adjusting screws; it is then adjusted by means of the upper circle in any required angular position with respect to the lower divided circle, so as to bring the cross lines of the photograph in position under a fixed microscope, supported on an arm from the fixed frame. By means of this instrument the sun pictures are measured so as to determine the diameter to 1/100th of the radius; the angular position of any part of a sun spot and its distance from the centre are thus readily ascertained; or the differences of the right ascension and declination with respect to the centre are as easily read off to the same degree of accuracy.

Mr. De La Rue has recently produced by his large telescope an image of a solar spot, and portion of the sun's disc, far superior to anything before effected, and which leads to the hope that a new era is opened in heliography, and that the resources of this Observatory might be further developed in that direction.

At the last Meeting of the Association the sum of 90*l.* was voted for an additional photographer, and of this sum 50*l.* has been received. The Committee suggest that the balance of 40*l.* be granted again at this Meeting, as the full sum will be required during the ensuing year. A detailed account of this expenditure will be presented in the next Annual Report.

Allusion was made in last Report to an instrument constructed by Prof. William Thomson, of Glasgow, for determining photographically the electric state of the atmosphere. This instrument has been fitted up at Kew, where it has been in constant operation since the beginning of February last. It has been found to answer well in a photographic point of view, and Prof. Thomson has expressed himself much pleased with the results obtained. The mechanical arrangements connected with the fitting up of this instrument were devised and executed with much skill by Mr. Beckley, the Mechanical Assistant, who has also recently made a working drawing of the instrument for Prof. Thomson, who intends to publish a description of it.

The arrangements made by Mr. Francis Galton, in the Observatory Park, for testing sextants, and which were alluded to in last Report, are now almost complete; and six sextants sent by Capt. Washington, R.N., Her Majesty's Hydrographer, have been verified.

The Observatory was honoured with a visit from His Imperial Highness Prince Napoleon, on the 9th of September last. His Highness expressed much satisfaction at witnessing the efficient state of the Institution.

Application has been made to the Commissioners for the International Exhibition of 1862, for a space of 40 feet by 20, in which to exhibit as many as possible of the instruments in use at the Observatory, including those which are self-recording.

The Committee desire to express their thanks for a valuable addition which has been made to the Library at Kew, consisting of a very large number of the Greenwich publications, presented to them through the kindness of the Astronomer Royal.

It will be observed by the annexed statement, that the expenditure of last year has exceeded the income by about 90*l.*; but as this year comprised five quarters, it is hoped that the usual annual grant of 500*l.* will cover the expense until the next Meeting of the Association.

JOHN P. GABRIEL, Chairman.

Kew Observatory, August 30, 1861.

Accounts of the Kew Committee of the British Association, from June 18, 1860, to September 4, 1861.

RECEIPTS.		£.	s.	d.
Balance from last Account	..	11	8	5
Received from the General Treasurer	..	500	0	0

For the verification of Instruments—		£.	s.	d.

		£798	12	8

I have examined the above account and compared it with the vouchers presented to me, and I find that the amounts expended exceed those received by the sum of 79*l.* 8*s.* 7*d.*; and that the expenditure for salaries, &c. this year is for one year and a quarter, that in the last account having been for three quarters of a year only.

R. HUTTON.

16th August, 1861.

Prof. PHILLIPS read the

Report of the Parliamentary Committee.

The Parliamentary Committee have the honour to report that on the 19th of July they met the Steam Performance Committee, by appointment, at the Admiralty, and had, in company with the members of that Committee, an interview with the Duke of Somerset.

That in the course of that interview the chairman of your Committee shortly explained the motives which had induced the British Association to appoint the Steam Performance Committee, and called upon Mr. Fairbairn, who thereupon stated and explained the principal suggestions contained in the report of the Steam Performance Committee, which had been prepared and agreed upon, and will be presented to this meeting; and urged upon his Grace the expediency of carrying them into effect.

The Duke of Somerset, in reply, stated certain objections which he entertained to some of the suggestions, founded chiefly upon the circumstances that sufficient time could not be allowed for the various experiments consistently with the interests of the service, and that the ships of the Royal Navy only employed steam occasionally, and only as an auxiliary power; but his Grace was understood to agree to supply such information to the scientific public as could be done without improperly interfering with the performance of ordinary duties.

The Dukes of Devonshire and Argyll, the Earls of Enniskillen, Harrowby, Rose, and Greig, Lord Stanley and Sir J. Pakington must be considered as having vacated their seats in your Committee in pursuance of the resolution adopted at Liverpool in 1854; but your Committee recommend that they should be re-elected. Your Committee also recommend that the two vacancies in the House of Commons' List be filled by the election of Sir Joseph Paxton and Lieutenant-Colonel Sykes.

WROTTESELEY, Chairman.

Sir Joseph Paxton and Lieut.-Col. Sykes were elected members of the Parliamentary Committee.

Prof. Phillips read a list of the Presidents, Vice-Presidents and Committees of Sections, but this list was incomplete, and must be reserved for next week, when it can be given in full.

SCIENTIFIC MISSION OF MM. DE SCHLAGINTWEIT.

Tunbridge Wells, Sept. 2, 1861.

IN a review of the Results of the Scientific Mission of the Messrs. de Schlagintweit to India, published in the *Athenæum* of the 17th of August, it is stated, that they were charged with that duty, "at the earnest recommendation of General Sabine and Sir Roderick Murchison, on the part of the Royal Society." The writer then adds, "There is a strong suspicion abroad, that the appointment was one of the grossest jobs that ever disgraced the annals of science." Again, in another paragraph, when speaking of the cost of completing the publication of a work of which one volume only has been issued, the reviewer says, "we trust that before it is granted, scientific men will be consulted who

have not received any Prussian decorations." Now, as I was wholly unconscious of having been in any way authorized by the Council of the Royal Society to take such a step, and as I never received any Prussian order, I begged General Sabine to be so good as to write to me an explanatory letter on the subject. The accompanying letter from him, which I beg you to print *in extenso*, shows clearly that I had nothing whatever to do with the recommendation of the Royal Society, which related exclusively to Terrestrial Magnetism.

As my illustrious friend Baron Humboldt had spoken and written to me in terms highly commendatory of the powers of the Brothers Schlagintweit, as physicists who had made excellent observations in the Alps, I had no hesitation in quoting the authority of that illustrious man in any personal reference which may have been made to myself; but as regards the appointments which the Schlagintweits held in India, the East India Company alone can give the proper explanation.

As soon, however, as these gentlemen returned to Europe with proofs of their having penetrated considerably beyond the Karakorum chain—hitherto the limit of British exploration—I felt it to be my duty to do them justice for their enterprise, and I recorded my sentiments in the Anniversary Address of the Royal Geographical Society of 1857.

RODERICK I. MURCHISON.

13, Ashley Place, Aug. 30, 1861.

Dear Murchison,—On my way through London I have looked into the Minutes of Council of the Royal Society, and am now able to inform you authentically of the circumstances which led to the mission of the Messrs. de Schlagintweit.

The suggestion of a Magnetic Survey of India originated with myself, and was first made in 1838 in my Report 'On the Magnetic Variations on the Globe,' read to the British Association at Newcastle in that year. The suggestion was favourably received by the Association, and the co-operation of the Royal Society was asked and obtained in bringing it under the notice of the Court of Directors. In January, 1846, Capt. Elliot, of the Madras Engineers, was appointed by the Court to make a magnetic survey of the Indian Archipelago, preparatory to the extension of the survey to the continent of India. Capt. Elliot completed this preliminary portion in 1849; and his report was sent by the Court of Directors, in 1851, to the Royal Society, accompanied by a proposal, that it should be printed in the *Philosophical Transactions* at the joint expense of the Royal Society and the Court of Directors. This was acceded to, and the report published accordingly. On the further recommendation of the Royal Society, the Court of Directors authorized Capt. Elliot to return to India for the purpose of completing the continental portion of the survey. The progress of this work was interrupted by the decease of Capt. Elliot, which took place at Madras in 1852. In a letter to the Secretary of the Royal Society, the Secretary of the Court of Directors apprised the President and Council of the Royal Society that "the Court will instruct the Government of Madras to carry out the investigation so unfortunately interrupted by the death of Capt. Elliot, as soon as the services of a competent officer are available for that purpose."

In the same year (1853), the Earl of Rosse, then President of the Royal Society, received a communication from Chevalier Bunsen, then Prussian Minister at the British Court, tendering the services of the Messrs. de Schlagintweit "for the purpose of exploring the Himalayan range in behalf of a more complete knowledge of telluric magnetism, and many other branches of terrestrial physics, towards which purposes the King of Prussia proposed to grant them pecuniary allowances." This letter was transmitted by Lord Rosse to the Court of Directors, through the Secretary of the Royal Society; and was replied to by the Secretary of the Court of Directors, who "was commanded to state that the East India Company regard all such missions with great satisfaction; and that the Court of Directors propose to instruct the Government of India, in the event of their having no officer available for carrying out the objects left unfinished by Capt. Elliot, to apply to the Messrs. de

Schlagintweit to ascertain if one of those gentlemen would undertake the duty; and if so to place the instruments at his disposal, and to grant him a suitable allowance for the purpose."

No official communication was made to the Council of the Royal Society of the reply made by the Government of India to the instruction referred to in the last paragraph; but it was understood from private information that Lord Dalhousie stated, that no officer had volunteered to undertake the completion of the duty left unfinished by Capt. Elliot,—and that no officer competent to such an undertaking could, in the then circumstances of India, be spared from military duty. In consequence of this reply application was made by the Court to the Messrs. de Schlagintweit, and on the 30th of March, 1854, the Secretary of the Royal Society received, "by command of the Court of Directors, for communication to the Council of the Royal Society, the copy of a letter from Mr. Adolphe Schlagintweit, with an inclosure descriptive of his proposed operations in completing the magnetic survey of India." With the addition that "The Court will be glad to be furnished with such observations thereon as the Council of the Royal Society may think it necessary to make for the Court's information."

On the receipt of this communication the Council of the Royal Society passed the two following resolutions, viz.:—

"Resolved,—That the Secretary be requested to express the satisfaction which the President and Council have derived from this communication, and their hope that the completion of this undertaking, in the hands in which it is now placed, will be as advantageous to magnetical science, and as creditable to the Court of Directors, as was the magnetic survey of the Indian Archipelago, so successfully accomplished by the late lamented Capt. Elliot."

"Resolved,—That a sub-committee, consisting of Col. Sabine, Dr. Hooker, and Mr. Charles Darwin, be appointed, to whom the consideration of Mr. de Schlagintweit's proposed operations be referred."

Dr. Hooker, Mr. Charles Darwin, and myself were all three members of the Council whilst the preparations were in progress for the Messrs. de Schlagintweit's departure. I was glad to be able, on my part, to render them the same assistance in the preparation of their magnetical instruments that I had previously given to Capt. Elliot; and to assist in discussing with them the observations most important to be made, the proper distances between their stations, and the modes of combining the observations at the several stations in such manner as to give the most advantageous results for the direction, and the distances apart of the lines of equal declination, dip, and total force. Such services on my part were limited to the proposed magnetic operations, inasmuch as the Messrs. de Schlagintweit, from their own experience, stood very little in need of any assistance they could obtain from me in other departments of physical science, —and on such they had, moreover, the far greater advantage of the suggestions of Dr. Hooker and Mr. Darwin, to whom they could refer as members of the same sub-committee as myself.

I do not find any further notice in the Council Minutes of the mission of the Messrs. de Schlagintweit until their return from India, when a communication was received from them, requesting permission to dedicate to the Royal Society the first volume of their researches, containing their magnetical survey of India, in recognition, as was stated, of the "labours of many of the distinguished members of the Royal Society, by which it has so essentially and energetically promoted the science of magnetism."

I have ascertained, by an examination of the lists of the Council in different years, that it so happened that you were not on the Council on any of the occasions in which the mission of the Messrs. de Schlagintweit came before the Council. Two, at least, of these gentlemen, Dr. Hermann and Dr. Adolphe Schlagintweit, were well known, previous to their undertaking the mission to India, by their published researches in the Eastern and Western Alps, as diligent, laborious, and accomplished natural

philosophers; and it is quite possible that, whilst their preparations were in progress, communications regarding subjects of more general interest than magnetism may have been made to the Court of Directors by other Societies, or by individuals not officially connected with the Royal Society; but I know of none such. Your name does not appear anywhere in the Minutes of the Council of the Royal Society in reference to the subject, nor have I any recollection of having heard that you were concerned in any recommendation made at the time to the Court of Directors.

I should fail, however, in what I feel to be due to those gentlemen, if I should conclude these few remarks without bearing testimony to the admirable manner in which they have executed the magnetic portion of their undertaking. They have undoubtedly not spared themselves in any way; their researches are spread over the whole extent of the British dominions in India, and even considerably beyond the limits of our possessions: they have surmounted many difficulties which would have stopped less enterprising travellers, and persevered even to the loss of life of one of the Brothers. As a scientific work, their survey has been conducted with a full knowledge of the most recent advances of magnetical science; and the publication is executed in its details according to the most approved German models of their distinguished countrymen, Kreil and Lamont. The volume now published contains only the magnetic portion of their researches; it is understood that it is to be followed by eight other volumes, equal in magnitude, treating of other branches of physical science. Should the contents of these equal in interest and value the magnetic volume, they will have achieved a work which will long be held as most honourable to themselves, and to those who in their time exercised the sovereignty in India.

Regarding the pecuniary question,—the cost of their journeys, or their personal recompense,—or what portion of it may have been borne by the King of Prussia,—I have no knowledge whatever. It was not the custom of the Court of Directors to consult the Royal Society on such points, nor of the Royal Society to offer recommendations on them.

EDWARD SABINE.

WHALES AND WHALING.

8, Liddington Place, Oakley Square, Aug. 28, 1861.

I have been absent in the country, where I could not refer to notes or journals, or should sooner have requested your kind insertion of a few observations upon Professor Owen's notice [*Athen.* No. 1763] of my communication about whales, in which he points out that the "Baleine du Cap" of Cuvier is specifically distinct from the *Mysticetus*. Premising that in any remarks I may venture to make upon the subject, I do not for a moment presume to undervalue the specific distinctions of comparative anatomists, I may observe, that in the admitted scanty state of scientific information upon the subject, we are scarcely justified in assuming that the "Baleine du Cap" of Cuvier is the only species of Right Whale in the Southern Seas. Dieffenbach,† in his work upon New Zealand, published in 1843, gives a drawing of a true Right Whale, said to be a new species, which was sixty feet in length; and this differs in form from Right Whales captured off Twofold Bay, and sketched by myself. Since Cuvier wrote, the Americans have opened up new whaling grounds, from the Sea of Okhotsk to the Gulf of Anadir and Behring's Straits. Here then is a line of whaling communication from Behring's Straits right down past the coast of Japan, to the verge of the Tropics, along the whole extent of which Right Whalebone Whales are found. I do not know whether we have any evidence that the northern whale taken in Behring's Straits does not continue through the Gulf of Anadir, and so down to the southward; but it seems probable that in whaling grounds so connected there are whales of the same species. My own observations, extending over some years in the South Seas, lead me to think that different kinds of whales migrate at particular

† 'Travels in New Zealand,' by Ernest Dieffenbach, M.D., vol. ii., p. 176.

seasons, and that some species have a wider geographical range than is at present supposed. The Right Whale taken off Twofold Bay generally makes its appearance on that part of the coast of Australia about the end of May or beginning of June; first one or two, the numbers increasing until the middle and end of September, after which they begin to leave, and finally disappear by the end of November. In some seasons comparatively few Right Whales are seen; in 1846-47 they came in much greater numbers than in the three preceding years. It was generally found that they came up to the coast and into the bays in greater numbers after strong breezes off the land. During fine weather and when not alarmed, they would remain in the bays all night, ranging round and approaching very near the rocks. The whalers say they do this to rub off the barnacles with which they are often thickly encrusted about the head. The Humpback remains upon the coasts all the year round, but appears in greatest numbers during the Right Whaling season. I have seen it at Trinity Bay on the N.E. coast of Australia in lat. 16° 30' S. On one occasion, when we were anchored there in H.M.S. Rattlesnake, a whale of this kind "breached" clear out of the water near the ship, and I have also seen it in the Straits of Magellan. The greatest number of whales I ever saw at one time appeared to be making a passage: it was in the month of August, 1850, while on board H.M.S. Mæander, running down from Tahiti. We had strong easterly breezes—at times blowing violently—for several days; but as we neared the coast of Chili, the wind drew round to N.W. and fell light, and the weather became very fine. On the morning of the 22nd it was quite calm, and soon after daylight numbers of whales were seen coming up towards the ship from the westward. They approached in a very leisurely manner, rising easily, the top of the head (which at this part forms a sharp ridge) and blow-holes first appearing on the surface of the water, then the huge length of back, with its fin near the flukes or tail. They did not seem at all alarmed by the vessel, some of them rising close to the ship. The scene at this time was most extraordinary: the frigate steaming along under a cloud of canvas, with little more than steerage way, every part of her lower rigging, from which the best sight of the whales could be obtained, being crowded with men; the rising sun lighting up the shining bodies of the whales as they rose to the surface out of the deep blue water, each sending up two high columns of white vapour, like great jets of steam, which spread out into a cloud at their highest points; a distinct whistling sound being heard in the blowing of those that rose nearest the ship. In some instances the whales were in pairs, and frequently rose together at the same time. They extended up to the horizon, as far as could be seen from the ship, in a westerly direction, being scattered from N.W. to S.W.; and the whole shoal were heading to the eastward. The calm water and undisturbed movements of the whales afforded an unusually favourable opportunity for observing them. They were of a much larger kind than the Greenland *Mysticetus*, and blew higher, and with more force, than Right Whales.† I have seen similar whales in great numbers on the coast of Australia. They are exceedingly swift and active. Whale-boats never fasten to them, except by accident, in mistaking them for Right Whales. They take the line out with extraordinary rapidity; and it is instantly cut to free the boat, men with any whaling experience being well aware how impossible it would be to catch such a Tartar by ordinary means. A stuffed skin of one of these monsters would be a real curiosity, and would probably furnish the maximum of the Whale tribe, not to be obtained in a specimen of the *Mysticetus*, which is by no means the largest of Cetaceans, and certainly never attains the length of 90 feet, implied in Prof. Owen's paper [*Athen.* No. 1761, p. 119]. Scoresby observes, that the size of the *Mysticetus* has been much overrated, and says, that of 322 individuals in the capture of which he had been personally concerned, no one, he believed,

† These *Balenoptera* were not the *Gibbosa*, or Humpback, found in these seas, which is considerably larger.

exceeded 60 feet, "one of the largest to all appearance," which he ever saw, measured but 58 feet, and the longest actual measurement he had "ever met with or heard of," was of a whale killed at Godhavn, in 1813, which was 67 feet. He believed that 60 feet may be considered the size of the larger animals of this species, and "65 feet in length a magnitude which very rarely occurs," and quotes practical authorities of 1557 and 1625, in support of his opinion that whales taken at the time he wrote were as large as any captured since the commencement of whale fishing. I know from my own measurements, that Right Whales exceeding in size the largest measured by Scoresby have been taken in the Southern Seas. The mouth of this Southern whale is furnished with precisely the same filtering arrangement of whalebone as the *Mysticetus* of the Northern Hemisphere (not the short rough bone of the *Rorqual* species), and it must therefore subsist upon similar food, which is said [*Athen.* No. 1761, p. 119], amongst other conditions, to "further restrict the *Mysticetus* to high Northern latitudes." Every one must appreciate the great importance and interest of such a Museum of Natural History as proposed by Prof. Owen; but if the part of it devoted to the Cetaceans is to be carried out to the extent of enabling visitors to form a correct idea of the bulk and variety of the larger species of whales, it must include more than a specimen of the Greenland *Mysticetus*, which is only about the third in the scale of magnitude.

O. W. BRIERLY.

OUR WEEKLY GOSSIP.

ONE of the drawbacks of this beautiful summer has been a very great increase in the average number of fires. Hitherto, the destruction of property has not fallen upon literature, but the calamity of Wednesday, in Paternoster Row, has fallen upon it rather heavily. Messrs. Longman are the chief literary sufferers. We understand that their losses include the whole of their stock of Macaulay's fifth volume, and of the illustrated edition of 'Lalla Rookh.' M. Lemare, recently established as a commission agent, has lost the whole of his property, and has had a narrow escape with his life. The Messrs. Blackie, among other property, have lost the whole of the copper-plates of their large quarto Atlas.

A flower-show will be held, on Wednesday next, at the Royal Horticultural Gardens, South Kensington.

A Committee has been appointed, with the sanction of Her Majesty's Commissioners for 1862, for the representation of objects of architectural interest. Messrs. W. Tite, G. G. Scott, Digby Wyatt, Prof. Donaldson, and other architects of eminence were on this Committee. A sub-committee has been named, including Messrs. Barry and Street, for the purpose of forming a Court of high-class Decorative Art, in which shall be gathered together the best works in all the specified classes of Art, excepting Sculpture and Painting, these having their own separate galleries. All persons able to assist in this object are invited to communicate with the Committee.

We understand that Mr. Hardwicke has undertaken to publish a new edition of Smith and Sowerby's 'English Botany.' The work will contain all the original figures in Smith's work with the additions since made by Sowerby, and illustrations of the microscopic structure will be introduced. The work will be issued in monthly parts, and the flowering plants will be completed in about six volumes of twelve parts each.

We are informed that the 'Essays and Reviews' are now in process of translation into Gujaratee by a Parsee gentleman at present in London, who takes interest in the subjects discussed by the seven authors, and intends publishing his translation for the use of inquiring minds among his countrymen in India. Gujaratee, which is closely allied to the Hinduee, is the language spoken in the large province of Gujerat, on the western coast of India, between 21° and 24° of north latitude. It is the prevailing dialect at Surat, and is also extensively used beyond the limits of the province from which it derives its name. Indeed, from its wide diffusion, it has been not inappropriately designated

"the grand mercantile language of foreign Indian marts."

The Cambrian Archæological Association has been holding its fifteenth annual meeting—this year at Swansea. Mr. H. Vivian presided, and the programme of the week included several excursions, to which the amazing beauty of the weather lent the greatest charm.

On Tuesday, Mr. Burford opened a new panorama in Leicester Square. The subject is Naples; a theme not only of endless interest for its beauty and variety, but just now of passionate anxiety to many on account of political events. The view is taken from a point in front of the Castel dell' Uova—so as to embrace the two bays on which the city stands. On one side, the noble curve of the Chiaja towards Virgil's tomb, the palace of Donna Anna Caraffa and Posillipo; on the other side, the royal palace, the mole, the Castel del Carmine, and the English fleet. The panorama, of which the landscape is painted by Mr. Slous, and the war-ships by Mr. W. A. Knell, sen., has all the qualities which have made Mr. Burford's exhibitions famous.

A flower-show in September is a dangerous thing to attempt. But the brilliant summer weather has this year helped the gardener beyond his hopes, and the Crystal Palace display on Wednesday and Thursday was quite astonishing for the season. Nothing could be finer than the dahlias, asters, and verbenas. The roses, too, reminded one of June or July. The collection of fruit was very good.

The Ethnological and Antiquarian Sections of Letters will hear with regret of the death of Mr. Bateman, who died on Thursday last week, at his residence, Lombardale House, near Bake-well, Derbyshire, after two or three days' illness, and at the early age of 40 years, having been born in 1821. A country gentleman, of large property, situate in one of the most beautiful portions of the Peak, he devoted his time and wealth to antiquarian and ethnological pursuits. This taste was inherited from his grandfather and father, who severally laid the foundation of a fine library and museum. Mr. Bateman himself crowned their work by adding greatly to both, and by an extensive series of excavations in the tumuli of Staffordshire and Derbyshire, but more especially in the latter county. He did for Derbyshire what Sir Richard Colt Hoare did for Wiltshire in the last century; and the results of his researches have been made public in three several volumes,—viz., 'Vestiges of the Antiquities of Derbyshire,' published in 1848; 'Catalogue of Antiquities,' 1855, and 'Ten Years' Diggings in the Celtic and Anglo-Saxon Grave Mounds,' 1861; the last volume issued so recently as the past fortnight. The museum at Lombardale has now for some years been, next to Chatsworth and Haddon Hall, one of the wonders of the Peak; and well known to the more educated class of tourists, as it has at all times been easily accessible. It is rich in Greek, Roman, Mexican and Medieval antiquities; and its collection of Samian ware, particularly that part of it which once belonged to the Cook collection at York, is very fine. But it is in pre-historic Celtic, and to a degree in Anglo-Saxon antiquities, that it chiefly excels other private museums. Several large cases are filled entirely with the urns and other fictile vessels, as well as articles in flint and bronze, procured during his lengthened series of excavations in the Derbyshire barrows. From this source Mr. Birch might have added very largely to his dry and meagre account of Celtic pottery. As the human remains discovered in these barrow diggings were in almost all instances preserved, they are arranged here; some of the skeletons being articulated, and the series of crania well arranged. The museum at Lombardale, as it is, we believe, entailed, is, in fact, a vast storehouse for future inductionists; for the class of collectors, including though it has, amongst other Englishmen, Beyan Faussett, Sir R. C. Hoare, Lord Lonsborough, Mr. Ackermann and Mr. Bateman, cannot be said to have done much more than provisional work. The fruit has yet to come at the hand of another generation, who will eliminate from collections

such as this the inductions of an ethnological philosophy worthy of the name. This has not yet been done; but when it has—and this in no narrow spirit—the labours of Thomas Bateman in his generation will be appreciated, we believe, in a very high degree. As a public man, Mr. Bateman was shy and retiring. Simple, unaffected, modest, his exceeding worth as a scholar and a friend were best seen in the retirement of his home. Here, in his library or museum, whether turning over his rich collection of manuscripts, unfolding some costly diptych, or descending on the merits of a Grecian coin, a Celtic urn, or some vessel of old English earthenware, the fact, in its associations, was one to be remembered.

M. Meyerbeer has replied to the invitation of Her Majesty's Commissioners for the Exhibition of 1862, that in compliance with their request he will compose a March for the opening ceremony.

The Museum of Practical Geology, Jermyn Street, will be re-opened to the public on Tuesday next. During the vacation some important additions have been made to the wall decorations in the hall, consisting of inlaid slabs of polished granites, porphyries, marbles and alabaster, by Mr. Macdonald, of Aberdeen, and Mr. Hall, of Derby. Some of these specimens have never before been employed in the arts, and deserve the attention of architects.

A Society has been formed with the imposing title of "The National Association for Promoting Freedom of Public Worship in the Church of England." Its objects, as explained by itself, are—"1. To make known the evils of the Pew-System; 2. To maintain the fundamental principle of the Parochial System—the free use in common, by all parishioners, of their Parish Church; 3. To prevent the violation of the Parochial System by the sale and renting of Pews in new Churches; 4. To restore the Parochial System, where practicable, in Churches at present existing; and 5. To encourage the adoption of the Weekly Offertory." The Association seems to have its seat in Manchester; but there is a general committee representing the whole country, partly lay and partly clerical.

The Council of the Surrey Archaeological Society have determined to assist in promoting the proposed excavations of the site of Chertsey Abbey, which has been recently purchased by one of their local honorary secretaries, Mr. Thomas R. Bampton, and have opened a public subscription for the purpose. A large and curious collection of tiles from this site is at the Architectural Museum, South Kensington, and an equally large and very complete collection is in the possession of the Surrey Society. The excavations are now being carried on with great spirit, under the superintendence of Mr. M. Shurlock, a well-known local antiquary; and during the last few days some interesting remains have been turned up, or, rather, exposed: a tile paving, supposed to be a part of the cloisters, stone coffins, leaden chalice and paten, gold coin, gold ring, &c. An account of the previous excavations has already been published in the *Transactions of the Surrey Society*, and the present appear to promise an even richer harvest of antiquities. Subscriptions are received by the bankers, Messrs. Cocks & Biddulph, and by the honorary secretaries in London and at Chertsey.

On the 21st proximo the Lord Mayor, sheriffs, and aldermen of the City of London will attend divine service at Christ Church, Newgate Street, where a sermon will be preached by the Rev. G. C. Bell, Fellow of Worcester College, Oxford; after which they will proceed to the Great Hall of Christ's Hospital, when orations will be delivered on 'The Benefits of the Royal Hospitals,' in the following order, by the senior Grecians, viz., in Latin, by R. G. Glenn; in Greek, by A. T. Waugh; in English, by E. S. Carlos; and in French, by J. C. F. Morson. These will be followed by translations from the English into Greek Iambics, by H. Hughes; into Greek Sapphics, by E. C. Baber; into Latin Alcaics, by G. A. Crossle; into Latin Elegiacs, by F. C. Barber; into Greek Hexameters, by C. Bokenham. Two original poems

not yet adjudged will also be recited in Latin and English.

We have to report the death of the well-known German Art-historian, Johann David Passavant. He died on the 12th of August, at Frankfurt, where he held the office of Director at the Hâdel Institution. Born in 1787, he attained his seventy-fourth year. Passavant had been destined for trade; but a longer stay at Paris in 1810–13, where he made himself thoroughly acquainted with all the Art-treasures there, awoke in him the desire for a fuller understanding of Art. He began his studies at once, first under David, afterwards under Baron de Gros. At Rome he became intimately acquainted with the young artists who gave a new impulse to German Art, and acquired fame in later years (Cornelius, Overbeck, &c.). He developed apologetically their principles in his 'Views on the Plastic Arts,' and he began to make a name for himself by his 'Designs for Grave Monuments.' But his reputation rests on his works of Art-history, especially on his 'Artistic Travel through England and Belgium,' and on his biographical work—'Raffaël of Urbino, and his father Giovanni Santi.' We hear that he has left valuable manuscripts.

How shall I get into Italy? must be a question just now on the lips of hundreds of autumnal tourists. New railway extensions change the character of the great routes every month or two—now, the most expeditious road is by Chambéry and Mont Cenis—now by Geneva and the Simplon—now by Lucerne and the St. Gothard. The three roads are open respectively as far as St. Jean de Maurienne—Martigny—and Lucerne. When the tunnel through Mont Cenis shall be ready—and the works are in rapid progress—that will unquestionably be the easiest, if not the most attractive, route to Milan, Venice, Genoa and the South of Italy. At present the St. Gothard route has a considerable advantage over its rivals. The railway lines are open from Boulogne to Lucerne; a steamer takes you by the lake to Fluelen; you cross the pass in a diligence to Bellinzona, thence by steamer to Arona, and by rail to Turin, Genoa, Milan, or where you will. There is a gain of ten or twelve hours, of a handful of francs, and of the two lovely lakes of Lucerne and Maggiore, not to speak of the comfort of a frequent change in the mode of travel, though this would be the principal consideration with some. How many English tourists, rolling down the dusty road from Domo D'Ossoli, hot, and cramped, and weary, at the first glimpse of Lago Maggiore give up their places in the diligence, descend at the pretty inn at Baveno, and wait the steamer for Arona! Soon this glorious fatigue of Alpine travel will be lost; for French, Italian, Austrian engineers are all at work upon the railway routes; and the way from Zurich to Como will become as comfortable and commonplace as the ride from Windermere to Loch Lomond. A letter in the *Paris Patrie* gives some details on the operations now going on between Susa and Lanslebourg, which our readers will peruse with interest. The writer says:—"At the commencement of this great enterprise only the pickaxe and blasting were employed, but since the machines invented by MM. Grattone and Sommeiller were brought into use, the cutting of the rock has been carried on with remarkable celerity. The machines, which are worked by compressed air, are very ingenious; they are each of 250-horse power, and act simultaneously on both sides of the mountain. They set in motion different instruments of great power, which operate in any direction that may be required. The section of the tunnel is about 60 metres, and when the cutting was commenced only 12 men could, from the limited space, be occupied at each end, the work they did being only 40 centimetres (about 16 inches) per day; but the machines employ a force equal to 2,500 men, and cut out daily two metres—that is, one at each end. In a few months arrangements will be made for making the men employed relieve each other every eight hours, and an electric light will be established; and then the extraction of rock will be three metres per day. The tunnel will be 12 kilometres (7½ miles) in length. It is 1,330 metres above the level of the sea, and 1,060 below the

summit of Mont Cenis. It will gradually rise ½ per 1,000 to the centre, descending from that point towards Piedmont on the other. In the centre of the way a small canal has been formed for carrying off the waters which filter through the rock. Every fortnight an examination is made for the purpose of ascertaining the direction of the tunnel and level of the roadway, instruments of great precision being employed in the operation. Thus far the cutting on both sides of the mountain has been found to coincide exactly. The rock is easily penetrated by the machines. When holes of from 40 to 60 centimetres (16 to 23 inches) have been bored they are filled with gunpowder; the workmen retire to a distance of about 100 metres, and strong doors in iron are closed to prevent fragments of the rock from flying out. Then the mine is fired, and masses of rock are heard to strike against the doors. Afterwards a current of compressed air is driven into the tunnel to expel the smoke, so as to allow the workmen to enter. The removing of the fragments of rock is effected in the way employed on the cuttings of railways, and the machines are again set in motion." When these works are completed, the passage of the Alps will be reduced to twenty minutes!

SCIENCE.

First Sketch of a New Geological Map of Scotland. With Explanatory Notes, by Sir R. I. Murchison and Archibald Geikie. Constructed by A. Keith Johnston. (Edinburgh, Johnston; London, Stanford.)

WITHIN the last year or two we have noticed two geological maps of Scotland, which were new as respects time of publication, but not very new as respects geological discovery. The present, though a small map, presents itself with the high claim of being an attempt at a new geological map of the country, based upon recent researches, with which all geologists who take a special interest in the details of Scottish geology have probably already acquainted themselves. The discovery in 1854 of certain organic remains in the limestone of Durness, in Sutherlandshire, was one step towards more precise knowledge; and this was followed by others. In 1859, Sir R. I. Murchison, accompanied by an able colleague, revisited the typical district of the North, and laid the main results of that visit before the Meeting of the British Association at Aberdeen. In the following year, Mr. Geikie inspected some of the northern types, and showed how they ranged into the Southern Highlands. Sir R. I. Murchison's views being doubly confirmed, he requested Mr. Geikie to prepare this Map, and to introduce the results of his own knowledge of the rocks of the south of Scotland. Since Mr. Geikie is thus candidly announced as the preparer of the present Map, and as Sir R. I. Murchison again says, "The map which we now issue has been prepared by Mr. Geikie," it seems hardly fair to the younger and less known geologist to send forth this Map lettered on the cover, "Geological Map of Scotland, by Sir R. I. Murchison." Let us hope in the present instance that it was the binder's misfortune to have space only for one name on his gilded ornament. When, however, this Map is referred to by geologists, let the two names be fairly and fully cited.

Those who compare the present sketch Map with the earlier one of Prof. Nicol will find considerable differences, which, probably, the Professor would not admit to be well founded. He denies the existence of a fundamental gneiss as distinguished from those crystalline strata, occasionally gneissose, but more frequently quartzose and micaceous, which, according to the observations upon which this new Map is founded, lie much higher in the series: and, therefore, "the order of succession as

given in the map of Nicol is at variance with that which we consider to be the true natural sequence of the deposits." Opinions, therefore, yet remain rather at variance in some northern halls; but it must be allowed that this little sketch is a marked step in advance in Scottish geology.

While, however, it is only a first step, yet, as Sir Roderick observes, "If, in the absence of correct topographical maps, a very long time must elapse before any attempt can be made to publish a geological map of Scotland, on even a moderately large scale, so as to offer details like those which are laid down in the published Edinburgh Sheet of the Geological Survey, enough has already been done to enable my coadjutor and myself to venture on the production of that which we consider to be a requisite prelude to such future works, by placing the rocks in their true sequence."

But why produce a map so interesting to Scottish geologists on so small a scale? There is no apparent reason why it should not have appeared on a larger scale; and, therefore, have been far more legible and intelligible. As it is, however, we ought to say that this little Map possesses the usual excellent constructive characteristics of Mr. A. K. Johnston's productions. Without his constructive skill, the crowded details would have greatly obscured the whole. Microscopic lettering is the plague of maps requiring careful study; and although the Scotch themselves are so proverbially keen-eyed as to be able to see far into millstones, it does not follow that other people can see equally far into millstone-grits.

FINE ARTS

FINE-ART GOSSIP.—Through some misapprehensions, various complaints have been made public as to the treatment vouchsafed to the English artists at the recent Antwerp *fêtes*. Nothing could be more unjust than those statements; it was hardly possible for any persons to receive a more hospitable and hearty welcome than did the artists who visited their professional brethren at the Congress. It is extremely unfortunate that such remarks should have got abroad, especially on an occasion like that in question, when the painters of many countries met to consult upon their common interests and availed themselves of the hospitality of the artists of Antwerp.

The report of the Committee of the subscribers to the statue of Sir C. Barry is as follows:—"That the subscription amounts to £461.; that they had applied to the Chief Commissioner of Works to be permitted to erect a marble statue in Westminster Hall, at the top of the steps leading to St. Stephen's Hall; that the Hon. W. Cowper expressed his willingness to grant this site, or one outside in Palace Yard, where the statues of Stephenson, Brunel and Locke were to be erected; that the Committee on the Decoration of the Palace of Westminster had, however, refused the site in Westminster Hall, but suggested and offered the landing at the foot of the staircase in the inner lobby leading to the committee-rooms, commonly called the 'Witnesses' Lobby'; that the Committee recommended the acceptance of this site, and that a marble statue by Mr. Foley, R.A., should be erected at that place." After much discussion these recommendations were all adopted, and a sub-committee appointed to carry them into effect. No doubt, the site decided upon is a very good one, not at all unworthy of the occasion; and we congratulate the subscribers, as a body, upon the good taste which led to the abandonment of the first idea of claiming a site which is simply the finest interior position for a statue in all London.

Some repairs are going on to various portions of the well-known Church of St. Mary, Beverley. Amongst these, the roofs of the transepts are being replaced with appropriate ceilings of Perpendicular character, in keeping with the design of the building itself. The "Londoners' Chapel," a small

subsidiary chapel, is under thorough and careful repair. The origin of this little edifice, or rather portion of the great church, is notable. The "Londoners" were a body of London merchants who were accustomed to frequent the fairs and markets of Beverley and its neighbouring towns, and, fixing their residence at the town in question, they maintained a priest for the service in the chapel appropriated to themselves in St. Mary's Church. He is said to have resided in a chamber attached to the chapel now existing. It is to be hoped that the repairs above referred to will be proceeded with, not only in a proper conservative spirit, as they appear to have been begun, but continuously; so that this extremely interesting church may in due time regain some of its fine characteristics, much imperilled at present by certain hideous pews, ragged and patchwork screens. Well endowed as the building is, there can be no fear of an appeal to the public being made in aid of this desirable end.

Our tourist friends will find, in the exteriorly insignificant church at Flamborough, Yorkshire, several matters of interest. Among them, a finely carved rood-screen, of Decorated character, in fair condition, and, above all, with many remains of its original painting still upon it, mostly of blue colour. In front of this hangs a pair of white gloves, or rather the models of such, placed there, rather more than a century ago, to commemorate a notable marriage. Also, attached to the side of the altar space on the wall, a brass, in raised letters, recording, in rude rhymes, the achievements, titles and death of a companion-soldier of Edward the Fourth, who had been to "the wars in France." A font of Norman character will be observed under the belfry. Norman prevails in those portions of the church which are untouched; but, apparently owing to some defect in the foundations, extensive repairs of common Perpendicular, of a rude kind, have taken place.

The following pictures in the National Gallery have been protected with glass during the last year:—Bronzino, *An Allegory*, No. 651,—Titian, *The Holy Family*, No. 635,—Titian, *Portrait of Ariosto* (glazed when received), No. 636,—Lorenzo di Credi, *Virgin adoring the Infant Christ*, No. 648,—Albertinelli, *Virgin and Child*, No. 645,—Roger Van der Weyden, *Portraits of Himself and Wife*, No. 653,—Roger Van der Weyden, *The Magdalen*, No. 654,—Bernard Van Orley, *The Magdalen Reading*, No. 655,—Martin Schoen, *Death of the Virgin*, No. 658,—Raphael, *Madonna di San Sisto*, a tracing (glazed when received), No. 661,—Turner, *Ulysses deriding Polyphemus*, No. 508,—Hogarth, *Marriage à la Mode*, No. 113,—Ditto, ditto, No. 114. Total in the year, 13. At the close of last year the total number of works protected with glass was, in Trafalgar Square, 80, including three cartoons and one tracing; at South Kensington, 25 pictures and 100 frames and sketches. It is intended to place the whole of Hogarth's series of the *Marriage à la Mode* under glass.

MUSIC AND THE DRAMA

ALFRED MELLON'S PROMENADE CONCERTS, THEATRE ROYAL, COVENT GARDEN, GRAND ORCHESTRA.—Vocalists: Mdlle. Florence Lancia, Madame Laura Baxter, and Herr Formes. Every Evening.—On THURSDAY NEXT, September 12, an Italian Night, on which occasion Mdlle. Vacchetti from La Scala, Milan, and other Continental Theatres will make her first appearance.—On SATURDAY NEXT, September 14, a Volunteer Night.—Promenade, 1s.; Amphitheatre Stalls, 1s. 6d.; Boxes, 2s. 6d.; Private Boxes, 1s. and 10s. 6d.—Commence at Eight.—Conductor, Mr. Alfred Mellon.

MDLLE. WHITTY will appear at the THEATRE ROYAL, DUBLIN, on September 18th, in *PURITANI*; on the 18th, in *NORMA*; and on the 17th, in *IL BARBIERE*, with Titianni, Giuglini, Swift, Lemaire, Della Sedie and Ciampi.

NEW PUBLICATIONS.

ENGLISH SONGS.

Elizabeth's Songs from the Saints' Tragedy, Nos. 1 and 2. *Four Songs, written by the Rev. C. Kingsley*, Op. 8. By C. A. Barry. (Cramer & Co.)—Good words do not ensure good music, unhappily;—but since they display what is poor, by sharp contrasts, they can hardly fail to give a composer a better chance of inspiration than the paltry verse too often carelessly selected.—Apart, however, from all suggestion, Mr. Barry here

proves himself superior to the generality of modern song-writers. His setting of *'O that we two were Maying'*, is extremely elegant and simple: so is *'Margaret to Dolcino'* on a yet more limited scale. *'The Oubli'* is quaint. Mr. Barry would have been wiser had he left *'The Three Fishers'* alone, Mr. Hullah having set the ballad "for good and all." We have particular pleasure in these songs, because they come from one whom German training has not Germanized into an imitation of any one's manner or into a renunciation of what is beautiful in favour of what seems scientific.—Four Songs from the *'Idylls of the King'*, by A. Orlando Steed, (Jewell), come into the same category as the above. The second, *'Vivien'*, is the least good; the first, *'Enid'*, would be welcome, were it not for a vicious emphasis on the final word. *'Proud'*, *'Cloud'* are surely not admissible as arranged, each with its group of three notes. *'Guinevere'*, the song of the foolish virgins, is elegant.—*'Turn, Fortune'*, by Alexander Rowland, and *'What does little Birdie say'* by K. J. P. (Addison & Co.), are two among the less happy settings of the Laureate's words, which are many.—We are still among the poets who have written good words, when dealing with *'Three Songs'*, by William Metcalfe, (Ashdown & Parry.) *'The Blackbird'*, however, is not one of the Laureate's most attractive inspirations, and it is here harshly set. Mr. Kingsley's *'The Starlings'*, is better. Hartley Coleridge's *'Lark and Nightingale'* (a delicious lyric) is overloaded by its accompaniment, and the musical thoughts are stale as compared with the verse. But there is promise in Mr. Metcalfe, supposing him to be young, and willing to simplify his writing in favour of reality and freshness of fancy.—In *'A Wood on a Windy Day'*, a stormy lyric, by Miss Anne Brontë, has been set by E. Aguilar, (Davison & Co.) with an obvious desire to paint the "roaring of the boughs" by the accompaniment, the voice being comparatively an accessory. By way of close to this paragraph on poetical songs—what a pity that there should be any others!—we must say a kind word for Mr. J. F. Barnett's *'Gentle Spring'*, (Leader & Cook), a thoughtful and elegant setting of Prof. Longfellow's words. Here and there, however, a false accent is to be objected to: and throughout the composition there is too much of the pianoforte-player.

Little more than an announcement can be given to the pile of miscellaneous songs which are still waiting notice:—*'Sweet Summer'*, in two parts (Addison & Co.), by J. L. Summers, is sweet, if not very new.—*'On that far shore'*,—*'The Water Nymph'*, by John Barnett (same publishers),—*'Save Father on the sea'*,—*'The Trumpet on the Rhone'*,—*'The Sailor's Wife'*,—*'Voice of the Western Wind'*, by J. L. Hatton (same publishers), hardly represent the average merit of two of our best song composers.—The same may be said of *'The Coming of the Flowers'*, by W. V. Wallace (Cramer & Co.).—Nos. 4 to 8 of *'Melodies of England'*, composed by Ignatius, arranged by Henry Regaldi (Jewell), are not "up to the mark" of amateur music.—*'Who can see thee, dearest Child'*, by Dr. Elvey (Addison & Co.), is elegant in the Italian style.—W. Hutchinson, Esq., contributes two notions in *'The Spring of Life'* and *'When the silvery Moonbeams sleep'* (Hall, Cheltenham).—*'Courting Days'* (same publishers), by Wellington Guernsey,—*'Hail to thee'*, by John Raymond,—*'Little Cares'*, by A. B. Brown (Williams),—*'Summer Morning'* (very strange this), by E. Fagan (Cramer & Co.),—*'The Captive Bird'*, by F. Leslie (Shepherd), may be passed over.—Next, may be dismissed, with acknowledgment of their good will, three patriotic offerings:—*'The British Volunteers'*, by W. H. Calcott (Lonsdale),—*'Every man join heart and soul'*, by A. Mellon (Addison & Co.),—and *'To Arms'*, by H. H. Pierson (Schubert, Hamburg).—*'The Floweret's Message—Early Flowers of Spring'*, by G. B. Allen (Cramer & Co.).—*'The Song of the Enchanters'*, by E. de L'Orme (same publishers).—*'O chide not, my heart'*, by W. T. Wrighton (Cocks & Co.),—*'The Emigrant's Song'*, by M. Barker (Novello),—and *'A Merry Heart'*, for two voices, by W. O. Cramer (Addison & Co.),—and *'We merry, merry Fairies'*, also for two

voices (same publishers), are the last late publications of English vocal music to be dealt with at this "time of asking."

HAYMARKET.—On Saturday a new piece in three acts was produced. It is entitled 'The Soft Sex,' and had been evidently intended as a satire on the strong-minded woman, who according to the drama is an importation from America. Something in it, however, displeased the audience; and Mr. C. Mathews, at the conclusion of the second act, appeared for the purpose of appeasing the sibilants. He said that he had an interest in the piece, for, in fact, it was his own; and promised to make it a much better thing on its second representation. Mr. Mathews has not given himself a very important position in the action, but supported his brief part with great precision and finish. Mr. Buckstone, in the first act, made great way with an eccentric part, which he dressed indescribably, and particularly extorted applause by the description of an American hotel. The scene is laid in Regent's Park, where Mr. Bollover Biggins has a villa, and into which he has imported two American ladies, Miss Priscilla Cram (Mrs. Poynter) and Mrs. Cosmos Cook (Mrs. Wilkins), the former as governess to his daughters, the latter as a Columbian friend, a great traveller and transcendental talker. By these Biggins's niece, Ida (Mrs. C. Mathews), is thrown into the shade, and the management of the house taken out of her hands. A few months make both her and her uncle miserable. The girls, under their Transatlantic tutors, become masculine in their notions and habits, unmanageable in their tastes, and run into inconceivable danger; while their aunt, Mrs. Mandwinde (Mrs. E. Fitzwilliam), goes wild on political economy. But at length Biggins's Nephew (Mr. C. Mathews) appears on the scene,—the real owner of the property on which the uncle and his friends are supporting their various caprices to their mutual discomfort, and of course proceeds to set things to rights. He reads the parties many a moral lesson, which Mr. Mathews delivers with much force and great propriety,—and soon finds out the merits of the quiet and retiring Ida, who is now likely to become mistress of the position. She does not, however, abuse her newly-acquired power; but induces him to allow the family to partake the advantages to which he has become entitled;—in a word, to continue to inhabit the villa, and to share in the profits of a large cotton-mill near Stockport. We are not quite sure that Mr. C. Mathews's view of life is perfectly correct, or that the shafts of his satire are always well directed; but the piece has the merit of having a purpose, and the dialogue is not without spirit and point. When judiciously weeded, it is, we think, likely to work well enough.

STRAND.—This theatre re-opened on Monday, with 'The Post-Boy,' 'More Precious than Gold' and 'Aladdin.'

STANDARD.—Mr. C. Pitt is starting at this theatre. 'Richard the Third,' 'Hamlet,' 'The Hunchback,' 'Ingomar,' 'The Corsican Brothers,' and 'Louis the Eleventh,' have been performed.

MISCELLANEA

Kew Gardens and the Great Exhibition of 1862.—The beautiful ribbon flower-bed, fifty feet in length by seven in breadth, is still the one leading attraction of the season. The flowers are now exceedingly brilliant, being at the climax of their autumnal beauty. All the great centres of English industry are sending agents and artists to copy it, as a design and pattern for part of the goods they are making for the Great Exhibition of next year, viz.—Manchester, prints, chintz, draperies, &c.; Coventry, ribbons; Kidderminster, carpets; Glasgow, muslins, shawls, &c.; Yorkshire, coloured table covers; Belfast, damask table linen, &c.; Nottingham, lace; Macclesfield, Derby and Spitalfields, silks, embroideries, &c.; Dublin, mixed fabrics; Paisley, Scotch goods and window muslins; Bradford, moorings and damasks; Clerkenwell, artificial flowers; and the Potteries, china and porcelain.

To CORRESPONDENTS.—J. M. C.—T. T.—A. J. D. D.—Senex—J. S.—E. M.—received.

Now ready,

CODEX ZACYNTHIUS.—GREEK PALIMPSEST FRAGMENTS OF THE GOSPEL OF SAINT LUKE, obtained in the Island of Zante, by the late General Macaulay, and now in the Library of the British and Foreign Bible Society: Described, Transcribed, and Edited, by SAM. L. PRIDEAUX TREVELLIS, LL.D. Half-red-russia, cloth antique, price 11. 1s.

Catalogues, gratis, by post free, of Polyglot Bibles, Church Services, Books of Common Prayer, in Ancient and Modern Languages, Aids to the Study of the Old and New Testament, Concordances, Grammars, Lexicons, &c.

London: Samuel Bagster & Sons, 15, Paternoster-row.

THE MAHABHASHYA, i. e., the "Great Commentary," by Patanjali, On the Grammatical Aphorisms of Panini, with its Commentary the Bhāṣya-Pradīpa, and the Commentary thereon, The Bhāṣya-Pradīpodyota. Vol. I. oblong folio, containing the portion (808 pages of Sanskrit and 40 of English) entitled The Nāvahūka.

Edited by JAMES R. BALLANTYNE, LL.D., Principal of the Government Sanskrit College at Benares, with the aid of the Pandits of the College. Mysore, 1856.

James Madden, 3, Leadenhall-street, London.
Price, in Sheets, 3l. 3s. A few Copies only for Sale.

GERALD MASSEY'S LAST VOLUME OF POEMS.

HAVELOCK'S MARCH; and Other Poems. (The major part now printed for the first time.) By GERALD MASSEY. 12mo. cloth, price 5s.

"All the sea-peoples have the dash and saltiness of the ocean in them. They deserve to be read, and if read are sure to be admired. The poet's love-lyrics will find many admirers. Readers who find this vein of feeling in their own humour—and there will be many such—will get the volume for themselves. The whole mass of song and celebration is inscribed to Lady Marian Alford in a poem of great beauty. One of the Elizabethans might have written these lines."—*Athenæum*.

London: Trübner & Co. 50, Paternoster-row.

LEBAHN'S WORKS ON THE GERMAN LANGUAGE, ADAPTED FOR SELF-INSTRUCTION.

Just published, Second Edition, price 2s. 6d.

Lebahn's First German Course.

"It is hardly possible to have a simpler or better book for beginners in German."—*Athenæum*.

"It is really what it professes to be—a simple, clear and concise introduction to the German language; one, which will be equally useful to the self-instructing student and the member of a German class."—*Critic*.

Fourth Edition, price 3s. 6d.

Lebahn's First German Reader.

"An admirable book for beginners, which indeed may be used without a master."—*Leader*.

Sixth Edition, price 3s. 6d.

Lebahn's Eichenfels and Dialogues.

"A charming production. The Dialogues are as perfectly adapted to render the student a speaker of this interesting language, as is the Vocabulary for making him a reader."—*Educational Times*.

Sixth Edition, price 8s.; with KEY, 10s. 6d.

Lebahn's German in One Volume.

"To those who would attain a practical use of the language, with a moderate expenditure of time and labour, this work will be a welcome help."—*Illustrated London News*.

Lebahn's Practice in German. Price 6s.

"Whoever fails to learn the German language with this help, must have an intellect irredeemably dull and obfuscated."—*Evening Standard*.

Lebahn's Exercises in German. Price 3s. 6d.

"A volume of 'Exercises in German,' including in itself all the vocabularies they require. The book is well planned; the selections for translation from German into English, or from English into German, being sometimes curiously well suited to the purpose for which they are taken."—*Examiner*.

Lebahn's Self-Instructor in German. 6s. 6d.

"The student could have no guide superior to Mr. Lebahn."—*Literary Gazette*.

Price 2s. 6d. each,

Lebahn's German Classics: with Notes and Complete Vocabularies.

PETER SCHLEMIHL, the Shadowless Man. By Chamisso.

EGMONT. A Tragedy, in Five Acts, by Goethe.

WILHELM TELL. A Drama, in Five Acts, by Schiller.

GOETZ VON BERLICHINGEN. A Drama, by Goethe.

PAGENSTREICHE, a Page's Frolics. A Comedy, by Kotzebue.

EMILIA GALOTTI. A Tragedy, in Five Acts, by Lessing.

UNDINE. A Tale, by Fouqué.

SELECTIONS FROM THE GERMAN POETS.

"These editions are prepared for the use of learners who read without a master; and they will be found convenient for that purpose. In each, the text is followed by a glossary, wherein not only the sense of every particular phrase, but also the dictionary meaning of most of the several words, is given in good English. With such aids, a student will find no difficulty in these masterpieces."—*Athenæum*.

Lebahn's German Copy-Book: being a Series of Exercises in German Penmanship, beautifully engraved on Steel. Price 2s. 6d.

"* About Seven Hundred Commendatory Notices of Lebahn's Works have appeared.

LOCKWOOD & CO. 7, Stationers' Hall-court.

Just published, price 4d.

A LECTURE ON THE LIFE, CHARACTER, and RELIGIOUS OPINIONS OF THE REV. ISAAC WATTS, D.D., addressed to the Congregation of the Church of the Saviour, Avenue-place, Southampton, July 21, 1861, by the Rev. EDMUND KELL, M.A. F.S.A., after the Inauguration of Dr. Watts's Statue by the Earl of Shaftesbury, July 17. With Lithograph of the Statue. Published by request.

London: E. T. Whitfield, 178, Strand.

Now ready, fcap. 8vo. cloth, 4s. 6d. post free,

THE ART OF EXTEMPORE SPEAKING: Hints for the Pulpit, the Senate, and the Bar. By M. BAUTAIN, Vicar-General, and Professor at the Sorbonne.

"A book of suggestions for men who would practise extempore speaking.... Eloquent, forcible, full of apposite illustrations."—*Athenæum*.

London: Bosworth & Harrison, 215, Regent-street.

This day, fcap. 8vo. cloth, 2s. 6d.; by post, 2s. 8d.

VILLAGE SKETCHES, descriptive of Club and School Festivals, and other Village Gatherings and Institutions. By T. C. WHITEHEAD, M.A., Incumbent of Gawcott, Bucks.

"Much sound good sense and noble feeling are displayed in these Sketches. We cordially wish them a wide circulation."—*Athenæum*.

London: Bosworth & Harrison, 215, Regent-street.

MR. DICKENS'S NEW WORK.

The Third Edition; in 3 volumes, of

GREAT EXPECTATIONS. By CHARLES DICKENS.

3 vols. post 8vo.

THE CONSTABLE OF THE TOWER:

AN HISTORICAL ROMANCE.

By WILLIAM HARRISON AINSWORTH.

With Illustrations by Gilbert.

"The Constable of the Tower" is one of the best of our English historical romances."—*London Review*.

Second Edition, fcap. 8vo. 3s. 6d.

TANNHÄUSER; or, THE BATTLE OF THE BARDS:

A POEM.

By NEVILLE TEMPLE and EDWARD TREVOR.

"Full of beauty of thought, melody of language, and sudden pictures that rise like visions before the reader—it is full also of noble purpose and distinct morality.... For very many years there has not been a more remarkable poem offered to the English public."—*Times*, August 2.

MR. ANTHONY TROLLOPE'S NEW SERIAL,

With Illustrations by J. E. Mills, A.R.A.

Part VII., price 1s., of

ORLEY FARM: A TALE.

By ANTHONY TROLLOPE,

Author of 'Framley Parsonage,' 'Dr. Thorne,' 'Barchester Towers,' &c.

Chapman & Hall, 129, Piccadilly.

With a Frontispiece by John Gilbert, and 13 Illustrations, fcap. 8s. 6d. cloth,

The DOUBLE VOLUME for 1844 (Vols. VI. and VII. together), price 10s. 6d. in cloth, and Vol. VII. price 5s. in boards, are Now Ready.

London: BRADBURY & EVANS, 11, Bouverie-street, Fleet-street, E.C.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, WATERLOO-PLACE, PALL MALL, S.W.

The HON. FRANCIS SCOTT, Chairman.
CHARLES BERWICK CURTIS, Esq., Deputy-Chairman.

FOURTH DIVISION OF PROFITS.

SPECIAL NOTICE.—Parties desirous of participating in the Fourth Division of Profits to be declared on Policies effected prior to the 31st of December, 1861, should make immediate application. There have already been Three Divisions of Profits, and the Bonuses divided have averaged nearly 2 per cent. per annum on the sums assured, or from 30 to 100 per cent. on the premiums paid, without the risk of copartnership.

To show more clearly what these Bonuses amount to, the three following cases are given as examples:—

Sums Insured.	Bonuses added.	Amount payable up to Dec. 1854.
£5,000	£1,987 10	£6,987 10
1,000	397 10	1,397 10
100	39 15	139 15

Notwithstanding these large additions, the Premiums are on the lowest scale compatible with security; in addition to which advantages, one-half of the premiums may, if desired, for the term of five years, remain unpaid at 5 per cent. interest, without security or deposit of the Policy.

The Assets of the Company at the 31st of December, 1860, amounted to £730,665 7s. 10d., all of which has been invested in Government and other approved securities.

No charge for Volunteer Military Corps whilst serving in the United Kingdom.

Policy stamps paid by the office.

For Prospectuses, &c. apply to the Resident Director, No. 8, Waterloo-place, Pall Mall.

By order,

E. L. BOYD, Resident Director.

LONDON LIFE ASSOCIATION,
81, KING WILLIAM-STREET, E.C.

Instituted 1808.

President—CHARLES FRANKS, Esq.

Vice-President—JOHN BENJAMIN HEATH, Esq.

Trustees.

Francis Henry Mitchell, Esq.
Alfred Heath, Esq.

Robert Hambury, Esq.
Bonamy Dobree, Esq.

The London Life Association was established more than fifty years ago, on the principle of Mutual Assurance, the whole of the benefits being shared by the Members assured. The surplus is ascertained each year, and appropriated solely to a reduction of the premiums after seven yearly payments have been made. If the present rate of reduction be maintained, persons now effecting Assurances will be entitled, after seven years, to a reduction of 75 per cent., whereby each £1 of annual premium will be reduced to 25 pence.

This Society has paid in claims more than..... £4,150,000
And has policies now in force amounting to..... 6,400,000
For the payment of which it possesses a capital exceeding..... 2,750,000
And a gross income from premiums and interest of more than..... 340,000
Assurances may be effected for any sum not exceeding 10,000, on the same life.

The Society has no agents and allows no commission, nevertheless the new assurances effected in the last financial year amounted to 887,360, and the new annual premiums to 10,607.
EDWARD DOCKES, Secretary.

THE SCOTTISH WIDOWS' FUND
AND LIFE ASSURANCE SOCIETY

is a purely Mutual Office, in which the whole Funds belong to the Members; and the Profits are divided among them alone. Since it was founded, in 1815, its history has been one of constant and increasing prosperity; and it is now, in point of Funds, Annual Revenue and number of Members, one of the largest Life Offices in the world. The Security presented by the Society to its Members and their Representatives is of the most unquestionable character; while the Returns made in the form of Bonuses are, it is believed, not exceeded by those of any other similar Institution. The following is a

MEMORANDUM OF BUSINESS, BONUSES, FUNDS AND REVENUE

Extracted from the Society's detailed Prospectus.

1. TOTAL ASSURANCES ISSUED..... £14,631,794
2. TOTAL BONUSES DECLARED..... 3,038,049
3. SUMS ASSURED AND BONUSES EXISTING 10,886,861
4. TOTAL CLAIMS PAID EXCEEDED..... 3,600,000
5. INVESTED FUNDS..... 3,801,764
6. ANNUAL REVENUE..... 425,738

Forms of Proposal, detailed Prospectuses and Reports, and every information, may be had at the Head Office, or any of the Society's Agents.

SAMUEL RALEIGH, Manager.

J. F. ANDERSON, Secretary.

Edinburgh, 9, St. Andrew-square.

SPECIAL NOTICE.

Proposals dated and lodged at the Head Office, or with any of the Society's Agents, during the current year, will secure One Bonus more than those of later date.

LONDON HONORARY BOARD.

George Young, Esq., Mark-lane.
Charles Edward Pollock, Esq., Barrister, Temple.
David Hill, Esq., Sussex-square.
John Murray, Esq., Publisher, Albemarle-street.
Samuel Laing, Esq., Publisher, Financial.
Sir John Thomas Briggs, Admiralty.
Leonard Horner, Esq., F.R.S.
James Anderson, Esq., Q.C., Lincoln's Inn.

AGENTS FOR LONDON AND THE SUBURBS.

Central Agent.

Hugh M'Kean, 4, Royal Exchange-buildings, Cornhill.

District Agents.

Major R. S. Ridge, 40, Pall Mall, Agent for the West-End District.
Benton Seely, Islington-green, Agent for Islington District.
Robertson & White, Accountants, 4, Princes-street, Bank, E.C.

ACCIDENTS OF ALL KINDS,
AND FROM ANY CAUSE,
may be provided against by an Annual Payment of 25 pence to the **RAILWAY PASSENGERS' ASSURANCE COMPANY**, which secures 1,000, at death by Accident, or 6s. weekly for Injury.

NO EXTRA PREMIUM FOR VOLUNTEERS.
ONE PERSON in every **TWELVE** insured is injured yearly by ACCIDENT.

75,000, has been already PAID as COMPENSATION.

For further information apply to the Provincial Agents, the Railway Stations, or at the Head Office, 64, Cornhill (late 3, Old Broad-street).

ANNUAL INCOME, 40,000.

CAPITAL ONE MILLION.

WILLIAM J. VIAN, Secretary.

64, Cornhill, E.C., January, 1861.

THE LIVERPOOL AND LONDON FIRE
and **LIFE ASSURANCE COMPANY.**

Office:
No. 1, Dale-street, Liverpool; 30 and 31, Postery, London.
FIRE DEPARTMENT.

The Annual Premiums exceed 400,000, and place it in the first class of Fire Offices. Its liberality and promptitude in settling claims have been established in the adjustment of enormous losses; and its influence in determining rates of Premium has uniformly been given to proposals for improving the character of risks, that high Premiums may be unnecessary.

LIFE DEPARTMENT.
The Annual Premiums exceed 130,000; the Accumulated Reserve in this department is 707,000.

RESOURCES.
The invested funds of the Company exceed 1,300,000. The liability of Proprietors is unlimited.
SWINTON BOULT, Secretary to the Company.
JOHN ATKINS, Resident Secretary, London.

SUN LIFE ASSURANCE SOCIETY,
THREAPNEEDLE-STREET, LONDON.

The Profits of this Society will be divided in future Quinquennially; and Policies will participate at each division, after three Annual Payments of Premium have been made.

Policies effected now will participate in four-fifths, or 80 per cent., of the Profits, according to the conditions contained in the Society's Prospectus.

The Premiums required by this Society for insuring young lives are lower than in many other old-established Offices, and Insurers are fully protected from all risk by an ample guarantee fund, in addition to the accumulated funds derived from the investments of Premiums.

No charge for service in the Militia or in any Yeomanry or Volunteer Corps in the United Kingdom.
Policy Stamps paid by the Office.

Prospectuses may be obtained at the Office in Threapneedle-street, London, or of any of the Agents of the Society.

CHARLES HENRY LIDDERDALE, Actuary.

ROYAL INSURANCE COMPANY.
Head Office:—29, Lombard-street, LONDON,
and Royal Insurance Buildings, LIVERPOOL.

Branch Offices:—Manchester, Birmingham, Bristol, Leeds, Dublin, Glasgow and Edinburgh.

EXTRACTS FROM THE REPORT FOR THE YEAR 1860.

"The success of the Company, even in its earliest years, received the marked attention, and elicited the surprised comments of writers best acquainted with the history of Insurance Companies.

"The Fire Branch for 1860 EQUAL the Total Fire Premiums for the SEVEN YEARS 1855 to 1861.

"Life Premiums for 1860 EXCEEDED the Entire Life Premiums for the EIGHT YEARS ending 1853.

"Purchase of Annuities in 1860 LARGELY EXCEEDS the similar receipts for the first TEN YEARS, 1845 to 1854.

"This progress, it is believed, is unsurpassed, considering that it applies to each of the three branches of the business."

FIRE BRANCH.

"The Fire Branch has certainly shown no exhaustion during the year 1860 of its resources, and has previously brought it to a position of the first magnitude among the Insurance Companies of the United Kingdom. The Fire Premiums in 1856 had advanced to the sum of 239,314. 7s. 6d. In 1860, the amount of Fire Premiums has arrived at a sum of 232,977. 12s. 11d. showing an increase of 34,662. 15s. 8d. or 14.8 per cent. of the total advance of the preceding year, so that in two years the Fire Revenue of the Company has been enhanced by the enormous sum of 66,397. 17s. 6d.

"The Elementary Report of Returns of Duty paid to Government for the year 1860 exhibits the augmentation of the business in a more prominent way, as it affords the means of comparison with other Companies. The Proprietors will be gratified to learn that the increase of Duty paid by the Royal in the last year must be the result of the fact that its business, either London or Provincial, whilst only one of those Companies ever approaches to 50 per cent. of the advance of this Company. Our increase actually equals 30 per cent. of the entire increase of the whole of the Metropolitan Offices combined, whilst of the Provincial Offices its forms upward of 30 per cent. of the total advance of the other 25 offices established out of London."

LIFE BRANCH.

"The Reports of the Company for several years have had invariably a considerable and increasing success in the Life Business, the new Policies of each succeeding year showing an advance over the one that had immediately preceded it. A similar result is shown in the year 1860, the Premiums on New Policies, after deducting Guarantees, being 15,079. 17s. 10d., which is an increase in the item of 1,993. 12s. 6d., above the amount received for the year 1859.

"But even this advance is small when compared with the sudden and remarkable momentum which has been given to this branch of the business in the present year (1861).

"It was not until the commencement of the year that the public seemed to have become fully acquainted with the fact, that the Royal Insurance Company had published late in the last year an account of the investigation into the assets and liabilities of its Life Department, under a novel form, and in as plain and intelligible a manner as the abstruseness of the subject admitted, together with the entire statements and valuations necessary for that purpose.

"It is conjectured from the extensive notices of this Pamphlet, and its accompanying Diagrams, which have appeared in the Periodicals of the day, that it has largely attracted the attention of vast numbers of persons in all parts of the United Kingdom, as well as in other parts of the world. Indeed, a most satisfactory and conclusive evidence that such is the case is afforded by the fact that the Sum Assured on new Policies in the six months to the 3rd June the present year is actually 20 per cent. in excess of the Sum Assured in the corresponding months of the year 1860, although the latter amount in itself exceeded the Sum Assured in any like previous period of time.

"If this success be continued, the Royal Insurance Company will be enabled to increase the amount of its new business, be at once placed (at least with one or two exceptions) at the head of all the Insurance Companies doing business in this country, and the anticipations of the last Report, to the effect that the details of the Life Business then to be published would form an epoch of the Establishment, will have a speedy and very happy realization."

SPECIAL ADVANTAGES OF THE LIFE BRANCH.

PROFITS. Large Proportion returned every Five Years to Policyholders in existence two consecutive years.

Expenses chiefly borne by the Fire Branch, in order to increase the Bonus to be returned.

LIFE BONUSES DECLARED.

Two per Cent. per Annum on the Sum Assured; the greatest Bonus ever continuously declared by any Company.

SECURITY FOR BOTH FIRE AND LIFE BRANCHES.

Capital TWO MILLIONS Sterling.

Accumulated Funds in hand exceed 800,000.

PERCY M. DOVE, Manager and Actuary.

JOHN B. JOHNSTON, Secretary.

LE SOMMIER ÉLASTIQUE PORTATIF.—**HEAL & SON** have patented a method of making a Spring Mattress portable. The great objection to the usual Spring Mattress is its being so heavy and cumbersome. The "Sommier Élastique Portatif" is made in three separate parts; and, when joined together, has all the elasticity of the best Spring Mattress. As it has no stuffing of wool or horse-hair it cannot harbour moth, to which the usual Spring Mattress is very liable; the prices, also, are much below those of the best Spring Mattresses, viz.:—
3 ft. wide by 6 ft. 4 in. long £3 5 0
3 ft. 6 in. " " £3 10 0
4 ft. " " " £3 15 0
4 ft. 6 in. by 6 ft. 4 in. long £3 0 0
5 ft. " " " £3 5 0
5 ft. 6 in. " " £3 10 0

The "Sommier Élastique Portatif," therefore, combines the advantages of elasticity, durability, cleanliness, portability and cheapness.

An ILLUSTRATED CATALOGUE of Bedsteads, Bedding and Bed-Room Furniture sent free by post on application.

AS INFERIOR KINDS ARE OFTEN SUBSTITUTED.
WOTHERSPOON & CO., GLASGOW AND LONDON.

TOURISTS AND TRAVELLERS.—NOTICE.
—Messrs. W. & J. BURROW, of Great Malvern, beg to call attention to their highly-praised MALVERN LANDSCAPE GLASSES, 24 and 6 Guineas. Sent on receipt of Post-office order.

CAUTION.—SMEE'S SPRING MATTRESS.
TUCKER'S PATENT, or SOMMIER TUCKER. Comfortable, cleanly, simple, portable and inexpensive. Purchasers are respectfully warned against infringements and imitations, in which somewhat of the general appearance of the SMEE'S SPRING MATTRESS is carefully preserved, but all its essential advantages are sacrificed.

WILLIAM SMEE & SONS, having now the entire of the Patent Right, are able to announce the following considerably
REDUCED SCALE OF PRICES.

Size No. 1 for Bedsteads 3 feet wide	25s. 0d.
" " " " " " " "	37s. 6d.
" " " " " " " "	45s. 0d.

Other sizes in proportion. To be obtained of almost all respectable Upholsterers and Bedding Warehousemen.
ESPECIAL NOTICE should be taken that each Spring Mattress bears upon the side the Label, "Tucker's Patent."

SAUCE.—LEA AND PERRINS
beg to caution the Public against Spurious Imitations of their world-renowned
WORCESTERSHIRE SAUCE.

Purchasers should
ASK FOR LEA AND PERRINS' SAUCE,
Pronounced by Connoisseurs to be
"THE ONLY GOOD SAUCE."

* * * Sold Wholesale and for Export, by the Proprietors, Worcester; Messrs. CROSBY & BLACKWELL, London, &c. &c.; and by Grocers and Oilmen universally.

RUPTURES.—BY ROYAL LETTERS PATENT.
WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 200 Medical Gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of a steel spring, so often hurtful in its effects, is here avoided: a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, sitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive Circular may be had, and the Truss (which cannot fall to fit) forwarded by post, on the circumference of the body, two inches below the hips, being sent to the Manufacturer.

MR. WHITE, 238, PICCADILLY, LONDON.

ELASTIC STOCKINGS, KNEE-CAPS, &c.
For VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light in texture, and inexpensive, and are drawn on like an ordinary stocking. Prices, from 7s. 6d. to 15s. each; postage 6d.

JOHN WHITE, MANUFACTURER, 238, Piccadilly, London.

METCALFE, BINGLEY & CO'S New Pat-
tern Brushes, and Penetrating unbleached Hair Brushes, Improved Flesh and Cloth Brushes, and genuine Smyrna Sponges, and every description of Brush, Comb, and Perfumery. The Tooth Brushes search between the divisions of the Teeth, the hairs never come loose. M. B. & Co's New and Delicious Perfumes—The Fairy Bouquet, The Oxford and Cambridge Bouquet, in bottles, 3s. 6d., and 5s. each.—Metcalfe's celebrated Alkaline Tooth Powder, 2s. per box.—Sole Establishment, 130s and 131, OXFORD-STREET.

DURABILITY OF GUTTA-PERCHA

TUBING.—Many inquiries having been made as to the Durability of Gutta-Percha Tubing, the Gutta-Percha Company have pleasure in giving publicity to the following letter:—From **SIR RAYMOND JARVIS, Bart., VENTNOR, Isle of Wight.**—Second Testimonial.—March 16th, 1859.—In reply to your letter, received this morning, respecting the Gutta-Percha Tubing for Pump Service, I can state with much satisfaction, it answers perfectly. Many builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years; and I am informed that it is to be adopted generally in the houses that are being erected here. —N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta-Percha Tubing.

THE GUTTA-PERCHA COMPANY, PATENTEES,
13, WHARF-ROAD, CITY-ROAD, LONDON.

BLAIR'S GOUT AND RHEUMATIC PILLS.

Price 1s. 1d., and 3s. 9d. per box.
This Preparation is one of the benefits which the Science of Modern Chemistry has conferred upon Mankind; for, during the first twenty years of the present century, to speak of a Cure for the Gout was considered a romance; but now the efficacy and safety of this Medicine are so fully demonstrated, by uncollected testimonials from persons in every rank of life, that Public Opinion proclaims this as one of the most important Discoveries of the Present Age.

These Pills require no restraint of diet or confinement during their use, and are certain to prevent the disease attacking any vital part.

Sold by all Medicine Vendors, and at 220, Strand, London.

COCKLE'S ANTIBILIOUS PILLS for In-
digestion, bile, sick headache, acidity, heartburn, flatulency, &c. Prepared only at 12, Abchurch Lane, 18, New Ormond-street; and to be had of all Medicine Vendors, in boxes, at 1s. 1d., 2s. 6d., 4s. 6d. and 11s. each.

KEATING'S PERSIAN INSECT-DE-
STROYING POWDER.—This powder is quite harmless to Animals, but is unrivalled in destroying Fleas, Bugs, Emmites, Flies, Cockroaches, Beetles, Gnats, Moths in Furs, and every other species of Insects in all stages of metamorphosis.

An invaluable remedy for destroying Fleas in Ladies' Pet Dogs. It is perfectly harmless in its nature, and may be applied without apprehension, AS IT HAS NO QUALITIES DELETTERIOUS TO ANIMAL LIFE.

Sold in Packets, 1s., 2s., 6d., and 4s. 6d. each, or post free for 14, or treble size for 38 postage-stamps, by **THOMAS KEATING,** Chemist, 79, St. Paul's Churchyard, London, E.C.

DINNEFORD'S PURE FLUID MAGNESIA

has been, during twenty-five years, emphatically sanctioned by the Medical Profession and universally accepted by the Public, as the Best Remedy for acidity of the stomach, heartburn, headache, gout and indigestion, and as a mild agent for delicate constitutions, more especially for Ladies and Children. Combined with the Acidulated Lemon Syrup, it forms an agreeable Efferescent Draught, in which its Astringent qualities are much increased. During Hot Seasons and in Hot Climates, the regular use of this simple and elegant remedy has been found highly beneficial. Manufactured (with the utmost attention to strength and purity) by **DINNEFORD & CO. 179, New Bond-street, London;** and sold by all respectable Chemists throughout the Empire.

TEETH.—By her Majesty's Royal Letters

Patent.—Newly-invented Application of Chemically Prepared India-rubber in the construction of Artificial Teeth, Gums, and Palates.—**MR. EPHRAIM MOSLEY, Surgeon-Dentist, sole proprietor.**—A new, original, and valuable invention, consisting in the adaptation, with the most absolute perfection and success, of **CHEMICALLY PREPARED INDIA-RUBBER**, as a lining to the gold or bone frame.—All sharp edges are avoided; no spring wires or fastenings are required; a greatly increased freedom of suction is supplied; a natural elasticity, hitherto wholly unobtainable, and a fit, perfected with the most unerring accuracy, are secured; while from the softness and flexibility of the wax employed, the greatest support is given to the adjoining teeth when loose or rendered tender by the absorption of the gums.—To be obtained only at 9, Lower Grosvenor-street, Grosvenor-square, London, W.

NO MORE PILLS NOR ANY OTHER

MEDICINE.—"We find **DU BARRY'S HEALTH RESTORING REVALENTA ARAICA FOOD** the safest remedy for habitual constipation, indigestion (dyspepsia), palpitation, coughs, colds, asthma, bronchitis, consumption, diarrhoea, nervousness, biliousness, torpidity of the liver, &c."—**Andrew Ure, M.D. F.R.S. Dr. Harvey, Dr. Shorland, Dr. Campbell, Dr. Wurser's Testimonial.**—"Bonn, July 19, 1859. Dr. Barry's Food is particularly effective in effectually curing indigestion (dyspepsia), a combined habit of body, as also in diarrhoea, bowel and liver complaints, inflammation, irritation, and cramp of the urethra, the kidneys and bladder, and hemorrhoids; also in cough, asthma, debility, bronchitis, and pulmonary and bronchial consumption."—**Dr. Rud. Wurser, Professor of Medicine and Practical M.D. in Bonn.** Packed in tins, with full instructions, 1lb. 2s. 6d.; 6lb. 11s.; 12lb. 22s. 6d.; 24lb. 44s. 6d.; free of carriage, 40s.—**Barry Du Barry & Co., 77, Regent-street, London; Fortnum & Mason; also at 60, Gracechurch-street; 4, Cheap-side; 63 and 150, Oxford-street; 239, 330, 430 and 451, Strand; and all Grocers.**

AN ANTIBILIOUS MEDICINE, NEITHER

PILL NOR DRAUGHT, but having a delightful taste, and which may be eaten as confectionery. Such is **DR. HUGH'S MEDICAL ATOMS.** They give immediate relief to all disorders of the head, heart, stomach, and bowels.—Price 1s. 1d., 2s. 6d. and 4s. 6d. per packet; and sold by all Druggists.

HOLLOWAY'S PILLS.—Abdominal Pains,

Colic, Torpid Bowels.—These disorders are particularly apt to prevail when bad weather prevents our taking out-door exercises. The want of fresh air, and of muscular exertion, soon begets indigestion, from which flows a multitude of other maladies. All who have once tried Holloway's Pills will pronounce them to be the best and the best relief of all disorders of indigestion. Whatever may be the immediate origin of the malady, these admirable Pills will at once remove both cause and effect, without much restriction of pleasure or diet. They increase the appetite, strengthen the stomach, regulate the bowels, the kidneys, and gently increase the activity of the bowels. The most delicate may fearlessly rely on Holloway's Pills.

SIR EDWARD BULWER LYTTON'S NEW WORK.

On the 27th of September, 1861, will be published, price 5s. 6d. bound in cloth,

THE FIFTH VOLUME
OF
ALL THE YEAR ROUND,
Conducted by CHARLES DICKENS.

LONDON, SATURDAY, SEPTEMBER 14, 1861.

PRICE
FOURPENCE
Stamped Edition, 5d.

MINERALOGY.—KING'S COLLEGE,
London.—Professor TENNANT, F.G.S., will commence a COURSE OF LECTURES ON MINERALOGY, with a view to facilitate the study of GEOLOGY, and the Application of Mineral Substances in the ARTS. The Lectures will begin on Friday Morning, October 4th, at 9 o'clock. They will be continued on each succeeding Wednesday and Friday, at the same hour. Fee, 2s. R. W. JELF, D.D., Principal.

UNIVERSITY COLLEGE, LONDON.—
JUNIOR SCHOOL, under the Government of the Council of the College.

Head-Master—THOMAS HEWITT KEY, A.M.
The SCHOOL will RE-OPEN on TUESDAY, September 24, for New Pupils. The Boys must appear in their places, without fail, on Wednesday, the 25th, at a Quarter-past Nine o'clock. The Session is divided into Three Terms—viz., from the 24th of September to Christmas, from Christmas to Easter, and from Easter to the 1st of August. The yearly payment for each Pupil is 18s., of which 12s. is paid in advance in each Term. The hours of attendance are from a Quarter-past Nine to Three-quarters-past Three o'clock. The Afternoons of Wednesdays and Saturdays are devoted exclusively to Drawing. The subjects taught are, Reading, Writing, the English, Latin, Greek, French and German Languages, Ancient and English History, Geography, Physical and Political, Arithmetic and Book-keeping, the Elements of Mathematics, Chemistry, and Natural Philosophy, Social Science, Gymnastics, Fencing, and Drawing. Any Pupil may omit Greek or Greek and Latin, and devote his whole attention to the other branches of Education. There is a general Examination of the Pupils at the end of the Session, and the Prizes are then given. At the end of each of the first two Terms there are short examinations, which are taken into account in the general examination. No absence by a boy from any one of the examinations of his Classes is permitted except for reasons submitted to and approved by the Head-Master. The discipline of the School is maintained without corporal punishment. A Monthly Report of the conduct of each Pupil is sent to his parent or guardian. Further particulars may be obtained at the Office of the College. CHAS. C. ATKINSON, in the Classes of the Faculty of Medicine will commence on Tuesday, the 1st of October; those of the Faculty of Arts on Tuesday, the 15th of October. August, 1861.

GOVERNMENT SCHOOL OF MINES,
JERMYN-STREET, LONDON.
Director—Sir RODERICK I. MURCHISON, D.C.L. &c.
The Prospectus for the Session, commencing on the 7th October next, will be sent on application to the Registrar. The Courses of Instruction embrace Chemistry, by Dr. Hofmann; Physics, by Prof. Tyndall; Natural History, by Prof. Huxley; Geology, by Prof. Ramsay; Mineralogy and Mining, by Mr. Warrington Smyth; Metallurgy, by Dr. Percy; and Applied Mechanics, by Prof. Willis. TRENHAM REEKS, Registrar.

PHARMACEUTICAL SOCIETY OF GREAT
BRITAIN, 17, Bloomsbury-square, W.C.
SCHOOL OF PHARMACY.—SESSION 1861-62.
The Session will commence on Tuesday, October 1, and extend to the end of July, 1862. Lectures on Chemistry and Pharmacy, by Dr. Redwood; on Botany and Materia Medica, by Dr. Beckett. Laboratory Course, for Practical Instruction in General and Pharmaceutical Chemistry, under the direction of Prof. Redwood. Students have free admission to the Library and Museum. Two Scholarships (the Jacob Bell Memorial Scholarship) of 30s. a year each, with free laboratory instruction during the period of scholarship, are annually awarded. For detailed Prospectuses and further information apply to the Secretary.

A PHYSICIAN, residing at the West-End of
London, wishes to unite with a Young Gentleman about to Study Medicine or Science in any of the London Schools, to whom he could offer an advantageous home and a share in the personal superintendence which he gives to his own son.—Apply to Dr. LANKERHANS, 8, Savile-row, W.

ST. MARY'S HOSPITAL MEDICAL
SCHOOL.—THE WINTER SESSION will commence on TUESDAY, October 1, at Eight o'clock, p.m., with an Introductory Address by Mr. Spencer Smith. The Medical Appointments in this Hospital are annually conferred upon Pupils without additional fee. The advantages of Five of these Appointments far exceed as many Scholarships of Fifty Pounds each. Physicians—Dr. Alderson, Dr. Chambers, Dr. Sibson, Dr. Handfield Jones, Dr. Steevens and Dr. Markham. Surgeons—Mr. Coulson, Mr. Lane, Mr. Ure, Mr. Spencer Smith, Mr. Walton and Mr. James Lane. Physician-Accoucheur—Dr. Tyler Smith. Ophthalmic Surgeon—Mr. White Cooper. Aural Surgeon—Mr. Toynbee. Surgeon-Dentist—Mr. Sercombe.

LECTURERS.
Clinical Medicine—Dr. Alderson, Dr. Chambers, Dr. Sibson. Clinical Surgery—Mr. Coulson, Mr. Lane, Mr. Ure. Medicine—Dr. Chambers and Dr. Sibson. Surgery—Mr. Lane and Mr. Spencer Smith. Physiology—Mr. James Lane and Dr. Broadbent. Anatomy—Mr. James Lane and Mr. Gascoyne. Operations on the dead body—Mr. Walton. Dissections—Mr. Gascoyne and Mr. Norton. Chemistry and Practical Chemistry—Dr. Field. Midwifery—Dr. Tyler Smith and Dr. Graily Hewitt. Materia Medica—Dr. Steevens. Botany—Dr. Dresser. Medical Jurisprudence—Dr. Sanderson. Ophthalmic Surgery—Mr. White Cooper. Aural Surgery—Mr. Toynbee. Dental Surgery—Mr. Sercombe. Comparative Anatomy—Dr. Broadbent. Natural Philosophy—Mr. Smalley.

PRIZES, &c.—The Medical appointments in the Hospital. A Scholarship in Anatomy of the value of 20s. A Prize of 50s. for Students of the first year. Prizes in the several Classes at the end of each Session. The Fee for the Hospital Practice and Lectures required by the Royal Colleges of Physicians and Surgeons, and the Society of Apothecaries, is 50s. 6s., payable by instalments. A detailed Prospectus will be sent, and further information obtained, on application to GEO. G. GASCOYNE, Dean of the School. St. Mary's Hospital, August, 1861.

A QUEEN'S UNIVERSITY. QUEEN'S COLLEGE, CORK.

President—SIR R. KANE, M.D. F.R.S.
Vice-President—JOHN RYALL, LL.D.

FACULTY OF MEDICINE, Session 1861-62.

Dean of Faculty—DENIS B. BULLEN, M.D.

Professors.
Anatomy and Physiology, Practical Anatomy—J. H. CORBETT, M.D. L.R.C.S.I.
Practice of Medicine—D. C. O'Connor, A.B. M.D.
Practice of Surgery—Denis B. Bullen, M.D.
Materia Medica—Purcell O'Leary, B.Sc. L.A.M. M.D. F.R.S.
Midwifery—J. R. Harvey, A.B. M.D.
Natural Philosophy—John England, A.M.
Chemistry, Practical Chemistry—J. Blyth, M.D.
Zoology, Botany—Joseph Keay Greene, A.B.
Modern Languages—R. De Vericour, D. de L.
Logic—Geo. Sidney Read, A.M.

CLINICAL MEDICINE AND CLINICAL SURGERY, at the North and South Infirmaries, by the Physicians and Surgeons of these Institutions. **CLINICAL MIDWIFERY** at the Lying-in Hospital.

The MEDICAL SESSION will be OPENED on MONDAY, the 28th of October, 1861, and the Lectures will commence on the 4th of November. The Department will be opened for Dissections on the 15th of October, under the direction of the Professor of Anatomy and Physiology, assisted by Dr. Shinkwin, Demonstrator.

Eight Scholarships will be awarded to Students in Medicine, thus:—Six Junior Scholarships, of 20s. each, to Students commencing their first, second, and third year, two to each year; and two Senior Scholarships, of 40s. each, to Students commencing their fourth year.

By order of the President,
ROBERT JOHN KENNY, Registrar.

UNIVERSITY OF EDINBURGH.

Chancellor—LORD BROUGHAM.
Vice-Chancellor—Principal SIR DAVID BREWSTER, K.H.
Rector—The Right Hon. W. E. GLAISTONE.
